SOUTHERN LITERARY MESSENGER.

PUBLISHED MONTHLY AT FIVE DOLLARS PER ANNUM—THOMAS W. WHITE, EDITOR AND PROPRIETOR.

VOL. V.

RICHMOND, JANUARY, 1839.

No. I.

To our Friends and Subscribers.

We commence the fifth volume of the *Messenger* with renewed thanks to our subscribers and contributors, and to the public generally, including the corps editorial, for their generous support and indulgence for the last four years. It will be remembered, that at the beginning of our work, it was strictly an experiment of doubtful results. In the south, especially, no such publication had been able to maintain itself against the usual discouragements which attend literary adventure; and our writers of genius had either wasted their powers in uncongenial pursuits, or sought an opportunity of displaying them in distant states, where taste and talent were more amply rewarded. We flatter ourselves we have had some humble share in awakening a more laudable spirit on the south side of the Potomac. Many young men, we have reason to think, have been induced to essay their strength in literary composition, who might otherwise have shrunk from the trial. Our pages have been frequently enriched by the chaste and beautiful productions of woman's mind; and even veterans, who for years had reposed on their laurels, have been tempted once more to gird on their armor, and re-enter the lists of intellectual strife. Thus far we have had much to lighten the cares and toils of our journey, and we still feel every inducement to persevere. It would be uncandid, however, not to acknowledge, that notwithstanding the undoubted success and approbation which the *Messenger* has received, it ought to be considered as still an *experiment*, and liable to all those vicissitudes which beset similar establishments. We are aware that in this country at least, the empire of literature, like that of law and politics, is subject to constant and sometimes violent fluctuations; and we have no right to hope for an exemption from the common lot. We may be said to have made four annual voyages with success, and yet may even encounter shipwreck in the fifth, unless favored with prosperous gales and sustained by an effective equipment. Competitors are rising in every direction to contend with us for a share of public patronage; and it would be folly to close our eyes to the fact, that whilst competition, to a certain degree, is rather useful than otherwise, beyond that point it is too often a death struggle, in which the least powerful must yield. There are other dangers which the literary press especially, is doomed to encounter—in the fastidiousness, variety, and mutability of the public taste. Whilst some of our readers are content with plain

nutritious food, others require a larger infusion of spice. Some become wearied by long and grave articles—whilst othersome (as Hawkeye expresses it,) are not satisfied with the brief and sportive sallies which occasionally embellish our pages. In not a few instances, a portion of our *constituents* have held us responsible for all the sentiments contained in all the articles of our correspondents; a rule so unreasonable in itself, that we would not be bound even to argue the question with the malcontents. There is also another class of our subscribers which we confess occasions us much perplexity. We allude to those who continue to lend us their names and even cheer us with their smiles—but yet are unhappily forgetful of the *terms of publication*. Most gladly would we pay the paper-maker and compositor with these grateful proofs of encouragement, if that kind of currency would answer in this world of reality as well as romance. The fair fabric of liberty itself cannot exist without taxation; and the labors of the good and the pious would soon perish, if unsupported by that powerful *metallic spring*, which puts all human machinery into motion.

We hope we shall not be considered as making these remarks in a querulous spirit, nor from motives of an exclusively personal character. Individually, we acknowledge the great interest we feel in the establishment of something like a home literature, but it would be a great mistake to suppose that with the present patronage of the *Messenger*, (though very considerable,) its pecuniary benefits would constitute the prominent inducement to continue it. In that point of view, a connexion either with the mercantile or political press, would unquestionably yield a clearer nett profit. There are circumstances, however, which peculiarly forbid, at the present crisis, the slightest relaxation of effort on our part to secure the stability and permanency of this work. Utterly indisposed as we are, and entirely impolitic as it would be, to mingle in political strife, there are some questions touching our national existence and union which occasionally force themselves upon our pages, in spite of ourselves. On these questions there is no division of party, no difference of opinion, in a large portion of this great confederacy—and we may, with truth add, that the most virtuous and enlightened of the whole nation concur in the propriety of arresting that fanatical spirit which threatens to involve us in the horrors of servile war, and the miseries of disunion. It is the duty, we humbly conceive, of the southern people especially, to sustain every barrier which can be

erected against these mischievous violations of civil and social duty; and we think, that to combine the literary with the political press, for that object, would be exercising an influence not to be disregarded. *We shall therefore continue to persevere.* From the beginning, we have been sustained by noble and generous friends, without whose aid we should unquestionably have long since sunk under the cares and responsibilities of this work. We invite them to continue their support so long as we shall deserve it; and to our able and excellent contributors we appeal once more, in the full confidence that they will not relax their efforts to build up and establish the cause of literature in our good old commonwealth.

THE PAST.

BY ELORA.

The glorious past! how fondly still I turn
To the green beauty of its distant bowers;
And oh! how vainly does my spirit yearn
Once more to be a child amid its flowers.

It is the empire of the loved and lost!
I hear their voices on the thrilling air;
I see their forms, not worn and tempest-tost,
But, in the mellow light, serene and fair.

Look with me—sister, brother—look and see
The gentle beaming of our mother's eyes!
And hark! the tones that charmed our infancy,
Faint on the breezes of the past arise.

Home of departed joys! oh I could gaze
Ever unwearied on thy visions bright;
Dearer to me thy evening sunset rays,
Than all the future's glow of morning light.

See, as in life they wandered by our side,
With pious looks that did our love engage,
With hoary hair, and steps that feebly glide,
Slow move the venerable forms of age.

And laughing children, in their shapes of earth,
Flinging their curls upon the sunny air,
As erst they cheered us with their winning mirth,
Lend their bright presence to that region fair.

Oh! blest illusion! Memory, leave me not;—
Yet, even as I speak, strange sounds arise,
Grey shadows gather round each verdant spot,
And clouds go fleeting o'er the summer skies.

And lo, I look upon a land of *graves*;—
And in their midst I see my mother's tomb:
There droops the yew, and there the cypress waves,
And mid the grass white roses meekly bloom.

And is it *thus* with all my lovely dreams?
Sadly I turn unto the future's light—
Earth's future—and behold amid its gleams,
The lurking shadow of death's coming night.

Alas, how dark were life without the truth
That whispers to our weary hearts of Heaven;
Telling of changeless bliss, immortal youth,
And homes of glory to the ransomed given.

There by the shining stream or sparkling fount,
Lieth no mouldering victim of disease;
But life is in the vale, and on the mount,
Joy in the air, and health upon the breeze!

And there again the loved and lost are found—
But not as when on earth they blessed our sight:
Harps in their hands—their brows with glory crowned,
Their raiment brighter than meridian light.

Fair clime of nightless skies, and deathless bloom,—
Land of the blessed! shall it ever be,
That I, escaping from a world of gloom,
Shall find repose and happiness in thee?
Philadelphia.

A SCHEME

FOR REBUILDING SOUTHERN COMMERCE.

We cannot permit the following communication to pass from our hands into those of our readers, without calling their attention emphatically to its contents. We dare not offend the modesty of the author by disclosing his name; but we may venture to say of him, that his attainments grace the navy of his country, with whose honor his own name is intimately associated. The subject which he discusses, is now the most popular one which falls within the whole range of southern discussion. The manner, in which he treats it, is perfectly original. The proposition which he submits to the consideration of the South, and particularly of Virginia, is as bold as it is important. The whole style of the essay is as clear as it is polished. If this production had no other merit, and if its scheme were entirely visionary, yet it would be eminently valuable from the variety of new and interesting facts, which he has collected and spread before the public. The fathers of the packet-system of New York are deeply indebted to him for the lustre which he has shed around their names. The merchants of that great metropolis ought to thank him for the beauty and power which he has displayed, in tracing out some of the essential sources of their prosperity. To the navy of the United States he suggests many valuable hints about its past and its future improvement. These merits cannot be denied to our author, whatever may be thought of the present practicability of the theory, which he suggests for the renovation of southern commerce. But is it impracticable? We pray our southern readers to put the question home to themselves; to weigh it in all its bearings; to compare its advantages with its objections—its expenses with our resources, and then to *judge* for themselves. If their judgment decide in its favor, we call upon them then to *act*. Where is the Jeremiah Thompson of Virginia? Where is the enterprising merchant, who will call forth the genius of steam to cope with the canvass of the packets? If such a measure be found to be expedient, why should not they start forth to accomplish its con-

summation? At the next convention, let each member subscribe for not less than ten shares, and pledge himself to procure among his constituents a subscription for not less than one hundred shares of stock in the Southern Atlantic Steam Navigation Company. Our lives upon it, that the man who has urged it in the following essay, will be found willing to lend all the resources of his genius towards devising the best means, for realizing all the benefits of his own proposition.

We cannot give a better evidence of the value which we ourselves set upon this essay, than in running to the expense of an engraved chart to illustrate its conceptions. All which, however, is respectfully submitted, &c. &c.—[*Ed. So. Lit. Mess.*

DIRECT TRADE WITH THE SOUTH;

Navigation of the Atlantic—Packet Ships of New York—their influence over the Commerce of the United States—and their effects on American naval architecture.

The business of commerce presents no law, which forbids the southern merchant to exchange his flour in Rio for the coffee of Brazil; or to barter in Valparaiso and Lima, his produce for the copper of Chili and Peru; and this again for teas and silks in China. That he should carry on a lucrative trade with the West or East Indies, with the Brazils, on the coast of South America, or in the Mediterranean, nothing is wanting but the nerve and capital of the South controlled and regulated by well directed energies. The example of a single capitalist in any of the southern ports, who should have a correct knowledge of the demands of trade, would not fail to gain for his town in a short time a fair proportion of direct trade, such as that enjoyed by Baltimore, Philadelphia, or Boston.

Salem, by the lead which a single house took in the business, became renowned for her commerce with the East Indies, especially for the tea trade, which she enjoyed almost exclusively for many years. Nantucket and New Bedford are celebrated for their wealth, and the value of their whale fishery; the Coffins and the Bunkers gave them this celebrity. Fanning and his associates struck out in a new line of business, and in a few years made Stonington famed for sealing. And we shall show, that New York owes much of her prosperity to the commercial energies of a single individual. With patience and the exercise of proper talents and enterprise, the shoulders of one capitalist at his own windlass would do more for Norfolk or Charleston, than all the resolutions adopted by southern conventions are likely to do. It is example, not precept, that the South requires.

We have watched these conventions with much interest; but we have ever laid down the reports of their proceedings in disappointment. The resolutions passed in convention, "not to buy northern goods when they can get southern, unless the northern are the cheapest; not to freight northern vessels when they can freight southern, unless the northern freight for less," and many others, remind us of the oath which Neptune and his crew required of us, when we first crossed the equator, viz: "never to eat brown bread when we could get white, unless we preferred the brown; and never to kiss the maid, if we could kiss the mistress, unless we liked the maid best." Unless these gentle-

men have been sworn by old Neptune, and really mean to do nothing in the way of direct trade from the South, they should resolve always to kiss the maid and eat brown bread, whether they liked it or not, and commence trading on their own bottoms.

When we say that the South, might, in a few years, and with no other means than individual enterprise, share with Baltimore and Philadelphia, her just quota of direct trade, we do not include as any portion of it, that great influx of European commerce, which the packet ships pour into the New York market. But this will not satisfy the South. Her vaulting ambition craves something more than the grasping hand of New York has left to Boston, Baltimore and Philadelphia. The commercial grandeur and prosperity of that city, have long attracted her attention. In view of the growing importance and immense advantages of its trade, she has become restive, and would now fain rouse up into a bold and honorable emulation her lethargic spirit of commerce. But in essaying to divert any part of the packet trade into a new channel, the southern merchants must do more than hold conventions merely to take the sailor's oath, to resolve and re-resolve to meet again.

How artificial soever the present course of trade through New York may at first sight appear, it has settled down into regular channels. In attempting to divert it from these channels, by re-opening the natural ones, or creating others, the South, before she proceeds to the undertaking, should perfectly understand the nature of every obstacle to the scheme, in order that she may take her own measures, and be fully prepared to meet and overcome every difficulty as it presents itself. She will find in New York a formidable competitor, if this city have not already reached that point of commercial grandeur which brooks no rivalry. It were well therefore to examine into the causes, which have turned the balance of trade so greatly in favor of New York, and to show by what means that city attained and maintains her commercial supremacy over all other ports in the United States. From this examination, some clue may be gained, to the only means by which the South may reasonably hope to become possessed of similar advantages. If, looking at the present, we refer to the past for information, we will be struck with the fact that commerce has dwindled away at the South, only to flourish the more at the North. If we go a step further, and attempt to trace to its origin, the cause which was adequate to such an effect, we may discover it in the circumstance, that at the South, planting was found most profitable; but at the North, commerce and navigation. Therefore the South grew the cotton, and the North carried it to market. And up to this time, each section has followed the course which circumstances rendered most expedient; and each in its favorite pursuit has taken the lead of all other countries.

Availing herself of the invention of Eli Whitney, the former, by means of the cotton-gin, has, within the last forty years, increased her annual production of cotton from some two or three thousand bales to 1,700,000; while the latter, stimulated by the enterprise of her sons, and the increasing demands of trade has built up a commercial marine, which whitens every sea, and carries the products of American industry into all ports open to her flag.

der the seal of the state department, put on board the New York packets, to be delivered by the captains into his hands. Hence the "consular letter bag."

But of late years, instead of being sealed in the state department at Washington, the consular letter bag has been made up in the New York post office. All who have the *entree* there, and wish to save their correspondents the extra postage paid on ship letters, contrive to cheat the captain of this perquisite, by mailing in the consular bag. Thus it has swelled from a small package, into a No. 1 canvass sack of very portly dimensions. The packet captains found, that the increasing size of this sack affected letter money, somewhat as distance does gravitation; their receipts on account of the latter decreasing, not as the *squares*, but as the size of the bag, increased. On a recent occasion, the consular bag being more than usually large, and the number of English two-pences for letter money unusually great, the captain did not find out the mistake, until he discovered, that, by a mere Yankee accident, the consular letter bag had found its way into the Liverpool post office, instead of the consul's hands. The minister in London and the consul in Liverpool paid up, for the first time, the ship postage with a bad grace, for their complaints were heard in Washington, and Mr. Secretary Forsyth ventured to write the unlucky captain Harris a severe reprimand for his want of patriotism in not sacrificing his time and his two-pences to save those functionaries a few shillings. How the twenty-five cents per sheet, now levied by the steam-ships, and twelve and a half cents by the packets, will go down in Washington, we shall in due time find out.

Some are of opinion, that the establishment of packets was a natural consequence of the course of trade: but we think this a mistaken view of the subject; and certainly, when the project of sailing on the same day of each month, full or empty, was first broached, it was generally thought a piece of mere Quixotism. Many were the half cargoes of turpentine and cotton from New York, and salt and coals from Liverpool, which the owners, for many years, were compelled to ship on their own account, in the face of almost certain loss, in order to be ready for the appointed time of sailing. Moreover, the packets were in operation two years, before they got any decided preference from passengers. But now they serve as the *passenger train*, on the great highway between the old world and the new. The officers of the British army in Canada, and the merchants of British America, think of no other route both for coming from and going to the mother country. Merchants and travellers from the South and West, from Havana, Mexico and the West Indies, make them the great thoroughfare to England and all parts of Europe. Always sailing at their stated times, full or empty, business men began to calculate with certainty on their departure and arrival; the effect of which, in a short time, was to make New York a greater depot for produce and manufactures, and a place of resort for merchants and passengers: so that there is now less difficulty in obtaining cargoes for twelve ships per month, each of three or four times the capacity of the original liners, than there was in filling up the *Amity*, or the *James Monroe*. Thus, New York now carries on a trade in her foreign packets alone of twenty-four of their cargoes per month, equal to 17,000 tons, and sufficient to give constant employment to 140 ships of the size of those which commenced the Havre line.

Independent of these, the fleets of home packets that are continually plying in and out of New York, must carry something to and fro: and it is well known, they keep up an active trade. Their regularity procures them also a preference over other vessels, for freight and passage. Their profits arise from the frequency of their trips and low freights, rather than from large freights and few trips. And, as they have their regular days of sailing, on which they must go, they sometimes carry at a very low rate; and this low rate of itself often induces shipments to and from New York, which otherwise would not be made. Owing to this circumstance, copper ore is sent from Cuba to England via New York; iron ore from New Jersey, and many other articles, which but for the packets, would never have been sent to the New York market.

Their *packet* character gives them another advantage over transient vessels; owing to which the Liverpool packets sail without the expense of ballast, and afford their whole capacity for the transportation of merchandise. Some of them have a standing contract, to carry the copper ores of Cuba, whenever offered, at a fixed rate of freight, which is very low. Others have a similar contract for iron ores from the United States. When these are wanting, the extensive market of New York always affords other heavy articles, such as turpentine and the like, which serve in the place of ballast. The same thing occurs at Liverpool: weighty articles of merchandise to ballast the ship are always to be had there, and which will more than pay for the mere expense of taking in and discharging.

Thus we have shown how the packets, by their occasional low rates of freight, *insure* shipments, and are the means of exchanging many products, which without them would continue dead capital. Instance the Virginia and New York packets, which bring firewood when no freight can be had; the Savannah line, which brings cotton for less than a dollar a bale, and the New Orleans, a vast variety of merchandise, that never would have been sent to New York except for the extremely low freight. By such influences as these, exerted upon commerce in various ways, the packets are daily drawing New York nearer and nearer into the exact focus of foreign and domestic trade.

The facilities to transportation, continually presented by the speed and regularity in the sailing of the packets, caused many goods to be shipped to New York, which were intended for other cities, and oftentimes for foreign markets. These, the home packets and traders are ever ready to receive, and convey to their point of destination. So convenient have the packets become in this respect, that the merchants of Philadelphia and Boston are now in the habit of ordering large quantities of their merchandise, purchased in England, to be shipped in the New York liners. For the same reason, merchants from other cities, which but for the packets, would import directly, have found the most convenient channel for a large portion of their French and English trade, to be through New York. Thus, that city has become an entrepot for English and other goods—a repository for all the great staples of the South, and a mart in which the merchandise of the North is bartered for the produce of the South.

It frequently occurs, that several houses in Boston, Philadelphia, Charleston, Mobile, or New Orleans, send each, large orders to England, for the shipment of merchandise. Not having bottoms of their own, the importation must therefore be made by some vessel al-

ready there. The orders are given without any concert at home, neither is there any between their agents abroad. And though the orders together call for a large cargo, those from the same house, or even from the same city, to any one agent, may not be sufficient to complete the cargo of a ship "up" for the very place. The goods have been purchased and are ready for shipment; the transient vessels advertising for freight, have no fixed day for sailing: that depends on their success in making up a cargo, which may be to-day, to-morrow, or ten days hence—the New York packets are sailing regularly once or twice a week; and home packets or coasters, are plying daily from New York to the place for which the goods are intended; the orders are pressing; *time is money*; consequently the shipments are made in the New York liners. The importer, by directing his goods to be thus shipped, knows beforehand when and by what vessel to expect them. In all of which the merchant finds his advantage. Besides the punctuality with which his orders are met and his importations made, he finds that the packets, by their "floating policies of insurance," offer another inducement to shippers, which transient vessels do not. By these policies, insurance in New York is effected, by the mere act of shipment, upon all goods shipped by the packets, and that too at a *lower* rate than is generally charged by other vessels.

These various operations have made New York the place of remittance to England. Hence, the heavy transactions there in foreign exchange. And these transactions, and their influence on trade exerted in favor of the packets, have made that city the London of America, and Wall street its Lombard street. Of her forty-eight packet ships to England and France, New York, during the boisterous weather of last winter, presented the rare spectacle of only one at her wharves, the value of those on the seas being estimated at twenty millions of dollars.*

Ever since the establishment of packets, New York has been gradually swallowing up the commerce of Philadelphia and Boston with England. We have seen that their merchants now make large importations through New York. Twenty years ago, and there were almost as many ships sailing from Boston, as from New York, to Liverpool. But if one ship sailed last year from that port to Liverpool, it is more than we know. British ships too are almost entirely thrown out of the trade from New York to Liverpool. In the months of December, 1837, and January and February, 1838, fifteen packets, and about as many transient vessels, sailed for Liverpool, but not one English vessel, though freights at this time were twenty-five or thirty per cent. higher than usual.

If then the direct trade of the enterprising cities of Boston and Philadelphia have been so much crippled in their contest for its advantages with New York, on something like equal terms, and before she possessed the facilities which she now enjoys from her packet system and extended commercial relations, what may the agricultural South expect to accomplish by her commercial conventions, which meet to *resolve* and not to *act*?

Such have been the effects, and such is the tendency of the packets on the trade of New York and the commerce of the United States; though some may say that the packet system has been the effect, rather than the cause of increased trade, and this may be true to a

limited extent. But none can deny that the packets, with their regularity, have been found to be a great improvement in the old system of commerce. They are to transient vessels what canals are to turnpike roads. And the packets, like canals, have rather led, or directed, than followed trade.

It may also be urged, that the packets were established from New York, because she had more capital than the other large cities. Were this true of the city, which we much doubt, it was not true of her Quakers; for, it is generally believed that they, when they established the first liners, had a loan from a Quaker house in Liverpool, the agents for that line. Besides, Philadelphia had the Bank of the United States: so that in banking capital, New York was her inferior.

The accessibility of the port may be urged as another reason. But in that respect, Norfolk is far her superior. A thorough examination into cause and effect will convince any candid mind, that it was the noble scheme of the enterprising Friend, Jeremiah Thompson, which made New York the packet port, the emporium of trade, and the centre of negotiation for these United States.

The practical solution of the Atlantic steam problem, by facilitating intercourse alone, will tend greatly to increase at home the power of New York, and to extend abroad her commercial sway. But let the success of Atlantic steam ships meet the just expectations of their most sanguine friends, many and great improvements must be made in the generation and application of steam, before this subtle means of navigation can compete with canvass, in the carrying trade of the ocean. For a long time to come, the steam packets must rely for their profits mainly on the transportation of passengers, small parcels, and letters.

The number of these parcels will rapidly increase. They will consist mostly of light and costly articles of merchandise, such as the demands of fashion and the change of seasons are continually calling for. If one merchant receive by steam ship the latest fashions and newest patterns from France and England, all the merchants of the same city, in self-defence, must do the same, or lose their run of custom. It is to this circumstance—to the advantages of the most rapid communication, that we wish to call the attention of those who have the will and the means to open a direct trade from the South. The trade of Bristol, like that of the South, has dwindled down into a mere skeleton of its former greatness. She has made a bold effort, and sent out her splendid steam ships, to invite commerce again to her wharves, and recover back to her piers the rich argosies of her merchants. In the example of that ancient city, let the South get understanding.

The plan talked of at the South, of sending their vessels, dragging along at uncertain periods, after foreign trade, must signally fail in the present stage of commerce. The South has not the market of the North to receive, nor the fleets of packets of New York to distribute her return, or to collect her outward cargoes; for she must have something more for commerce than raw cotton, tobacco, tar, pitch, and turpentine. The force of her own habits is against her; and to succeed in gaining her portion of direct trade, she must, as we have before said, go vigorously to work, and carry on the heat of the contest, not with the bulky trader, as might have been done twenty years ago, but with the crack liners of the present day.

* See newspapers of the day.

The packets that have been lost during the twenty years' existence of the various lines, are as follows :

In the Liverpool line—the Albion, captain Williams, on the coast of Ireland; forty-three lives lost: the Amity and the Nestor, both on Long Island, by captain Pease; no lives lost: the Liverpool, on her first voyage, on an ice-berg; crew and passengers saved in boats: the Panther, on the Welsh coast; no lives lost: the George Canning, on the New Jersey shore; no lives lost.

In the London line—The Crisis,* never heard of; supposed to have been lost in the ice: the Sovereign, on the New Jersey shore; no lives lost.

In the Havre Line—The De Rham, captain Weiderholt, on Long Island: the Louis, captain Macy, on the New Jersey shore: the Paris, captain Robinson, near Barfleur; and the Francis Depau, captain Robinson, almost within the piers of the harbor of Havre. The loss of the first two was attributed to negligence on the part of the pilots. No lives were lost in any of them.

If it be recollected, that no vessels that traverse the ocean crowd canvass as the packets do; that these various lines cross the Atlantic once every thirty hours, or two hundred and eighty-eight times a year; that they have been running twenty years; that they have carried to and fro not less than 200,000 persons; and that, of that number, and within that time only two shipwrecks have occurred with loss of life, the safety of the packets compared with railroads, steamboats and stages, will appear wonderful. The navigation of the packets calls on the captain for the sailor's best skill and judgment, and on the crew for untiring vigilance.

But if the packets, as we have seen, have operated to the aggrandizement of New York, placing the commercial sceptre of America firmly within her grasp, they have, in other respects, had tendencies of a more general character. In improving naval architecture, they have done much; and in increasing the commerce of the United States, they have done more. In a national point of view, the Thompsons, the Wrights, and Marshall—all of whom, except Marshall, have been gathered to their fathers—are, with their packet ships, scarcely less of public benefactors, than Fulton and Whitney were with their steamboats and cotton-gins.

The influence which the packets have had in naval architecture, is scarcely less important than that which they have exercised in the trade of New York. They, more than other ships, continually called for a combination of capacity to carry, with other qualities no less requisite—speed among the foremost. Constant efforts to produce such combination have effected wonders in ship building, and have adorned our commercial marine with the finest specimens of naval architecture known on the ocean.

In all improvements common to the two, the commercial has taken the lead far ahead of the naval marine of the United States. In the introduction of chain cables; in the economical substitution of iron for hempen cordage, as slings, ties, trusses, sheets and the like; in the modelling of ships, and in the masting and sparring of them, the former have invariably shown the way to public vessels. So far from taking the lead in all such improvements, the navy has lagged behind, and in many instances has actually been "whipped in."

In the introduction of cotton canvass, the South acted

* The Crisis was merely a temporary packet.

as "whipped in;" but generally the officers, not in the navy department, by their united voice, have performed this office.

In the use of steam, the navy is far behind the times. The most skilful of all nations with the commercial steamboat, it is not a little remarkable that the government of the United States should be groping behind all the maritime nations of Europe in the department of steam. Those who of late years have had control over the affairs of the navy, have shown an inertness on this subject, which true patriots cannot comprehend, and which intelligent officers heartily condemn. Present prospects are not much brighter than the past. The advocates of steam for maritime warfare have no cause of gratulation on account of recent changes in the navy department; for it is asserted, and we believe with truth, that the present head of that department is deplorably unenlightened on the subject, and therefore bitterly opposed to steam men-of-war. Must we be whipped into the use of steam also? We pray God, it be not by a voice louder than officers can give, stronger and more dreadful than the South can utter.

Any attempt on the part of a junior officer to invent improvements, or to introduce those of others, single handed, has been frowned down at once. In way of illustration, we might here instance the case of a young officer, who referred to the proper head, the plan of an instrument invented by him to facilitate the finding of longitude by lunar observations. It was referred to the board of navy commissioners, who, although it was founded on mathematical principle, condemned it as a piece of "hardihood," because, forsooth, the materials (those of all the nice nautical, and astronomical instruments,) were liable to expansion by heat, and contraction by cold. Such is the spirit that keeps the *materiel* of the navy behind the times; that has caused so many abortions, and occasionally produces things, instead of ships for the service.

With regard to every improvement concerning ships, ship-building or navigation, if the packets are not the first to present it to the world, they are the foremost to copy and to give it currency.

In the days of the Thompsons, it was thought necessary to put a new ship into the "line" every eight years. But this arose more from the desire to improve and build larger, than from actual necessity on account of wear. It is thought, that the "liners" which are now new, may be continued in the "line" for twelve or fourteen years with perfect safety; for there is a point in size, speed, and accommodation, (and they have nearly reached it,) beyond which it will not soon be expedient to go.

For many years, the old ships of the Liverpool were taken into the London line. But the practice is now discontinued, and within the last four or five years this line has been fitted out with twelve elegant new ships of about 650 tons, and receives as it deserves a larger share of public patronage than formerly. The passengers in it are landed and embarked at Portsmouth.

In the packets of 1818, the ladies' cabin was in the stern of the ship. The first innovation upon this, was made in the James Cropper in 1822, which was fitted with a centre house, and storm house over the wheel. Old sailors have ever had a prejudice to "top hampers;" and it was thought by many of them, the height

of absurdity to lumber up the decks of so fine a ship with such *stuff*. Those ships were sharper, and did not carry as many bales of cotton as the packets of 1838, in proportion to their tonnage, though a bale of cotton is much larger now than it was then; its size having increased in the ratio of four to three. In 1822, the freight going, was to the freight returning, as seven to eight; the usual amount of freight from Liverpool being about £800, and from New York £700. Until the present time freights from Liverpool have always been higher than from New York. In no one instance did the freights ever exceed £1400, till 1834-5, and subsequently.

The packets of the "Dramatic Line," (a new line to Liverpool, in opposition to the old, or "Black Ball Line,") have no cabin below, but a long poop cabin, reaching nearly to the mainmast. Old sailors are against all such innovations. But, notwithstanding, experiment has proven this to be an excellent arrangement; for, without affecting a ship's sailing, her safety, or her behavior as a sea-boat, it gives her the advantage of a larger cargo, secures it more effectually from damage, and protects the passengers from the "ship's smell" and other odors compounded of sulphur, hydrogen, and all the "what nots" of a ship's hold, which are so offensive to "*petticoats*" and invalids.

The difference between the packets of 1818 and 1838, most obvious to landsmen, may be found in the size and cabins of the latter. The size, in some instances, is more than treble, and in all, the cabins are more commodious, and much more extravagantly furnished and found. Barn-yards, cow-houses, soda-fountains, ice-houses and the like, are as indispensable to the packets now, as a jib was to Van Tromp.*

For a long time, the chief object of English merchant builders seems to have been (not to mention the effect of the old absurd way of measuring tonnage,) to construct ships with a view alone to their carrying, regardless of their beauty or sailing. Whereas, the ship builder on this side of the water, has made these the very elements by which he constructs his model, and lays out in such admirable proportions the length, breadth, and depth of his ship.

Were packets of 700 or 800 tons to be built now on the model of the *Amity*, or any of her sister ships, known as the *old packets*, they would draw eighteen feet water or more; they would not carry as much as the packets now do by at least one-fourth. The "*Oxford's*" register is 752 tons; her usual draft of water, when going to sea, is fifteen feet: never more than sixteen feet. She draws less water, and carries five or ten per cent. more cargo to her tonnage than the "*Independence*," and is said to out-sail even that celebrated "*liner*," except in light winds and smooth water. She will carry more cargo to her tonnage than almost any other vessel of the same depth of hold, and with knees, beams, and

keelson of the same size, that has been built even for the express purpose alone of carrying.

The *Oxford*, *Cambridge* and *Burgundy*, and all the ships of the "Dramatic Line" have deep keels, enormous keelsons, flat bottoms, and a large hanging knee under each beam. Their timbers are not so large, perhaps, as the timbers in the old packets; but the difference in this respect is fully compensated by their improved models, by the increased thickness of the planking and ceiling, and by improved methods in fastening. All of these models sail nearly on an even keel, trimming perhaps five or six inches by the stern.

The "opposition" between the "Black Ball" and "Dramatic Line" is very active. Coming and going, they steam to sea, and steam into port, and steam wherever a steamer can be had. They are said sometimes to have thirty or forty men before the mast, and to carry watering engines to wet their sails in dry weather and moderate breezes. Such competition is but the incentive to ingenuity, and leads on to improvement.

Speaking of the improvements introduced of late years in the packets, a gentleman in New York, who is now and has been in the packet business from its commencement, (for many years himself a master,) writes as follows:

"During my being in the line, from 1822 to 1832, I do not think the models of the ships were much changed; but they were increased much in size. The general impression then among merchants, and even among nautical men was, that to produce fast sailing it was necessary to build the ships with sharp bottoms, by giving them much *dead rise*, and consequently abridging their carrying qualities. It has been found, however, that our predecessors were altogether mistaken in their notions of gaining speed by *dead rise*: it has such a tendency to increase the draft of water, as to produce no speed. It was no uncommon occurrence for a ship of 400 tons to have, in those days, twenty-six inches *dead rise*. The present models are altogether changed. Our largest ship, say the *Cambridge*, has about seventeen inches *dead rise*, and were I to build again I would reduce it to twelve inches. The effect of this is to give buoyancy; and with fine ends so as to secure good steering, the ship will evidently go faster through the water. I should not be surprised if this model were to be adopted for vessels of war.

"The packets that have been built during the last few years, are much greater carriers than those formerly built. They are not only larger, but much fuller bodied, caused by less *dead rise*; preserving, however, the same sharpness at each end, and are much *faster* sailers, more comfortable, have less motion, and are much better sea-boats.

"I do not think their timbers so large in proportion, taking into consideration their increased burden and ability, from their peculiar model, to carry much more weight in proportion, without being deep, as ships built ten or fifteen years ago. I have talked much with the builders upon this point, but their defence is (and very justly) the increased fastening—increased number of knees, and much larger—wider keel and keelson—more breast hooks—solid bulwarks about the bows—heavy clamps and bilge pieces—and thicker plank, both for the outside and ceiling, altogether

* We have not within our reach the means of ascertaining the cost of the first Liverpool packet, but it is not probable that it exceeded \$20,000. The recently built packets cost from \$75,000 to \$80,000. Until within a very few years, after a packet had been strained by running, it was customary to take her out of the line, and sell her to the whalers of Nantucket and New Bedford. We have seen many such "blubber hunting" in the Pacific. Thus vessels which were thought no longer safe, or capable of running express on the Atlantic, were found admirably adapted for the perilous voyage of the whaler.

more than compensates for the deficiency in scantling; and another consideration is, that the present model labors and strains less in a heavy sea, than the former ones."

It is unnecessary to add, that every new packet presents some improvement over its predecessor; and that they are always among the first to take hold of any new contrivance, by which power, space, time, or economy is gained.

As in ship building and improvements in the economy of ships, so the packets, if not before, are certainly not a whit behind public vessels in the use of the best and most improved nautical instruments. The day has not long been gone by when chronometers were a mystery in the navy, and midshipmen were told that longitude was a secret with which they had nothing to do. But those times are history, and we hope a brighter era is dawning upon the navy. By a wonderful stretch of liberality, vessels of war are now allowed to have *libraries* on board, (if a row of twenty or thirty works may be called a library,) and the library of one ship is a duplicate of all the rest. By this judicious arrangement, all ships are furnished with copies of the same books, just as every boatwain's store-room is with the same sized blocks, number of coils of "two inch stuff," &c. When these wear out, they are replaced by duplicates, so that the libraries contain the same works now they did twenty years ago.

"Barometers and chronometers," says a well known packet captain, "were used in 1818, when I first entered the line. I also used a sympiesometer for the last ten years, and have the highest opinion of its utility, preferring it to the barometer." Barometers are to be found on board some of the public vessels: sympiesometers in none. We are credibly informed, that the only two of these useful little instruments in the navy, belong to the Exploring Expedition.

The shortest distance between Sandy Hook and Liverpool, is 2887 nautical miles—not allowing for the oblateness of the earth as a spheroid—which would make the distance a little less. The shortest line that can be drawn between the two places is represented on the annexed chart, by the dotted curve B, passing from Sandy Hook through New Brunswick, Newfoundland and Ireland, to Liverpool. But the route traced by this curve is of course impracticable to the navigator, and therefore that is his nearest route which admits of the least deviation from this curve.

If it be borne in mind that the shortest distance, between any two places on the surface of a sphere, is the arc of the great circle intercepted between them, it will appear obvious to our mathematical readers, why the *course* or line of bearing between them is *circultous*, and therefore is not the shortest distance.

When a vessel sails on a direct line of bearing from one place to another, (unless both places be on the equator, or on the same meridian,) she describes a section of a loxodromic curve, which may be defined as a spiral that makes constant angles with all meridians. But when she sails on the arc of a great circle, and performs the shortest distance, she continually changes her course, and passes over every meridian at different angles. Thus, a vessel which should sail the shortest route from Sandy Hook to Liverpool, would leave Sandy Hook by steering N. E. $\frac{1}{4}$ E. When she reached lati-

tude $54^{\circ} 48'$, she would be steering E., and when she made Liverpool, her course would be E. by S. $\frac{1}{4}$ S. The distance by such a route would be one hundred and eleven nautical, or one hundred and twenty-eight, statute miles less than the distance on the line of bearing.

To illustrate more strikingly: a degree of longitude on the latitudinal parallel, say, of 70° South, is $20\frac{1}{2}$ miles. Suppose a vessel in longitude 0° on this parallel, to be bound to longitude, 180° on the same parallel; if she sail but one course, she must steer either east or west, and sail three thousand six hundred and ninety miles. But if she could sail on the meridian of the place by steering south, passing over the pole, then steering north, and thus describe an arc of a great circle, she would arrive at her point of destination after having sailed only two thousand four hundred instead of three thousand six hundred and ninety miles.

The packets, with which time is speed, distance, wind, and everything, have given this principle in the science of navigation a value which the navigator hitherto has seldom allowed to enter into his calculations of "course and distance." Steamboats can better avail themselves of it, and no doubt will render it an element in calculation, whenever the chart shall be spread for the course to be laid out upon it. The boat which shall shape her course always on the arc of a great circle, will thus, without any advantage of speed, accident, or fortune, in her favor, gain four per cent. of the distance between New York and Liverpool, over her competitors, that shall not take into account the difference between distance by a certain curve and by a straight line on the chart. To exemplify this, we have marked off the track of the Great Western on her trip to New York in April. It appears by her "log," that of the fifteen days passage to New York, she had but three days of easterly wind; and that she sailed on this route three thousand two hundred and twenty-three miles. Whereas, after having taken "departure," if, instead of standing to the southward and westward, she had steered to the northward and westward so as to make Cape Clear; then keeping on, or to the north of the curve C, she had made Sable island, and shaped her course thence by the south shoal of Nantucket, she would have shortened her distance two hundred and sixty miles, and might have arrived in New York at least a day and a half sooner: the distance from Bristol by this route being only two thousand nine hundred and sixty-four miles, instead of three thousand two hundred and twenty-three.

The average time for packet passage between New York and Liverpool is twenty-three days going, and thirty-five coming; while between New York and Havre it is twenty-four out and forty-four in. Havre is but one hundred and forty-five miles further than Liverpool: the distance from New York to each being measured on the arcs of great circles. But owing to obstruction, by the interposition of land on the shortest line, the difference between the distances practical in navigation is less than one hundred and forty-five miles. Yet this excess of distance, while it requires only one more day on the passage out, prolongs the homeward bound passage nine days! A cause which, of itself, is by no means adequate to such an effect. The explanation must be sought elsewhere; and we think it

may be found in the route pursued by the Havre packets on their inward bound passage.

Ships from the north of Europe or from Havre are too apt, when they come out of the English channel with a leading wind, to shape their course by the line of bearing of their homeward bound port; when no vessel coming out of the English channel should ever be found to the south of the dotted curve D; no odds what be her port of destination in the United States, whether in Maine or Georgia, or any of the intermediate states, she has no business to the south or east of this line, unless she be driven there by adverse winds.

The doctrine, that a vessel bound from Havre de Grace in latitude $49^{\circ} 30'$ to Charleston in latitude $32^{\circ} 50'$, and longitude $79^{\circ} 48'$, should not only go further to the north than her "departure," but actually continue to the north of it, until she has made 32° of longitude, will, we are aware, appear paradoxical to many old sailors: but the route to the north of this line to New York presents two advantages over what is called the "southern route;" for by the latter the distance is not only greatly increased, but the passage is frequently prolonged in consequence of head winds and calms.

The prevalent winds across the Atlantic, from the parallel of latitude 45° or 50° , to the northern limits of the "trades," are westerly, while above this parallel to the north, they are more variable and less constant from the west. The converse of this is eminently the case in high southern latitudes. The experience of all navigators in the southern seas goes to confirm the fact, that while for many degrees beyond the southern limits of the south-east trades, the prevalent winds have westing in them, to the south of these the winds blow almost constantly from the east. The westerly winds that most prevail to the south of the parallel of 45° or 50° , of north latitude, are no doubt counter-currents in the atmosphere, by which the breezes, that have once served to sweep the north-east trades along, are returned in eddies, to be ready in their turn to serve again as "trades." Consequently, if a vessel from Havre bound to New York keep to the north of her course, she is the more likely to meet with favorable winds.

The Liverpool packets in their northern passage do this, and although they have with regard to the distance to be sailed, but six or eight hours in their favor, they make a difference, in the average time of passage, of nine days; and they gain by the northern passage in three ways, viz: in distance, in wind, and in currents. The set of the gulf stream is said to reach into the Bay of Biscay. The Liverpool packet, on her northern passage, avoids the effect of this, (however feeble,) while the Havre packet, on her southern passage, encounters the full force of it. The "log" of the "Great Western" shows that in her first trip, (the track of which is laid down on the annexed chart,) she encountered south-easterly currents, which in the whole distance set her back one hundred and seventy-five miles.*

When the Liverpool packet puts to sea with the wind from the south or south-west, she should straightway make a fair wind of it, by running out through

the North channel; the distance from Liverpool to Sable island, and consequently to New York, through the North channel, being only twenty-five miles greater than the distance to the same points by the south coast of Ireland. Besides the advantage which she derives, by thus making a fair wind of a head one, she has the additional advantage of being further to the north, and consequently more chances of meeting with favorable winds.

The probabilities of a quick passage to New York, for a vessel sailing out of Havre or Liverpool with a head wind, are greatly increased by her standing off on the larboard tack, after she has cleared the land; even should the wind be so as to allow her to lay up on the starboard tack two or three points nearer to the direct line of bearing of her port, the other tack is to be preferred on account of distance, and the probability of favorable winds. The northern should be preferred as the homeward passage at all seasons of the year, unless with a leading breeze, except perhaps in April; May and June, when the winter has broken up, and so made the route dangerous on account of icebergs and floating fields of ice.

By an inspection of the annexed chart, it will be seen that the gulf stream describes in its course almost exactly the section of a great circle, such as the dotted curve D represents; and that all vessels bound out of Boston, or any port from the south of it, to England or to Europe, must pass to the south of Sable island, on account of the obstacles and dangers to the north of it. And furthermore, (the dotted curve D showing the shortest distance between any point on it and the Gulf of Florida,) that the nearest route for all vessels coming out of the Gulf of Mexico, through the Gulf of Florida, or from any port on the Atlantic coast of the United States, and bound to England, or to France on the Atlantic, or anywhere through the English channel, to the north of Europe, is down the gulf stream, and to the west and north of this curve.

If vessels could sail on any course without regard to wind, this curve would represent the extreme eastern and southern limits of navigation for all traders (always excepting those to the Peninsula or Mediterranean,) bound from the United States, or coming out through the Gulf of Florida, to England and all parts of Europe. The tracks of all vessels in the navigation of this route, would be convergent as far as the longitude of Sable island; entering into the narrow limits between this island and the curve D, as into a lock, their course would lie between C and D, which may be considered as a grand canal across the Atlantic, along which the richest products of the earth are carried. This at all times is the best route for steamers.

The curve C represents the northern, and D the southern limits of this commercial canal. New York is situated on the margin of it, commanding its resources, and exacting tribute from all who travel upon it. The ships from the South, without going much out of their way to the great European markets, can call there as at a nearer market; or touch there to complete, tranship, or commute their cargoes.

It is not a little remarkable, that the nearest route to Liverpool, from Charleston and from New York, should be, for more than two-thirds of the way, exactly in the same track on the curve C. And Charleston, or the

* The log shows that sometimes her latitude and longitude, per observation, are in advance of the "dead reckoning," and vice versa. When these two, without any apparent cause, are found to differ much, such difference is usually ascribed by navigators to currents.

South, in attempting to *force* a direct trade with Europe, has many difficulties in her way. The advantage of ships, of seamen, the force of custom, and the example of trade, besides exchanges, and the various influences that follow in the train of commerce, with commerce herself, are all in favor of New York.

Those who first established the packets, have placed New York on a commercial eminence, and put a sceptre in her hand, which she delights to hold; and she will neither come down from the one, nor surrender the other, until the balance of trade be lost to her ships. The plying of steamboats across the Atlantic will but make more absolute her sway over the commerce of the United States; for, besides making New York the channel of direct communication with England, both by letter and in person, they will further aggrandize that city in her commercial importance by bringing bills on America into the English market, and setting on foot a regular system of exchange with this country, similar to that between England and all parts of Europe. And New York will be the centre of negotiation for all these bills.

If the South would take away this sceptre and divide commerce with the North, she must be prodigal of her wealth, and attempt boldly—for the odds against her are fearful. The contest now cannot be carried on under sail, ship against ship; New York has become too skilful in the manœuvres of her fleets—too powerful and too swift in the chase with her packets. She must be attacked in her high places, and steam must be the weapon.

Havre is ripe for a steam enterprise across the Atlantic. That town is ready to co-operate with any city in the Union, and no doubt would receive with open arms, a proposition from the South, to run from Norfolk a line of steam packets, which, going and coming, might touch at Portsmouth, as the London packets do, to land and embark passengers. It may be perceived by the chart, that Portsmouth is but a step out of the direct track of a steamer to Havre; and that, by steam, Norfolk is only one hundred and eighty miles further than New York, from either place. But whatever be done, must be done quickly. Without the help of steam, and the improvements of the day, the commerce of the South must continue to dwindle.

The South has taken an honorable lead in Atlantic steam navigation. She it was, who, twenty years ago, sent the first steam vessel across the Atlantic, and thus acted as pioneer to the splendid steam enterprise which is now going into operation with a success that astonishes as much those in the old as it delights those of the new world.

Let the South bring her strong men to the enterprise, and get up, as we have said, her line of splendid steamers to England and France; and let the first blow be aimed to divide with New York the facilities of communication; and then withdraw from her, if she can, a part of the travel, and make the port of Norfolk the centre of exchange for New Orleans and the South. When she has done this, let her throw herself behind her cotton bags, and then with her ships make the gallant stand. And if, after all this, the proud spirit must succumb—if the South must sink into her, so called, vassalage to the North, and be ruined by her tribute to New York, her sons may say of her, as Wirt said of the General Armstrong privateer, "she has graced her fall, and made her ruin glorious."

WINTER.

I.

Spring is the time for joy;
For gushing from the heart's deep-welling springs,—
For the first fluttering of the soul's young wings,
Which the long sleep that winter's numbness brings,
Could chill, but not destroy.

II.

Summer's the time for love;
For the full heart to worship and adore—
For the strong river of the spirit to pour
Its flood of praise and gratitude before
The Lord of Heaven above.

III.

And Autumn brings its hour,
To gather in the harvest of the soul;
That peace of mind the world could never dole
To those who bend beneath its bad control,
Or court its withering power.

IV.

But, Winter! who hath sung?
What feelings, what affections in the deep
And hidden fountains of the heart asleep,—
What thoughts that now in frozen channels creep,
Thy power should lend the tongue?

V.

Thy clouds and silent snows,
Wrapping the hills in pall and winding sheet—
Thy whirling storms of wind and driving sleet—
Thy solemn voices where the dark pines meet,
And the keen night-wind blows;

VI.

Thy varied household scenes—
Thy fireside dreams, and the strange visitings
Of mirth and wo—of affluence, that clings
To selfishness—or want, that merrily sings,
Content with scanty means:—

VII.

These, Winter, wake my soul
To look beyond the present, and to view
In the dim future many a sky of blue—
Many a bright field of sunlight, glimmering through
The clouds that backward roll.

VIII.

Then let *thy* voice be—FAITH:
Let spring-time call for joy—Summer for love;
Let Autumn whisper peace, like murmuring dove;
But thou, O Winter, pointest us above,
And bid'st us look through death!

January, 1839.

C. P. C.

LINES, WRITTEN AT MIDNIGHT.

BY CHARLES M. F. DEEMS.

I.

How slowly through the distance break
The sounds that tell the midnight hour!
Time, swiftly hast'ning, seems to speak
His warning from yon distant tower;
And to the sadness of his tale,
The response is the low wind's wail.

II.

But, hark ! it is a funeral chime,—
The passing moments now have led
The youngest child of father Time,
And laid him with the buried dead :
And who will stand upon the verge
Of that deep grave to sing his dirge !

III.

Midnight ! it is that fearful hour,
When, as we learn by nursery lore,
Spirits malign exert their power,
And walk our slumbering planet o'er :
Dark superstition stoops to hear
Their steps, and quakes with restless fear.

IV.

It is a pleasant hour to think,
When all around is calm and still ;
The musing spirit then may drink
At thought's unfailing fount, its fill—
All nature breathes a harmony
That sets the captive spirit free.

V.

Our quiet village wrapt in sleep,
From its still breast gives not a breath,
To tell of those who vigils keep—
But all is calm and still as death.
The breeze, as it sweeps gently by,
Whispers a mournful lullaby.

VI.

How many a young heart beating there,
In airy dreams of pleasure roves,
And freed from waking pain and care,
Hovers around the form it loves ;
Beauty's bright eyes are sealed in sleep,
While Loves around their watching keep.

VII.

Yon mountain range, with lofty top,
Throwing its girdle round our earth ;
The pensive moon, in fullness up,—
To what sweet thoughts do these give birth !
"The milky baldric of the sky,"
Can constant themes of thought supply.

* * * * *

Carlisle, Pa., 1839.

THE SPECTRE HORSEMAN, OF BOSTON.

The evening before the battle of Lexington a strange horseman galloped through the streets of Boston, crying "Woe, woe ! To arms ! to arms !"

Slow sinks the sun o'er Brighton's blooming hills,
And tints with fire the trees—with gold the rills ;
And while the last faint ray of mellow light
Rests on the gray-hair'd mountain's loftier height,
Peals o'er the deep the hoarse-ton'd evening gun,
And loud proclaims the busy day is done.

Now England's banner on the rampart falls,
And bugles echo 'mid the fortress walls ;
While round the flag-staff willing soldiers come,
To speak their presence to the empty drum ;
And now the last wild strain of martial life,
Has rolled away the accursed rank of life.

On yonder common, Boston's noble boast,
Slept on their arms the ever watchful host ;
And round the lines the weary sentry trod,
And thought of home or held commune with God ;
While polar fires lit up the northern sphere,
And glanced on snowy tent and gilded spear.

Night came apace, with darkness deep and long,
And wrapt the city's spires and busy throng ;
In dreadful gloom the streets and alleys slept,
Through which the lone civilian cautious crept ;
While loud and clear the old North's steeple told
The note of time—the night was getting old.

And now the moon, slow rising o'er the wave,
A silver softness to the scenery gave :
Bright glowed the spires—the bay in beauty shone ;
The waves, the set—the isle, the jewel stone—
The dark old man-of-war, a genii king—
The floating skiff, an angel's flashing wing.

The lordly Gage, upon his couch of gold,
Like Montezuma, agonizing rolled ;
Then starting up, and creeping like a mouse
Through the dark chambers of the Province House,
He stept upon the balcony that hung
Above the Royal Arms—when I was young.

And there, his head inclining on his hand,
He mused destruction to a "rebel land."
Thus dreaming o'er the narrow court that lay,
In moonlight glorious as the noon of day,
He hears—he starts—with terror in his eye—
What sound is that ? what means that awful cry ?

Along the street he hears the ring of steel,
As though the pavement felt a courser's heel.
"It is, it is, it nearer, louder comes ;
"And there, the picquets beat their warning drums
"Who can it be ? Such speed denotes surprise !
"Up ! all who love me ! Howe, Burgoyne, arise !"

Onward the horseman spurred his charger white :
Pale was his face—his burnished armor bright ;
A waving plume of raven deck'd his crest,
And the pale moon flashed upon his breast ;
While from his charger's steel-clad hoofs there rolled
The sparks of fire that speak the rider bold.

His look was brighter than the eagle's gaze—
And now before the balcony he stays,
And hollow rings his voice amid the night,
While round him glares a flood of dreadful light ;
His motion up, his words come wild and clear,
And Gage in terror lends a trembling ear :

"On Bunker's Hill the weeping patriot stands,
And prays the God of battles for his shield ;
The rude militia gather round their brands,
And seek to know their duty in the field :
The truant school-boy feels the holy fire,
And asks his rifle from his grey-hair'd sire.

"The blooming daughter bids her brother go
To free his country from a blighting foe ;
The anxious mother o'er her husband bends,
And up to Heaven her prayer for safety sends ;
The plough-boy leaves in furrowed field his team,
And e'en the sick man knows the patriot's dream.

"From sylvan hills to cliffs that line the deep,
The beacon fires like flashing meteors leap;
On earthen mound the patriot banner gleams,
And high o'er all the startled eagle screams;
The powers shall fail who seek to chain the mind—
And whirlwinds they shall reap who sow the wind.

"Woe! woe! to Britain! trembling tyrant hence;
No longer mock ye, with a vain pretence;
This glorious land, by Pilgrims' children trod,
Shall own no master but the living God!
Up all ye drones! ye cankering spirits fly!
Hear while ye may—to-morrow you may die!"

Then couching in its rest his pondrous lance,
He waves his plume and gives a lightning glance:
Down, down the midnight street he holds his way—
Around his charger's heels the lightnings play;
High o'er the house-tops shoots the awful glow,
And faint and fainter rings his cry of woe.

The awe-struck leader stands with list'ning ear;
Before him sweep the mourners and the bier;
Beside him yawns the soldier's hasty grave,
And drums low beat the dead march of the brave.
He starts! o'er western hills the night has curled,
And morning's crimson bathes a waking world.

The night has pass'd—the spectre gone;
And, hark! upon the tented lawn,
From idle lounge and beauty's charms,
The pealing bugles call to arms!
The die is cast—and with the sun
Night sinks on blood-stain'd Lexington.

And who was he, who 'mid the gloom,
Declared the vile oppressors' doom?
Whose armor spake of olden day,
When belted knights held honor's sway?
A spectre he, from noble urn,
The Bruce—the Bruce, of Bannockburn.

Washington, January, 1839.

J. E. D.

CURRENTE-CALAMOSITIES,

TO THE EDITOR.

FROM THE AUTHOR OF "THE TREE ARTICLES."

Now the truth of the matter is this, my dear Messenger: Some perhaps much too partial friends, have seen fit to suggest the continuation of those sylvan articles, some seven or eight of which have already appeared in your pages from my pen. They throw in my teeth the following passage from the closing paper of the series, published in your December number, and insist upon my using up my material *instantly*: "A mass of pencilled passages, marked in my books, by numerous *dog's-ears* offer themselves, for quotation," &c. &c. If you agree, I certainly can have no objection, other than the fear of boring the reader beyond his bearing; and so, if he will promise to cry "*oh! jam satis!*" when he finds me "coming it *rather* too strong," as Samivel Veller would say, here goes!

But I shall not confine myself to the forest in this new series of papers. I am "out of the woods," and

shall "hollo" in what vein I choose: discoursing, as freely of the "sermons in stones, books in the running brooks, and good in every thing," as I have hitherto done, and shall yet do, of those eloquent "tongues in trees," some of whose teachings I have endeavored to translate, for the benefit of the indulgent reader.

And, by the bye;—did you see that most horrible of horrid puns, in what one "W" has written in the National Intelligencer, about your sylvan correspondent? He intimates that I have raised in his mind the presumption, that I am lineally descended from Titus Oates,—"*because vy?*" Because I have written *Trees-on!* Is not that too bad? *What-a-stone* must have been the heart of the perpetrator of such a pun! But all this, episodically.—*Revenons a moutons.*

Here is a string of the dog's-eared passages alluded to, which were turned down for use, but were not used, in the tree papers. I take them as they present themselves.

1. A LANDSCAPE, FROM POPE.

"See Pan with flocks, with fruits Pomona crowned,
Here, blushing Flora paints the enamelled ground:
Here, Ceres' gifts in waving prospect stand,
And, nodding, tempt the joyful reaper's hand."

2. A NIGHT SKETCH, BY GAY.

"But when the gloomy reign of night returns,
Striped of her fading pride all nature mourns.
The trees no more their wonted verdure boast,
But weep in dewy tears their beauty lost."

3. FROM "THE GRAVE;" BY BLAIR.

"Oh! when my friend and I,
In some thick wood have wandered heedless on,
Hid from the vulgar eye, and sat us down,
Upon the sloping cowslip-covered bank,
Where the pure limpid spring has slid along,
In grateful errors, through the underwood,
Sweet murmuring; methought the shrill-tongued thrush
Mended his song of love," &c.

4. AN INVOCATION; BY THOMSON.

"Ye woodlands all, awake! A boundless song
Burst from the groves! And when the restless day,
Expiring, lays the warbling world asleep,
Sweetest of birds! sweet Philomela, charm
The listening shades, and teach the night His praise!"

5. A PENCIL DRAWING, BY MALLET.

"Far in the windings of a vale,
Fast by a sheltering wood,
The safe retreat of health and peace,
An humble cottage stood."

John Dyer, the author of "The Fleece" and "Grongar Hill," is a true sylvan. He worships Pan with the true devotion of an orthodox believer. See!

6. A MOONLIGHT SCENE, IN FIVE LINES.—Dyer.

"When many-colored evening sinks behind
The purple woods and hills, and opposite
Rises, full-orbed, the silver harvest-moon,
To light the unwearied farmer, late afield,
His scattered sheaves collecting," &c.

7. A GLIMPSE FROM GRONGAR HILL.—Dyer.

"Below me trees unnumbered rise,
Beautiful in various dyes:
The gloomy pine, the poplar blue,

The yellow birch, the sable yew,
The slender fir, that taper grows,
The sturdy oak, with broad-spread boughs."

8. THOMAS WARTON SAYS:

"Musing through the lawny park,
The lonely poet loves to mark
How various greens in faint degrees
Tinge the tall groups of various trees.
While, careless of the changing year,
The pine cerulean (?) never sere,
Towers distinguished from the rest,
And proudly vaunts her winter-vest."

9. THUS LANGHORNE:

"Has fair Philosophy thy love?
Away! she lives in yonder grove!
If the sweet Muse thee pleasure gives,
With her, in yonder grove, she lives!
And if Religion claim thy care,
Religion, fled from books, is there;
For first from Nature's works we drew
Our knowledge, and our virtue too!"

This should have been selected as the standing motto of "the tree papers." So apt!

Here is a fine passage, from "The Village Curate," a poem by James Hurdis, an English poet, who died in 1801.

10. A BOOK TO READ.—Hurdis.

"——Let us read

The living page, whose every character
Delights, and gives us wisdom. Not a tree,
A plant, a leaf, a blossom, but contains
A folio volume. We may read, and read,
And read again, and still find something new
Something to please, and something to instruct."

11. A PRETTY SIMILE.—Hurdis.

"But mark, with what peculiar grace yon wood,
That clothes the weary steep, waves in the breeze
Her sea of leaves!"

12. THE TRUE WOOD-FEELING.—Hurdis.

"How peaceable and solemn a retreat,
This wood affords! I love to quit the glare
Of sultry day, for shadows cool as these:
The sober twilight of this winding way
Leta fall a serious gloom upon the mind,
Which checks, but not appals. Such is the haunt
Religion loves,—a meek and humble maid,
Whose tender eye bears not the blaze of day."

"The farmer boy" was a true poet of nature. Hear him!

13. WOODLAND CONTENTMENT.—Bloomfield.

"Welcome silence! welcome peace!
Oh! most welcome, holy shade!
Thus I prove, as years increase,
My heart and soul for quiet made.
Thus I fix my firm belief,
While rapture's gushing tears descend,
That every tree and every leaf
Is moral Truth's unerring friend.

"I would not, for a world of gold,
That Nature's lovely face should tire;
Fountain of blessings yet untold!
Pure source of intellectual fire!"

Fancy's fair buds, the germs of song,
Unquickened midst the world's rude strife,
Shall sweet retirement render strong,
And morning silence bring to life!

"Then tell me not that I shall grow
Forlorn,—that fields, and woods will cloy:
From Nature, and her changes, flow
An everlasting tide of joy!
I grant, that summer heats will burn,
That keen will come the frosty night,—
But both shall please,—and each, in turn,
Yield reason's most supreme delight.

"Build me a shrine, and I could kneel
To rural gods,—or, prostrate fall;
Did I not see, did I not feel,
That one Great Spirit governs all.
Oh Heaven! permit that I may lie
Where o'er my corse green branches wave;
And those, who from life's tumult fly,
With kindred feelings press my grave!"

There's "the baker's dozen!" Perhaps I will give you another batch, (to continue the metaphor,) hereafter. At present, I have a word or two of my own to say to you.

You may remember that the article you did me the honor to publish in your December number was dated at Newburyport, in the state of Massachusetts. I had intended to say something therein of that most beautiful of spots, but feared to tire the reader's patience. It is my native town, and rich, in my estimation, with a thousand treasured recollections. Beautifully situated upon the banks, and near the mouth, of one of the loveliest of American rivers, the Merrimack, down towards the margin of which it slopes gently, it affords a fine view from the river of its regularly laid out streets, and handsome buildings. It is about a mile in length, with a pretty and populous village adjoining it on each extremity, through all of which for some miles extends a wide street, bordered with fine old elms and sycamores, some of which are of enormous growth, and most affluent profusion of foliage. The upper side of this long street is the highest part of the town, and forms the summit of the hill upon which the whole is laid out, amphitheatrically. This ridge is chiefly occupied with dwelling houses of tasteful architecture, surrounded by verdant parks, and ample gardens, with an abundance of trees. There is a beautiful public common upon this street, in the rear of which, deep sunken in the midst of a circular range of hills, is a little lake, famous in that vicinity as the skating ground, for more than one century, of more than four generations. While I was enjoying my late visit to these scenes of my childhood, I derived much enhancement of that enjoyment from watching the progress of an improvement then going on, upon the margin of this mimic lake, which was peculiarly gratifying to my feelings and my taste. They were extending the promenade in front entirely round the pond, so as to take in the entire amphitheatre of hills, as a part of the common. This done, the citizens were called on, each who might wish to do so, to set out, his favorite tree upon the newly laid out grounds. The call was responded to with prompt alacrity, and ere I left the

banks of the Merrimack, the whole of the new promenade was lined with a double row of thrifty young trees, each planted by individuals, to be cherished as the legacy of one generation to another. This may be called the true *practice* of what your "tree" correspondent has so long been *preaching*. May the preaching and practice alike increase! There certainly is need enough of both, in this delightful, wonderful, matter-of-fact country of ours!

Adieu for another month!

J. F. O.

BEAUTY.

WRITTEN FOR MISS EMILY S.—Y.

"Where is Beauty? where?"

Earth's thousand voices cried;
And an answer, mute, filled earth and air,
From nature, far and wide.

The Alpine flower sprang up
High, in the cleft rock's side,
And the tulip lifted her gorgeous cup
By the dahlia—Tyrian-dyed.

And rose with graceful care
Unveil'd her glowing breast—
Gems of the morning glittering there—
Like a maid for bridal dress.

"Where is Beauty? where?"
Cried echo from her cell;
And the forest wav'd, and the streamlet there
In a silvery cascade fell.

The light clouds, floating high,
Threw shadows o'er the green;
And an unseen hand drew out on high
The bow of tinted sheen.

The setting sun-beams threw
On earth a livelier tinge,
And the clouds of a royal-purple hue
Were edged with a golden fringe.

Then autumn's wondrous wand
Touch'd forest, hill and sky,
And sky and hill and forest land
Did glow most gorgeously.

"Where is Beauty? where?"
Earth's eager ones still cried;
And the lover with exulting air
Led forth his beauteous bride.

The mother gazed with joy
On the babe at her breast that lay,
And glanc'd at the shouting, gold-hair'd boy,
With the butterflies at play.

* * * * *

Whirlwind and plague and storms,
Revell'd in earth and air,
Midst Beauty, in its thousand forms;
And Death stood victor there.

"Where is Beauty? where?"

Shall none its image find?"

Earth cried—and Heav'n responded there,

"'Tis in the immortal mind!"

Maine.

ELIZA.

THE BONES OF LEIPSIC.

"A ship laden with bones from Hamburgh arrived at Lonsmouth, on the 25th of Oct. 1839; the property of an agriculturist of Morayshire, and intended for manure. The master of the vessel states that these bones were collected from the plains and marshes of Leipsic, and are part of the remains of the thousands of brave men who fell in the sanguinary battles fought between France and the Allies, in Oct. 1812."—*Imperial Magazine, London, 1839.*

The bones of the heroes! yes, bear them away
From the spot where they fell on that blood-flowing day,
When Leipsic's wide marshes and trampled plains rung
To the cannons' wild music as dreadful they sung;
The captain and soldier no longer are known—
No crest speaks the rank, and no gold gilds the bone.

And England,—the power that o'er Waterloo roll'd
Her legions undaunted in crimson and gold,
And bore to the isle, in the midst of the wave,
The ruler of princes, the brave of the brave,—
Has now their white bones on her cold hill-sides spread,
Gathered up by the boor from the field of the dead.

Ha! there lies the arm of a prince of the blood,
And there a tall grenadier rests in the mud,
And yonder the spider his light web has spun,
Round the skull of the chief, and the breech of a gun;
The worm has dined well with the wolf and the raven,
And the blood of the bold tinges that of the craven.

And say, ye philanthropist, shall not the dust
Of the bones of ambition and rapine and lust,
Bring good to mankind, when they fatten the soil,
And hasten the end of the husbandman's toil—
Make the tall grass to wave and the moss rose to bloom,
Where floated the banner and fluttered the plume?

There leave them to moulder, both horseman and horse,
They slumber as sound as on rampart or fosse;
And plainer the lessons they teach shall be read,
Than when they lay whitening the field of the dead:
There pride may be taught, how the proudest have sank,
When the wolf howled their dirge as the warm blood
he drank.

And when the last trumpet of terror shall sound,
And the dead muster strong from the deep and the
ground—

When the Book of Offences is opened before,
With its pages of crimson and letters of gore;
Then ye shall be counted more worthy than they,
Who on the lone battle-field mouldered away.

Oh Leipsic! before me I see thee appear,
With thy hosts rushing on in their downward career;
Thy eagles of gold, that in darkness grew dim,
Thy death note, that pealed from the cannon's dark rim,
Thy onset, thy meeting, thy slaughter, thy fall,
Thy conquerors' shout, and thy bugles' recall.

Washington, 1839.

J. E. D.

DESULTORY SPECULATOR.

—
ACTORS.

It is a curious fact, that the greatest actors have been produced in those nations, where they have been the least esteemed as men. Among the Romans the theatrical art was carried to a higher state of perfection than among the Greeks, and the Romans held actors as slaves, while in Greece they were freemen, and devoted to a profession which was far from being considered as dishonorable. Among a people so lively, ardent, and spirited, this art made rapid progress. Eschylus is said to have performed in his own tragedies, and players were sometimes elevated to the offices of state. Among them may be found ambassadors and ministers. Aristodemus, the actor, was sent by Athens, as one of the ten ambassadors, to treat with Philip of Macedon, who did not look upon it as offensive. The most ancient Greek tragedian of whom we have any knowledge, was Archelaus. Lucian says of him, that when in Abdera, he personated the character of Perseus in the *Andromeda* of Euripides, and the effect of his performance was such that almost all the spectators were affected by a species of insanity, and ran about the streets for several days animated by the same passions, repeating the same gestures, and exhibiting the same fury as Archelaus. Satyrus, who distinguished himself as an actor, after Archelaus, though his acting had not the same effect, was, nevertheless, of great service to Demosthenes. It was he who corrected the defects of his elocution, and who taught him finally to declaim with as much elegance as himself. This celebrated orator had been ignorant of the art of giving force and grace to his orations, by a just and impressive elocution. His enunciation was embarrassed, painful, and defective, and he was often hissed in the midst of his finest discourses. Satyrus took him in charge, and succeeded in removing all his defects of elocution. Greece, however, does not seem to have produced any actor of very great eminence in his art, while the Roman writers speak in high terms of their *Æsopus* and *Roscius*, though the profession itself was regarded as infamous. Cicero has given to the actor the title of *artist*; and the two players referred to, by their superior talents and skill, caused the unjust humiliation of their state to be forgotten. These two men, the one in tragedy, and the other in comedy, attained to great distinction and wealth. Their income must have been immense. *Roscius* is said to have received daily about one hundred and eighty dollars. *Æsop* gave an entertainment on one occasion, at which a single dish was served up which cost from three to four thousand dollars, and he died worth several millions. It is related of this actor, that from the impulse of genius and enthusiasm, he so identified himself with the character he was personating, that he slew an actor near him, whom he mistook for *Thiestes*. Disgraceful as this art was esteemed, however—for the Papian law absolutely interdicted the marriage of Roman senators with women who had ever exhibited themselves on the stage—Roman knights were sometimes found willing to appear on the boards, even before the downfall of the republic. After this, theatrical enthusiasm continued to increase, and the

dramatic art to be more highly esteemed, and the emperors themselves would occasionally condescend to dispute the crown with a gladiator or a player. History informs us that the empress Domitia died of love for an actor named Paris. Caligula made Apelles a minister of his intimate councils; but this monster, it is well known, was very capricious—for, having heard on one occasion, the cries of a poor player, whom they were flagellating, as was then the custom, he thought his voice so very melodious, that, to prolong the pleasure he experienced, he caused the flagellation to be repeated. In the reign of Constantine, after he had embraced the christian religion, the dramatic art was denounced by the councils, and players were proscribed. St. Leo, in his epistles, has declared, that theatrical spectacles having been invented to corrupt the heart and destroy the soul, no one can doubt but that the Devil assists in person, in all these exhibitions—and in all past ages players have been pursued by the thunders of the church. But notwithstanding this hostility, theatrical representations were at last introduced into cathedrals and monasteries. Scriptural subjects were frequently thrown into a dramatic form during the middle ages, and exhibited by monks. These were called **MYSTERIES**, or the Sacred Comedy, and originated, according to Warton, in the following manner. At the fairs, established by Charlemagne in France, and William the Conqueror, and his Norman successors in England, the merchants, for the purpose of drawing to them large assemblages of people, employed jugglers, minstrels and buffoons to amuse those who attended. The arts of these men were gradually extended and improved, till the clergy observing that these annual celebrations made the people less religious, by producing idleness and a love of festivals, proscribed the amusements and excommunicated the performers. But finding that little or no regard was paid to their censures, they determined to take these recreations into their own hands, and turned actors themselves, and represented stories taken from the Bible. Music was introduced into the churches, which were employed as the theatres, for the representation of holy comedies or farces, such as the festivals among the French called the *fete des Foux, de l'âne, et des Innocens*, which became great favorites. Thus originated the **MYSTERIES** or Sacred Drama, which is said to have given rise to the first conception of Milton's sublime epic, the *Paradise Lost*. Warton also mentions a curious tragedy, written by a Jew named Ezekiel, in which the principal characters were Moses, Sapphira, and God, from the Bush. It was the first scriptural drama, and written after the destruction of Jerusalem, to animate, Warton supposes, the dispersed Jews with the hopes of a future deliverance. Moses delivers the prologue, and his rod is turned into a serpent on the stage. The following is a brief description of another of these religious dramas. The play opens with songs—a little boy first enters, and after wishing the audience great pleasure from the exhibition, retires. The Devil then makes his appearance, who drives before him, with a whip, a poor old man, who makes known to him his infirmities; but the infernal spirit, instead of being moved by pity, twists a serpent round his neck, which holds an apple in his jaws. The old man sinks senseless on the ground. DEATH comes, and is preparing to carry off the body, when JE-

as CHRIST rushes before it, and with a blow of the cross puts Death and the Devil to flight. He then touches the old man, who is Adam, and who revives by the power of his touch—puts a crown upon his head, and after making him repeat his prayers, carries him to heaven. The second act exhibits the ten commandments, and the third the sacrament of baptism. Tartarus is then taken, stripped of his habiliments, cast into a cave, and bathed in several pails of water. This is followed by a number of buffoneries—and when the play ends, the same little boy reappears and makes his respects anew to the audience.

The church has always denounced theatrical amusements and those who have made acting a profession. Christian burial has been denied to them—and even in the present century a cure of Paris refused his prayers and church to a beautiful *danseuse* of France. Yet, what will appear somewhat singular, the stage, after all, has furnished a greater number of saints than most other professions. The lawyers can boast of St. Ives—the physicians and surgeons, of St. Comes and St. Damian—the notaries, of St. Crispin, the protector of shoemakers; while the players claim one martyr, St. Gelasin—three male saints, namely saints Genest, Ardalion and Porphyrius, and one female saint, St. Pelagius. The latter flourished in the fifth century, and exercised her art at Antioch. She was converted by the preaching of Nonus, and, from that moment, renounced the world, its pleasures and pursuits, sold her property, and distributed the proceeds among the poor. She left Antioch, dressed in male habiliments, and, taking the name of Pelagius, retired near Jerusalem, upon the mount of Olives, where she lived as a recluse and led a very austere and religious life. The fame of her good works spread in a short time far and near, and she became in the end quite a celebrated saint. It was not, however, till after her death that her sex was discovered. Genest lived in the reign of Dioclesian who ordered him to exhibit the christian mysteries, for the purpose of turning them into ridicule. One day, as Genest was exhibiting the ceremonies of baptism, he is said to have been suddenly illuminated by an internal light, and publicly declared his wish to be baptised. This was at first supposed to be a mere feint to exhibit his character with greater effect. He was made to perform all the usual ceremonies—re-clad in a white robe, conducted before a statue of Venus, and ordered to worship it. But Genest openly protested that he was a real christian, and would not worship either prostitutes or wooden idols. This afforded much mirth to the audience at first, and the emperor himself supposed it was a mere piece of pleasantry in the actor; but as soon as they found he was in earnest, the lictors were ordered to advance and he was publicly whipped on the stage. Genest, however, remaining firm to his new faith, Dioclesian sent him to the prefect, and he was put to the torture; but nothing could vanquish his constancy, and he was finally decapitated in the year 303. Porphyrius and Ardalion, both players, obtained the honor of martyrdom in the same manner. They were both converted while representing the christian mysteries, and both beheaded. It was the opinion of St. Thomas that the dramatic art had nothing unlawful in it, and he cites the authority of St. Paphnucius, who asserts that it was communicated to him in a reve-

lation that an actor would participate with him in the joys of Paradise.

Modern nations do not seem to be less prejudiced against the professors of the dramatic art than the ancients. France has produced perhaps the greatest number of skilful and distinguished actors, and yet a strong prejudice exists against them in that nation. In England, however, this prejudice is not carried to quite so great a length. Actors of talent are sometimes received into the best society, and many into families of high rank. Lord Chatham corresponded with Garrick, and his ashes repose in Westminster Abbey, where those of Byron have been refused admittance.

In this country public opinion is not so favorable to the professional player as to the professor of the fine arts; although I do not think the one is less an artist than the other, or less entitled to the respect and admiration which genius and skill in those arts are calculated to beget. A little of the old puritanical feeling still subsists among the descendants of those who brought with them the strong prejudices which formerly existed in England against players; but this is beginning to wear rapidly away, and a more liberal, enlightened and rational sentiment respecting them and their profession now very generally prevails. The most distinguished for talent are admitted freely into the best society, and admired and respected in proportion to their genius as artists and their character as men. But in the United States, where the most splendid field is opened to legal and medical talent and industry, the occupation of a "poor player, who struts and frets his hour upon the stage," is not one, however alluring the fame may be which it promises, that will induce many to follow it. In this profession, however, no ordinary man can attain perfection or fame. A great actor must be a man of genius—must unite to the intellectual many of the best physical powers. The tragedian should be the creature of passion, and possess great sensibility and intelligence, as well as a fine person and a good voice. He should, according to Talma, (himself an admirable model,) be gifted with an imagination which "associates him with the inspiration of the poet, transports him back to times that are past, and renders him present and identified with those historical personages or impassioned beings, that have been created by genius—that reveal to him, as if by magic, their physiognomy, their heroic stature, their language, their habits, all the shades of their character, all the movements of their soul, and all their peculiarities, and that enable him to enter into the most tragic situations and the most terrible of the passions, as if they were his own." These remarks are very just. To express passion in all its shades and varieties, it must be felt, and the actor must be subjected to all the extremes and vicissitudes of passion, and consult and study in his own nature, before he can exhibit them in all the truth and power of reality. "In my own person," (says the same tragedian,) in any circumstance of my life in which I experienced deep sorrow, the passion of the theatre was so strong in me, that although oppressed with real sorrow, and in the midst of the tears I shed, I made, in spite of myself, a rapid and fugitive observation on the alteration of my voice, and on a certain spasmodic vibration, which it contracted in tears—and I say it not without some shame, I even thought of making use of it

on the stage—and indeed this experiment upon myself has often been of service to me." Lekain, another French actor of great celebrity, is said, in his latter years, to have fallen passionately in love with a Madame Benoit, whom he always placed in the first side wing of the theatre, whenever he played, and addressed to her all the expressions of tenderness and love, which he had to employ to the actress playing with him, to give real force and tenderness to those expressions. Much of this power is, however, the effect of imitation. Garrick is said to have witnessed the agony of a father who had accidentally let fall from his arms, while dandling it in a piazza, a child whom he almost madly loved, and the tragedian always availed himself of this terrible picture in his personation of Lear. But these imitations are not peculiar to the player: the poet and the painter are alike guided by them. Michael Angelo is reported to have stabbed his brother that he might transfer to the canvass, with greater truth, the contortions of his features in the agony of death. Ariosto excited a violent burst of rage in his father, and in ecstasy allowed him to indulge it, that he might describe an angry father, with greater power, in a comedy he was then writing.

A tragedian does not require more talent, but he must possess more sensibility and enthusiasm than a comedian. The comedian represents incidents and personates characters that he daily meets with, and with which he is familiar; his imagination has less exercise; he is acting in the sphere in which, he, in fact, revolves: he has only to employ the faculty of imitation in representing the little passions, follies and weaknesses of those in his own condition in life, but his observation must be close and accurate. If he exaggerate or fall short of nature, it will be immediately noticed by those before whom he appears, who, from their own experience, are always capable of judging of the truth and correctness of the copy they are contemplating. "The tragic actor on the contrary must quit," says Talma very properly, "the circle in which he is accustomed to live, and launch into the high regions where the genius of the past has placed and clothed in ideal forms the beings conceived by his imagination or already furnished him by the pen of history. As to the physical qualities, it is evident that the pliability of the features, and the expression of the countenance ought to be stronger, the voice more full, sonorous, and more profoundly articulate in the tragic actor, who stands in need of certain combinations and more than ordinary powers, to perform from beginning to end, with the same energy, a part in which the author has frequently collected in a narrow compass, and in the space of two hours, all the movements, all the agitations, which an impassioned being can often only feel in the course of a long life." "When we," he then asks, "consider all the qualities necessary to form an excellent tragic actor—all the gifts which nature ought to have bestowed upon him, can we be surprised that such actors are so rare?" I will conclude these desultory remarks on actors, or dramatic artists, with an anecdote of the distinguished French tragedian from whom I have made the above extracts, which will illustrate the admiration sometimes entertained for great performers by enthusiastic lovers of the dramatic art. Having entered into an engagement to perform at Bordenaux, Talma

received the following curious letter, before his arrival, addressed

"TO THE SON OF MELPOMENE.

"Sir,—I have only six francs, and am without every resource. I hear you are to honor the town with your presence, and that, too, at the very moment I propose to put an end to my life. I shall, therefore, defer my project, in admiration of your talents, which I know only by your fame. I conjure you then, to hasten your visit, that I may admire you and expire. Refuse not the desires of your fellow creature, who, being able to live only four days, has divided the sum which remains as follows:

Four days' nourishment.....	3 francs	0 sous
Pit.....	2 "	10 "
Poison.....	0 "	10 "
	—	6 "

Forrest* has become a candidate for legislative honors, and if he succeed will be the first actor that ever became a legislator. It is not at all probable that he will ever reach the same eminence, as a parliamentary orator or statesman, that he has attained as a dramatic artist. It will be a singular fact in the history of the stage, however, should this distinguished and admirable tragedian be thrown into a sphere so entirely inconsistent with his professional pursuits.

Washington, Nov. 8, 1839.

G. W.

* Since the above was written, Mr. Forrest has declined the honor of being a candidate for Congress; but it still serves to show the rank which he and his fellow artists hold in the estimation of the people of this country.

G. W.

THE EXILE'S NATIVE LAND.

———"For what is slavery, but to be
Dependant for the spirit's life,
Upon the will of those not free."

I.

They wrong me much who say I fly,
With selfish sense, my native land,
And seek, with calculating eye,
The bounties of some foreign strand—
That, heedless of my country's weal,
I leave her in her hour of wo—
Neglect the wounds her sons should heal,
And aid her foes to strike the blow.

II.

'Tis true, my place of birth I leave—
Sad place, so known by many a grief—
And feel no pang, and scarcely grieve,
That, at the last, I find relief.
Nor weep I for the kindred thing,
Once known, alone—now known no more—
Nor feel the pang and parting sting,
To fly, for aye, my native shore.

III.

I leave, for aye, my place of birth,
The social dwelling lov'd so long—
I seek another spot of earth,
And hopes more high and ties more strong!

I snap each chain that once could bind ;
 I tear apart each early band
 That link'd itself about my mind—
 Yet leave I not my native land !

IV.

No! by the firm and fearless pride,
 That, when the little world conspir'd,
 To curse, or conquer, or deride,
 Still held its ground, unquench'd, untir'd—
 By the warm passions of my heart,
 By the unnumber'd hopes, I grieve,
 Though from my birth-place I depart,
 My native land I do not leave !

V.

Through blighted hopes and broken faith,
 And many a cruel wrong and jeer ;
 Through cares that brought, and came with death,
 And left me many a token there—
 Through many a trial, toil and pain,
 'Mongst foreign tribes, a savage band,
 'Tis thus, I break each early chain—
 I seek to find my native land !

VI.

What boots it where my infant eye,
 First met the garish glance of day—
 Or, in what clime beneath the sky,
 I wore my choicest hours away—
 If there, the heart was never free,
 Or, all unknown, or barr'd and bann'd,
 It pined for life and liberty—
 That never was my native land !

VII.

What boots it though its skies are bright,
 Pure as the gentle spheres that glow,
 Where, on the traveller's dazzled sight,
 Italia stands, a heavenly show—
 If Asian sweets are on each breeze,
 Circassian charms, and Peru's ores,
 Are things familiar to her seas,
 The freest fruitage of her shores.

VIII.

These make no land, alone, for me—
 Poor is the Switzer's realm of snow,
 Fruits gather not on every tree,
 Nor diamonds in his vallies grow—
 Yet there, a high abode, he dwells,
 Secure in rude simplicity—
 For freedom guards his mountain dells,
 And every limb and thought is free.

IX.

The Spaniard, with luxurious airs,
 Reclines beneath a fruitful sky,
 And, with no toil of his, uprears,
 With, but a word, each luxury—
 But does he lift a freeman's arm,
 Or does he feel a freeman's thought,
 And does he know that freedom's charm,
 For which his sword has never fought ?

X.

That's not my native land, though bright
 Each charm of fruit and flower may be—
 Its woods though green, its skies though light,
 Make not the native land for me.

I ask not if the hills repose
 In gentle slopes, beneath the sun,
 Or, if each mountain-streamlet flows,
 To sleep, a murmuring sleep, in one.

XI.

I ask not if the genial clime
 Is blest with many an hour of calm,—
 If, through the longest lapse of time,
 The flowers are bloom, the winds are balm—
 If plenty blesses labor's hand ;
 If rugged toil, in russet clad,
 Wins bounteous blessings from the land,
 To make his inmost spirit glad.

XII.

Let those who will, whate'er the fate
 Of freedom or of fortune be,
 Still hug the soil, a poor estate,
 That breeds no growth of liberty.
 I envy not the miser love,
 That lives but on a memory dead ;
 And nothing care, though all reprove,
 For the mere dirt on which I tread.

XIII.

That's not my native land, where power
 May lord it with a tyrant-sway,
 And find fit tools for every hour
 Of terror, through the livelong day—
 Where truckling parasites abound—
 A fawning crew that nought may save—
 To hug the chain, to lick the ground,
 And, for the offal, be the slave.

AN ADDRESS,

Delivered before the two Literary Societies of Randolph-Macon College, June 19, 1838—by Hon. John Tyler. Published by request of the two Societies.

GENTLEMEN

Of the Franklin and Washington Literary Societies :

I am here this day in compliance with a request from the Franklin Literary Society, that I would deliver an address before your two Societies. That request having been urged upon me for the second time since this college has gone into successful operation, seemed to deny to me the liberty of opposing my personal convenience to your wishes. I felt myself highly honored by your repeated call, and resolved, if possible, to meet it. It is no small matter of self-congratulation that I have been able so to master my time, as to be with you on this interesting occasion. I have felt, from the first, a deep interest in the prosperity of Randolph-Macon. I have learned with pleasure, the rapid strides she was making to extensive usefulness ; and the spectacle which she on this day exhibits, is honorable to her founders, and indicative of the elevated rank which she occupies among the colleges of Virginia. She bears a name which is well calculated to recommend her to our affections ; or, more properly to speak, she unites two names in one, and blazons them forth upon her escutcheon. Those names are identified with high intellect and devoted patriotism. It was my good fortune to be personally acquainted with both the distinguished citizens who have been selected as the tutelar saints of this institution. To the first, was given

a genius splendid and brilliant above that of his fellow-men. I have often felt the warmth of its rays, and been spell-bound under its influence. Whenever John Randolph rose to address either the assembled multitude, or the legislative body, all eyes were eagerly bent upon him, and all ears were open to catch every word and every syllable that fell from his lips. Few men ever lived who had so perfect a command of language. Every word used by him, was precisely the very word, best suited, of all others, to express what he intended. His mind was the capacious reservoir of knowledge, and when it poured forth its treasures, an intellectual repast was furnished to his auditory, rich and luxurious. The stream of his eloquence flowed on so clearly and smoothly, that through its shining mirror you beheld in the depths below pearls and gems of inestimable value. In speaking, he could not be regarded "as copious and Ciceronian," but every word sparkled and every sentence burned. It is true, that in much he was eccentric; it could not well be otherwise, for his mind was never at rest. New speculations and new theories were continually crowding about him, and in chasing them over the fields of space, no wonder that he should sometimes have departed from his orbit. On one subject, in particular, he was remarkably uniform, and, from the early dawn of manhood to the close of his life, consistent. He properly regarded our central government as a federative system, the result of the voluntary adoption of the several states. He saw that liberty could only be secured by preserving a due balance between the general and state governments. He believed also that the tendency of the system was to consolidation, and every advance in that direction he opposed uncompromisingly. Neither honors conferred, nor honors expected, could win him from his allegiance to his principles. The last act of a public nature which he openly advocated, bears testimony to this, and exhibits his character in an attractive light.*

Of Nathaniel Macon, I cannot well speak too highly. There was a beautiful consistency in his course, from the moment of his entering public life to the moment of his quitting it. Nothing sordid ever entered into his imagination. He was the devoted patriot, whose whole heart, and every corner of it, was filled with love of country. He was a moralist, who set forth his precepts, not in ponderous volumes, but in his daily actions. Not remarkable for the brilliancy of his intellect, he was most distinguished by the solidity of his judgment. Called by the state of North Carolina to high political station, he presented in his person and conduct, a true type of the state and people he represented; nothing gaudy, nothing glaring; no fret work or curiously wrought mosaic; but all about the building betokened strength, and enduring strength. He united in his person the meekness and humility of the christian, with the calm and unpretending dignity of the philosopher. In the house of representatives, he was the firm and unflinching republican—and in the senate chamber, the venerable patriarch—the co-temporary, in fact, of Washington and Franklin, and most worthy to have lived in the same century with them. He had no regard for those forms and ceremonies which constitute the pageantry of what is called high life.

* The resolutions offered to the people of Charlotte disapproving the doctrines of Gen. Jackson's celebrated Proclamation.

They appeared to him an unreal mockery, a mere show of friendship, the shadow of social intercourse; and the plain republican who had been reared amid the realities of the revolution, despised them heartily. And yet I doubt whether there ever lived a man who possessed or practised more of the genuine hospitalities of life, or whose heart was more entirely filled with the christian charities, or the christian virtues.

Such were the two men whose names have been adopted by this college, and are united into one. There was wisdom displayed in the adoption. You, and all who have preceded, and all who may come after you as alumni of this institution, are thus constantly reminded of the fame and glory which attend, invariably, on intellect highly cultivated, and on the unceasing practice of virtue. A model of almost absolute perfection, if properly blended and successfully imitated, is presented. Wit, genius and fancy, are placed in close connection, with a judgment so inflexible and so erect as rarely ever to have been shaken. The first adorns and beautifies; the last shelters from the storm and protects from the blast. The first spreads over the earth a carpet enamelled with the brightest and sweetest flowers—peoples each star, and fills earth and heaven with harmonious and dulcet sounds. The last sees in each floweret, and every blade of grass, as well as in the glorious heavens, evidences of a power unseen, infinite in wisdom, and boundless in benevolence. The one creates, the other preserves. The one embellishes and adorns the judgment-seat with the gayest and brightest garlands; the other holds the scales with an untrembling hand, and weighs out the decrees of good and evil to mankind. The one, if I may so speak, is the capital to the pillar; the other, the pillar itself, which upholds the edifice.

God has most wisely endowed the human mind with various faculties. The imagination springs forth like the falcon in its upward flight, seeking to reach the sun, while reason, by restraining cords, draws it back again to earth ere its wings are scorched. To cultivate these two faculties so that the first shall not attain the mastery, is the true secret of successful education. The mind is thereby matured, and its energies are brought forth, as required, into beneficial action. The man of mere imagination is almost useless in his day and generation. He lives in a world of his own creation, and peoples it after his own untamed conception. Man is not the creature that God has made him, nor is the earth fitted for his residence. Man, nor the earth, according to his wild imaginings, are neither suited to their appointed destiny. He either elevates man to an equality with his Creator, or sinks him below the level of the wild beasts. The realities of life torture and distract him. There is nothing to him of harmony, nothing of beauty, in the frame of the universe. "This goodly frame, the earth, seems to him a sterile promontory; this most excellent canopy, the air, this brave overhanging firmament, this majestical roof, fretted with golden fire, appears no other thing to him than a foul and pestilent congregation of vapors." He would, like another Phaeton, mount the chariot, snatch the reins from the hands of Apollo, and drive the horses of the sun. Blind and infatuated man! and yet he is the creature of education—and that, misdirected, has overwhelmed him in misery. What, if the volume of

nature had been early opened to his sight; what, if the chain of being had been traced out for him from the merest atomite to the infinitely great and all-glorious Creator; what, if he had been taught the adaptation of the parts to the whole; what, if man's position on the map of existences had been pointed out to his eager and curious gaze; what, if mind itself, and each and every of its elements, had been exposed to his view; what, if he had been instructed in a knowledge of the human passions, and the volume of his moral duties had been opened before him; he would have arisen from the instruction another and a better being: he would then have seen order and harmony in all around him. Each little flower which bloomed by the way-side, as well as the lofty tree whose top aspires to the clouds—the pearly dew-drop, as well as the broad ocean itself—the lowly ant-hill—as well as the snow-clad mountain—the smallest insect, as well as the eagle “when towering in his pride of place”—the glow-worm, as well as the bright and golden sun—all, all would have united in unveiling to him the face of Omnipotence. He would have learned that “order was Heaven's first law,” and would have taken his appointed place in society with the volume of his duties in his hand, and obedience written on his heart. Love to man would have arisen as a necessary consequence of love to God. The copious stream of his moral duties would have flowed from a knowledge of his Creator; his bosom would have swollen with a desire to be useful in his day and generation; a pure ambition would have possessed him—an ambition to be distinguished among the benefactors of mankind. True glory would have waved him on to that high eminence on which stands the temple of true fame, and he would have aspired to immortality on earth, and endless reward in heaven. What, if difficulties and dangers had at any time beset his path; what, if persecution and obloquy attended his footsteps; what, if man, for whom he labored, maligned him, and society, for whom he toiled, disowned him—he would still have persevered, and persevered to the end: his name would, ultimately, have been inscribed on the pillars of the temple, and its tablets would bear record to his noble virtues. Such would be the results of a well directed system of education. The two men whose names you have adopted as the representatives of your two societies, verified in their lives the character and results which I have described as proceeding from well disciplined minds. George Washington and Benjamin Franklin, each in his own appropriate sphere, ran the race which was set before him, and terminated his career in glory. The first, under Heaven, gave to his country freedom, and assisted to open that heretofore sealed book, in which is written the rights of man; the other taught to philosophy new lessons, and unfolded more fully the great book of nature. The one snatched the rod from the hands of oppression and broke it; the other grasped the thunderbolt and deprived the lightning of its wrath. Around the temples of the one was entwined a civic wreath, richer and brighter, and purer than had before adorned the brow of the proudest conqueror; the other was the darling child of philosophy, to whom nature disclosed her most secret mysteries.

There was a wisdom and power exerted in the formation of man, inexpressibly great, and most truly wonderful. In the anatomy of the physical system

there is much to excite our admiration. The heart, like the ocean, at each pulsation pours out the blood through the arteries, giving life and activity to the whole mechanism. The thews, the sinews and the muscles, nay, every bone and thread and fibre, performs its appropriate function, and concurs in producing and preserving that most inexplicable of all mysteries, animal life. Look upon the form divine of the youth who is in the act of transition from puberty to manhood; his blood runs frolic through his veins; and the deer, bounding over the dewy lawn, is not more agile or airy in its step. His eye and cheek bespeak the varied emotions which arise from time to time within his breast. His voice is attuned to harmony, and the graces of his person, and manliness of his form vie with each other for excellence. He would constitute a model worthy the chisel of a Phideas or Praxitiles. It is full of life and beauty and majesty—that youthful form. But how much more to be wondered at and admired, the human mind! How mysterious its operations? How astonishing its results? The body, however beautiful, is of the earth, earthy—its sphere of action is limited and circumscribed—it has speed of feet, but no wings with which to fly—it may reach the summit of the loftiest mountain, but it can rise no higher. But what can circumscribe or limit that ethereal essence—the human mind? On the wings of the morning it flies to meet the sun at its rising, follows it in its course through the heavens, and watches it to the moment in which, with its last ray, it bids the world good night. And when night throws its mantle over all things, it follows each star along its path of light, numbers the myriad host, and chases the comet in its eccentric flight. Turned to earth, it penetrates her darkest abodes, walks among her hidden fires, plunges into the depths of ocean, and makes companions of the monsters of the deep. Standing on the present, it looks back upon the past, and contemplates the future. It holds converse with the men of other days. It sits by the side of the Ptolemies on the throne of Egypt; beholds Achilles in his wrath, and Troy in flames; attends Æneas in his flight to Italy—and with the twin brothers, lays the first stone in the walls of imperial Rome; it holds converse with Socrates and Plato, and is familiar with the academic groves and with the philosophers; it is in the assembly of the people with Demosthenes, or in the senate chamber with Cicero; it listens to Pindaric strains, or hears the tuneful Maro sing. It follows the course of empires and of states—marks alike the causes of their greatness, and of their decay and downfall. Loaded with the riches of the past, it goes to work for the present and future; it conceives, it plans, it executes; chains cannot restrain, or dungeons confine it. How mysterious and how grand its operations! And yet, if we are lost in astonishment at the capacities of the mind of man, how absolutely inexpressible become our thoughts, when we contemplate, as far as finite capacities are permitted, the infinitude of mind possessed by the great Creator. The human mind is but a spark struck out from the sun—a mere emanation from the centre of all light—and yet, I repeat, how wonderful its conceptions, how sublime its operations!

Such, gentlemen, are the high gifts of body and of mind, which we have received at the hands of our

Maker. But these gifts are useless if they be not cultivated and improved. From the first, a decree designed for man's happiness has gone forth as the accompaniment of these high capacities. They must be brought into action by our own exertions—the gem lies buried in the caves of ocean, and it would lie there forever, if efforts were not made to rescue it from its pearly bed. You have been laboriously engaged during the collegiate course, now about to terminate, in this work of improvement. Under the direction of wise instructors and watchful guardians, you have unremittingly pursued your studies, and many of you on this day will receive the honors to which your exertions will have entitled you. The road over which you have travelled was crowded with difficulties. A morass, apparently deep and impenetrable, often intercepted your progress. With weary footsteps you lingered upon its brink, in doubt whether to attempt to pass it. The gloom was deep and the pathway narrow, but truth stood on the firm land and beckoned you to follow. Again your spirits rallied—your purposes and resolutions again became fixed—the morass was penetrated, its difficulties were overcome, and you stood once more on the firm land, prepared to encounter future difficulties, and in like manner to overcome them. Such is the process by which the human faculties develop themselves. They slumber in our infancy, they wake up by slow degrees as we advance in years. How pleasing to witness their development. The infant slumbers in its cradle almost without consciousness of being—its eyes open to the light, and mind forthwith begins its work. Faculty after faculty exhibits itself. For a time the child delights itself with the fairy forms around it. It is, in truth, a fairy world in which it has awoken. The bright and fleeting things of earth attract it; its foot-print is seen amid the early dew, chasing the butterfly, or it watches the flower as it opens and stretches out its hands to gather it. The spirit of inquiry at length takes possession of this beautiful boy; he begins to compare and arrange; he is no longer satisfied with merely beholding the beauties of creation. He regards them but as effects springing from causes to him unknown. He goes in pursuit of causes; a change has come over his feelings and his actions; the bauble no longer delights; a thirst after knowledge possesses him, and he turns over the pages of the philosopher and flies to the shades of the academic grove; he seeks to converse with the learned and the wise, and to hear from their lips lessons of instruction. He now enters the temple in which nature performs her mysterious rites; he sees her at her laboratory, and learns the processes which she there adopts. He is a votary of science, and at her altars he worships. All his faculties are now awakened, and his mind is stored with the rich treasures of knowledge. A new theatre now awaits him—the groves of the academy are to be quitted, and he enters upon the world's busy stage. His theories are now to be reduced to practice, and he has to read out of a new volume, in which are written the results of the passions. He has heretofore studied their anatomy only; they are now to be exhibited in connection with the daily business of life. He is now to see how the peace and harmony of society is broken by their direful conflict; how completely one of the passions often attains

the mastery over all the rest; how ambition swallows up patriotism, or avarice deadens with its touch all the more noble and generous feelings; or how the most noble and generous feelings may themselves degenerate into vices. Generosity, prudence being dethroned, becomes wasteful extravagance; and prudence itself, liberality being silenced, terminates in poor and narrowless parsimony. Fear, the instinctive principle by which danger is avoided and human life preserved, attempts to usurp the mastery over courage, and in the struggle the first degenerates into cowardice, and the last into rashness, and so with all the rest. The lessons of his youth will not now be lost upon him. From his knowledge of the structure of the human mind, he well understands, that man would have been imperfectly made up without all the passions—that the absence of any one of them would have left the work unfinished: That, consequently, to permit any one of them to slumber—and much more, to yield the mastery over all to one—is to produce that very defective arrangement, which man, as a free agent, may produce, but which God never designed. To preserve well their balance, is to approximate to perfection. Where this is done, each passion discharges its appropriate function, and conduces to a state of blissful harmony. Reason sits on her throne in all her supremacy, holding in subjection the complex mechanism of man, with all its emotions, passions and desires. No idols are erected by the senses, or false gods set up to be worshipped. Absolute perfection, it is lamentably true, is rarely, if ever reached. As the hurricane or earthquake disturbs the quiet of the natural world, so some unruly passion from time to time bursts forth in its fury, dethroning reason, and shaking most terribly the animal system. In view of this, the ancient of other days hung his head in despair, and the lover of his species had almost ceased to hope. Let the truth be confessed: resting upon our own unaided resources, we are like mariners on the stormy deep, at the mercy of the fitful winds and unsteady waves, without chart or compass. We are driven we know not whither; no peaceful haven in view, and no friendly star shining amid the darkness, by which to steer our course. There is but one hand strong enough to save us. Our Creator must be our preserver from the dangers which threaten. To him alone we can raise our eyes in hope and confidence. Reposing on him, our frailty is converted into strength, and the storm rages harmlessly around us. In his infinite goodness he has deputed among us a divine teacher, and under the influence of his teaching the world has already been reclaimed from barbarism to civilization; from ignorance to knowledge. Before his coming, man mistook rashness for true courage, and a rude stoicism for virtue. The warrior, clad in his armor, and trampling with his heel on the fallen, was esteemed the chief among men; and the war-cry, which was sounded over every land, affrighted peace from the earth. Man was not only the enemy of his fellow-man, but the great enemy of himself. The passions were in fearful conflict. A new star rose in the heavens, and there came healing on its beams. The spirit of anger, the darker spirit of revenge, hatred, with its kindred and gloomy host, was rebuked, and love and charity spread their mantle over the earth. Would we then know to what refuge we may flee from the

madness of the passions? that refuge is to be found in the christian doctrine; in the charity which it teaches, in the love which it inculcates. The Bible is the great moral code, whose lessons address themselves with resistless power to the heart and to the understanding. Where, amongst the boasted philosophy of the schools, shall we look for any thing to compare with its pure and divine instructions? What lamp, lighted up by all their proud wisdom, shines with so brilliant and yet so mild a lustre along the pathway of life? What so elevates the soul to a sublime conception of the attributes of the Deity? In striving to attain perfection, where shall we look for an exemplar but to the meek and lowly Nazarene? Let the champions of infidelity, in their infuriate zeal, declaim as they may. Until they shall have furnished to the world something better than in their idle ravings they have yet done, they and their works will go down in darkness to the same grave. They have striven in vain to shake the edifice of christian faith; but its foundations are laid deep in the affections, and their assaults have ended only in their own destruction. The banner of infidelity has been struck down to the dust, while the cross has been set in the all-glorious heavens.

Under the influence of these convictions, gentlemen, you are destined to enter upon the theatre of life. You will do so at an eventful period in the history of man. The gloom of the Gothic ages has long since passed away, and intellect has gradually awakened its energies. Science has now lighted up all her lamps, and at her altars are found innumerable votaries. Nature, so long veiled in mystery, exhibits herself in all her beautiful proportions to the enraptured gaze. The chemist is at work in his laboratory, and the philosopher in his closet: a flood of light has burst upon the world—and things heretofore hid from the observation of man, are now laid open to his view. The long and intricate chain of cause and effect, is in the process of exposure. Mind is most powerfully at work, and no where is it more actively engaged than in this our father-land. What heart can fail to beat with delight at contemplating the mighty results which are transpiring around us? Improvement meets us in all our walks. The mechanical arts are ceaselessly engaged in moulding existences into new forms and new shapes, and the great ocean bears witness to new triumphs achieved by man's inventive genius. Time and space are almost annihilated. The most remote parts of this wide-spread confederacy are brought near to each other, and the dweller upon the distant lakes is made familiar with the inhabitant of the sea shore. Much, however, remains to be done, and a wide field has yet to be explored. A country most highly favored by heaven, with every diversity of soil and climate, will demand your aid. The generation which has passed, and the generation which is passing, will commit to the hands of those who are to succeed, the task of improving, adorning and preserving. To you, in common with others, will also be entrusted the task of fortifying and protecting civil liberty against the attacks which may be made upon it. This is a task of fearful difficulty, and will require vigilance the most unceasing. The spirit of change is ever active. There is a restlessness in the affairs of men, which hurries on with equally rapid pace, from evil to good, and from good to evil. The past tells us many a

tale of freedom won and of freedom lost. Nations have grown up in strength—have flourished, and have passed away. The mighty ones of the earth have long since gone down to their graves and are forgotten. The tide of time has rolled, in its resistless course, over empires and states, leaving no traces of their former renown, but broken pillars and fragments innumerable. In knowledge of these facts, we, who are now actors on the stage of life, turn to our colleges and universities as to the arks in which the great covenant of freedom is deposited. There, history opens her volumes, in which are recorded the causes which have led to national greatness, and in which are traced out, as with a pencil of light, the causes of their final overthrow. There, religion and philosophy preside over the physical and moral world. There, are taught those great principles on which government should properly rest; and there, the youthful mind is early imbued with a love of liberty, and an abhorrence of tyranny. Our own system of government, apparently complex, is explained in all its parts. A political orrery is developed, which shows how the state and federal governments, like the sun and the planets, may each revolve in its separate orbit, and may roll on forever, without danger of collision—if the people be wise and their rulers honest. Who, then, can feel other than a lively interest in the prosperity of each, and all of our literary institutions? Who, worthy to be a legislator, could for a moment hesitate to increase their pecuniary endowments, where necessary to extend their usefulness? And actuated, as they are, by the same motives, and impelled by the same high considerations, how unworthy would they be of their exalted calling, if the base spirit of envy or jealousy could find admittance within their halls. I come to declare to you, masters and professors of Randolph-Macon, that if such spirit has obtained entrance into other halls, it has no abiding place within those of the venerable college of William and Mary. It is known to you that I hold a seat at her visitorial board, and I have full authority, therefore, to declare that she witnesses your prosperity with pleasure, and hails you as an ally in the cause of literature, of science, and of freedom. You both fight under the same banner—the banner of truth and of justice. You war upon the same common enemy—error in deed and, error in opinion. Your trophies are the same—the trophies of religion and philosophy. Your labors terminate alike in the good of your country and of man.

And to you, students of Randolph-Macon, permit one, who, like yourselves, has been the inmate of kindred halls to those which you have frequented, to extend to you the right hand of friendship, and to express to you a few more parting remarks. The race of true glory lies before you. A close and diligent application to your studies, and a ready obedience to the advice of your instructors, will best prepare you to run it successfully. Like the racers at the Olympic games, you will keep the goal of honor evermore in view, and strain every sinew in order to win the prize. In after life many of you will meet together in legislative halls. Then will be revived the recollections of your college life, and under the influence of the lessons which you will have there received, the only rivalry amongst you will be an emulation in the great cause of your country's happiness. To that country, in every calling of life,

your usefulness may be manifested. At the council board or at the plough, in the senate chamber or in the work-shop, your light may be made usefully to shine before men; for, in the language of the moral bard of England,

"Honor and shame from no condition rise,
Act well your part, there all the honor lies."

Your duty to your country, no matter what may be your ultimate destiny, will remain the same. You will keep your eyes steadily fixed upon her institutions, and will be prepared to stand by them in weal and woe. You will remember that free governments have been more frequently overthrown by fraud than force. You will therefore stand ready to make a bold sally from the citadel of liberty, the moment the sappers and miners have pitched their encampment before it. You will drive them off before they have had time to throw up an entrenchment behind which to shelter themselves. In all the agitations and convulsions of party, to which popular governments are particularly exposed, there will still be a post of absolute safety—it is to stand by the constitution. There is no other post of safety. The party of to-day may not be the party of to-morrow. The political idols which men set up and worship at one moment, may in the next be overthrown and trampled in the dust. Let, then, those who may have the folly to do so, fall down before the car of Juggernaut and be crushed; but you will not follow their example. You will still rally in support of the constitution; and, when the storm is at the highest, you will cling to its pillars—and, if needs be, will esteem it glorious to perish amid its ruins. It may be your fate to be denounced by those who would betray the public liberty. Heed not their denunciations. You may be persecuted even unto exile. Summon to your aid that moral courage which will enable you to achieve a victory more full of renown than ever conqueror won—a triumph over the weakness of human nature and over the temptations which most easily beset us. You will thus entitle yourselves to the respect even of your enemies; and when success shall once more perch on your country's standard, and the ravens be frightened from their prey, you will have a reward richer than crowned monarch can confer—the approval of your own unsullied consciences.

Many of you are about to separate yourselves from those scenes which have been so long familiar to you. You will bid a long adieu to those friends who have been associated with you in your studies, and partaken in all your amusements. You will bid your kind instructors an affectionate farewell. In after-life the scenes through which you have passed will often gather around you. Memory will recall the past, and the light of other days will break in upon your dreams. Ofttimes, like the young eaglet who has left the nest in which it has been nurtured, you will wish to recall the days of your youth, and to revisit these halls. The star of your destiny may be hid by dark and gloomy clouds, or your argosy of life, freighted with all your hopes, may be tossed on angry waves, which threaten to devour it. Remember then the instructions of your youth, and resting on the consciousness of a life well-spent in the practice of virtue, you may bare your bosoms to the fury of the storm, and stand erect before God and man.

I would address a few words to those of the other sex, who have honored us with their presence on this occasion. Upon woman rests much of the destiny of the human race. She is the flower planted in the wilderness of life to adorn and beautify it. We love the gay, and the bright, and the beautiful; and in the morning of our lives we are ready to admit, that in the olden time, "the angels in heaven fell in love with the daughters of men." But youth is the period of romance. Philosophy is the companion of more advanced age—and regarding her in its calm light, what on earth can be more interesting than *the mother*? How many recollections and ideas crowd upon the mind at the repetition of that single word—our *mother*! She who has nurtured us in infancy; watched over our cradles; taught us to raise our little hands in prayer; followed us in our infantile rambles, and reared us to manhood, in the love and practice of virtue—such a mother is of priceless value. No loud-toned trumpet sounds forth her praise. She drags at her chariot wheels no miserable captives made in war; but her path is strewn with flowers, and the virtues attend upon her footsteps. An elysium reigns around her, and countless blessings are her's. God will bless her, and man adores her.

DRAMATIC EPIGRAMS.

I.

ON A YOUNG LADY'S SAYING SHE WAS IN LOVE
WITH THE DRAMA.

Shakspeare has said that "All the world's a stage;"—
With pretty Bess the play's so much the rage,
So wholly claims her heart, one may infer
That this same "stage" is "all the world" to her!

—

II.

ON MANAGER WARD'S ANNOUNCING THAT HE MUST
CHANGE HIS THEATRE INTO A CIRCUS.

Manager loquitur:

When wit is lowest, and its powers are spent,
Then to the highest do they raise my rent:
And I, (poor Shakspeare driven from the course,)
Am doomed to cry, "My kingdom for a horse!"
And, as the public taste is sunk so low,
That nothing will go down but noise and show,—
And, as the only critics influential
Are gallery loafers, with their voice potential,—
Pray, who can tell but soon 'twill come to pass
I'll have to cry "My kingdom for an ass?"*

THE PROMPTER.

Washington, 1839.

*The eccentric comedian, Edwin, of England, was in the habit of burlesquing the characters of Shakspeare. On one occasion he travestied Richard the 3d—and after the exclamation on Bosworth field, "A horse! a horse! my kingdom for a horse,"—he added, by way of improvement, "If I can't get a horse, a jackass will do." The memoirs of Edwin abound in the most amusing anecdotes.—[Ed. So. Lit. Mes.]

A VOYAGE ROUND THE WORLD,

INCLUDING AN EMBASSY TO MUSCAT AND SIAM, IN
1835-36 and 37,

By W. S. W. Ruschenberger, Surgeon U. S. Navy; author of
"Three Years in the Pacific." Carey, Lea, & Blanchard,
Philadelphia.

This voyage was made in the United States' ship *Peacock*, the second man-of-war, that under the "stars and stripes," has performed a voyage of circumnavigation from west to east. One object of the cruise was to exchange on the part of the United States, ratified treaties of commerce and navigation with the Sultan of Muscat, and with his Magnificent Highness, the King of Siam; thus opening new channels of commerce between the old and new worlds, and preparing the way for American enterprise.

A consul has since been appointed to Muscat, who is now on his way there, with the view of establishing in the dominions of His Highness, the Sultan, the first American factory, which is to be connected with a respectable mercantile house in New York.

Besides the Persian Gulf and the coast of Arabia, this treaty with the Sultan has opened to the commerce of the United States a line of coast reaching south in Eastern Africa from the straits of Babelmandel to Cape Delgado; the latitudinal limits of which exceed in extent, by several degrees, the Atlantic seaboard of the United States. But whether the commercial edifices, which American citizens may raise in this country, are to be built in the sand, or on a rock, experiment will soon decide.

The principal exports from the dominions of Syeed Syed bin Sultan, and which might find a market in the United States, are, Mocha coffee, wheat, raisins, drugs, horses, ivory, tortoise shell, ox and rhinoceros' horns and hides, gurn copal, rice, cocoa-nut oil, and bees wax. While the necessities or fancies of his subjects create a demand for cotton and woollen goods, and many "Yankee notions."

A thrifty, trading people are the Yankees; (for when abroad, the southern, the eastern, and the western man are alike proud of this patronymic.) We, ourselves, have "put a girdle round about the earth," and we have never sailed on any sea, nor visited any people, whether savage or civilized, where was not to be found some enterprising, trading son of brother Jonathan's, with his ships, his schemes, or his notions. When a Russian navigator was congratulating himself with the discovery of the South Shetlands, a Yankee was there to pilot him into port. While John Bull was boasting of the honor of the first discovery of the same islands, brother Jonathan was there laying out the seal in lots, to kill, *flipper*, and skin.

We once made a visit to Robinson Crusoe's island, and not expecting any one there our "right to dispute," we had drawn largely on our juvenile favorite for reminiscences, and from the adventures of the skin-clad bucanier and his man Friday, we had conjured up a feeling of romance, to which the sight of herds of wild goats, clambering over the precipices, gave a zest. And the sea bird heightened it as she flew from her nest, screeched and sent an echo from the cliffs. Fancy took wing—and we were already indulging in the an-

icipated luxury of a visit to the island and cave, as solitary and as lonely as they were when Robinson Crusoe left them. Our vessel came to her anchor, and the spell was broken; for no sooner were we brought to, than appeared along side of us a long-legged, bare-footed "Tom Coffin" of a Yankee, who introduced himself as the lieutenant-governor of the island, and said he had come on board with the compliments of the governor, to offer us the civilities of the place, and cod-fish to buy.

These two functionaries were sons of New England; they had landed in a whale boat a short time before, with a crew of six Sandwich Islanders, and taken possession of the island in the name of the United States.

It is this ready spirit of adventure, and quick perception of expedients, that have made us the commercial nation we are. From the Arctic to the Antarctic circle, every breeze that blows upon the water, is a fair wind to American ships. They are found in all seas; and wherever the man-of-war goes, she finds herself always within the limits of American commerce, and within the sphere of usefulness to American citizens.

The *Peacock* has performed an important service, though in the early part of the cruise she came well nigh being wrecked near the Isle of Mazeira. In the event of shipwreck there, the officers and crew would have been massacred, or made slaves of by the Bedouin Arabs, who were hovering around the ship in their dâus.

"About twenty minutes past two o'clock, on the morning of the 21st," says Dr. Ruschenberger, "all hands, except the watch on deck, were roused from sleep, by a horrid noise, caused by the ship's bottom grinding and tearing and tossing on a bed of coral rocks. When she struck, the ship was sailing at the rate of seven and a half miles the hour, and her progression was not suddenly and fully arrested, but she ran on for some minutes after the helm had been put up. When I reached the deck, it was starlight, the breeze was fresh, and neither land nor breakers could any where be seen; the wind had been brought on the starboard side, and the sails, no longer opposed to it by their surface, were fitfully flapping and slashing as the wind swept past them. The ship rolled with an uncertain wavering motion, grinding and tearing the coral as her sides alternately came against it. The uncertainty of our situation, threatened as we were with destruction—the crashing of coral—the darkness of the night—the wallop, wallop of the sails—the fast succeeding orders of the officer of the watch, and the piping of the boat-swain and his mates, produced an impression not easily described nor forgotten. There was an appearance of confusion; but every thing went on with as much regard to rule as if the catastrophe had been anticipated. Every one asked, 'Where are we?' but no one knew, nor was it easy to explain, at this time, by what means we had got on shore.

"The first gleam of day discovered a low sandy desert, about three miles to the eastward of us. The water was in spots of a bright green, from its shallowness, but dark where it was deeper. The work of lightening the ship was continued. A raft was constructed of spare spars, and several ton of shot were thrown overboard.

"About 10, A. M. a large canoe, manned by four

men, approached the ship. We sent an unarmed boat towards her, with an indifferent interpreter. When near enough, he hailed the Arab, who manifested strong repugnance to communication. While our boat pulled rapidly towards him, his wild companions stood up, and we could see their broadswords flashing in the sun, as they flourished them over their heads, in a manner not to be misunderstood; our boat, therefore, returned, without opening any amicable intercourse, and the canoe anchored close to the shore.

"Later in the day, an officer was sent towards the beach to ascertain the state of the tide. Immediately on perceiving our boat near the shore, an Arab sprang from the canoe, and ran along the sand, brandishing his sword, intimating that he would offer opposition to the landing.

"About one o'clock, P.M. four large canoes were seen approaching from the northward. They joined company with the one above mentioned, and then they all anchored close to the ship, now very much careened from the falling of the tide. In this fleet, besides several negro rowers, we counted twenty-nine fighting men, each one wearing a 'khunger' in his girdle, and there were spears and broadswords and matchlocks enough in sight to fill their hands.

"After anchoring, several persons left the canoes in which they had come and assembled on board another, which was paddled near the ship. A tall old man, with a white beard, stood up, and throwing up his naked arms, and nodding his head, hailed us; from his gesture, we gathered that he demanded to know whether we would cut his throat, if he should come on board. After a few minutes consultation, they came along side, and two of them climbed on deck. * * *

"The elder of the two was very talkative, and had rather a cunning expression of face; while the younger was more taciturn. His figure was slight, but every one, in strong terms, expressed admiration of his beauty. A thick fell of curling black hair, which reached to the shoulders, keen, dark hazle eyes, regular features, smooth, dark skin, white teeth, and above all, the intelligence of his countenance, imparted to the beauty of his face a feminine character; but the jetty mustache and curling black beard stamped him as a young warrior. * * They inquired how much money we had on board, and said forty more dâus were coming.

"In a few minutes they left us. The young warrior removed the 'khunger' from his girdle, and secured it by the folds of his turban to one side of his head, and then lowering himself by a rope down the ship's side, dropped into the sea, and swam gracefully to his canoe, followed by his companion. Soon afterwards they all weighed anchor, and stood away to the southward.

* * "Our situation was every hour becoming more critical. We were satisfied the Bedouins had not paid us their final visit, but were inclined to believe they would soon appear in greater numbers, to attack the ship; and though we were more than a match for them at this moment, when the ship was on an even keel, and the crew not very much fatigued, in the course of a few days the case would be different; our supply of water was inadequate to our necessities for more than a few days, and incessant labor must soon exhaust the powers of the crew. * * *

"The prospect of getting the ship off was distant;

and as the surest means of obtaining relief, the second cutter was equipped with a crew of six picked men, and despatched early the next morning to Muscat. * *

"On Tuesday morning, the 22d, soon after the departure of the second cutter, the work of lightening was continued, and we saw, with feelings of regret, one-half of our guns cast into the sea.

"The upper spars and sails were sent down from aloft, and on renewing our efforts to heave, at the top of the tide, we discovered with pleasure, that the ship moved. This infused new life into all hands. The men broke forth in a song and chorus, to which they kept time, as they moved round the capstan, or hauled the hawser in by hand. * * And at 3 o'clock, P.M. we anchored in three and a half fathoms water."

His highness, the Sultan of Muscat, with much promptness and great liberality, despatched a frigate and squadron of dâus to the Peacock's relief. He proffered a sloop of war to bring the officers and crew of the Peacock home, in case she should be lost; and offered to send the United States' special diplomatic agent, Mr. Roberts, on his mission in one of his highness' own frigates. And after the ship had been docked at Bombay, she received her lost guns, which the Imaum had had weighed with much trouble, and sent at his own expense.

True, as our author apprises his readers before setting out, '*No vamos a bodas, sino a rodear el mundo.*' But though not bound in search of pleasure or adventure, he has entertained his readers with a very interesting narrative of incidents and facts. Every thing he sees and learns is told *off hand*, and in a way that at once turns the reader into a companion; and makes him feel that it is a feast he is at, which his 'patrón' only went round the world to cater for. And in this he has spared neither pains nor expense; for his work abounds with statistics, agreeable narrative, and just such information as the practical man would seek.

We have been puzzled to gather from his book, satisfactory ideas of the Doctor's peculiar sentiments with regard to the business of foreign missionaries, among whom he has been and seen much. Without being warmly in favor, or strongly opposed to their cause, he freely expresses his opinion of whatever passes under his own observation; which, however honestly intended, will nevertheless induce the missionaries themselves to consider his VOYAGE ROUND THE WORLD less the work of a friend than of a foe.

"I have long entertained the opinion," says the Doctor, "that the little success attending the missionary labors in general, is owing to the demonstration of too much religious zeal on their part, without any attempt to show the worldly advantages attending on a full belief in christian doctrines. Greater success might be anticipated, if the minds of the misbelievers were first prepared by instruction in general knowledge, before attempting to convince them of the religious errors in which they live. We are not aware of more than three or four distinguished instances of conversion to christianity, effected by missionaries, where the individuals have been through the remainder of their lives, intrinsically pious." * * p. 126.

The experience of nations has shown, that knowledge, without a code of sound morals, to impose restraints, is a fearful thing. Witness the engines of per-

secution, which were set up in Spain and elsewhere by the evil passions of men, who were guided by knowledge that was neither tempered with the wholesome precepts of true religion, nor chastened by the moral influences of early religious education. Wisdom that is learned before the nature of religious errors is understood, only sets the passions of the human breast more cunningly to work. It teaches those who have the power, the art of drawing more closely around the *people* (who in few countries are *learned*) the chains which bind them to old habits and superstitious notions. One age back, and catholic Europe dispensed knowledge to the world. But the Bible was a sealed book to the *people*. The church preached example to them, only to set precept at nought, and to grind them the more with persecutions and oppressions.

The enterprise of foreign missions had its origin in the United States among the Congregationalists of New England. The American Board of Foreign Missions was organized, as it now exists, under a charter granted in 1812 by the legislature of Massachusetts. Though not itself an ecclesiastical body, the board of missions has acquired its ecclesiastical relations from the Congregational, Reformed Dutch, and Presbyterian churches, under the joint auspices of which it acts. Besides these, and independent of them, other denominations have also their missionaries.

The missionaries acting under the authority of the American Board, had in 1836 reduced seven languages to letters, made translations, printed, and taught reading and writing in them. They have raised up forty-nine churches, at which 2147 native members (heathen converts) go to worship. They have established 359 schools and seminaries, from which about 13,000 pupils receive instruction. More than 100,000,000 pages have been printed under the auspices of the Board, in twenty-five different languages, which are spoken by nearly 500,000,000 of people.* This shows that the missionary has neither been idle, nor fruitlessly engaged; for all of it has been done in one-third of a life time, and that too by a feeble band of American citizens, (half of which is composed of women,) who, claiming no reward for their services, and craving no boon but the charity and prayers of their countrymen to sustain them, have nobly forsaken all the endearing ties of home, and boldly encountered, for the sake of their cause, dangers of the most appalling kind. The adventures in India of the accomplished Mrs. Judson, of missionary memory, exposed her to sufferings, in which she displayed a courage and devotion that seem more like fictions in the beautiful stories of romance, than sober acts of the staid missionary.

Setting aside its high and principal object, no institution is more national in its results, than that in America of foreign missions. And we may add, that no men, under the auspices of any association, deserve more than do the American missionaries, to be considered true patriots. Wherever these men have been,—and they pick out the darkest spots of the earth for their work,—they have nourished science and added to our knowledge by their labors. They have gained the respect, and often the confidence and esteem, of those with whom they sojourn. Abroad, they have always presented their nation in a favorable point of view; and

*Missionary Herald.

in no one instance, have they failed to promote its interest, either directly or incidentally.

Within a few years, the missionary enterprise with its sister scheme of colonization, has done more towards suppressing the slave trade on the coast of Africa, than the laws of the most powerful nations on the globe, enforced with all the vigilance of their men-of-war, have been able to accomplish. Owing to the manner in which native Africans have been operated upon by colonists and missionaries, the slave-trade on the western coast has become a mere shadow of what it was.

With talents that would grace their country, with affluence, friends, and bright prospects at home, men conceive themselves called to labor in the missionary field. Without a murmur, they forego all considerations of a personal character, and enter upon the work with glad hearts. Nor is there any privation, or hardship, or danger, which they do not unhesitatingly encounter. In the midst of the murderous customs of India, and the idolatrous islands; among the cannibals of Sumatra; on the burning plains of pestilential Africa; or wherever his duty calls him—we behold in the American missionary, the philanthropist and christian, on his beautiful errands, striving with the Bible, as with a lens, to throw rays of pure light upon the heathen darkness around him.—“Among the most agreeable hours spent at Bangkok, were those passed in the society of the American missionaries. * * * *

Dr. Bradley, assisted by his wife, dispenses medical advice and medicines daily, to at least one hundred afflicted Siamese. I spent several hours at their dispensary, and left with feelings of admiration and respect for individuals, who appeared more in the light of ministering angels of beneficence, than that of human beings. When I contrasted their present situation with what it must have been in the United States; and viewed their active and incessant labors in behalf of objects more calculated to excite disgust, than call forth active piety—the risk of health and life they were daily incurring—I could not help suspecting that they were acting under the influence of an enthusiastic zeal, tending rather to retard than advance their cause. Their efforts are too strong, and must defeat themselves: a more leisurely and cautious manner, for the first few years at least, ought to be pursued. Of the truth of this opinion they are inclined to be convinced, but say, ‘How can we thrust away from us the afflicted, who hourly petition our relieving charity?’ They are aware that their own unacclimated constitutions are incapable of long enduring so much fatigue: they know from experience, that over-zeal has been a rock upon which many bright prospects of the cause have been wrecked: they know that steady perseverance is likely to achieve more in this, as in every thing else, than interrupted efforts, however strong; yet they pursue the impolitic course, unable to repress the ardent desire of doing good, notwithstanding that ‘doing good every day’* is contrary to the laws of the land.

*The residence of the missionaries was moved, soon after their arrival, to its present place, by the Siamese authorities, because, as it was asserted, they were too near the residence of his Magnificent Majesty, who once a year passed that way. Besides, the missionaries were doing good every day, and thereby obtaining too much merit, which was contrary to law. His Magnificent Majesty himself, not being allowed to ‘do good’ for more than ten days successively.

"I accompanied Dr. and Mrs. Bradley from their humble dwelling, where they leave all the little comforts which circumstances allow, to the dispensary, a small floating house on the river. The voyage was made in a sanpan of the commonest kind, without shelter from a blazing sun.

"We found nearly a hundred individuals crowded under the veranda, and many still in their boats, awaiting the Doctor's arrival. Among the number was a considerable proportion of talapoins* in their yellow robes, and I thought all manifested pleasure at our coming.

"The males on the veranda were separated, but a stranger would be unable to distinguish the sexes by their features, and, being aware of this, the Doctor very kindly said, 'These are females, and those the males.' The front of the dispensary is divided into two apartments,—one occupied by Mrs. Bradley, who dispenses prescriptions to the women, and, where the treatment of the case is continuous, manages the detail, thus leaving Dr. Bradley more time to bestow on new, or more urgent cases. In every instance, the prescription is written on a slip of paper, upon the reverse of which is a text from scripture, in Siamese, and the patients have acquired the notion, that this is an important part of the treatment. Whether this plan of disseminating the scriptures be a feasible one, I question; seeming very much like exhibiting chippings from the sculptor's chisel, as a sample of a fine piece of statuary, or a brick as a specimen of architectural structure. Besides it may lead to the impression that these texts are spells essential to the cure of the disease." p. 311-312.

Instead of likening these texts to 'the chippings from the sculptor's chisel,' the Doctor would have been more happy in his simile, had he compared them to specimens from the quarry, which may induce some to examine it carefully with the hope of finding a treasure there.

This plan of distributing texts is a beautiful little artifice, which the missionary, in honest zeal for his cause, resorts to. With him, it is an object of primary importance to disseminate the scriptures; accordingly he cuts them up into texts, disguises them under the forms of tracts, stories, incidents of conversation, and like the lapidary with his jewels, presents them in every light and shade, hoping to attract attention to his pearls.

The missionary's cause is the cause of humanity; and he has to resort to many little expedients to advance it. It is a scheme for nothing short of revolutionizing more than half the earth, and of crowning all people with the blessings of civilization. Like all great revolutions in the condition of men, much human misery must necessarily be involved in it; and though the sufferers themselves may not enjoy the price of their misery, those who come after them, will say the price is well worth the cost.

Philanthropists are in favor of speedy civilization; and justly so. Yet, nevertheless, that generation through which a nation passes from a savage to a civilized state, must needs be a miserable generation. The old see the social system of their fathers broken up; they are called on to cast forth their penates, and to resist the force of confirmed habits and early education, all of

which have afforded pleasures in their way, and which are foregone by many, only with a broken heart: the young, without the predilections of their fathers, are pioneers in a new order of things; with yet no social relations established, without the proper checks and balances to their new condition, they resort to untried expedients; and while it is gradually regulating itself, they meet with reverses, are cast down, and in their generation, only succeed by many trials and disappointments in preparing the way for those who come after them.

We have had an opportunity of seeing the missionary plan for christianizing heathen nations in operation, and of witnessing it in practical detail. We have compared the system of the American Board with the system of England. A residence of several weeks among the laborers of each, served only to confirm first impressions, and to satisfy us that the American *works* much better than the English plan. The difference in result is mainly attributable to the difference in the organization of the two corps, and the manner in which the plans are carried out; for, philologists have shown that the two people among whom our scene is laid, are descendants from the same race; and their condition in all respects, when the missionary first made his appearance among them, approached as nearly to one and the same, as the influence of climate, the difference of latitude, productions and resources of countries will allow. Although on opposite sides of the equator, there is a striking resemblance, indeed scarcely any obvious difference, to the casual observer, between the Society and Sandwich islander, either in manners, customs, features, or language.

The English have a missionary station at the Society Islands; the Americans at the Sandwich. When we were among them, the laborers in the first field had been there thirty-four years; in the second, nine years. The latter had been more profitably worked, and gave promise of the better harvest.

Our voyage lay from the Marquesas to the Society Islands, and thence to the Sandwich. In it we saw the savage in his rude state of nature, and in his transition thence to civilization. We had an opportunity of contrasting the social condition of man in his *fig-leaf* state, as at the Marquesas, with his condition in his *chrysalis* state towards civilization, as at the Society, and in his dawning life of civilized existence, as at the Sandwich Islands.

At the Marquesas Islands, the climate is a delightful one of perpetual summer; the soil and the sea, of their own accord, yield fruits in abundance; no labor is required of the hospitable native, but to pluck the ripe bread-fruit, cocoa-nuts, and plantains, almost his only food, from the trees. With his smiling face and cheerful countenance, he has but few necessities, and knows no want: happy in his ignorance, he fulfils the conditions of the familiar apothegm, 'Where ignorance is bliss, 'tis folly to be wise.' His island is the dreamer's Utopia, where nature is law, and law is love. And if human happiness be that ideal thing which philosophers have described it to be; and if we estimate the condition of the savage, not by our, but by his, standard of what constitutes true happiness, by far a greater portion of it falls to the lot of the unlettered and simple-hearted Marquesan, than to the Society islander, who,

* Siamese priests of the Budha religion.

in his pilgrimage of thirty-four years towards civilization, has become familiar with the vices, but rude indeed in the virtues both of savage and civilized life. We speak of the mass; of course there are individual exceptions.

We shall not pretend to discuss the policy of the course pursued in the missionary system at the Society Islands. We only speak of what our own observations and conclusions have presented to us, without intending to censure, or disparage. For certain it is, that the labors of the missionary at the Society Islands, have not been crowned with success, by any means commensurate with the fruits of similar labor at the American station, on the opposite side of the line.

The thirty odd years of missionary labor at the Society Islands, seem to have brought the natives, (we speak of the mass,) to that state in which they are neither able to supply the new wants, which the change in their condition has made necessary to them, nor to substitute new sources of amusement and happiness for those they have been taught to despise. Like mischievous schoolboys, their principal study seems to be to cheat their teachers.

At church, we saw breechless wardens stationed among the congregation, with wands in their hands, which, by frequently goading and tapping remiss members, were used to preserve proper decorum. Some, whom we saw officiating at a prayer meeting afterwards, in "*puris naturalibus*"—because the dark would conceal their copper-colored skins from view—came to us by night, but with far other than Nicodemus' intentions. The views of the untutored Marquesan, we could pity; but the hypocrisy of these, we despised.

Filthy in their persons, the missionary has found it expedient to introduce the fashion of *shaven* heads, both for male and female. An assemblage of them in holiday dress, some with a shirt, some with a coat, some with breeches on, as an only garment; while here and there a few with the more comely rig of whole garments or the clean tappa, afforded to the unmissionary eye of the stranger by no means a pleasing sight; on the contrary, it presented to his mind, ideas of the squalid wretchedness and abject poverty, which would be called forth by the same motley group in more civilized countries.

Of less commercial importance, and consequently more isolated in their situation than the Sandwich Islands, the missionaries at Tahiti have neither attracted as much public attention, nor had the opposing influence of foreign residents among the natives, to contend against, which their brethren across the line have. This faction among resident foreigners has not failed to create partisans, and to make the missionary sensible of its strength; for it has exercised strong influences against him and his cause. True, the Tahitian missionaries have their enemies in the *Tuteoures*, a band of natives who will neither hear their doctrines nor receive their instructions; but these have neither the influence nor the cunning of foreigners.

The most sensitive nerve, and that which whenever touched, is sure to rouse man into action, has been placed by those who have studied the secret springs of human action, not among the blood vessels of the system, but in the pocket of the man. The collateral results of missionary labor have sometimes twitched

this nerve; and being irritated and inflamed, its tendency with all who have felt its influence, has been to make enemies of those who should be friends of the mission.

In the march to civilization, made under the wool-white flag of the missionaries, the islanders have learned duly to estimate the value of their property; and, consequently, under their improved system of barter and trade with foreigners, the latter are continually reminded by this delicate nerve, that the natives do understand the problem of "*quid pro quo*" in its practical operation.

We have heard such gravely urged among other reasons equally sound, as a cause why the foreign trader should oppose the missionaries, and triumphantly adduced as an instance of the injury which these have been to the Sandwich Islands. "The time was," said a respectable ship-master, who had been trading there for more than a quarter of a century; "the time was," said he to us, "in the days of old *Tommy-hommy-haw*, and before old Bingham, or any of his psalm-singing crew had ever been here, when I could lay in a full supply of pigs and poultry for an old coat, and with a bit of red flannel, or a string of beads, buy *vegetation* enough to last a week. In 1804, I put in here for refreshments; and among other old clothes that I had, was a threadbare black coat; I had it brushed up and the seams inked, and traded it off with the king, who for it, supplied the ship with vegetables while we staid, and with live stock when she sailed. The coat was always too small for me, and the king was a much larger man than I am, and one day he came in great trouble, complaining that he could not fix the coat to look on him as it did on me; it did not meet by about a foot. So I told him it was because he was a *great* warrior, and that in Cook's country, soldier man wore blue ribbons in his button-hole. I put some loops of blue ribbon to it, and buttoned them up across his breast, and he went away much pleased with his soldier coat. But times are changed since then, and whatever you get here now, you must pay for. And its all owing to these missionaries."

As we approached Honolulu, but while yet in the outer harbor, and before we had any communication with the shore, we were boarded by a person, the only object of whose visit, appeared to be, to bespeak our prejudices in favor of the anti-missionary party. In a short time this worthy had read over to us the whole catalogue of charges and specifications against the missionaries, the most grave of which were that they lived meanly, and worked with their own hands. Nor did we afterwards hear any of a different character, except that of the oft-repeated Catholic missionary affair, and insinuations that certain of them had a back stairs' influence in the councils of state which they used to missionary purposes.

The principal missionary station is at Honolulu; though the condition of the mass has undergone more ameliorations at those ports and islands of the group that are less frequented by foreign shipping. At these latter, where the natives are not tempted by the lurements of foreign vice, nor the missionary thwarted in his business by the example of white men, he gains more of their time and attention for his work, and consequently they are more industrious, less vicious, and

therefore in a more prosperous state on some of the other stations than they are at Oahu.

We visited several of these "out-of-the-way" stations, and no where, in a single instance, did we witness the slightest misdemeanor among the islanders; but on the contrary, a rigid and scrupulous adherence to honesty and morals was observed in all their dealings. "They learn the Bible by rote," said one of the missionaries, "faster than we can print it. It is distributed to them in single sheets just as we get it from the press. They are continually asking for more, and frequently want to know, if after learning the next one, they will not have learned all the books in the world. And in our walks, we are constantly called on to point out the right from the wrong." Every where we were forcibly struck with the improved and improving condition of the islanders, and had palpable proof that the missionaries had so far conducted their nine years of labor in the most judicious manner.

"The missionaries stationed at the Sandwich Islands, as a class, are inferior to all those whom it has been our fortune to meet at other stations during the cruise. Many of them are far behind the age in which they live, deficient in general knowledge, and I think I can trace in them more of the lineaments of the Mucklewraths and Poundtexts of by-gone days, than is desirable in divines of the nineteenth century. Belonging to a sect, many of whose numbers, by some unusual combination of circumstances, have been made to reflect, and consequently change their manner of life suddenly, they have quitted their workshops to expound the scriptures; fancying all to be as bad as they themselves were previous to conversion, they go zealously to the work, and, feeling the deep importance of their subject, deal damnation and destruction, in a peculiar slang, to all whose opinions and course of life differ from their own. This is no sketch of fancy, and we can only lament there is no power to shield the pulpit from the vulgar spoutings of unlettered ignorance. It is heard in the United States, and I have no doubt, but the 'Board of Commissioners for Foreign Missions' sends abroad the best they have at command. In some rare instances we find combined in the person of the missionary polished manners, knowledge of the world, unimpeachable piety, and a mind firm in solid learning, and graced by various acquisitions of elegant literature. But it unfortunately happens that such men have generally held the subordinate and least distinguished places in the missions, doomed to be ruled by the majority, and labor in the detail of systems which their intelligence will not approve. I might mention such an one, but I must not individualize." p. 475.

The manner in which the missionaries have reduced the Sandwich Island language to letters, does not show any deficiency of talent among them. In the structure of an edifice it is not essential, or even expedient, that all the laborers should be master-workmen. The missionaries had much rubbish to clear away at the Sandwich Islands, but they have laid the foundation of their edifice upon firm ground, and have built it up thus far in admirable proportions. The workmanship shows no want of skill. But "perfection is like the mountain of the talisman, no one has ever yet reached its summit."

We have been led unwittingly away by this interesting subject. If the missionary err, *humanum est*, and

over his faults, if faults he have, we would cast the mantle of charity, as long as it contains any virtue in its folds.

The Doctor's motto is, "Believe me, I speak as my understanding instructs me, and as mine honesty puts it to utterance." And whenever the missionaries came up to his standard, which we think is pitched too high, he does not withhold from them their due meed of praise, nor deal it out grudgingly. He bears ample testimony of the devotion and success with which the American missionaries in British India have labored in their cause. He gives an interesting account of his visit to the missionary school at Bombay, in charge of Miss Farrar. Under the judicious management of this lady, her school constitutes the only neutral ground, which has ever been afforded where the haughty Mussulman, the persecuted, but honest fire-worshipper, and the exclusive Hindoo, with all his prejudices of caste, could ever meet on any thing like terms of equality. "Already," continues our author, in his interesting narrative, "the feeling against caste has received a shock, and the little girls associated together without much repugnance; and their parents, for the sake of what they learn from their worthy instructors, suffer them to attend the schools." p. 127.

The Doctor left Miss Farrar's school "fully impressed, that the plan of educating native females must succeed, and in the course of time be attended with very beneficial results throughout India"—and adds, "that the great obstacles which the missionaries have to contend against there, are the prejudices of caste; and these are incredibly strong." p. 125.

The *Monolithic* caves of India, are splendid temples of Hindoo antiquity, hewn, as their name signifies, out of the solid rock. They are found among the mountains of Elephanta and Salsette; they are adorned with verandas, spacious and elegant apartments, supported by pillars and columns; and ornamented with massive pieces of statuary, and numerous specimens of the sculptor's art on the walls and near the doorways, many of which are wrought out of the living rock.

The learned of different ages have in vain searched history, inquired of tradition, and tortured their own ingenuity, for some account of the origin of these caves. But the remotest history is silent on the subject, and the people who carved them out, are lost to tradition. All that is known of them is gathered from the stony idols and silent monuments, which a heathen people, at a remote period, and with immense cost of time and labor, had erected to their gods. From the grandeur, number and style of them, it is inferred that they were executed under some powerful dynasty in the East, which must have reigned many years before works of such extent could have been completed.

There is a striking similarity in the architectural style of these caves, and the Monolithic temples of Nubia. The manner in which they are decorated, the resemblance between the symbolical representations found in the two cases, and other traces of like forms of worship, favor the conjecture, that the people who hollowed out these temples in the mountains, had a common descent; for they bowed before similar idols, and worshipped the same powers of nature and spirits of the universe.

The recent discovery in ancient Edom of the Mono-

lithic city of Petra, adds plausibility to the conjecture that the upper Nile was peopled from Western India. Though the biblical history of early times rather favors the hypothesis, that the bloody Bozrah* was the *father-land*, whence commerce, by means of caravans, found her way into India and Nubia, carrying along with other customs in her train, the stone-cutting art.

The ancient temples of Hindoostan and Egypt, the city of Petra, and the ruins of Palenque, afford an interesting field of research to the antiquary, who shall seek among their remains for traces of similar architectural designs, or other monuments of art, that may serve as a connecting link between the nations of the old world and the aborigines of the new.

Besides the caves of Salsette and Elephanta, among the other subjects of general interest touched upon in the "SKETCHES IN HINDOOSTAN," are the policy of the English East India government, many graphic sketches of rides, scenes, manners and customs about Bombay, and a short account of the Parsees or fire-worshippers.

Without the avarice, or the Jewish curse upon them, the Parsees are among the heathen what the Jews are to the christian nations of the earth. Both of them have been driven from their land, and neither of them have a country. Conducting a thrifty trade wherever they are known, both people have preserved, among all nations, and through every revolution, their peculiar religion and forms of worship. The Parsees are celebrated for their upright dealing and honorable bearing. In some parts of the East, it is said, that sealed bags of money are received and passed currently among merchants, with no other knowledge or voucher of their contents, than that afforded on the outside by the brand of the Parsee merchant.

Moore's beautiful oriental story, the *FIRE-WORSHIPPERS*, is familiar to every one. The deep-toned pathos with which this poem is sung by the young minstrel to his tulip-cheeked bride, delights the fancy, and, in the youthful mind, flings an air of romance around the gallant Hased and his devoted band, which the mention of fire-worshippers in after-life always calls to memory.

They suppose the throne of the Almighty to be situated in the sun, which dispenses light and heat to the earth; hence the worship of that luminary;† hence also their worship of fire which is emblematical. The stated times for their devotions are at the rising and setting of the sun. They will kindle a fire, and make use of it in their household economy; but they pay it reverence, and will not extinguish it. We recollect an instance of grave offence to a Gheber, by a *squirting* son of brother Jonathan, who, on a visit to the "rebel son of fire," spit his tobacco juice into the blazes of that emblem of deity.

More than a thousand years ago the fire-worshippers were driven from Persia, their country, by the Arabs, under the father of the "dark-eyed Hinda."‡ Fleeing from the persecutions of their Mussulman tyrants, they sought refuge in various countries of the East. At last they found an asylum among the Guzeratees, who allowed them to exercise their religious rites, on condition that they would reveal the mysteries of their faith, and conform with the customs of the country. Whence, in the pursuits of commerce, they have emigrated to all parts of the East. At the age of

seven years they are invested with the "Gheber belt" of goats' hair, which they never take off, or put on, without prayer. They believe in one God, and that Zoroaster was his prophet. After their expatriation they had no temples, "but morning and evening they assembled on the highways, or near some fountain, where they worshipped the rising and the setting sun. They are generous to all classes of men, without regard to their religious opinions: they often display their charity and benevolence by purchasing slaves, and, after instructing them in some useful art, giving them their liberty." p. 137.

Their number, their union, and their wealth, have excited jealousy, and sometimes made them objects of suspicion; but such is the mildness of their manners, and the rectitude of their conduct, that instances are rare of their being cited before a judge for any misdemeanor. They are fond of poetry. And a Parsee, while tolerant of all religions, has never been known to change his own. p. 133.

From Bombay the squadron proceeded to Colombo, (Ceylon,) and were the first American men-of-war that have anchored there. The officers were cordially received, and hospitably entertained. The Doctor's "SKETCHES IN CEYLON," are replete with valuable information, and entertaining accounts of incidents and things. "Spicy breezes,"* salt, government, cinnamon gardens, commerce, pearls and missionaries, are only a portion of the varied and agreeable topics discussed in these delightful sketches. The chapter on pearl fishing is particularly instructive. The fishery is a government monopoly, and is farmed out for only a few days in the year, during which time alone, the pearl banks are fished. The oysters taken are sold on the spot to the highest bidder. And those who consider a pearl oyster a treasure, will be astonished to learn that a bushel of them may be purchased for a less sum than a bushel of common oysters costs at Faversham or Colchester. p. 190. The missionaries have met with more success at Ceylon than in any part of India. And what may be flattering to our national pride at least, is, that though the American missionaries there, have been passed over in silence by writers on British India, "they are acknowledged on all hands," says the Doctor, "to be more exemplary and more useful, and more eminently successful than any other religious people in India." p. 166.

Passing from Ceylon, the reader joins hands with our author, and is "shown about" Batavia, where his fruit-loving mouth waters for the delicious mangustin; thence he accompanies him to Bankok on many a pleasant jaunt, and amidst curious scenes and people. Here the treaty was exchanged with his magnificent majesty, the king of Siam.

Thence, on a short allowance of provisions, and with languid minds, under the exhausting influence of an enervating climate, to Turon, where they failed in the second attempt, on the part of the United States, to open a commercial negotiation with the Cochin-Chinese government; and from here they hie merrily on with a leading Monoon, to the celestial provinces of the cousin of the sun, and brother of the moon.

A few days after their arrival at Canton, they were called on to perform the last sad offices of friendship to

* Isaiah lxiii.

† Lalla Rookh.

‡ Lalla Rookh.

* Vide Bishop Heber's Missionary Hymn.

Edmund Roberts, Esq., the diplomatic agent, who had executed the treaties on the part of the United States, with the courts of Siam and Muscat, and to Lieutenant Commanding Archibald S. Campbell, commander of the United States schooner *Enterprise*. The officers and American merchants at Canton, erected monuments over the remains of these two officers.

The kind attentions of the foreign merchants at Canton, served to divert the minds of the officers from these calamities, and the squadron again put to sea, after a sojourn of three or four weeks, of which the *SKETCHES IN CHINA* afford many interesting details. The cave, whence the gentle Camoens charmed his countrymen with the soft melodies of his verse—graphic sketches of scenes, manners and peculiarities—and the chapter on the “*TEA PLANT*,” will all find favor in the eyes of the general reader.

After touching at the Bonin, the *Peacock* arrived at the Sandwich Islands on the 7th September, 1836—not, however, without leaving on her trackless way, the body of another gallant spirit. On the 25th July, the remains of J. D. Mendenhall, purser of the *Enterprise*, were committed to the deep.

“A funeral at sea is always impressive. The present was particularly so; for, we were paying the last tribute to one who had been generally beloved and respected by the officers of the squadron.

“The flags of both vessels were at half-mast; the coffin, covered by a flag, was placed in the lee gangway; the tolling of the ship’s bell summoned the officers and crew on deck; a solemn silence every where prevailed, broken now and then by a slight swash of the sea against the vessel’s side. While the service of the church was being read, the *Enterprise*, with tolling bell, passed under our stern, and came close under our lee. Her bell was silent; the officers and crew were gazing from deck—one plunge, and the broad blue bosom of the Pacific ocean, closed over the mortal remains of one much loved, leaving no trace to mark his grave.” p. 451.

A few statistics and graphic sketches, other than those already noticed at the Sandwich Islands, with “*SKETCHES IN THE CALIFORNIAS AND MEXICO*,” bring this interesting volume to the conclusion.

It has already been published in England. It is a more interesting, a better written, and a more valuable work, than “*Three years in the Pacific*,” by the same author, which went rapidly through several English editions.

IMPROMPTU.

Impromptus are generally, like much of Sheridan’s wit, cut and carved for the occasion. The following is an exception to the general rule:

I love thee, girl, e’en as the saint
Loves his bright dream of Heaven!
And if such love were sinful deemed,
For mine I’d be forgiven—
For loving graces such as thine
Is only loving what’s divine.

[*Hesperian*.]

BRIDAL ADDRESS.*

To E. F. M****.

RECITED AT HER NUPTIALS BY HER SISTER.

’Tis done! their hands are joined—the vow is given—
Angels are regist’ring that bond in Heaven!
The blessing of the man of God ascends,
Rebreathed by father, brothers, sisters, friends,
And prayers of loving and of loved ones rise,
Invoking richest blessings from the skies.

Hail to the bridegroom! hail to the youthful bride!
Be rosy mirth and joy on every side;
Let age forget its hoary hairs to-night,
And revel youth in unrestrain’d delight;
Let folly, gorged with pleasure, sink oppressed;
Leave discontent, in frowning sadness dressed:
But, here, let every lip, new hope impart,
And all be bliss, where heart meets kindred heart.

Bride of all happiness! in this bright hour
What gift is left for man, or Heaven to shower?
See—love-lit eyes their radiance round thee fling,
Joys in thy path like early flow’rets spring;
And—*more than these*—brighter than sunbeams ray—
A father’s holy smile illumines thy way;
A parent’s benison is on thy head;
Oh! blest with that alone, though all were fled!
He too—whose breast is throbbing wild and high—
Whose soul is filled with love—whose speaking eye
Sees through this mazy crowd one form alone—
Who, than thy bosom, asks no other throne—
He stands enraptured by thy side—*thine own*!

The bond—’tis sealed—thou’rt his; through good or ill,
His wife, his counsellor, friend, companion still;
To smile away the clouds—if clouds should come—
And make an Eden of that dear spot, *home*!
To weep that he doth mourn—and wake thy song
Of mirth, that friends and blessings round him throng—
To watch o’er him, like to a fadeless star,
That lights the gloom and keeps dark grief afar;
To have no thought, no will—no wish avow,
Unsanctioned by his voice—meekly to bow
Before his riper judgment—and fear nought
On earth, save loss of love by gold unbought;
When sorrow pales his manly cheek, or care,
To soothe his anguish—tenderly to bear—
By frets unvexed—and in thy heart to wear
That love which baffles time or change—whose power
Is strongest, firmest in the darkest hour.
All this thou’lt be—and well shall he repay
A love, too deep for minstrel to portray.

Behold! it fades—the veil of future years—
In fancy’s mirror, lo! thy form appears;
Thou’rt ill, upon the couch of pain—but he
Is by thy side, and all thy suff’rings flee!
Thou weep’st—he cheers thee with his whispered words;
Thou’rt sad—he touches memory’s tend’rest chords—

* This address was recited immediately after the ceremony of a marriage, which took place lately in the city of New York, before a large assemblage of friends. It was written for the occasion by a sister of the bride, and spoken by a younger sister nine years of age.—[*Ed. So. Lit. Messenger*.]

His anxious eye is bent upon thy face,
Even as now. Oh! when can time erase
The truth, the love, the holy confidence,
All sweetly mingled in that thrilling glance!
Again thy step is bounding, and thine eye
Its tale of mirth is telling; wild and high
Thy merry laughter rings, and joy once more
Illumes thy cheerful hearth, as oft of yore;
While, bending o'er thee, fondly murmurs he,
"Did not I tell thee such our joys would be?"

Pure, as the veil flung o'er thy virgin brow—
Fond, as the dreams that in thy bosom glow—
Bright, as the rose of beauty on thy cheek—
True, as the faith thou *feels* but can'st not speak—
Deathless, as Vesta's temple flame, be all
Thy love—changeless as Heaven, whate'er befall!
Thy every grief be light, as summer's wind,
Which shakes the flower, but leaves no blight behind.
THINE be the mind-born charms, which coming years
Rob of no sweets, and time but more endears;
And HIS, the holy truth, which still loves on,
When friends forsake, and youth and beauty's gone!

November, 1833.

THE FALLS OF BASH-PISH: OR, THE EAGLE'S NEST.

To the Editor of the *Southern Literary Messenger*.

Two of our friends, who were on a pedestrian tour, called to see us last week. Their way of life is sedentary, and they wisely chose this mode of repairing the waste (I should more deferentially say expense) of mind and body, in their studies. As men of taste, they combined with a plan of exercise the purpose of turning aside from the highway, to see the natural beauties of our romantic county of Berkshire. But on inquiring by the wayside and at the inns, they could obtain no information but that there was a "sightly view" at such a point, or a "fine prospect" descending such a mountain. Of the manifold treasures hidden in our hills they could get no report, and this led them to suggest that residents in a country worth visiting should write some account of their surroundings, which should be a sort of guide-book to the explorer. It struck me this was a reasonable species of hospitality, and having just returned from a visit to some falls in our neighborhood, quite unknown to fame, I determined to send to you a copy of the notes I made at the time of the excursion. A description of the favorite haunts in our immediate neighborhood, would be a more literal compliance with the suggestion of our pedestrians, but besides, that in speaking of these domestic lions, I could scarcely divest myself of the partiality resulting from fond associations with such old and familiar friends as *Monument-Mountain*, the *Ice-glen*, the *Roaring-Brook*, the *Precipice*, &c., the journal to Bash-pish is already written, a resistless argument in its favor.

September 11, 1833. A bright, warm September morning. Our party is arranged, and we are on the point of starting for Bash-pish. Every thing is propi-

tious, save that the rain we have so earnestly desired to lay the dust, has not fallen; but what signifies it? with such a party we surely may endure without complaint dust, heat, rain, or any other of the lesser evils that may chance to "light o' our shoulders." While we have Mrs. — and the —'s with us, we have moral influences that are equivalent to sunshine and showers, and all the life-invigorating and life-restoring powers of the natural world. Our party includes eighteen persons, counting by that respectable designation five school girls. As far as they are concerned, it is sure to be a party of pleasure; for, all the miseries ever heaped on a devoted party of pleasure, so called, could not counteract the joyful sense of escape from music lessons, French, Latin, arithmetic, and all those tasks at which they assuredly sow in tears, if they are hereafter to bear their sheaves rejoicing. But here is our omnibus, a long open wagon, and merry voices are ringing round it; and there is the appendix to this great work, a barouche, in which the more delicate members of the party are to take their turn, with the little unconscious traveller, who, having travelled but four months on this road of life, as yet neither looks backward nor forward.

We proceeded down the county road: a soft, and as the travellers among us said, Italian atmosphere, seemed like a transparent veil between us and the mountains, and made them look blue, and hazy, and distant; while every nearer object was clear and defined. The Mountain Mirror on our right, true to its name, reflected like those polished silver plates, anciently used as mirrors, and gave back clearly the image of the sylvan beauties that stood thickly around it; while Scott's pond, on our left, looked as blue as the heaven above it.

At Stockbridge a portion of our party were awaiting us, and congratulations poured in upon us on our happy prospects. The clouds that threatened yesterday have vanished—we run no risk in the open omnibus—the wind is westerly, the most trustworthy of winds, and so kissing hands to our God-speeding friends, while one of our party was muttering, as he clambered over the high wheels of the omnibus, "*Jual diavolo di Carro!*" we proceeded onwards, and next drew up at the inn, in the pretty village of Barrington, where the street is enfolded in the mighty arms of old elms. What beautiful memorials of the departed are the trees they planted, with their roots struck into the earth whence we have all sprung, and their stems mounting heavenward whither we all tend! Some one suggested that the Barrington inn furnished tolerable claret, and it was voted prudent to secure a few bottles for our lunch, to which, in the true vein of travellers, we were looking forward to as the next great event of the day. Our admirable purveyor, A—, went to procure it. The man who happened to be serving the bar,—for the honor of our county I trust he was not an accredited official of the Barrington inn,—seeing A—'s blonze, and observing his foreign accent, deemed it an apt occasion for a speculation; and having delivered the claret, said it was two dollars a bottle. "*Due scudi!*" (two dollars,) exclaimed our friend; "my good sir, the bar-keeper asked me but half a dollar for a bottle yesterday." The man drew in, muttered some apology, and quietly took the tendered half dollar per bottle. Such a circumstance might have been noted down by our

travellers abroad, or foreigners here, as characterizing a district; and yet we have passed up and down this good county, for the better part of half a century, without meeting a similar instance—so reliable are the conclusions of generalizing travellers!

The drive from Barrington to Sheffield is along a meadow road, and for the most part on the margin of the Housatonick. Green fields and a stream of water, great or small, will always constitute beautiful scenery; but when that stream has been the play-fellow of your childhood, and has smiled on you through all the chances of life, there seems to be a soul breathed into material things. Some of us needed all this spiritual communion, to endure with christian patience the clouds of dust that enveloped us, even through that

"woodland scene,
Where wanders the stream with waters of green,
As if the bright fringe of herbs on its brink,
Had given their stain to the waves they drink;
And they whose meadows it murmurs through,
Have named the stream from its own fair hue."

We trust that the poet from whom we quote, when he shall have cast off the burden, we are sure he unwillingly bears, of a party-paper, will come back to the more genial task of illustrating other points of his native county, as well as he has done "Monument Mountain," and "Green River."

Sheffield has far less rural beauty than most of our villages, but it has a compensation in lying in the shadow of the Jahconick, and in having their western horizon defined by the beautiful outline of that lofty mountain. At Sheffield we proved the virtue of a name; for having called for *lunch*, a table was spread for us with stacks of eggs, bread and butter, cakes, pies, &c., besides a smoking quarter of lamb—in short, a fair country meridian dinner, for which, being called a *lunch*, we paid only eighteen cents each!

At Sheffield, some slight indications that we were a party of pleasure appeared; for all such seem to share the curse that fell on Seged, when he devoted nine days to happiness. There were various signs of fatigue, restlessness, and anxiety. Some were lolling on the beds—others stretched on the floor—some bewailing the dust—and others noting mares' tails and mackerels' backs, that promised we should at least have no dust to complain of after to-day. But what are we to do with rain in our uncovered ark? "Wait till the rain comes," wisely says one of us, who never sees any evil in the future, and bears every present evil so lightly, that to her it seems to have neither form nor weight. From Sheffield, in spite of various guide-boards, inviting us to shorter and better routes, we adhered to that which follows the course of our favorite river, that now, though it has lost nothing of the grace of the infant, is dilating into a breadth that ranks it among rivers in our land of mammoth waters. It is, in this dry time, somewhat in the condition of the sixth age, its bed being a world too wide for its shrunk sides. Well may it linger, and turn, and double on its track, like a good spirit loving the smiles it makes; for, in some sort, it is the creator of this scene of abundance, beauty, and contentment. But oh, the dust! the dust! we can hardly see our fellow travellers through the clouds between us; and feel that farthest from them is best. We have now

left the county of Berkshire, and entered the state of Connecticut; and in passing over a high hill to the village of Salisbury, we stopped on a summit, called, I believe, Prospect Hill; but where in this country of far-stretching views, of valley and upland, is there a hill that might not be so designated? From this hill we first saw the two lovely lakes that lie cradled in the valley, separated only by a strip of *terra firma*, wide enough for a carriage road. Mrs. — gave them the fitting name of the *Twins*; and the curious little hill on the right, whose natural inequalities present to the eye the image of terraces, battlements, and turrets, she called *Castle-Hill*. There is much use in associating names with points of a landscape; besides that, that seems hardly to have an individual existence which has no name. They serve as a sort of "open sesame" to the memory; and when afterwards we hear them, they, and their dependencies, and surroundings, pass before us almost as vividly as when the eye first rested on them. There is good sense as well as good taste, in giving a name that is obviously descriptive—it stands some chance of being generally adopted. Our people do not readily change the homely designations of "Great Pond," and "Little Pond," for the fine and foreign names bestowed by amateurs. The west was mottled with clouds which reflected the last rays of twilight, when we drove up to one of the two inns in the old village of Salisbury. Our arrival produced a change in the little dwelling, like setting the wheels of a factory in motion. All the energies of the landlady, who, her husband being absent, has double duty to perform, are put in motion. Here are twenty persons to be fed without any previous preparation for such an onslaught; twenty persons to be accommodated with lodging and all its accessories, and some among them habituated to whatever there is of refinement and elegance in the country; but luckily there are half a dozen girls, in their teens, easy material for stowing, who will sleep soundly on feathers, straw, or a bare floor, and be sure of a merry waking after; and all of us have learned Touchstone's true philosophy, "When we were at home we were in a better place, but travellers must be content." A party of pleasure must be poorly fitted for their vocation, if they cannot convert the incommodities of a narrow inn into materials for laughter. After a due investigation, it was settled that Mrs. —, and her tail of girls, should take possession of the *ball-room*; that Mrs. —, her nurse, and child, should have a little nest of rooms, some ten feet square—a strange penning up for one what last year at this time was fêted in lordly palaces, the cynosure of all eyes. To M., and F., and F., was assigned the only carpetted apartment as compensation for their French couches, psyches, mirrors, dressing-rooms, bathing-rooms, &c. at home; and I sent two of my young handmaidens to secure apartments for the rest of us at the inn over the way. They returned, charmed with their success. They had engaged for the gentlemen the refinement of separate apartments, and for the four of us that remained, "such a delightful room—so Saxon!" I had some misgivings as to the quality termed Saxon; but what was my dismay, on retiring to my quarters, to find a town-hall, (called by courtesy, ball-room,) built by the good citizens of Salisbury for their civil assemblings. By the feeble glimmerings of our lamp, I perceived at the upper

extremity of the apartment, some fifty feet long, an orchestra, which the fervid imaginations of my young purveyors had, I presumed, converted into a *dais*. The room was illuminated by eight windows with not even a paper curtain—nothing but the dark scarlet bombazet demi-curtain, which seems the favorite ensign of our country inns. Beside the windows, there is a door opening on to a piazza, large enough to have afforded egress and ingress to all the gods of our Saxon fathers, and quite in character for their impartial hospitalities: it had no fastenings to exclude volunteer guests. And further, this “delightful Saxon” apartment had a sanded floor, which, as my young companions chose to course up and down its fifty of length, was rather unfriendly to the sweet offices of sleep. But in spite of this—in spite of the windows rattling in their casements—in spite of a rising northeaster—of the blowing open of the door, and the pelting in of the rain, a king might have envied our sound sleep on the teamsters’ beds of this “delightful Saxon” apartment! Such wonderful transmuters are exercise and fatigue, of straw-beds and coarse coverings into down and fine linen.

Wednesday morning.—The winds are howling, and the rain driving, and our strolling company must be housed for the day. Picturesque travellers, we must make our own pictures. Shadows are always ready, and it will be strange, if with the bright spirits around us, we cannot put in our own lights. Half a dozen propositions are already afloat for the amusements of the day. “Shall we get Mrs. — to read Shakespeare to us?” or “shall we prepare for waltzes and tableaux?” It is agreed that the blonzes of our Milan friends will make charming costumes for the girls, and the scarlet curtains will work up admirably into bandit gear—it will be the first real service the detestable things ever rendered. In the meantime, I have set my merry girls and our Italian cavalieri to sweeping the sand off the floor. A— is decorating it with a series of family portraits he has discovered, evidently painted by some unlucky tinto, who had no other mode of furnishing the *quid pro quo*; for the landlord has sat for three portraits—once with folded hands, then reading, and then meditating; and the landlady is presented in the vanities of a most versatile wardrobe. Our Italian friends seem to produce strange perplexity in the minds of our entertainers. The woman who waited on our little party at breakfast, came to me after it was over, saying, in a most apologetic tone, “I am afraid you can’t understand me any better than I can you;” and my assurance that I was her countrywoman, brightened her countenance with the first perception that we were not all outlandish folk.

The floor is swept. A— has crossed the brooms as trophies over the door—some are tossing B— in a blanket—others galloping, and the rest waltzing with the family portraits! We shall have no lack of amusement.

At eleven, the whole party assembled at the upper inn, where a centre-table having been tastefully arranged by the young ladies, so as to give a most civilized aspect to the apartment, we gathered round it. Our amateur artists busied themselves with finishing up the sketches of the previous day. The girls cajoled the landlady out of her knitting work, and sat most demurely at it. Our Italian scholars translated English

into Italian poetry; and one of our foreign friends improvised verses in his own language, till, by common consent, each individual occupation was abandoned, and every eye and ear was devoted to Mrs. —, while she read to us the first scenes in the Merchant of Venice. I doubt if a theatrical representation of Shakespeare, with all the aid of scenic effect, and dramatic illusion, can equal such a reading of the play as Mrs. —’s. The acted play is necessarily cut down and garbled, and nine-tenths of what remains is travestied by bad actors; but, read by Mrs. —, Shakespeare is truly interpreted, and every word delivered in a voice that is the most effective, as well as the most delicious organ of the soul. That voice, with her electrifying eye, and her miraculous variety of expression, breathe a living spirit into the written words, and each character appears before you in its individuality and completeness; not only the intellectual Portia, the cool, subtle and avenging Shylock, but the grave and generous Antonio, the sagacious Gratiano, &c. &c.—such characters as on the stage, are either automations or buffoons. But Mrs. —, who seems in the versatility of her talents as well as in her genius, to be “near of kin” to her great master, had no sooner closed her book than she sprang up stairs into the ball-room, to teach L— a gavot, and finding in a corner of the room an old crimson banner, belonging to the citizen-soldiers of Salisbury, and a sort of helmet-cap that had probably graced their commander, she donned the one and flourished the other, impersonating an heroic chieftainess, who might have appropriated the words of Clorinda—

“Son pronta ad ogni impresa;
L’alte non temo, e l’umill non sdegno.”

Here is the summons to dinner. How has the rainy morning been charmed away!

It is a pity that metaphysicians instead of scoffing at the theories of philosophers older than themselves, and striking out new systems to be scoffed at in their turn, do not observe the minds around them, and the laws that govern them. Here is our kind little landlady who has been perfectly happy all the morning in the satisfaction she was preparing for her guests. How cheerfully she has performed the multifarious labors of housewife, cook, and maid of all work, crying “anon, anon!” to every one’s bidding, and casting her smiles like sunbeams beyond the clouds that were scudding before her. The odor of a turkey roasting for dinner, (a rare dainty at this season in these country parts,) acted as a charm against fatigue and disquietude of every sort. The dinner hour came—the turkey was served—the hungry guests sat down to dinner. It was a moment of honest triumph to the good woman—a moment when the little vanities of the housewife were dignified by the benevolence of the woman. But, alas! night is next to day; and not more dismal is the change from light to darkness, than the vanishing of the poor hostess’ smiles, when she saw the strongest, skilfullest hand among us laboring in vain to separate the joints of the ancient gobbler, who, though the father of generations, she had undoubtedly brought to a most untimely end. The poor woman, for the first time that day, sat down. All the toils of the day—all the runnings to and fro, were accumulated at this moment. Hope had cheated her into unconsciousness of her burdens, and at

the touch of disappointment she sunk under them. Now our metaphysical result is, that there are certain powers of the mind, which, brought into action, abridge labor even more than spinning-jennies.

After dinner we fell into an argument on the tendencies of the Catholic religion, to prolong the dominion of absolute governments. F—— earnestly contending against it in spite of his sixteen years in the dungeons of Spielberg; which we might have expected would have prejudiced him in favor of our argument.

Thursday morning.—We sent through a pelting rain, a mile and a half, for a fiddler, ensconced him in the orchestra, lighted up our tin chandelier and began dancing, though we had but one cavalier who did not declare himself *hors de combat*. Fortunately two wandering stars suddenly rose above the dreary horizon of our young damsels. The one was a young man who introduced himself as Hermann Hinklinker, a German student, and his companion, a Count Catchimetchikoff, a Pole. They both spoke English well. The German student was a sort of admirable Crichton. He seemed an universal genius, and whatever he was called upon to do he did marvellously well. His eye was that of an inspired poet, and his countenance, conversation and manners, had the witching charm that belongs to the knight of bower and hall. As if by instinct he selected the lady of our fair company, who has been presented at foreign courts, and might grace an epic poem, and having called in vain on our rustic fiddler for various dances foreign, he gracefully joined a quadrille, a country dance, and Virginia reel, and danced with as much glee as if they were the dances of his own land and fondest associations. His companion, the Polish Count, with the unpronounceable and almost unwritable name, was boyish and unpractised, but he had the freedom of a seemingly happy nature, and a certain air of the well-born and well-nurtured, that was pleasing. At half past nine our dancers had exhausted their superfluous activity, and we adjourned to the little parlor where our wondrous student sang German, Italian, French, and English with equal facility, and with an expression that waked all the soul within us; and that, perhaps, is the prosaic interpretation of what the poet means by "creating a soul under the ribs of death." The young Polish prince sang an accompaniment, that at least showed long practice, with his more accomplished friend. Our hostess sent us in a refection of cakes and peaches, and we separated at twelve, bidding our strange visitors "good night," as if they were of us. Who were they? Whence came they? Is it possible that their advent was connected with the disappearance of two of our party, Mrs. — and Miss —, who left us after tea, and did not appear again till this morning?

It is still raining, and has rained all night, as it did upon the drowning unbelievers of Noah's time. The wind is still east, and our pictorial party will probably go home again without either seeing Canaan falls, the lakes, or Bash-Pish.

Ten o'clock.—Good, as well as evil, comes unlooked for. The wind has changed—the clouds are breaking away—the carriages are ready—Ho! for Canaan falls! Our friend, R. A——, has joined us. This is his home, and he has undertaken hospitably to show us the beauties to which he is native, and which he rightly appreciates, and unostentatiously enjoys. The rain has done

us nothing but good—it has laid our enemy, the dust, quietly at our feet—washed the trees—greened the fields—and brimmed every little brook, so that this seems the land of fresh and gushing streams.

The elements had ceased their hostility, and air, earth and water, were ministering to our enjoyment, when, lo! on descending a hill, we came upon a stream that had overflowed its banks and flooded the road for a long distance. We stopped to take counsel of an old resident, who assured us there was no danger, and those among us who were as brave as the Duke of Marlborough—that is, who feared nothing where there was nothing to fear—proceeded, in spite of the outcries of sundry of our juveniles, who were suddenly pervaded with a sense of Falstaff's alacrity in sinking. After all it was but one of Andrew Marvel's dangers, and only served to add one to the pictures laid up in our memories; for it was a pretty sight to see the omnibus' horses dashing into the water, and to watch their passage, as they were now nearly hidden by the light foliage, that almost embowered the narrow road and now emerged from it. At Canaan falls we rejoined, by appointment, some dear friends who had come from home with us, and who, during the rainy day, had enjoyed a welcome that might have been envied by him, who boasted that his kindest welcome was at an inn. Canaan falls have long been known as furnishing valuable water privileges, and as being the location of profitable furnaces, but being far from the grand routes, they have been little visited by amateurs, and few of this dainty body probably know that there is a fall of sixty feet in the Housatonic. Human beauties have their "handsome days," and so have the beauties of inanimate nature, if that can be called inanimate that breathes harmony, and speaks to the soul. Never, I am sure, were these falls seen in a more becoming light. The river was filled by the rains of the previous night, and literally verified what was said in another sense, by our good woman of the inn, when she told me "the falls were well worth seeing—there had been a great addition to them." "What, more water?" "Oh no, more furnaces!" And, in truth, furnaces are not very bad "additions." They certainly are far less offensive accessories to falls than factories, which are so upright, so freshly painted, and so full of windows. Whether it is that Ketch's marvellous pencil has redeemed a furnace from all utilitarian and anti-picturesque associations, so that you cannot see one without thinking of the young page Fridolin, and his beautiful mistress; or that there is something that harmonizes with trees, rocks, and water, in these buildings, that always look old, brown, dingy, and ominous, with their glowing fires gleaming through their port-holes. Some of our party who had seen Schaffhausen, were struck by a resemblance of these to those celebrated falls, and had the courage to pronounce them little less beautiful. I shall not attempt to describe them. Painting even is an ineffective presentment of a water-fall; and words, without the spell of genius, cannot conjure up to the imagination the motion and force of the river, as it rushes over the precipice—the rocks above, that seem in vain to have tried to repel and obstruct its passage—the pretty islands—the steep banks, with their dark cedars—the rustic bridge below—the long stretch of the river, and the far distant hills that bound the horizon, and all touched

with a light that would have set an artist or a poet off into ecstasy.

But the majority of our caravan were neither artists nor poets; so after running up and down the bank, to the bottom and the top of the fall, wondering, admiring, and exclaiming as much as could be reasonably expected, we returned to enjoy a very nice lunch, in a degree that could not have been exceeded by poets or artists. *En passant*, we commend, as in duty bound, the nice inn at Canaan falls to the wayfarer, where he will be sure of finding that rarity, fresh eggs *fresh*, and cakes and pastry most skilfully compounded.

We had yet a drive of five miles in extent round Furnace lake to Salisbury, and then a tour round *Salisbury lakes*, so called—*par excellence*. The views returning, of upland and lowland, were most beautiful. We were driven to the summit of a hill whence we saw all the Salisbury world and the glory thereof. We passed a rill that our rainy day had swollen into what appeared a mountain torrent, and finally passing round the lower margin of Furnace lake, reached our inn at three o'clock. The day was still unclouded, and as the shadows were lengthening, every hour added to the beauty of the scenery, so that the eye, not satisfied, as it is never satisfied with such seeing, our party, excepting Mrs. — and myself, set off for the lakes.

Opposite the inn there is a very green field, and this field is traversed by a little stream, that is, I believe, the outlet of the lake on Mount Rhiga; at any rate its birth-place is on that high mountain, and as it flows through this fresh bit of meadow land, it retains its free and joyous mountain character. There is always in the sound of running water a voice of invitation; and Mrs. — and myself, having no heart to resist such a bidding, passed through an open barn, which afforded us the readiest access to the meadow, and then strolled along the margin of the brook to a clump of sycamores, from whose roots the earth had been so washed away as to afford a good seat, and their clean white stems a far better support than our perpendicular country chairs. The trees along this brook are not the willows and light shrubbery that usually affect our water courses, but groups of noble oaks, elms, maples, and sycamores, (the original growth I believe,) disposed as if they were planted by the most skilful artist—and were they not?

"If this were in England," said Mrs. —, reverting to her English associations, "it would make the fortune of our innkeeper. There we have a large class who haunt such places. That barn would be removed, or rather it would never have been placed there, and the little aid that nature needs to give it all the attraction it is capable of, would not have been spared; but in your country the supplies that nature yields to physical wants is all you get from her. There are a few individual exceptions; but for the most part those of your people who can afford the luxury of travelling, throng the watering places; they go in herds, and must eat, drink and live, in crowds. To love and enjoy nature, requires a certain degree and kind of cultivation, which your people have not."

In spite of the *amour-propre*, which one instinctively extends so far as to embrace one's own people, I could not but admit that there was much justice in my friend's strictures. The denizens of our cities, who, for the

most part, make up that class that can indulge in the luxury of travelling, and summer excursions, do not spend their short holiday in exploring their country and making acquaintance with its lonely solitudes—and why should they? We must be content to let people be happy in their own way. There are no daily papers at Bash-pish or Canaan falls—no prices-current—no reports from the stock market—and the most irresistible French dresses, or (as one of my fashionable friends styles them) even the most *romantic* French dresses, and the most perfect "loves of capes," would be worse than wasted there. But, as I urged to Mrs. —, is there not a much larger class in our country, than the privileged aristocracy of any land can furnish, sufficiently educated to relish the beauties of nature? A love of nature, amounting to a passion, is innate with a few—but a very few. With the greater part it needs to be awakened and cultivated. In the eager pursuit of the first necessities of existence, this love or taste has been neglected among us; but it is precisely one of those pleasures that suits the mass of our people, for it is rational, most moral, and *unexpensive*. Nature exhibits her pictures without money and without price. Her show-rooms are every where open without respect to persons, seasons, or hours. And are there not at this moment, scattered in our secluded places and retired villages, numbers who quietly and unostentatiously enjoy the festival nature has spread, and who are getting that 'wisdom' which

"is a pearl with most success
Sought in still water, and beneath clear skies?"

And are there not prisoners pent in our cities, who hunger and thirst after the green meadows and misty mountain tops?

With the shadows, we again all gathered at our head quarters, and passed the evening in representing a secret meeting of the Carbonari. One of our Italian friends, who, for the project cherished in these meetings, had suffered sixteen years in the dungeons of Spielberg, showed us the mode of inaugurating a new member of the society; and different members of our party, being instructed in their official duty, regularly initiated a young black-eyed girl into the secrets of membership.

We went early to bed, to prepare for the fatigues of the next day. Little did we know what preparation was necessary. Pity that one cannot take in an extra quantity of rest, as Dalgetty did of provant!

Friday morning—after being joined by Miss — and her brother, our Salisbury friend, well fitted to be our guide and companion, and indeed furnished to every good work, we began the ascent of Mount Rhiga, on our way to Bash-pish, which was to be the crowning point of our excursion. The road begins alongside the little brook aforesaid, and continues its delightful companionship for four miles to the summit. There is but just space enough between the brook and the close set trees for a road. The branches of the trees often stretch over and interweave above your head. The flowers of the season, the gentians, asters, and golden rod, were thick set and blooming among the turf, and the long ferns hung over like green plumes. "This," said Mrs. —, as she marked the laurels planted all along the roadside, "must be paradise in June; it is just such a drive as our noblemen obtain in their parks

at almost unlimited expense and trouble." As we wound upward, we had glorious glimpses into the open world we were leaving behind us, of hill-side and valley; but there was one point at which we stopped and remained for some moments in breathless admiration. Here there was a wide, deep and wooded chasm between us and another eminence, that presented a semi-circular front like the wall of an amphitheatre—but an amphitheatre built by an Almighty architect. The trees grew over the side of this mountain so close that they looked absolutely packed with a surface resembling a rich turf, and giving the appearance, I have remarked, of a green wall.

The greater portion of our company, the hale and the merciful ones, had alighted from our vehicles to walk up the mountain. A—, who either perceived that I was lagging, or wishing to provide a picturesque variety, struck a bargain with a butcher's boy, who was wending his way up the mountain with supplies for Rhiga, and having huddled the meat into the back part of the little wagon, he placed me, with my pilgrim's staff, on a board that served for a seat in front, where I figured as a vender of beef and tallow. The Doctor soon overtook us, another type of civilization, with his symbols, a sulkey, and a leathern sack, containing the torments of social existence for those that enjoyed few of its benefits. After passing the furnaces of Mount Rhiga, (called Mount Raggy by the natives,) we came upon a lake, four miles in extent, with the Katskills for a background. Oh how beautiful that lake and those blue summits were, when we returned at twilight—mountain, lake, and skies, all glowing with the 'last steps of day!'

From Rhiga we drove over a very comfortable mountain road seven miles to Mount Washington, and were again in our own county of Berkshire. By the way I had a little chat with the Doctor, and was congratulating him on his *ride*, embracing these far stretching and sublime views, when, in reply, directing my observation to a point in the Katskills, he said, "My father was killed there felling a tree, and left me, with several other children, orphans, in a log-hut hard by. I always see the place when I pass this way, and it is a dreary ride to me." There was much food for thought in this; but turning from the proof that the mind gives its own hue to the outward world, I remembered to have heard that this gentleman and his brother were eminent in their profession, and I thanked Heaven that the stream of life, in our land, runs to prosperity, even though its beginning be in a log-hut on the Katskills.

We stopped at a farm house in the village of Mount Washington, where we deposited our youngest traveller, with her nurse, and three of our little girls, who we thought incompetent to the labor before us—and having secured three riding horses for the least strong among us, the rest proceeded, under the guidance of an old mountaineer, through woodland and ploughed land towards Bash-pish. The distance was not more than two miles and a half; no frightful achievement for the poorest walker among us—but the ground was broken and rugged, and when two miles were accomplished we had to descend a precipitous hill, where there had been a road, now only to be marked by the heaps of stones from which the earth had been swept during the late furious rains. After much fatigue we did get down

without breaking our necks or dislocating our bones; but, if "*facilis descensus avari*," what the *ascent* would be we hardly dared to think—and think of any future evil we could not, while we were lured on by the music of the water-fall, which came up from the depths like the song of a siren.

Here ended my journal. We were perfectly exhausted with fatigue when we arrived at our Salisbury inn, at eight in the evening—and the next morning, before starting for home, I had only time to bring up my notes to where I have ended. But what signifies it? I could not have described that most graceful of all the water-falls I have ever seen—that treasure which Nature seems to have hidden with a mother's love, deep in the bosom of her hills.

We were afterwards told that we did not, after all, see what was grandest—that we should have approached on the other side, where the access was easy, and gone to the rocky breast-work,* at the summit of the hill, whence we should have looked off a sheer precipice of three hundred feet into the ravine through which the water passes away. I believe it, for the fall as we saw it was no more sublime than a child in its wildest frolics, or a fawn gamboling through the glades of its woodland home.

If any of my readers have been good-natured enough to follow me thus far, finding my story without an end, they may deem me guilty of an impertinence in publishing the journal of a home excursion, which has neither a striking point nor a startling incident. But if I should lead any to seek the healthy pleasures within their reach, which will cost them no great expense of time or money, I shall be content.

In spite of the old ballad which gravely tells us that "to travel is great charges," as you know, in every place, we spent five days, and saw and enjoyed all that I have, perhaps too tediously, detailed, for less than the amount of a week's board at a watering place.

* It is from this rock, where eagles' eggs have been found, that the place obtained the name of Eagle's Nest. Bash-pish is the corruption of a name given by some Swiss settler.

NOTES AND ANECDOTES,

Political and Miscellaneous—from 1798 to 1830.—Drawn from the Portfolio of an Officer of the Empire—and translated from the French for the Messenger, by a gentleman in Paris.

SPEECHES IN THE CHAMBERS.

Strangers, and particularly the English, never fail to exhibit, on visiting our legislative chambers, their surprise at seeing a speaker, after ascending the tribune, draw a little stitched manuscript book from his pocket, and commence the regular reading of a discourse to an assembly which rarely seems to listen to him. This habit of writing speeches is gradually disappearing, and it is well that it is so. Under the restoration, the deliberation over almost every law was preceded by a general discussion, during which the chamber was condemned to hear, I do not say to listen to, the reading of some thirty or forty written discourses, in which the principal object, the *projet* of the law, generally disap-

peared to make room for commonplaces, and irrelevant and unmeaning declamation, uttered with the most ambitious emphasis in the midst of the noisy confusion and conversation of the members. The attention of the chamber was only secured at the moment of deliberation on the different articles and the various amendments. Then the speakers—those who spoke without written discourses—seized the tribune; then alone commenced the true debate. The written discourses, with a few exceptions, are a sort of letters of exchange drawn upon the electors—a certificate of parliamentary life, which the *Moniteur* was called upon to despatch.

Now the deputies quit their places, and save themselves in the conference rooms, at the mere sight of the sheets of a written discourse. This repugnance to listening to written discourses, had been long discovered by men of capacity, accustomed to captivate public attention; and if they ever wrote their speeches, they committed them to memory, and afterwards improvised them from the tribune.

General Foy, whose eloquence was so brilliant, was several times indebted to this innocent stratagem for success. With him it was the result of pure modesty, for never were his speeches more powerful than when really improvised. General Lamarque was endowed with a wonderful memory; in 1828 he delivered twelve discourses on the budget of war, without having a single sheet of paper before him; and yet (I have proof of the fact,) these twelve discourses had been written in advance.

Another deputy, whom I will not name, (he belonged to a different side of the chamber, and did justice to himself by giving in his resignation in 1830,) had also, like General Foy and General Lamarque, the talent of appearing to improvise his discourses. But if, as has been said, few are great men to their *valets de chambre*, there are likewise but few orators for the journalists, charged with reporting their discourses. No pains are taken to conceal any thing from them, and frequently one may, in the tribune of the reporters, follow in the manuscript the improvisations of certain orators.

The deputy of whom I have spoken, was accustomed to send his manuscripts to the journals of his party, before the sitting of the chamber; but he took one precaution, which I never knew General Foy or General Lamarque employ. This was to note, himself, and beforehand, the interruptions, exclamations, or applauses which he supposed might accompany any of his periods.

I have seen—I say I have seen—seen with my own eyes, one of these manuscripts. The words *laughter, very well, murmurs on the left, applauses on the right, general approbation, &c. &c.*, had been added in the handwriting of the orator, on the sheets of the copy. I read at the end of this manuscript the following sentence, written out in full, and in the hand of the speaker:

The honorable orator, on descending from the tribune, was surrounded by his numerous friends, who hastened to congratulate him in the warmest manner.

PRINCE TALLEYRAND, IN JULY, 1830.

I could easily imagine the policy which induced the members of the last cabinet of Charles X. to keep the

ordinances of July a profound secret to the very last moment, had that secrecy been preserved for the purpose of concealing preparations for defence, extraordinary assemblages of troops, or other means of security; but there was nothing of this sort to be concealed. The government which declared war against the nation, commenced the struggle entirely unprepared. I might perhaps, have imagined some advantage from this secrecy, had it been intended that the *coup d'état* of 1830 should have broken out unexpectedly—had it been designed to take France by surprise—but there seems to have been no intention of accomplishing even this. The *coup d'état* was announced in the journals of every shade of opinion, and no ministerial sheet had been authorized to contradict the report; so far from this, the most ardent journal of the absolutist party every morning invited the government to make use of force for crushing the opposition it had to encounter; and yet, to the very last day, the ministers energetically denied the *projets* attributed to them.

The Austrian ambassador, whose wife was at the baths of Dieppe, and who was anxious to go for her, interrogated M. de Polignac with some anxiety:

"If any thing is in preparation," said he, "I should not leave Paris; I ought to be at my post."

"You may go, without fear," replied the minister; "I will be responsible that nothing happens."

The same answer was given to the English ambassador, who did not, however, put implicit faith in its truth, since he wrote to his government: "Serious events are about to take place: the minister of foreign affairs denies all intention of a *coup d'état*—but I know from a good source that the scheme is determined on."

M. de Rothschild, acute, full of foresight, and generally well informed, reposed in confidence upon the denials of M. de Polignac and M. de Peyronnet, who were interested in his operations at the Bourse. M. de Rothschild, whose immense capital is employed in every country in Europe, turned a deaf ear to the reiterated warnings which he received from all quarters. Urged on Saturday morning, the 24th, to guard against the fall which would be the inevitable result of the publication of the ordinances, which he was told, would appear on Monday morning, he replied with a sneer: "It will be time to think of that on Monday; I am about to set off for Boulogne." M. de Peyronnet had said to him: "There will be no *coup d'état* so long as I am a minister; my resignation is ready; time is always necessary to recompose a ministry."

This also was the language of M. de Chantelaume and of M. de Guernon-Ranville; M. d'Haussez and M. de Monbel preserved silence.

M. de Rothschild thought himself so certain of the truth, that he did not return to Paris during Sunday the 25th; and on Monday the 26th, one of his secretaries having found the ordinances in the *Moniteur*, hastened to meet his patron on the road from Boulogne, to inform him of the fact. The surprise of M. de Rothschild on reading the *Moniteur* was so great, that he swooned in his cabriolet.

A secret so well kept by so many persons is so extraordinary a circumstance, that one is forced to believe, that, until Sunday the 25th, nothing had been determined in the cabinet; and that, if the ministers had in a preceding council received information of the *projets*

of Charles X. (at first confided only to M. de Polignac,) a sufficiently strong opposition had been manifested to leave room to believe that these *projets* had been abandoned, and that it had been determined to wait as long as might be necessary to secure those who were still undecided.

M. de Talleyrand, whose perspicacity will not be questioned, also refused to believe in a *coup d'état*, or at least that it was so near at hand.

M. de Talleyrand did not love Charles X. and Charles X. detested him. He could not bear, it has been said, even to see his face; and M. de Talleyrand, always malicious, never failed to profit by all the opportunities which his dignity of grand chamberlain afforded, to present himself before the monarch. He did not hesitate to travel sixty or eighty leagues to procure this petty enjoyment of but a few minutes.

At the time of the revolution in Piedmont, the French ambassador near the court of Sardinia, having quitted Turin, came to render Louis XVIII. an account of the events of which he had been a witness. The Count d'Artois, informed of the presence of this ambassador in the cabinet of his brother, hastened thither: M. de Talleyrand was present at the conference. The Count d'Artois expressed himself at first with great vehemence on the events in Piedmont, and blamed with much energy the conduct of the ambassador in the circumstances in which he was placed. The ambassador proved that his conduct had been perfectly conformable to the instructions of the minister of foreign affairs. "You received some letters from M. de Blocas," replied the Count d'Artois, with some quickness; "those were the instructions to which you should have conformed." M. de Talleyrand defended the ambassador with much warmth, and Charles X. never forgave him, as he never pardoned the resistance to his wishes which had been offered by the minister of foreign affairs in 1815.

When the Count d'Artois and the ambassador had withdrawn, Louis XVIII. said, with a sad manner, to M. de Talleyrand, "You see, prince, I am no longer king; there are really two governments in France; and that which it is necessary to obey, under pain of disgrace, is the government of the king who can mount on horseback."

A short time after the ascension of Charles X. to the throne, M. de Talleyrand solicited the survivorship of the grand chamberlain's office in favor of his brother. The great offices of the court were in some degree hereditary in a family; but M. de Talleyrand had too much reason to doubt the good will of Charles X. to omit soliciting a promise which, to a certain degree, would have tranquillized him. "I not only cannot promise to comply with your request," replied Charles X., "but I ought to inform you that I have disposed of the place of grand chamberlain the moment that you leave it vacant."

A few days before the revolution of July, M. de Talleyrand had been entrusted with the discharge of a confidential mission near Charles X. The king of England, who, like his ambassador, placed but little confidence in the denials of M. de Polignac, had written to Charles X. to represent the danger of the measures which he was preparing, and to urge him, with a view to the interests of all the princes of Europe, to renounce *projets* which might endanger every throne.

In terminating his letter, he stated that his views on this subject had been developed to M. de Talleyrand, who would make them known to him.

On Saturday the 24th, M. de Talleyrand despatched the letter of the king of England to Charles X. and solicited an audience, which was appointed for the next morning, Sunday, the 25th of July, at three o'clock.

M. de Talleyrand proceeded to Saint Cloud at the appointed hour; the council was assembled, and Charles X. presided. It was in this council that a moral violence was exercised over the minds of such of the ministers as were opposed to the *coup d'état*, that an appeal was made to their personal devotion, and that the ordinances were at last signed.

M. de Talleyrand waited from three o'clock until six. Charles X., on leaving the council chamber, perceived him in the saloon, and observed: "I am very sorry, M. de Talleyrand, but it is too late; it will do to-morrow."

The next morning, M. de Talleyrand, having read the ordinances in the *Moniteur*, comprehended that it was indeed too late, and did not think it necessary to go to Saint Cloud.

Wednesday, the 28th, M. de Talleyrand, who was almost the oldest member of the Chamber of Peers, assembled at his house his colleagues then in Paris, to deliberate, after the manner of the Chamber of Deputies, on what was best to be done in the grave circumstances in which they found themselves.

THE MARSHAL, DUKE OF RAGUSA.

The Marshal, Duke of Ragusa, has been exiled from France since the revolution of July. After having the misfortune to make war upon his fellow-citizens, he committed the crime of suffering himself to be conquered. Let no one cry out against the position in which I have placed the two words, *misfortune* and *crime*, in the preceding sentence. It is always a misfortune to have to make war upon one's fellow-citizens; but this *misfortune* only becomes a *crime* in those who allow themselves to be overcome. Marshal Marmont was not the first French general reduced to the hard necessity of firing upon the people. Suppose Bonaparte, for example, had been defeated in his struggle against the sections of Paris, on the 13th *vendémiaire*, and you will concede that he would have been condemned even more severely than Marshal Marmont has been. Since 1830, the French soldiers have been frequently condemned to fire upon their fellow-citizens at Lyons, Paris, and in other places. No one thinks of reproaching them, because they were successful.

There is a cruel fatality in the lives of certain men. Nobody will deny that the Duke of Ragusa possesses distinguished military talents, vast information, and precious qualities; he is a man who in every respect gains immensely by being known. In 1814, he was accused of treason. Those who are well acquainted with the facts of the history of that period, and who judge without prejudice, know the injustice of this charge. But it seems to be a necessity with us to cry treason whenever we sustain a reverse; it is a satisfaction which we allow our own self-love. The marshal passed fifteen years under the weight of public reprobation. I say *public*, because those who are acquainted with facts, and appreciate them justly, are always in a minority in any nation.

New circumstances present themselves: the Duke of Ragusa is charged to defend a government which he did not like, and acts which he loudly disapproved. If he had followed the impulse of his heart, he would under these circumstances have betrayed, and no expressions would have been found strong enough for the patriotism of his conduct. For not having been a traitor, the marshal is compelled to seek an asylum in a foreign land. It is melancholy to think, and cruel to say so, but every thing tends to prove the fact, that in politics success changes the nature of things and legitimizes all.

Unimportant an individual as I am, I was in a situation to observe the secret opinions of Marshal Marmont, on the subject of the ordinances of July. I have long known him. The Duke of Ragusa had been consulted, in 1816, by the commission charged to prepare a complete plan for a system of defence for France. He came into a bureau in which I was employed, and taking me, because I was the first person he met, he dictated to me for nearly four hours, and with the most perfect lucidness, his opinion on one of the most difficult questions of military science. Whenever I have seen him since that period, he has received me with extreme kindness.

The ordinances of July had appeared in the *Moniteur* of Monday the 26th. Being connected, at that period, with a very liberal journal, the *Journal du Commerce*, I had been present, during the morning, at a meeting of the editors, in which it had been decided, notwithstanding the prohibition, that the journal should appear. Every one had then to occupy himself with the particular department which fell to his share. I had to report the proceedings of a solemn session of the Academy of Sciences, which was to be held on that very Monday. I proceeded to the palace of the institute, and was sitting in the library waiting the opening of the meeting. The Marshal Duke of Ragusa was the first member of the Academy whom I observed. I went up to salute him, and was instantly struck with the change in his appearance; he was walking alone, absorbed in his own reflections, and appeared to be suffering under the weight of violent chagrin.

"What are you going to do here?" he said to me.

"I have come to report the proceedings of the sitting of the Academy."

"To report their proceedings!"

"Yes, Marshal."

"Then you have not read the *Moniteur*?"

"I beg your pardon."

"And your journal will appear?"

"Yes."

"You have then asked permission?"

"No—and we do not mean to ask it."

"And it will appear?"

"Yes, while our presses remain unbroken."

"You are right—it is your duty."

The Marshal, after having said these words in a grave tone, resumed his silent promenade, carefully avoiding such of his colleagues as he was the most intimately connected with. When the sitting was opened, he seated himself at the extremity of a bench, and remained there, with his head resting on his hand, more than two hours, without exchanging a word with any of his neighbors.

I never saw the Duke of Ragusa again; but I have seen a letter written by him to a lady, shortly after the events of July, 1830. I wish this letter belonged to me, and that I was allowed to publish it: it would completely justify, in the opinion of many worthy men, the conduct of the Duke of Ragusa, both in 1814 and 1830.

M. DE POLIGNAC IN 1830.

It is known, that towards the conclusion of the struggle of the three days, many houses in the *Rue Saint Honoré* were occupied by detachments of the royal guard, which, abandoned in this perilous situation by the retreat of the rest of the royalist troops, could only exhaust their last ammunition and then surrender. One of these houses was taken by assault, and all the soldiers which it contained were killed and thrown from the windows. There were two officers in this house—one perished in the struggle, and the other was indebted for his life to an accident which he could never explain. Some minutes before the house was attacked, he heard himself called to from the street: it was in consequence of an order from M. de Polignac. He instantly proceeded to the Tuilleries, and received directions to throw aside his uniform, to cover himself with an overcoat, and to proceed immediately to the camp of Saint Omer, with an order to the commanding general to direct all his troops upon Paris.

The officer of whom I speak was but a sub-lieutenant; he was a man of high character, but his merits were only known to his friends, of whom I was one. He was brave, but possessed of none of those brilliant qualities, of those extraordinary talents, which distinguish a soldier, and cause him to be remembered in a moment of difficulty, when great energy or great activity are required. He was a man of intelligence, of a high character, but of a cold temperament, sufficiently certain of his own courage to make no parade of it, and discharging his duties conscientiously, but without ostentation. He believed himself, and ought to have believed himself, in his subaltern grade, entirely unknown to those who filled the principal offices of the government.

At the Tuilleries M. de Polignac had the whole staff of the Marshal Duke of Ragusa at his disposal: he had near him officers personally devoted to him—soldiers accustomed to discharge confidential and difficult missions; he left them aside; he did not reflect that a general or at least a superior officer was necessary to carry so important an order as the one he had to despatch. Despatches might be seized, or the bearer might judge it advisable to destroy them, and therefore it might be necessary to deliver a verbal order; and a general-in-chief might accord to an officer of elevated rank the confidence which he would perhaps refuse to a sub-lieutenant. Good luck would have it that none of these thoughts struck the mind of M. de Polignac: he asked for an officer, and he stopped at the name of a sub-lieutenant whom he had never seen, but whose name, which he then heard, perhaps for the first time, struck him. Why was this? No one knows. It was a mere accident. Without knowing it, M. de Polignac saved the life of a very good officer; also without knowing it, he happened to make a very good choice, for the mission was discharged with intelligence and rapidity—but events marched too rapidly to allow the expected succor to arrive in time. [To be continued.]

THE BRIDE OF THE DEAD.

The wanderer came from the far-off clime,
Where long he had wasted his life's fair prime,
To the home of his birth—the hallow'd spot
Of the vine-wreath'd hill and the shelter'd cot.
He came with the hopes of his youth no more—
His soul's glad dream had been shadow'd o'er—
And his pallid look told, with fearful power,
That death was at work in his manhood's hour.

But *she* was there, who had watched for him,
'Till her cheek had paled and her eye grown dim—
In whose thought his name, by a thousand ties,
Was linked to all blessed memories.

She heard but *one* step on the threshold stone,
(For deep through her heart had the echo gone,)
And the crimson tide to her forehead rush'd,
As fast on his bosom her full tears gush'd.

Then slowly she lifted his clustering hair,
But marked not the *change* that was written there;—
For oh! the measure of weeks, and days,
And distance, was lost in that fond, fixed gaze.
She saw, in the depths of his wasted eye,
But the holy light of the years gone by—
And voices and tones that the past time brings,
Were sweeping, like music, her spirit's strings.

"I have come for thee—I have come for thee,
From my exile home o'er the far bright sea!
But the dream of my youth with its joy hath flown,
And the golden cord of my life is gone.
I bring not riches, nor high renown,
And but withered hopes for thy bridal-crown!
And wilt thou be his, who greets thee now
With the seal of sickness upon his brow?"

"Will I be thine! Can the soul forget
The yearning thoughts which it clings to yet?
Will I be thine! Can the heart despair,
When love hath once lighted its shrine-fire there?
Oh! I *will* be thine, 'though thy hopes are crush'd,
Though the song of my life is in spring-time hush'd,
And the blossoms of joy are, like rose-leaves, shed;—
I am thine!—though I be but the bride of the dead."

* * * * *
They gather'd there in the humble church,
And the garlands were hung in the lowly porch.
They knew him when erst from that maiden's side,
He went to the world in his hour of pride,
And they marked now his step and his feeble smile,
As he totter'd slowly along the aisle;
And bright tears fell like the April rain
For him who, "*so changed!*" had return'd again.

They stood up there by the altar-side,
That wasted man and his gentle bride.
* * * * *
On the sacred book, with a golden ray,
The pleasant light of the sunshine lay,
And the words had been spoken for good or ill;
But why was the bridegroom so strangely still?
Low, down to the shrine, he had bowed his head,
And that fair, young bride, was *the Bride of the Dead.*

Richmond, January, 1839.

E. H. C.

THE NEW-ENGLAND GIRL.

I love the brow that scorns to wear
The shadows of a vain deceit,
That boldly fronts the monster care,
And lays him powerless at her feet;
I love the heart that loves in grief,
That gladly leaps at other's joy;
I love the hand that gives relief,
Tho' clasped not by a jewel'd toy;
I love the feet that haste to bring,
Glad tidings to a broken heart;
I love the voice, whose music's ring
Bids sorrow's heavy sigh depart.

I love the mind that soars above
The littleness of life's vain round,
Whose flight can compass worlds above,
And wander thro' mysterious ground;
Whose faith on God is firmly based,
Whose glance the infidel forsakes,
Whose words by modest merit graced,
The dull cold chain of fashion breaks.
I love the mother who can give
Her offspring nature's stream of life,
Nor think it misery to live
In all the duties of a wife;
I love the laugh of innocence,
That calls her little ones around,
Nor cheats them with a vain pretence,
Nor mocks them with a hollow sound.

And where shall such an one be found
Amid the thoughtless ones of earth?
Is she on fashion's changing ground,
Where cold precision stifles mirth?
Is she amid the gaudy things
That flutter round the lighted halls?
That haste in swarms to hygeian springs,
To waste their time in midnight balls?
Is she amid the *azure* crew
That study life to limn its faults?
That love the title of a *blue*,
And dose their friends with attic salts?
Is she amid the throng that spin
Their everlasting yarn by day?
That scorn to own a hidden sin,
Yet hasten on their downward way?

No! far from these my fancy strays,
Where some lone spire in beauty towers,
Where hoarse the mountain streamlet plays,
And sweet contentment makes her bowers.
There, o'er the dairy's richest store,
Or 'mid the fruits and flowers of earth,
Behold! the maiden I adore,
Baptized to innocence and worth.
Are roses worthless on the cheeks,
Tho' brighter far than those of spring?
Is the eye valueless that speaks
The soul's unspotted offering?
No! give me in my joyous day,
That gentle heart, that priceless pearl,
Whose smile shall chase life's gloom away,
The ruby lipp'd New-England girl.

Washington, January, 1839.

J. E. D.

NOTES OF A TOUR

FROM VIRGINIA TO TENNESSEE, IN THE MONTHS
OF JULY AND AUGUST, 1838.

By Rev. H. Ruffner, DD., President of Washington College, Va.

CHAPTER I.

From Lexington to Kanawha.

After ten months' confinement to the sedentary duties of a college, who would not be disposed to roam for healthful exercise and for change of scene? Curiosity prompted me on this occasion, to direct my course towards Tennessee; partly because I had heard a good report of it, and partly because having never crossed the 37th parallel of latitude, I was desirous to dip, so far as might be safe in the hot month of July, into the fiery regions of the south.

My design in these hasty notes, is simply to record such things relative to this tour, as may afford some information or amusement to the reader. Of personal incident and adventure, I shall have little to relate: descriptive sketches of scenery, and general observations on the countries visited, and on their inhabitants, will occupy the chief part of these notes.

Business led me first to Kanawha, where I would be on the high way, by stages and steamboats, to West Tennessee.

The route from Lexington, by Covington and Lewisburg to Charleston in Kanawha, presents many objects worthy of a traveller's attention. Few routes in the United States pass through so much fine mountain scenery. Lexington itself is the centre of a panorama of farms and woodlands, of vallies, hills and mountains, rarely equalled in beauty, variety and magnificence. The scene appears to great advantage from the college observatory.

An excellent turnpike-road leads from this pleasant village to Covington, on Jackson's river, where it meets the old state turnpike, that conducts the traveller by Kanawha to the border of Kentucky, at the mouth of Sandy river.

On leaving Lexington, the traveller going westward first crosses the gentle swell of the Brushy hills; and passing near the southern buttresses, that prop the huge mass of the House mountain, he comes, at the distance of twelve miles from Lexington, to the western boundary of the great valley, at the foot of the North mountain. Here he begins an ascent of nearly four miles along the mountain side. Not far from the top, he comes to a remarkable turn in the road, where the direction had to be reversed at a rocky and precipitous part of the mountain, and the road to be supported by high and massive walls. At this point, the traveller's eye is irresistibly attracted by the sublime prospect of the valley and adjacent mountains. Eastwardly, the view is bounded by the many-topped barrier of the Blue Ridge, at the distance of some fifteen miles. The interjacent country is diversified with cultivated vales and slopes, woody hills and rugged mountains, of every shape and size—green dells, where streamlets water the meadows, round-topped hills and long ridges, and nearest and greatest of all, the gigantic bulk of the House mountain, which stands apart in the valley, and raises its double top, like Parnassus, in superb grandeur over the hills of the country below.

Turning to a little gap in the North mountain, the road then passes to the western side, and descends to the valley of the Cowpasture river; and thence crosses some hills to the valley of Jackson's river at the Clifton forge. Here the traveller is struck with another kind of scene. He passes through the gap of a high mountain, which has been cloven through, and barely affords a passage to the river between rifted rocks, still jutting out almost over the passenger's head, and displaying to his uplifted eye the interior formation of the mountain. Cut an onion in two from the root to the stem; lay one of the halves on a table, and again cut it crosswise; the arched form of its coats will show how the curved layers of hard sandstone constitute this mountain, rent in twain by some convulsion of nature, to afford a passage to the waters from above.

This rupture of mountains, to give passage to the rivers from the main Alleghany to the adjacent vallies, and from the great valley to the sea, is a common and a remarkable feature in the geography of this country. The chief ridges of the Appalachian chain run in parallel lines; the waters which collect in the intermediate vallies, seem to have burst their way through the opposing ridges; but the effect is too great to be accounted for by the pressure and attrition of water. An upheaving by subterraneous force, probably first cracked these mighty barriers of solid rock; then the rush and the tear of pent-up floods, and the gradual wear of many centuries, would finish these sublime gaps, through which all the rivers of the Alleghany region have found a passage to the sea.

At Covington, the road leaves the river, and enters the Alleghany mountain beyond Callahan's. Nothing remarkable occurs in this part of the route, except it be, that a high precipice of limestone at Callahan's is filled with sea shells. This is no rare phenomenon; but one is struck with the circumstance, that a deep mass of sea shells should be found so near the very *backbone* of the great Alleghany mountains. But I have found shell-rocks also on the high ridges near the White Sulphur Springs, just on the other side of the same backbone of the Alleghany. Time was, therefore, when old ocean slept long and deep on the high bed of these mountains. So say the geologists, and so it must be: yet it seems strange to us, new comers into the world, that it should be so: and some of us are so certain that the world must always have been what we find it to be, that we won't believe the shells, even when we see them with our own eyes.

I shall pass by the springs without comment. They have had note and comment enough, of late years, from visitors and tourists. The traveller reaches Lewisburg by one day's journey in the stage from Lexington. I should have had a very pleasant day's ride, but for the company, most of the way, of a pair of blackguards. I have perhaps never in all my *staging* suffered so much from this sort of annoyance. Their souls seemed to be a slough of nastiness, which came belching forth whenever they opened their mouths. They soon had all the talk to themselves; for, who could mingle his purer thoughts with such a current of oaths and ribaldry? And who that regarded his own feelings or the sanctity of religion, would cast pearls before such swine? Yet these fellows were going to the springs, forsooth! And talked of having been regular visitors at all the fashion-

able watering places! I discovered a solution of the enigma: they were gamblers; and where the carcass is, there will the buzzards be gathered together. These birds of prey are said to have special accommodations assigned them at some of the springs, where they may securely pluck and fatten on the silly fowls who suffer themselves to be decoyed into their holes—or hells, as they are usually called. Report speaks truly of this fact, I fear: for I have seen evident signs of it myself. I have unexpectedly dropped this note on the springs. But let it stand; it may be useful.

Lewisburg is a thriving village; and it thrives from three causes: it is near the principal springs; it is on the great central road to the west; and it is the seat of many courts of law. With such three-fold feeding, any village would grow fat. It is situated on a deposit of limestone between the Alleghany and the Sewel mountains. The basin in which the town is built, was once filled by a lake. When found by the white settlers, it was an open savannah, surrounded by woods, and the border line of trees was perfectly horizontal, following the same level as it curved irregularly about the hills on every side. Certain strong remains of aquatic animals, yet found in the soil, give additional evidence that the savannah was once the bed of a lake. But whence came the water? And whither did it go? The answers are ready. At the northern extremity of the town is a large cavity or sinkhole, about one hundred yards long; at one end issues a spring which formerly supplied the lake; at the other end is a hole into which the water falls and disappears; the opening of this hole drained the lake; the closing of it (a very possible thing) would cause the lake to fill again and immerse the town.

About five miles west of Lewisburg, a creek turns a large mill on one side of the road, then flows under a bridge, and within two hundred yards strikes the base of a mountain, where it falls into a cavern, and pursues a subterranean course for several miles to the bank of the Greenbrier, where it rushes forth from the mountain into the river. A few miles west of this, the road crosses successively two narrow vales of limestone, full of deep *sinkholes* or depressions in the surface. A creek is known to flow under each of them. One of the creeks is appropriately called Sinking creek. This sub-Alleghany deposit of limestone, is therefore a very cavernous region.

About two miles west of Lewisburg, a spring issues at the head of a ravine, and flowing about half a mile, falls into an open-mouthed cavern. It first pitches down in a cascade, about twelve feet perpendicularly, upon a flat rock several feet wide; over which it tumbles again, and so from rock to rock, till it reaches an unknown depth. Long ago I heard in Greenbrier a story of a pig, which suffered an awful fate in this cavern. The poor swine, by reason of some false step, while rooting about the mouth of the cavern, fell in, and made a lodgment on the platform of rock upon which the water first falls. There he kept his station with due care, until by chance he was discovered, and an attempt was made, by means of a rope, to noose and hoist him up again to his native light and liberty. But not understanding what his friends meant by tossing their cord about him, he started aside, and lackaday! fell down the next descent beyond the reach of assist-

ance: nor could he stop any more; but went tumbling from rock to rock, with the falling water; and as he fell from stage to stage, he sent up to the ears of his astonished assistants the rumbling echo of his sounding body, mingled with his shrill squeals of despair; till all gradually died away in the distance; and the disappointed men with the rope, turned their steps homewards; consoled, however, with the reflection, that they were not themselves tumbling down, down, down, that gloomy abyss, from which neither pig nor man could ever return.

Westward of the valley of *Sinkholes*, the road soon enters a different sort of country, called the Meadows, at the base of the Sewel mountains. These meadows consist of flat sandy marshes, overgrown with shrubbery and grass, among hills topped with sandstone (as all the hills of this country are,) and a brown shale which imparts its color to the soil. The vegetation of these moist grounds is somewhat peculiar. In the summer they are adorned with a profusion of wild flowers, chiefly on shrubs; among which the swamp rose, the shrubby St. John's wort, (*Hypericum*,) the St. Peter's wort (*Ascyrum*,) and the beautiful wild honeysuckle (*Azalea*,) are conspicuous. When the native shrubbery is removed, fine crops of grass are produced, among which some wild annual plants spring up, and exhibit a variety of bloom to entertain the traveller and to excite the curiosity of the botanist. As I do not pretend to much science in these notes, I shall pass by this flowery region, with the single additional remark, that the sluggish streams which meander through it, creep into the Gauly river, among the Sewel mountains, which the road begins to ascend immediately beyond the Meadows.

The name of Sewel has been given to an irregular mass of mountains between the Meadow river and New river. A mountainous tract of the same general character, but under different names, extends beyond these limits, in a direction parallel to the Alleghany in some places of about equal height, and constituting the western limit of the sub-Alleghany region of limestone. From Sewel mountain westward, to the Ohio, the rocks are all sandstone, of the sort called secondary. Here the coal region begins.

The country of Sewel is so high, that winter may be said to rule about half the year. On the old road, which crosses New river at Bowyer's ferry, I have seen the mountain top exhibit all the deadness of winter; while half way down, the bursting buds and early flowers showed the first opening of spring; and on the water side below, the full grown leaves of the maple gave signs of approaching summer. Yet all these changes of climate occurred within a ride of three hours.

At Bowyer's ferry, a moderate current at an accessible point of the river, gives almost the only opportunity of crossing for the space of thirty miles, from the mouth of the Gauly upwards. The rest of the way, the narrow channel is choked with fragments of rock, and the current is all foam and fury.

The turnpike road does not cross at Bowyer's ferry, but pursues a more northerly route, from "mountain top to mountain top," till it takes a long declivity, which brings the traveller down to a sort of inter-vale, between the mountains of Sewel and Gauly, where it strikes the border of the chasm through which the river dashes.

Then it winds along one side of the awful breach made by the river—or, as I should say, *for* the river by some mightier power,—in the Gauly mountain.

Here are scenes of wild romantic sublimity, unsurpassed in the United States:—in their kind probably unequalled. After passing through a lane between fields, you find yourself suddenly in a gorge between high mountains; but the mountain on your left separated from you by a gulph, whose bottom you cannot see distinctly; but if you listen, the roar of invisible waters strikes the ear from below. Presently you may catch glimpses of deep precipices and foaming waves at their feet. You soon reach a place by the road side, where a path leads out to a projecting brow of the precipice, called the Hawk's Nest. Follow this path some fifty yards, and suddenly the chasm opens to the depth of nearly one thousand feet beneath the crag upon which you stand. Take courage and proceed to the farthest verge, where by stooping forward, you can look perpendicularly down. You may grasp the limb of a sapling, if your head grow dizzy, as it will probably do. Under your feet you see a sloping mass of rocky fragments between the precipice and the river. If not too much awe-struck to think at all, you think that you could throw yourself into the river, so narrow apparently is the ledge below. The height of your position seems not to be so great, as it is reported to be: the opposite cliff beyond the river, seems to be just at hand: you will cast a stone against its mighty wall. You draw back and make the attempt, but behold! your stone drops far short into the foaming waters. Your growing estimate of height and distance is further enlarged, when you observe that the trees at the base of the cliff seem to have dwindled to saplings, so many times must their length be repeated, to reach the top of the rocks.

Now turn your face up the stream. Oh, what a chasm! For miles along each side, you see a straight unbroken wall of rock, like that on which you stand; tall mountains slope out above the cliffs; shelving beds of broken rock slope down from their base; and between them all the mingled white and azure-green of the river, which must be large to rush with so heavy a sound, and to break itself over its rocky bed into such foaming billows. Now turn about, and look down stream. Here the view is suddenly arrested, within a mile, by stupendous precipices, interposing and seeming to close the chasm and to ingulph the river. If disappointed at first by this limitation of the prospect, the imagination is soon roused to conceptions not less romantically sublime than before. You look at the great mountains, which tower before you in this direction to a greater height, and with a more confused magnificence, than on the other side; and you think how deeply imbedded, and how closely confined, this wild and lonely river must be; working, as it does, its angular and rugged way through these deeply rifted rocks, which nothing less than almighty power could rear at first, and then break asunder, to let the troubled waters pass down to the far distant ocean.

Returning to your vehicle, you now wind your way along the mountain side; once in a while turning down into a ravine through which a streamlet flows, and then ascending again to the mountain side over the river; where, if riding in a coach upon the outer side,

you seem to be suspended over the tremendous gulph, and you find yourself instinctively drawing back, lest you “topple down headlong.”

Six or seven miles from the “Hawk's Nest,” you reach Manser's farm in a nook of highland, half enclosed by a bend of the river. Here, where the road begins to descend to the river, the scenery changes. You look down into an open valley, and are surprised to see a broad sheet of water spread out before you like a lake, enclosed by the same high mountains and perpendicular cliffs. On coming down near the river, you see the waters issue from the narrow chasm, and pour along between broad ledges of solid rock; until freed from confinement, they gently lave the feet of mountains five or six hundred yards apart. The road takes the sandy margin of the water, under the tall cliffs which now rise in broken columns over the traveller's head. Between these columns streamlets flow out of the mountain, and fall, in murmuring cascades, into basins by the road side; where overhanging cliffs and embowering trees invite the traveller to refresh himself with the cool shade and the pure juice of the rock. The summer heats sometimes dry up these falling springs; but still “the shadow of the great rock,” and the vine-covered trees, would, if found in Arabia, be of themselves a paradise in “a weary land.”

Midway of this broad water, between banks adorned with the elm, the maple and the holly, comes in the Gauly river, one hundred yards wide, and the united rivers form the Great Kanawha. From the Gauly down to the great falls, the lake-like river becomes shallower and ripply; the channel is diversified with islets and huge naked rocks standing out of the water. The largest of these is nearly opposite to the mouth of the Gauly, just above which, in the angle of the rivers, is a tall projecting cliff that overlooks all this river scene. With that taste for *diabolism* which characterizes a certain class of our people, especially the rude *pioneers* of the wilderness, the cliff has been called “The Devil's Pulpit,” the huge rock in the river, “The Clerk's Desk,” and the whole of this mountain-bound water scene is of course “The Devil's Church!” I allude to this diabolical nomenclature merely to remonstrate against it, and to urge upon all men of taste and of sense to purge this sublime and beautiful work of God of the disgusting associations which vulgar minds would attach to it. This propensity to defile grand and beautiful objects with satanical and other vile names, has been carried far enough in our country.

I will give an example of the effect which one of these names once produced on my mind. I was riding through Kentucky on a fine April morning, when I came to a clear stream, that ran cheerily along over a gravelly bed, between banks adorned with fine trees, and flowers that perfumed the breeze. So sweet and lovely was the scene, that I began to feel quite poetical, as I forded the limpid current, while the birds gaily carolled to the rising sun, and the air was filled with fragrance from the dew-bespangled flowers. Oh (thought I) how delightfully could a poet sit here on these turfy banks, and draw inspiration from this scene of rural beauty! Just then I met a citizen on horseback. “Pray, sir,” said I, “what is the name of this beautiful river?” He smiled at my enthusiasm as he answered, “*Bullskin*.” “*Bullskin*?” muttered I, with an empha-

sia which indicated the explosion of all my poetic enthusiasm, "who in the world could ever make poetry on the clear waters and flowery banks of the *Bullskin*? I wonder how even the birds can sing by a river with such a name!"—But a truce to this digression on the miserable fashion of our geographical nomenclature. Some mighty satirist ought to ring its absurdities and cacophonous vulgarities through newspapers and magazines, till something is done to reform it, or at least to check its progress on the frontiers.

Two miles below the Gauly bridge, the traveller arrives at the Great Falls of the Kanawha. Here a ledge of sandstone runs diagonally across the river, dipping gently under the current above, but terminating abruptly, like a wall about twenty-five feet high, on the lower side. The fall at low water is confined to a gap worn into the form of a horse-shoe, near the opposite shore from the road. To see it advantageously, one must walk two or three hundred yards over the bare surface of the ledge, and take his station on some projecting point by the gap. Here he may see and hear the heavy current, a few rods above him, tumbling and thundering over the rock, casting up a cloud of vapor, and making the atmosphere, and seemingly the solid rock, quake with its massive fall. This is certainly not to be compared with the incomparable Niagara; yet I hesitate not to pronounce it a sublime and fit conclusion to the wild, romantic and magnificent views along this extraordinary chasm in the mountains.

Below the falls the river flows with a rapid current through a narrow valley between high mountains: but after some miles the valley becomes wider; rich low grounds begin to appear; the river becomes broader and gentler, and the mountains assume a less lofty and rugged aspect. Twenty-four miles below the falls, where the bottoms are wide enough to admit of large farms, the salt works begin and extend down to the neighborhood of Charleston, a distance of eleven miles. The furnaces send up columns of smoke and vapor, which, about the village of Saltborough, where the furnaces are most numerous, darken the atmosphere over head, and give the valley a gloomy appearance. But when the traveller observes the dense and active movements of industry, the numerous boats on the river, the thick array of salt barrels on the shore, the rail-road cars passing between the coal-beds in the hills and the furnaces on the river bank, together with the sound and bustle of mechanics and laborers on every side, he is pleasantly affected with the signs of a thriving and productive manufacture.

The discovery of this great deposit of salt is an important event in the history of the west. In earlier times the difficulty of procuring salt was a serious evil to the settlers. At a few places in Ohio and Kentucky a brackish water was boiled down to a very impure salt, at a cost to the purchaser of eight or ten cents a pound. Foreign salt could be got only at an enormous price, on account of the long rugged ways over the mountains, and the difficulty of navigating the Mississippi, before the introduction of steamboats.

When the first settlers came to the valley of the Kanawha, buffalo, elk and deer resorted in great numbers to a lick at the margin of the river, near the mouth of Campbell's creek. Here, on sinking gums or hollow trunks of the sycamore into the sand, a weak brine

was obtained and occasionally small quantities of salt were made.

In the year 1795, Joseph Ruffner, of Massanatten in Shenandoah, purchased the fine bottom in which Charleston stands, and the tract containing the salt-lick. Here he settled with his large family, and died in 1802. Shortly after his death, his two eldest sons, David and Joseph, commenced a series of experiments about the lick, with the view of obtaining better salt-water. After much labor and expense, they got a gum sunk by the river side to the surface of the rock, which underlies the river and low grounds; but the salt-water was not improved. Too persevering to desist while any thing remained to be tried, they determined to bore into the rock, with the sort of chisel used in blasting. On boring down about thirty feet, they discovered that there was strong brine at the bottom of the hole; but how to get it out unmixed with the fresh water above, was now the difficulty. After infinite trouble, in an enterprise where every thing was to be invented, they finally got a tight head, like that of a cask, fixed at the lower end of the gum, and through an aperture in this head, a tube tightly inserted into the hole of the rock, so as to leave only the brine from below a free passage into the gum, from which it might be raised by a pump. The brine rose to the level of the river, and the manufacture of salt was begun. This was in 1808. In the same manner, wells were afterwards sunk on the neighboring lands along the river, and salt water obtained, until the works reached their present extent. The wells have from time to time been bored deeper; some of them now reach the depth of five hundred feet. The brine was found to be, in general, stronger as it was drawn from a greater depth.

The western country soon felt the benefit of this discovery. In a few years, the price of salt fell from four dollars the bushel of fifty pounds, to twenty-five cents! There is no reason to doubt, that the progress of western population and improvement, has been materially aided by this providential supply of a necessary article.

The annual produce of the works is now about two millions of bushels, and could easily be doubled or tripled according to the demand.

Wood was for ten or twelve years the only fuel used; and so great was the consumption, that all the country near the river for twenty miles, was stripped of its fine forests. The manufacture was beginning to languish for want of fuel. Divine Providence had deposited inexhaustible beds of coal in the mountains parallel with the salt-wells, and within a few rods of many of them; but the manufacturers knew not how to use this fuel, though several attempts had been made. Col. David Ruffner, one of the original discoverers of the water, at length applied his mind to the subject, and invented a construction of furnaces which succeeded perfectly, and which has, like his method of obtaining the water, been universally adopted.

An important improvement, originally from England, but somewhat modified, has been introduced at these works by Mr. George Patrick from New York. This is the application of steam in the crystallization of salt. The steam is generated in the boiler, which reduces the brine to the requisite strength, and is

conducted by pipes through cisterns filled with the strong brine. The uniform heat imparted by the steam, produces beautiful and pure crystals of salt, which may be made coarser or finer by a little variation of the process.

DORCAS LINDSAY:

OR, THE BACHELOR'S WRITING DESK.*

BY THE AUTHOR OF "THE BACHELOR'S DEATH BED."

Oh sex, sex, sex!

Young.

The wounded dove, when dying, feels the smart;
Closing her wings, conceals the cruel dart:
So, love abandoned flies from every eye;
Conceals its woes, in solitude to die.

Irving.

"His breath became harder and harder—his groans less and less audible; when suddenly raising himself, he grasped my hand with a dying effort,—said faintly—'You will—find—all—explained—in—that—.' I followed with my eyes the motion of his hand, as he pointed to a small writing desk, and when I turned them on him again, he was dead!"—[*The Bachelor's Death Bed.*]

The gallant ship dashed on through the billows, as proudly as if she were the pursuer, instead of the pursued. The aching hearts with which she was freighted were receiving the inspirations of hope, on the wings of the freshening breeze. But as the heavens began to frown and the storm to gather, the siren rode swiftly away on the rushing blast, and the leaden veil of despair shut out the sunlight of her presence.

The pirate ship, that, for a time, seemed waxing dimmer in the distance, now came flying, swift as a judgment, through the boiling waves. Her crew were noted as the bloodiest of their craft. Their hearts were not softer than the red-mouthed cannon that spoke death to their victims, and as the cannon to the match so were they true to the voice of their leader. Had their thirst for blood been insatiable as the cravings of the horse-leech, it would never have wanted gratification while he was its caterer. His name was their watch-word, and whenever it rose above the din of carnage,

"Hope with'ring fled, and mercy sighed farewell!"

But the present conflict was not to be surrendered without a struggle. The tall Indianman, for the sake of the loved and lovely who crowded her decks, would gladly have avoided it; but since come it must, she was ready both for the onset and the issue. She had been manned and equipped with special reference to the pirates who at that time swarmed the seas, and moreover left her port in convoy of one of the first ships of the line. But adverse winds had separated them; and now she was to encounter, alone and unaided, the most daring of the ocean scourges. However, the discipline to which her men had been subjected; the desperate

ardor that inflamed both crew and passengers; and more than all the holiness of their cause, armed them not only with the panoply of might, but of right.

"Oh God!" exclaimed a lovely girl, as she clung to the manly form of a youth, and shuddered at the warlike implements with which he was girded—"it is not for myself, for I am alone in the world; but you! that you should die."

"Say not alone, dearest," replied the youth. "If God has taken to himself your father and mother, he has left one who will be father and mother to you. But there is no time now—come with me to the cabin—although my doubts are not quite so gloomy as your's, yet heaven only knows what may happen; but if I die, the last word on my lips shall be your name, and if I live, my first aspirations shall be those of gratitude for your safety—come."

"Tyler Ethelwaite," said the maiden, and the fire of her eyes dried up the torrent of her tears while she spoke—"Tyler Ethelwaite! you know not Dorcas Adelmarr! She has not plighted you her love in the season of mental anguish, to forsake you in the hour when only the body is in danger. It is true that for a moment she felt a woman's weakness—but it is over! where you are, there will she be; and if you are to die, and the last word on your lips is to be her name, it shall be breathed forth to her, ere she dies with you; and if you are to be spared, she will be by your side, to pour out her soul in thankfulness for your safety, while your praises are going up in gratitude for her's."

"Dorcas,—deeply as I love you—this is madness! What will you, what can you do, amid the rain of bullets that will soon be pouring in upon us? What if a chance shot should take away the better half of my life, by depriving you of your's?"

"Is it Tyler Ethelwaite, that dignifies the devotion of a fond, trusting heart by coupling it, even in thought, with the ravings of a maniac? If such be his estimate of true love, it is indeed madness to feel it for him."

"No, Dorcas; you wrong me. Imagine if you can my sensations at the thought of your exposure to the tender mercies of a band of ruffians!—of the signal danger you must incur even in the event of our success, and the awful fate that must await you in case of our defeat and my death: and then ask yourself, if I love you less, when for my sake and for your own, I insist upon your retiring to a place of comparative safety."

"It will matter little to Dorcas Adelmarr, what may await her in the event of which you speak. Her cold clay will be insensible to insult when her spirit has accompanied your's to God who gave it. The men of blood, who even now are upon us, if victorious, will be too much occupied in their orgies over the living to feel any concern for the dead."

A shot from the pirate interrupted the remonstrance of Tyler, who reluctantly obeyed the command that summoned all to the guns. The pen even of a master could convey but a poor idea of the horrors of the conflict, and we are glad that it falls not within our range to attempt them. Suffice it to say that victory was perched now on the mast of one vessel and now on that of the other. The band of pirates had evidently no previous idea of the force they were about to encounter, but the contest once opened, they maintained it with vigor, and at length succeeded in boarding. Now

* This story, though properly a sequel to "The Bachelor's Death-Bed," is in itself complete. The Bachelor's own manuscript would have been forwarded to us; but being difficult to decypher, the author was compelled to catch here and there a hint, and fill up the burden of the story himself.—[*Editor Mess.*]

came the crisis of horror. Each fought for their all: these, for their friends; for the endearments of life; for the homes of their childhood; for the sight of the loved ones who were far away—those, for blood! These had every thing to hope in case of victory—those, every thing to fear in case of defeat; and, thus nerved, each fought fiercely and in silence. They needed no word of encouragement. Blade to blade and breast to breast, the work of carnage went on, till the worn-out crew of the good St. Catharine were about to resign themselves to despair. But suddenly the cry came from the mast-head of the pirate, “a sail! a sail!” and the sound was hope herself to the almost vanquished. Slowly and with deep curses the pirates were securing their retreat, when one of them, more daring than his fellows, rushed to where the shrinking girl was supporting herself by a rope, and snatching her in his arms, was about to leap over the side of the vessel. Swift as thought, Tyler intercepted him, but as he struck him dead, received from him in return, a stunning blow on the forehead, and fell prostrate beside the lifeless maiden.

The fight was over. The ship which had relieved them was the convoy under whom they had started. Her accomplished officers and gallant crew administered every comfort to the wounded, performed every office for the dead, and then proceeded in pursuit of the late baffled enemy.

When Tyler was restored to consciousness, he was relieved the necessity of inquiring for Dorcas, by the sight of her bending over him. Her joy seemed like the joy of the other world. No violent manifestations broke from her—what she felt, she felt in silence. The spirit of joy is like the spirit of grief. Its feebleness may be communicated to our fellows; light occasions may make us loud in our expressions; but as the sense increases upon us, it absorbs our words—it concentrates, for the time, every thought, feeling, passion and emotion of the soul into one grand point, and our tongues are chained as by a spell. The babbling rivulet, that winds its shallow tide through a rocky channel, has a laugh and a sound for every beholder; but when the stream swells to a river, it borrows a dignity from its dilation, and rolls on, broad and deep, but in silence. It is so with grief, and so it is with joy. The current of gladness that ripples over every happy heart, has a double office to perform—it must not only gladden the one who feels it, but those with whom that one is brought in contact. But when the current is swelled to a spring-tide, it is locked up within the recesses of the single heart, and appeals not to the sympathies of others, save by the eloquence of tears.

Between this heavenly, elevated joy, and that displayed by the other passengers, the difference was as great as that between the holy of holies and the vestibule of the temple. Here was the nabob, rejoicing that he still remained alive to be able to roll on in luxury; here the trafficker, chuckling that his gains still enriched his own coffers. An epitome of the whole world was to be found within the sides of that noble vessel, and each had his own selfish reasons for rejoicing in the general good. One of the noisiest of them all was an individual, who was well content to share the glory, though he had kept himself aloof from the danger of the deed. He was one of your fat, bustling characters, who make up in sound what they want in sense,

and in boasting what they want in courage. Prior to the late emergency no one had been louder in exhorting others to do their duty, and as he was not seen during the battle it was supposed that he had fallen a victim during the early part of it; but after it had been decided, he suddenly made his appearance, and was as bustling and active as ever. Nor did he seem at all disposed to take any discredit to himself, but according to his own account had played Richard the lion-hearted, instead of Bob Acres.

“You see, gentlemen,” said he, “I never in my life could shoot straight without a rest, and it seemed specially ordered by Providence that there was one convenient to the very place where I had taken my station. A high coil of rope seemed to have been placed there just on purpose for me, and the way I popped over them devils, when I got behind it, was a rarity. You see I knew it wouldn't do no good for me to let them know I was there, because in that case they might just have put me out of the way and seized on the place themselves. So I just kept my eyes pretty wide open, and every time I saw them all looking some other way, I would let fly at 'em and then dodge behind again. I thought moreover that I could in this way keep a good look out to see if any of you were in danger, and if I saw any of you likely to be overpowered, I could send a quiet ball and settle the matter. But you see when the pirates got to moving over that way, I knew it would be nothing short of madness to keep the position; so I slipped along, Providence only knows how, behind the gang-way house, where I thought I could act as a *corps-de-reserve*, in case of your being driven back so far. When I seen that young lady was there too, I felt a double thankfulness, for her own and her dead father's sake, who was my particular friend, and so I tried to get her to slip down along side of me out of the way. But she would stand up, and took no notice of me except once, when she asked me to lend her my sword, and she would go and take my place among the men. This looked like an insinuation, but I said nothing, and only longed for an opportunity to defend her. And gentlemen, it came! thank heaven, it came! For when you were falling back upon me, just as I put my sword between my teeth, and took my pistol in one hand and gun in the other, to run out to your assistance, you know we heard the cry of ‘a sail!’—and just as that fellow rushed out to snatch the young lady, I fired my pistol and gun at him both at once, and he fell dead, but not till he had given that young man a dig on the head to pay him for his rashness. Where was the use of his running out in that way at the man, when he saw I had finished him? I don't suppose he wanted to deprive me of the honor of killing him, but”—and here the little big man folded his arms across his breast, raised his eye-brows, and accompanied each word with an oracular nod of the head—“but—it—*looked* like it. But I won't harbor malice. I look upon this act, gentlemen, as the crowning act of my life, not only worth living, but dying for; and I here repeat solemnly that I would this moment give my life to have it in my power to perform such another, or my name's not Sam Blaze.”

During this declamatory burst, sundry sly winks had been passing around the audience; but when the hero had coolly and deliberately appropriated to himself the

honor of a deed, to which his fear had made him hardly able to be even an eye-witness—the expression of disgust predominated, and each one turning away, “left him alone in his glory.” One of them, however, made him a sign, and withdrew to a place where they could converse together, unobserved.

“You say,” said the stranger, a short, stumpy man, whose nose was a perfect note of interrogation, “you say you knew the father of that young lady; perhaps you can give me some account of herself. It’s not often one sees so pretty a creature and so young know so much about grief as she seems to. Why, she’s rigged out in black, as if she had stripped a half a dozen hearses to provide herself with mourning.”

“Well she may,” said the little, big man, glad to find another vent for his self-importance; “well she may; for such fathers and mothers as she lost don’t die every day—but, sir, it’s because they don’t live, sir. If the world was only made up of such people, I’d never ask to go to heaven, sir, because I’d think I was in heaven already. Intimately acquainted with both of them, sir, and a better man I never saw, and his wife, sir, seemed an angel sent direct from heaven to keep him company, sir. Because, sir, it would have been just as unnatural, sir, and the Lord knew it, sir, for such a good man to intermarry with the children of this world, as it was for the Israelites to intermarry with the heathen nations around them.”

“And how did they get to India?”

“The old story, sir; married for love and found it wouldn’t do to live on; so they took ship for where they wouldn’t have the rich old folks to be all the time casting it up at them, and saying, ‘We told you so.’ And depend upon it, sir, the opposition of parents has been the means of making more happy marriages, than all other causes put together. You see, sir, a young man courts a lady, and her parents don’t like him. They think him a sorry, no-account sort of chap, and don’t want their daughter to have any thing to do with him. May be he is, sir; but he’s got human nature enough not to like to have it cast up to him, and so he runs away with the daughter, and not only that, but makes a first-rate husband, just purely to spite the old ones. I believe in doing things out of spite, sir; and there are some people, sir, that won’t be influenced in any other way. They are like the Irishman’s pig, sir; he could be driven to Cork very well, if you’d only turn his head towards Kilkenny.”

“But you don’t mean to say this young lady’s father was one of that sort?—If you do—”

“Bless your soul, no, sir! Their families, sir, were tip-top; but some old quarrel had been kept up between them, ever since the old rebellion, and they’d no more have agreed to intermarry, than they would to have jumped into Mount Vesuvius! And when they found these young folks had run away together, they made no more ado about cutting them off with a halter apiece, than they would about snatching a bone from a dog’s mouth. But it made no great odds. They went to India, sir, and made something right pretty, sir; but they lost it all, and what’s worse, themselves too. That horrid climate, sir; if it was a man, how many murders it would have to answer for!”

“And this young lady?”

“Well, sir, I’ll tell you. You know life’s a thing

that wasn’t made to last forever, and by-and-bye the time came for the old folks in England. The wife’s father, as wives’ fathers generally do when their daughters marry against their will, died cursing her; and the father of the other one would have done so too—but a day before his death, news came that his son and son’s wife had gone to their account before him. I suppose he didn’t like the idea of meeting them at the judgment seat, without having done something to repay for his cruel treatment of them; so he left their daughter something, and ordered in his will that she should be sent for to come over and live with her relations.”

“And this young man?”

“Why, sir, he’s the one that was sent over to take charge of her. His servant tells me that he is a fatherless young man of handsome fortune, who with his mother, is residing with a widowed aunt of his in the north of England. This young lady is to receive an annuity from her grandfather’s executors, and the aunt, who belongs to the family, was bequeathed a legacy on condition of receiving her under her roof. The servant tells me that the young man’s mother is one of your easy, timid, good-hearted sort of women, but that his aunt is a real devil. The gentleman seems to be quite a nice young man, and I liked him very well, till he rushed forward in that cowardly way, and tried to deprive me of the honor of killing that pirate.”

They were interrupted by a loud laugh from another part of the vessel, and a call for Mr. Blaze. This personage went forward to comply with the summons, while the queer-nosed man, having taken out his note-book, sat down to add his newly acquired information to its contents. His informer was none other than the former butler of the young lady’s grandfather. He had been allured by the prospect of bettering his condition, to make an apparently disinterested offer of his services to his young master, and accompanied him to India. In that country, where every body must make money, he had contrived, in the service of his master, to amass something considerable, and was now on his return to England. He found the party who had called him, engaged in inspecting a couple of shot-holes in the back of the gang-way house, behind which he had ensconced himself, during the engagement.

“We were making up a subscription,” said the most quizzical looking one of the group, “to buy that gun and pistol of yours, with which you killed the pirate. They must be natural curiosities—something like the Irishman’s gun that was made for shooting round a hay stack. Look here; your two bullets went through this plank, and when they got to the mouth of the gang-way, turned short round the corner, picked out the fellow that was jumping overboard with the young lady, and knocked him in the head. It’s a God’s mercy that they didn’t complete the circle, and come on round where they started from and kill yourself. But I suppose the pirate’s head, was so hard that when they had gone through it they had to stop, and couldn’t go any farther.”

Blaze was a man in full possession of some of the happiest facilities of our nature. Among these was a settled, well-regulated impudence, that was perfectly indomitable. On the present occasion he merely glanced around an expression of complete wonderment, and said,—

"Why, gentlemen, I really cannot see a great deal of meaning in all this merriment. I certainly never pretended that my bullets made such a circle, as that gentleman is disposed to insinuate. Them holes I made there myself, I know—but I made them there to fire through; one for my musket, and one for my pistol. You see, I didn't want the pirates to know where I was, or they might have cut off my usefulness."

"But it seems to me," rejoined his tormentor, "that if more than one charge had passed through, the holes would have been a little larger."

"May be they would, if I had been one of your trembling, cowardly rascals, that can't hold a gun steady or shoot a black-bird, without shutting their eyes. But I tell you I put the musket as steadily to the hole as if I was pointing at it with a broom-stick, and how then was it possible for it to grow any larger? The bullets were all of the same size."

"But if you meant it for a port-hole," said the other, "you ought to have made it a little bigger so that you might take sight through it. How did you know but that your balls might save the pirates trouble, by doing their business on some of us? And how do you know but that some of the poor fellows, whom we have just thrown overboard, were sent to their long account by you? Several of them, I noticed, were wounded in the back, and if you murdered them, may the Lord have mercy on your soul!"

"Why in that respect," said Sam, pausing a moment, and looking for the first time a little foolish, "why in that respect, I must say—I—trusted to Providence."

"Yes! trusted to Providence! and the next time we are placed in such a predicament, I 'trust to Providence' I may be any where, rather than on the range of your bullets. But you lie! you poor pitiful wretch," said he, losing his temper and advancing upon him, "you know you do! and we know it! you were so frightened that you didn't know what you were about; you only fired once, and that when the danger was all over; and you wouldn't have fired then, only your gun and pistol were so ashamed of not having been used during the fight, that they went off themselves! I wish to heaven I could give you what you deserve; but I do not want to stay on quarantine forty days longer than the rest of the passengers, for having been contaminated by the touch of such a leper as you are!"

Sam blushed—as much of an epoch in his life as the Hegira was in Mahomet's; but like all men of his calibre, pocketed the insult.

"And how is my mother?" said Ethelwaite to the coachman, who was on the wharf, awaiting his arrival.

"Very well, sir; only a little fretted about your being away so long."

"And my aunt?"

"As usual, sir," said the man, with some degree of significance, at the same time touching his hat. "The coach is this way, sir."

In a few moments, Tyler and his betrothed were seated in the family vehicle, and whirled on rapidly towards their destination.

"I do not know why it is," said Dorcas, "but instead of feeling my heart uplifted with gratitude to the Author of our recent and various deliverances, I find it weighed down by an indefinable dread—a lurking pre-

sentiment, that all will not be well. My dear Tyler, I seem to myself doomed to be the child and sport of affliction."

"I do not know, Dorcas; it is just as natural for us to be troubled with the forebodings of grief, as it is for us to be enlivened with the anticipations of joy; and these feelings are not only inherent in our nature, but exert upon us a tempering, a moderating influence, that may make us less violent, but certainly more uniform in our temperaments. Anticipations of grief are often sent to moderate the wild zest, with which we indulge in our revellings of joy; and prospects of happiness often float over our sky, when the horizon is darkened by the shades of grief. Perhaps your present forebodings are but a discipline, preparatory to your entrance upon the scenes of happiness that are in store for you."

"God grant it! and if so, it is well. But you have told me very little of the friends whom we are so soon to meet."

"I am sure, you will like my mother," said Tyler, "and equally sure that she will like you, for my sake, until she has learned to love you for your own. Your opinion of my aunt, will depend very much on her opinion of you; and that is giving you every thing to hope, and nothing to fear. She is a woman of violent prejudices, and has no hesitation to manifest them, whatever be their nature. Her daughter you will find a passable companion, and only passable. But you will never lack society, so long as you can have the communion of your own thoughts, any more than I shall, so long as your thoughts can be communicated to me. On the whole, you may prepare yourself for a very comfortable time. I have written to them something about you, and can predict for you a very cordial reception."

"A man may smile and smile and be a villain"—so may a woman! and there is a concentration, an essence of meanness, in a woman's villainy, that makes even devils blush! The very masculine cast of a man's vices gives them for the most part a towering feature, and they are, generally, redeemed by some relics of a better nature. Thus, we have honor among thieves; chivalry among brigands; and we often see the beautiful millennial peace, exemplified in the subordination of the swart pirate, to the gentler dictates of the child of love. The pride of sex—the conscious dignity of manhood, is seldom wholly eradicated, and prevents a total prostration of the moral sense. But a mean woman is the meanest thing in nature. It may be from the contrast between what she is, and what she ought to be—but we never gaze upon her without feelings of the most unqualified abhorrence. So soon as, Esau-like, she leaves the exalted standing which is her birth-right, she exchanges the throne for the footstool, and is prostrated irretrievably. She even seems to acquiesce in her own degradation. The sense of her social inferiority becomes merged in a damning conviction of moral weakness, and she displays the depravity of the lost angels, without the majesty of their ruin!

Such a woman was Mrs. Harris. She had read the letter which her nephew had written, and from the terms in which he spoke of his fair charge, prognosticated the overthrow of what had been her most darling hope—the union of Ethelwaite with her daughter. It is true that for purposes of security she had refrained

from the divulgement of her expectations, and been content to play her card in silence. She had never even dreamed of disappointment, but calculated as confidently on the issue as if the game had already ended in her favor. But now, when the revelations of a moment had dashed the cup from her lips, she felt all the workings of the fiend. She loved her daughter—as the tigress loves her young; and she felt chafed and revengeful, that her daughter had been slighted. She was a woman who plumed herself greatly on that low kind of ingenious shrewdness, which the fox displays in its doublings, and she felt a something stronger than chagrin, a malicious spitefulness, that for once, her shrewdness had failed her. But she was not one to bear disappointment with folded hands. She vowed that if Tyler would not marry Martha, he should not marry Martha's rival, and rejoiced that Dorcas was to be under her own roof, and therefore the more exposed to her designs. There was one circumstance that operated greatly in her favor. Mrs. Ethelwaite, Tyler's mother, was a weak woman and completely under her control. Her violent character was a rod of iron over the yielding disposition of her sister-in-law; and a certain terrible secret in regard to the latter was in her possession, and she used it as a whip of scorpions.

"You are my own husband's sister, Mrs. Ethelwaite," she would say, when she had a difficult point to carry, "you are my own husband's sister, but were you ten times his sister, you should not trifle with and triumph over me. I have no malice towards you, Mrs. Ethelwaite, but if I was to mention a Mr. Somebody's name in a particular way, I could, and you know it, put you in a condition that nobody would hire you to scrub their kitchen. I don't say I'll do it, but I do say I can't see the use of so much obstinacy when I only ask a small favor of you." While she would be going on in this way, poor Mrs. Ethelwaite would sit, pale as a corpse, and trembling like a leaf, and such was the effect upon her, that she would have been willing to sign her soul over to eternal perdition in the next world, if she only could have avoided infamy in this.

On the night when the travellers were expected, the three inmates of Bellevue were seated around the parlor fire. Mrs. Ethelwaite was running to the window every few moments to listen for the sound of the carriage; Martha, was biting the nails of one hand and thrumming the centre-table with the fingers of the other, while Mrs. Harris, was gazing moodily on the fire, and making a final disposition of her plans before entering on their execution.

"I do wish, Mrs. Ethelwaite," said she, breaking the silence, "you wouldn't keep flying about the room so. They'll be here not a bit the sooner for it, and so much fuss is enough to shatter one's nerves to pieces."

"Well, sister," said Mrs. Ethelwaite, her eyes filling with tears, "I beg your pardon. Indeed I did not mean to disturb you. And now to punish myself, I won't stir from my chair again till he comes."

"Don't make a fool of yourself, and go to crying about it. I declare you are the strangest woman I ever saw. A body can't speak to you but you must make a baby of yourself."

"Well, sister," said she, forcing a smile, "don't scold me, and I'll sit just as still as I possibly can, and do

whatever you wish me to do; only let us all meet Tyler with a smile on our faces."

"Why, as to that, I love the boy, just as much as you do, and as much as I could if he was my own, but I am not going to make a fool of myself for him, or for any body else. I will do my part towards meeting him with a smile, but I doubt much whether you will do yours, unless you get a little of the tombstone out of your face, before he makes his appearance."

"I shall not have much time to do it in, then, for here he comes now," said she, running out of the room, as she heard the carriage coming up the avenue.

"Has he come?" drawled out Martha lazily, as if it was an effort to speak; "well, I believe I will go out and meet him too. And has Dorcas come, and may she sleep with me, mother?" And without waiting for an answer, she left the room in a slipshod gait that she took to be the ne-plus of refinement.

"Fool!" muttered her mother with the deepest scorn, as she closed the door. "Sleep with you! yes! you'll hug her to your bosom, and find her a viper!" and with her hands clenched and the face of a fiend, she fairly stamped with rage. Mrs. Harris would have been wanting to her nature, had she lacked the common attribute of meanness—hypocrisy. She had a perfect control, an absolute despotism over her emotions, that would have made the fortune of a diplomatist. And she needed it all; for her plot was no child's whim, that a breath might alter. It was grounded deep as the foundations of her malice, and as she unfolded to herself its various windings, she became so elated with the certainty of success, that to meet the party with a cheerful smile, required not even an effort.

"Well, my boy," meeting them as they entered the door, "how do you do?—and you, my dear? I am glad to see you. We have been expecting you a long time, and you are right welcome to Bellevue. Let me assist you in taking off your things."

Who then thought that this affability, this cordiality, this excess of frankness, was but the playfulness of the painted snake, before it darts upon its victim!

The acute observer might have noticed a slight, momentary shade of vexation on the features of Mrs. Harris as she removed the bonnet of Dorcas, and saw revealed a face like those that tempted the angels. But she easily recovered herself, while she turned to give the article to a servant; and perhaps the very beauty of her victim gave her additional complacency from the thought how much more signal would be her triumph. She therefore conducted Miss Adelmair to the fire, and used all her fascinations to inspire her with affection and confidence.

"You find us in a rather retired situation, my dear. We have but few visiting acquaintances, so that for our enjoyments we are very much dependent on ourselves."

"You certainly have no lack of resources," replied Dorcas, as she glanced at the centre-table, loaded with the choicest books.

"Why, yes; Martha is fond of reading, and I am always happy to encourage her taste. Some of them have just arrived from London, and I hope will please you. I sent for them on your account, fearing that you would, in such a lonely place, find little enough wherewith to amuse yourself."

"I cannot call any place lonely, ma'am, where my friends are so kindly solicitous to anticipate my desires," said Dorcas, overjoyed that she had succeeded in making an apparently favorable impression, which she had been assured was all that was necessary, and completely fascinated with the affability and tenderness of her companion.

A gleam of satisfaction darted across the features of Mrs. Harris, which Dorcas very naturally construed into an acknowledgment of her own sensibility.

During this time, Mrs. Ethelwaite had been sitting on Tyler's knee, examining him with all the minuteness and curiosity with which the South-sea islanders inspected the first white man; ever and anon throwing her arms around his neck; weeping, kissing him again and again, till in the course of her fondlings she discovered the scar which had been effected by the death-blow of the pirate. Her loud exclamation of surprise was followed by the most repeated and importunate inquiries as to its cause.

"Why I forgot to tell you, mother," said Tyler, "that we had a pretty hard scuffle with the pirates on our return home."

"And did they kill you?" said she, hurriedly; and then recollecting herself, "no, they couldn't have killed you, or you wouldn't have been here. But did they almost kill you?"

"No, mother; they neither killed me, nor almost killed me. One of them, however, set his mark upon me, but I soon recovered, and here I am as safe and sound as when I left you."

"But you have not told," interposed Dorcas, "in whose behalf, and to save whose life, you so generously exposed yourself."

"It was to save my own life, Dorcas."

"Come, come; that will not do. I am much obliged to you for the compliment, but I must insist upon your telling the whole story."

"Why I should have shown myself a strange pattern of manhood, to have let that fiendish pirate jump overboard with you; and I'll warrant, every one there was ready to die with envy, that I had deprived them of the honor of rescuing you themselves."

"Mr. Blaze, in particular," said Dorcas, smiling.

"We will tell the story about him, to-morrow. In the meantime, aunt, Dorcas is fatigued, and I think would be glad to retire—I know I can say as much for myself."

When the party had retired to their dreams, and left Mrs. Harris alone in the parlor, she gazed stealthily about the room, and then rising from her chair, muttered, "Yes! saved her life! another difficulty in my way; but I'll make him wish and her too, that she had been made food for the fishes instead of having come here to tamper and interfere with me! I have got to go to hell, any how; and since it is no use for me to try to go to heaven, I'll make up for it by doing as much harm as I can while I stay here, to recommend me to the favor of the devil!" and with this blasphemy on her lips, she snatched the candle and strode out of the room like a fury, to seek the darkness, but not the slumbers of midnight.

For several days after the arrival of Dorcas and Tyler, a growing change in the disposition of Mrs. Harris was universally perceptible. Her tone of voice

was subdued and bland; her address to inferiors considerate and mild; her intercourse with equals self-denying; and all her aims, to promote the general happiness. She was conscious that such a change must necessarily excite wonder, and a most finished plan did she adopt to prevent it from appearing unaccountable.

One day, when seated alone with Tyler, she remarked to him seriously, "there is one thing, my son, that, ever since your return, I have been anxious to confide to you. About a month ago, I found in my head a white hair, and it has had upon me the strangest effect imaginable. I am continually haunted by the thought that the day is not far distant when my head will be entirely silvered over; and when I think that from that stage of the journey of life it is but a hand-breadth to the tomb, the question repeatedly occurs, 'am I prepared to die?' Oh Tyler, I cannot tell you what I have felt. I cannot speak to you of the sleepless nights I have passed, and how much worse than sleepless my nights have been, when slumber has chanced to fall upon me. The midnight visions, the livid forms, the semblances of the other world that have affrighted me, are known but to myself and to Him who sent them. Of late I have felt more peace. Your return; the dear disposition of the angel whom you have brought home with you; her fondness for me, (for our souls have become perfectly knit together in love) have all had an assuaging influence: but oh! that I might hope my peace proceeded from a higher source—that He who pierced me with the arrow of conviction has had compassion on me, and bound up the wound with the oil of His grace!" and here, applying her kerchief to her eyes, she sobbed bitterly.

Tyler paused a few moments, and replied, "I am sensibly affected, my dear aunt, by your disclosure, and only wish that my competence to give you spiritual counsel equalled my solicitude in your behalf. But I shall ride by the parsonage this morning, and should be happy to invite the minister to call upon you."

"Do not ask him to day, Tyler. I will send for him; but just now I feel as if I could unbosom myself better to one of my own sex, and of these I know of none in whom I could confide unless in our own dear Dorcas."

"And a truer christian you will not find this side heaven—let me send her to you now."

Tyler left the room to fulfil his commission; and that evening Dorcas told him, "I had before been bound to your aunt by the ties of nature and affection, but to-day a new tie has sprung up between us—the bond of christian fellowship. I do love her next to the best friend I have on earth, and if you knew how devotedly she speaks of him, you would not wonder at the strength of my attachment."

At the next communion season, it was publicly announced that Mrs. Harris had connected herself with the church; and the simple peasantry remarked that the Lord had not performed such a miracle since the day of Pentecost.

Since the arrival of Dorcas, Walter Roberts, a young man residing a few miles off, had been an almost daily visiter at Bellevue. He was of fascinating address, and possessed of every accomplishment, but at heart an unprincipled libertine. He had, however, the discretion to keep his principles, or rather want of principles, to himself; and in consummate

hypocrisy, his only superior was Mrs. Harris. He was very familiar with polite literature, and had always an abundance of news, which made him what ladies call a right charming fellow. He was more showy than Tyler, and perhaps generally more agreeable as a companion. There was this difference between them: The one had read a great deal, but thought very little; the other was a man more fond of communing with his own thoughts than those of others. The one had read more from a desire to pass with the crowd as a man of parts; the other looked upon knowledge as a sacred spring, and felt too much reverence for the holy fountain to let its bubbles flash up incessantly to win the admiration of the common herd. The one was calculated to be caressed by the many and despised by the few; the other to be cherished by the few and overlooked, not despised, by the many. Roberts had a ready self-conceit that gave him, in his own opinion, a high place in the estimation of others; Tyler, on the other hand, had a distressing humility that made him think others as blind to his real merits as he was himself.

Roberts, on his visits to Bellevue, was generally accompanied by his sister—a young lady who embodied many of the follies and a few of the virtues of her sex. Mrs. Harris, during their riding and walking excursions, invariably managed it that Miss Roberts should be under the charge of Tyler, while Dorcas was handed over to the charge of Roberts himself. This part of the plot was the more easy to be effected, because Roberts on a party of pleasure, would not of course be expected to gallant his own sister, any more than would Tyler to devote himself exclusively to those of his own household. So that indeed it was hardly necessary for Mrs. Harris to interpose her agency here, for matters went on just as she wished, without her interference. This was an art of hers. She had a most profound knowledge of human nature, especially of its weaknesses,—for of these she had a chart within herself—and she knew exactly when it was necessary for her to come forward with her open influence, and exactly when it was necessary for her to remain behind the curtain and pull the string in secret. She knew the fascinations of both the Roberts'; she knew that Walter was the directly opposite of Tyler, and Sarah equally so of Dorcas; and therefore that any partiality shown by Dorcas to Walter would be as grating to Tyler, as any partiality manifested by himself to Sarah would be unpleasant to Dorcas; because naturally if one person seems partial to the known opposite of another person, his regard for the latter of the two is supposed to be proportionally weakened. This was the reasoning of Mrs. Harris, and she knew that the golden chain of sympathy once broken, her triumph would be complete. She would therefore take occasion to incite the coquetry of Sarah, by imploring her not to make such sad havoc of her nephew's heart, and would have treated Walter in the same way, but as she saw he was sufficiently bent on taking the castle for himself, she only threw out occasional hints of encouragement.

In the meantime she was to Dorcas the tenderest of mothers. She ingratiated herself thoroughly in her confidence, and used many unobserved arts to draw forth her feelings in reference to the attentions of Tyler to Sarah Roberts. But Dorcas was a high-souled, queenly girl, and seemed to cherish not even for a moment

the thought that his affection for herself was weakened. She was conscious in her own breast of such a wealth of devotion to him, that judging of his feelings by her own, she would as soon have thought the needle false to the pole, as to have indulged the suspicion, that she had ceased to be his cynosure. She saw that he was attentive to Sarah, and only loved him the better for his politeness; and as to the attentions of Walter, they were even disagreeable to her—not that she suspected them to be designing, but because to one of her nature the attentions of any one, beside the one, would be unsatisfying. Yet she would laugh and chat with him as freely, as if he were entitled to the greatest intimacy; for she was so perfectly artless and innocent, that it would have done her as much annoyance to suspect another, as to be herself suspected.

Not so with Tyler—and for the simple reason, because he was a man. Men are, naturally, more jealous than women, because they are, naturally, less constant. He was moreover, as we have said before, of an humble disposition, and when he reasoned with himself he felt rather surprised that Dorcas had found any thing at all in him to admire, than that she manifested a superior admiration for another. Yet when they were alone, with no eye to gaze on them, she would pour out to him such fond tokens of tenderness, that she would beguile him insensibly from his despondency. But when the succeeding day would bring with it the unwelcome form of Roberts, who had become enamored to distraction of Dorcas, he would fall back again upon his own gloomy thoughts, unless when piqued to make himself as agreeable as possible to Sarah.

Mrs. Harris saw the state of his mind, and was rather at fault to perceive nothing like it in Dorcas. A great mind may thoroughly comprehend a little one, but a little mind can never understand a great one. Mrs. Harris had the right theory in regard to the every-day characters we meet with; but Dorcas Adelmair was as far above these, as the heavens are higher than the earth. She was as infinitely remote from every petty jealousy as the east is from the west, and she could not possibly have been aroused to discover any impropriety in the attentions of Tyler to Sarah. He was happy, and that was enough for her. Mrs. Harris soon learned better than to make any unguarded attempts with this design; for, if she was in this one instance too blind to see, she was too prudent not to feel her way. She soon found out where she could direct her exertions to the best advantage, and accordingly began with Tyler. She observed him one day when his countenance was sad, and having withdrawn with him, she sat for some time with her hands folded and her eyes bent downwards. At last she said—

"Tyler, my dear son, do I love you?"

"Yes, my aunt; I can believe that you love me, though I doubt all the world besides."

"And my dear boy, does the world contain any in whom you have a right to trust, yet whom you are forced to doubt?"

"Aunt!"

"Nay, Tyler, my own son, I cannot see grief working its way through your heart without feeling a correspondent emotion in my own. We need not talk in secrets. My dear boy, let me entreat you to hasten your marriage with Dorcas. She is a dear, good

girl, Tyler, and you may never meet with such another, should you lose her."

"Aunt, you have been to me a mother, and in this have proved yourself more than a mother; but do not be offended that I follow not your advice—I reject it simply because there seems to be a necessity for its being given. What I have felt and do feel I can never express, but the reason you give for hastening our marriage shall be to me a reason for deferring it; and if in the meantime Dorcas is confirmed in her attachment to Roberts, I will release her from her engagement, though the act should release my soul from my body."

Mrs. Harris gazed upon him as he left the room, and hardly waited for him to get out of hearing before she exclaimed triumphantly—

"Why, the very fates are in my favor! It could not possibly have turned out so, unless, they had interfered. But to improve advantages—ah! here comes Dorcas! the very thing!"

When Tyler left the room, he walked moodily down stairs, and met Dorcas in the hall. "Oh!" said she, running gaily up to him, "I have just been out to walk, and I met Mr. Roberts, and he said he would ride with us to-morrow—but, dear Tyler! what is the matter?"

"Nothing; I have a headache, and was going out to enjoy the fresh air."

"You will let me go with you?"

"No, Dorcas; I had rather be alone. I shall return soon." She gazed at him as he went out, and stood motionless. It came upon her like a torrent, that he had more than once of late spoken to her coolly, and the thought bewildered her. She looked up toward heaven, and exclaimed, "Father, look upon me;" and then turning, said to herself, "I have but one mother to go to, and God be thanked, she is not only a temporal but a spiritual adviser." With this confidence she sought her—'temporal and spiritual adviser!'

Tyler took refuge from the approach of intruders in the solitude of a neighboring grove. "Why," mused he, "should I repine, that Dorcas has transferred her affections to one so much better calculated to make her happy? It is true he cannot love her more, yet he can not help loving her as much as I do; for, love for such an angel is an irresistible impulse as involuntary as obedience to fate. She loved me, because she was grateful to me; and shall I make her gratitude the plea of insisting on an alliance that is disagreeable to her? What have I done for her that the most iron-hearted would not have been glad to do—and is not the fact of my having benefitted her, the dearest consolation of my life? It is I who ought to be grateful for the opportunities afforded me of being of service to her; and shall I make her pay so dearly for what has been my own gratification, as to force her to give her hand to me when her heart is another's? Perish the thought! and if I cannot have the joy of possessing her, give me at least the consciousness of having nobly resigned her."

Dorcas, with a heavy heart, entered her aunt's chamber, and throwing herself into her arms, poured out to her the source of her grief.

"My dear daughter," said Mrs. Harris, "it is our duty to take meekly the chastenings of our Heavenly Father."

"I know it, my dear mother, but my heart will rebel. Tyler has been my all in all. I have loved him too well

for my spiritual good, and it is but just that I should be punished with the frowns of my idol. Yet oh! that some milder instrument of punishment had been mercifully adopted."

"Be patient, my dear," said Mrs. Harris encouragingly; "it is but the infirmity of men to be jealous. His suspicions will soon die away of themselves, and then you will again be happy."

"Ma'am?"

"Do not take it to heart: it is only a passing whim. He feels hurt; it is true, because he thinks you manifest a partiality for Roberts; but believe me, my dear, the feeling will be but transient. In the meantime it perhaps might be as well to be a little less pointed in your manner towards Roberts. You know we are commanded to feel for each other's infirmities."

The words of Mrs. Harris drove away every tear from the eye of Dorcas, who, rising in her own simple native dignity, said: "I do know it, aunt; but I cannot help Tyler bear a burden that implicates my own honor. Walter Roberts has entitled himself to my esteem, and I have but treated him as he deserves to be treated. If Tyler is offended that I reciprocate the attention and courtesy of your visitors, I must submit to lie under his displeasure—though it be my sorest trial, next to the frowns of my Maker. I trust, though called upon to endure those of the one, I shall not be visited with those of the other; and though my heart be wrung by the reproaches of its best beloved, it will still be enlivened with the peace of conscience."

"I leave you, dear Dorcas, to your own meditations. Look to Him who is the strength of the weak, and the helper of the helpless."

As Mrs. Harris closed the door behind her, she clasped her hands together, and exclaimed in a low voice, though from the bottom of her heart—

"Good!"

"And has it come to this?" sighed Dorcas bitterly, as she cast herself on the bed. "Slighted, despised, suspected by the idol of my bosom! I could bear his frowns—but his suspicions!" and here the poor girl wept as if her heart would break.

Mrs. Harris had rightly conjectured. Dorcas was a proud, high-souled girl, and supposed others as free from guile as herself. But to be suspected! this, if any thing, could force her to fear that she was not beloved; and she said, sorrowfully, "oh! had he felt for me as I do for him, he never could have believed me so unworthy his regard;" and with this thought she rang the bell, and sent for her aunt to come to her immediately.

She was in tears when Mrs. Harris entered the room, but drying them, she said, "mother, do you think if Tyler had loved me as he ought, he would have acted so towards me?"

"My child," said Mrs. Harris, "do not ask me."

"But are you not my only adviser?"

"I know I am, my dear, and this alone forces me to confess that as much as my heart has been set upon your union with him, yet I have been forced to entertain fears, when I have observed his very apparent partiality for Sarah Roberts. I have loved him from his cradle, but though he were in truth my own son, I would cast him off forever, should he prove himself capable of such perfidy."

"Say not so, dear aunt; he has known me under pe-

culiar circumstances, when his sympathies were all alive; and these may have prompted his affection for me. But why should I hope that he is the same now? The circumstances that gave birth to his feelings have been buried in the past, and it is but natural that his feelings should have been buried with them. What claims have I upon him? It is he who has claims upon me, and gratitude alone should prevent in me a desire to interfere with his happiness. I will write to him and tell him so."

"You had better not be too hasty," said Mrs. Harris, affectionately. "We may be wrong, though I fear we are but too right. But let me watch for you, and you may depend upon my faithfulness. Besides, should you thus write to him, you would make yourself liable to misconstruction, especially if our fears are correct. In the meantime, my dear, act with the same high-minded propriety as ever. Appear not too anxious by altering your due treatment of Mr. Roberts, and be assured that if Tyler's feelings toward you are of the proper stamp, they will compel him to be the one to make the becoming overtures."

"Bless you, my mother, for this and for every thing else. I will show my sense of your judgment by following your advice, and of your affection by repaying it with my warmest gratitude."

That evening, Dorcas from a sense of duty, treated Tyler with as much cordiality, as his coldness and her own wounded sensibility would admit of. The next morning when Walter called, she cheerfully complied with her engagement, but her heart did faint within her, when Tyler said that he believed he would stay at home, if Sarah would consent to remain with him and look at some pictures. She of course gladly consented.

The reader's imagination can easily supply to itself how matters went on for several days subsequent to this event. The breach became gradually wider and wider. Tyler endeavored to stifle his emotions by being particularly attentive to Sarah, and Roberts had become more than ever enamored of Dorcas.

About two weeks after the ride, Sarah rode up hastily to Bellevue, and running into the parlor, said to Dorcas, "do throw aside that sober look for just one minute, while I tell you the best news in the world. My uncle has just written to me, that a large party of pleasure is about leaving London for Paris, and that I must come on and go with them under his protection. I am to start immediately, and have ridden over but for one minute to say good-bye. So here it is—good-bye. But where is Tyler? ah! there he is;" and kissing the party farewell, she ran out of the house to meet him coming up the avenue. Dorcas felt sick at heart as she saw him turn his horse to accompany her home.

"I have been thinking, Tyler," said his aunt, one day, when they were conversing on the subject, "that you would have a better opportunity of really testing the attachment of Dorcas, by going away from home for a short time, and leaving her entirely unrestrained. Ardently as I desire your union, I cannot consent to it at the expense of your happiness. Suppose then you make a short trip to the continent—say to Paris, and in the meantime Roberts can develop his intentions, and Dorcas feel at full liberty to pursue her own inclinations. I know you desire to act honorably."

"You are right, aunt; and the sooner I follow your

advice the better. I can endure any thing but this suspense, and will start to-morrow."

"Dorcas," said Mrs. Harris, when they were holding their nightly consultation a little before bed-time, "I am grieved to tell you, but have you not observed Tyler to be unusually gloomy since Sarah's departure?"

"I have."

"You will be less surprised then when I tell you that to-morrow he leaves for Paris, and, as I strongly suspect, by a previous arrangement between themselves."

"I am by my fears prepared for the worst, as I am by your counsel and by heavenly assistance fortified to bear it. There are but a few drops remaining in my cup of bitterness, and these I am prepared to drink."

"Bid him farewell affectionately; and I cannot advise you to hint a word to him about the past, present, or future."

"Mother! I am a woman—and trust me, not wanting in a woman's pride."

"I can trust you, my dear; but it is late—shall we not to bed?"

"Yes, but I fear not to sleep—good night," and kissing her, she left the room.

"Not to sleep! no! but it will not be long before I shall sleep and that soundly. Revenge they say is a sweet pillow for the soul to rest upon, and I'll have it!"

Not long after this, Sarah wrote to her brother that she had been very agreeably surprised by Tyler's arrival in Paris; that he had been devotedly attentive to her, and that she had every reason to expect daily an offer of his hand. Roberts, overjoyed, communicated the intelligence to Mrs. Harris, who mused upon it for sometime and inquired,

"What then is to become of Dorcas?"

Walter replied, "if I might hope, my dear madam, that you and she would permit me to supply his place! especially since my own sister has captivated her swain."

Mrs. Harris looked at him steadfastly a moment and replied, "Mr. Roberts, I have noticed Dorcas and Tyler, from the beginning. I have always been fully satisfied that they were not intended for each other. I love her well enough, but I love him better; and, really, Mr. Roberts, between ourselves, (we understand each other?) I am not sorry that he has thought better of it—particularly, since he has been convinced of his folly by a girl of such tried worth as your sister. While then I shall be glad to second your inclinations, I will not attempt to force those of Dorcas. I will see her myself; convince her that she has nothing to hope from Tyler, and in two days from now you may call upon her yourself."

There is an old story of two sharpers who met, and by appearing each to each the most simple hearted of beings, cheated each other out of five hundred dollars apiece. Somewhat after the same sort was the game now to be played by Mrs. Harris and Roberts. Each had to affect the utmost disinterestedness and simplicity, and each put every art in play to make a tool of the other. We shall see how they succeeded.

Soon after the departure of Roberts, Martha came into the room and walked listlessly up to the glass, with the ostensible design of arranging her ringlets; but as these were already in perfect order, we may charitably suppose that there was some person in the glass whom

she felt inclined to call upon. She took one finger and lightly, very lightly, touching here and there a curl, said, while thus engaged, to her mother,

"What did Mr. Roberts want, mother? Didn't he ask to see me? As soon as I saw him coming, I took the papers out of my hair and dressed myself, and waited for him to send for me; but when I saw he didn't, I thought I would come down any how, and see what you were talking about. But he has gone, and I have had all my trouble for nothing. Did he say nothing about me—not even ask how I was? I think he might."

"He came over, my dear, to tell me that Tyler and Sarah are going to be married."

"Why, mother, I thought you said I might have Tyler?"

"I used to tell you so to keep you quiet when you were a little girl, but only then. Since the Lord opened my eyes, I think it wrong for first cousins to marry."

"But, mother, good people often marry their first cousins, and I don't see why I can't have Tyler. He's handsome, mother."

"We should feel it our duty to set a better example, and then, may be, they will not do it any more. But go and call Dorcas; she will feel more interested in the matter than you do, for you know she and Tyler were to be married."

"Well, if *she* wants Tyler, she may have him, for she is so good. But Sarah Roberts shall not, because I want him myself;" and, so saying, she went up stairs and told Dorcas to go down and tell her mother that Sarah should not have Tyler; "for," said she, "a letter has just come from Europe, I mean from France, that says they are going to be married. But, la! how queer you look! I am sorry—are not you?"

With an aching heart, Dorcas sought her aunt, and found her ready to confirm her worst fears. After having played about with her victim, and fully satisfied her that there was no hope, Mrs. Harris, and to provide for herself a plausible way of escape in case of accident, affected to turn consoler. She was careful, however, to delay her hypocritical conversation, until there was no hope of its being received.

"Cheer up, Dorcas," said she; "you know Sarah is, like all girls, fond of making conquests, and her natural desires may have led her to attach more importance to the attentions of Tyler than he actually designed. Perhaps, too, he only has devoted himself a great deal to her that he might forget his suspicious jealousies." This last was artfully brought in, and Mrs. Harris well knew the effect it would have upon Dorcas.

"I love you tenderly, aunt, for your attempt to pour oil on my wounds; but I have no hope of their being closed, until closed by death. It is not his attentions to Sarah, so much as his suspicions of me, that has given me up to despair. Had he loved, he could never have doubted me."

"Well, my dear, if clouds are about you, you know who sent them; and knowing who sent them, you know where to seek light amid your darkness."

"And I will seek that light," said Dorcas, gratefully. "And I will not forget to thank Him that I have one to remind me whence our help cometh."

"Know, who sent them!" said Mrs. Harris scornfully to herself. "She knows not that! but she *shall* know it."

Seated by a writing desk, in one of the splendid hotels in Paris, Tyler was inditing a letter to his aunt. "Soon," mused he, casting his pen on the table, "will my fate be decided. Roberts will take advantage of my absence to offer her his hand, and she shall not know the struggle it costs me to give her up." Resuming his pen, he wrote that Paris was the most delightful place in the world; that he was enjoying himself highly, and that he need not be expected home until after a certain event had happened, (meaning the marriage of Dorcas and Roberts); in conclusion, he begged to be remembered to Martha, Dorcas, and his mother. The letter he enclosed in a blank envelope, and the day after the conversation of Dorcas and her aunt, it arrived at Bellevue.

Mrs. Harris, herself, read it to Dorcas; admitted the clause in relation to a *certain event* to be "confirmation strong as proofs of holy writ;" and wound up her torture by commending her "dear, forsaken daughter" to the favor and protection of the Almighty; vowing that if she was not to see Tyler before the certain event, she would not see him after it—for he should never cross her threshold as the husband of Sarah Roberts.

Her aim, her horrid aim, was to drive Dorcas to the commission of—suicide! She had never an idea of that mental and moral greatness, that borrows vigor from being trampled on, and distils energy from despair.

On the day following, Roberts, trembling with anxiety, called upon Dorcas. Heartless libertine as he was, he had felt how powerful is the holy alliance between virtue and beauty. He had been accustomed to look upon the sex as decorated wax-dolls, made solely for the convenience of man, and subject to his caprice. But a new light had broken in upon him; he had been brought under influences to which he had ever before scorned at the idea of being subjected: but the same soulless hypocrisy—the same unscrupulousness as to means, was still identified with his existence.

He found Dorcas buried in thought by the parlor fire. As he approached she rose, and extending him her hand, endeavored to veil her emotions under the semblance of cordiality. Now and then a faint smile would wander over her features, but it so belied her heart that she could with difficulty restrain it from being followed by a gush of tears. They, for awhile, conversed familiarly on their usual topics; but Roberts endeavored, step by step, to bring the conversation nearer home, until he made her an open avowal of his love and an unqualified offer of his hand.

Had a thunderbolt fallen from Heaven, it could not have shocked more utterly the heart of Dorcas. But, poor girl! thunderbolts *had* fallen—and they had so accustomed her to endurance, that the present shock was but one among the many. She had learned in the school of affliction to command her feelings, and rising from her chair, she said, with an ice-like calmness—

"Mr. Roberts, we have met too often. I admire you as a man, and esteem you as a friend, but we meet not again;" and when he awoke from the trance into which her words had thrown him, he found himself alone.

It may seem unnatural that Dorcas, during all this time, had fallen so unwarily into the snares that were spread for her. But it must be remembered that she was a perfect child of nature. She had been nurtured in a distant land, where her father and mother, sensible

of the dissipations of East-Indian society, had kept her secluded from it, lest she might yield to its enchantments. And here, we may observe, is one great error of parents. Fearing lest their children may become victims to the world, instead of giving them an early knowledge of its temptations, and at the same time instructing them by example and precept how to avoid them, they immure them in ignorant solitude, believing that the mechanical principles here acquired, will avail them when removed from their own influence. Hence they have no trials of faith to work out patience; no gifts of patience to work out experience; no treasures of experience to enliven them with hope. The consequences of disagreeable follies have never taught them discretion: they have no knowledge of human nature to guard them against its deceptions: their whole minority has been passed in the nursery, and when they leave its walls, their minds are the same unlettered, blank sheet, as when their eyes first opened on the darkened light of Heaven. The result is, that where one such, by a happy combination of circumstances, is saved from destruction, thousands become the slaves of the vicious, the victims of the vile, or the dupes of the artful.

Recovering from his stupor, Roberts exclaimed, "Rejected! 'Meet not again!' But we do meet again, and that speedily." As he uttered this, Mrs. Harris, who had been awaiting, feverishly, the termination of their interview, entered the room:

"Well," said she, advancing towards him; "What said my pretty bird? But what!—downcast?—dejected? Not nay, surely?"

"Even so, madam;" and here he disclosed the decided conduct of Dorcas.

"You opened your attack too soon," said Mrs. Harris, who had now struck upon a new vein, and thought if Dorcas could be forced to marry Roberts, her ends would be accomplished, though her malice would not be so completely gratified. "We have but yesterday received certain intelligence, (or directly implied, if not certain,) that Tyler and Sarah are to be married before their return, and she has not yet recovered from the shock. When she hears that they are actually married—as she doubtless will in a day or two—you will find her less impregnable;" and here she handed him Tyler's letter, with the envelope, telling him to read it at his leisure. She had given him his clue, and knowing her man, was just as well aware what he would do with that envelope, as if the future was already before her.

He took the letter, put it in his hat, and before he was on his horse, his plan was fixed. Going immediately home, he, by the aid of the letter in his possession, counterfeited Tyler's hand-writing—wrote that the marriage ceremony having already been performed, the couple would be home in a week. This letter he enclosed in the envelope which Mrs. Harris had given him, of which he had contrived to alter the date of the post-mark, and, three days after, dropped it into the letter-box of the neighboring post office. When Mrs. Harris received it, knowing well the source whence it came, she went immediately to Mrs. Ethelwaite, and commenced in her usual way:

"Mrs. Ethelwaite, you are my own husband's sister."

The poor woman, well aware what was coming, sat trembling in her chair, and simply faltered out,—

"Well, sister?"

"You know, Mrs. Ethelwaite, I have kept that ugly secret of your's *well*—too well, I fear, for my eternal happiness; for you know, as the Bible says, the partaker is as bad as the thief: I must now disclose it—and, first of all, to Tyler." She saw her sister was fainting, and handing her the camphor bottle, said, "Come, come; it is not time to faint yet. Do you want me to tell him?"

"Great heaven! No!"

"Well, listen to me, Mrs. Ethelwaite. That boy of yours was my darling hope. I meant him to marry my Martha, and he as much as promised me he would. He went to India, and there fell in love with that viper, and had the impudence to write and tell me of it. But he shall not marry her—I swear it; and you are to help me prevent him."

"But, sister, he is going to marry Sarah Roberts."

"It's a lie! and it's all my doings. I estranged him from Dorcas—I sent him to France—I started the report—I shall soon say he is already married, and at your peril you are not to deny it—nay, you are to affirm it, if called upon."

"But, sister, I cannot tell a lie."

"Very well—I then can tell the truth!"

She cast on her a scowl of the blackest malignity, and seemed about turning away. Mrs. Ethelwaite imploringly raised her hand.

"Your hand is up. Swear by it then, as you hope for peace, that you are mine, to do my pleasure."

She signified her assent.

"Well, then, have done with your folly. Your secret is yet with me—how long, depends upon yourself;" and so saying, she went in search of Dorcas.

"My dear girl, I did not think to be, so soon, the bearer of such unpleasant tidings—Tyler and Sarah are married—the heartless ingrate! Here is the seal of his perfidy;" and she read the letter.

Dorcas received its contents with a dumb, lifeless grief, as if the fountain of her soul was already frozen. Both sat in silence, till Mrs. Harris said, "Dorcas, be a woman! I would not advise you to your harm—but, be a woman! I feel my own nature outraged with yours. Consult your dignity, and if another inducement is necessary, save Tyler the remorse of having broken your heart."

"How?"

"You know Mr. Roberts—he is dying for you. Save his life and your own by marrying him. Be spirited!"

"My own life is of no consequence. I have another way of ending my griefs than that. Marry him! marry any body!—no body but death!"

Mrs. Harris thought a moment—"perhaps she means to —; better!" and then said, "well my own child, I only advised you as a woman. Now let me advise you as a christian. Remember!" and here she pointed heavenwards, and left her.

She saw Roberts, and told him there was no hope; Dorcas would die soon—and begged him to say nothing more about it. But he was not one to be so easily baffled.

Dorcas remained half alive and half dead, until the day before Tyler was said to be expected. Mrs. Harris arose every morning with the hope that she had destroyed herself; and her first demand of the servant was to

know how she was—expecting to receive the intelligence. But now she could wait no longer. “The fool has got no heart,” said she, as she mixed a cup of poison, intending to do herself for Dorcas, what she thought her too ‘pusillanimous’ to attempt. “But no! this is the last night: she may have reserved herself for this. Let her kill herself if she will, and then I shall be revenged on her soul too, if she has one. But if she is alive to-morrow morning, her shroud shall be made before nightfall;” and with this hellish design, she put the deadly mixture into the sideboard.

Dorcas’ room was an eastern wing of the house, and opened into the yard. Hither she repaired on that momentous night.

Roberts, thinking this the most favorable time for his designs, had stationed a carriage in the road, under the idea she could then be the more easily persuaded or compelled to abandon a place where she must die with misery, and retire to one of secrecy, where she could brood over her sorrows alone—without being mocked by the presence of Tyler, as the husband of another. This was to be his pretext; but once in his power, he intended to force her into a compliance with his importunities. He saw her enter the room, and felt his heart fail him as she sank upon her knees, and committed herself to the Father of the fatherless. A noise disturbed him, and he hastily retreated in an opposite direction, but still not so far but that he could see the candle burning. He watched patiently for nearly an hour: still it burned on. He stole up closer, yet saw no one—crept nearer—nearer—lifted the latch—opened, entered the door—the room was empty!

Maddened with rage, he stood undecided for a moment, and then proceeded toward the carriage. “Curse it!” muttered he, as he told the postillion he should have no more use for him that night.

“Looking for a lady, master?” said the man, who had been employed on such duties before; “cause I seed one get into the diligence when it came along, about a half an hour ago.”

The thought struck him that Dorcas had banished herself from home. “The very thing!” said he; “drive on; follow the diligence, but do not catch up with it. See where she gets out, and then we part.”

The horses dashed on. Morning revealed the object of their pursuit about a mile ahead. At breakfast they ascertained that a pale young lady, closely wrapped up, was one of the passengers. They followed on to London—saw where it stopped; and to the joy of Roberts, Dorcas left it and entered the hotel. Towards evening, he saw her driven away in a carriage, and was told that she had gone on board an American packet that was to start the same night. At midnight, he had himself conveyed on board the same vessel, just before she weighed anchor, and left England—forever!

In the morning, when the passengers came on deck, Dorcas was thunderstruck to behold Roberts standing before her. He addressed her—

“My dear Miss Adelmair, how have we met! Deprived by your coldness of all that made England dear, I last night left it forever. But most willingly shall I endure the transportation for life, if my fair judge goes with me to help me bear the burden of her own sentence.”

“Mr. Roberts, this will not do.” She took a minia-

ture of Tyler from her belt, and pointing to it, said, “Though I might blush to own it, my heart is still there. I am sorry that any thing from me has made you desert your home. Return there, and be happy. On this vessel you address me not at all, or only as a passing acquaintance.”

In the meantime, solitary amid the gaieties of Paris, with them, but not of them, Tyler came to himself. “What if I have been unjust?” said he, after returning one night from a crowded saloon. The next dawn saw him on his way to Bellevue.

His aunt met him at the door.

“Where is Dorcas?” said he, hurriedly.

“Gone!”

“And Roberts?”

“Gone too—with her!” She intimated they had eloped.

Tyler went to his room with a stricken heart. He threw himself on the bed; and shortly after, an old woman, a house servant, brought a letter, saying Miss Dorcas had left it. With a trembling hand he tore it open, and read—

“I have not a word of reproach. I love you too well to embitter one drop in your cup of joy. Be happy with your bride; and sometimes, when far separated from you by the waste of waters, cast a thought on
DORCAS.”

Stupified at first, and then frenzied, he rushed with the letter to his mother, and in an unguarded moment, drew from her the foul conspiracy.

Snatching her by the arm, he dragged her to his aunt, whom he also seized in the same manner, and thus confronted the guilty pair.

“Speak!” shouted he; “confess! or rather spare your confession, you fiend! My mother has confessed for you, you foul hypocrite!”

Mrs. Harris condensed her features into a withering expression of hatred, and rejoined—

“Your mother? do you call that thing your mother?”

“Yes! and you are a woman, or you should be taught how to speak of her.”

“And who was your father?”

Mrs. Ethelwaite burst out in a wild, piercing scream, and fell dangling from the unrelaxed arm of Tyler.

“My father died before I was born; but what is that to you?”

“He might have been your father, but he never was her husband! But listen to me, Tyler Ethelwaite.”

Tyler did listen till she cast the foul blot on his birth; and then the thought flashing on him that it *had* been involved in mystery, he fiercely clenched both his hands round her throat, and flinging her with all his might against the wainscoting, rushed from the house in a raging madness, and rode in a frenzy towards London.

When Mrs. Harris recovered from her stunning fall, she saw no one in the room but her sister, still lying where she had fallen when Tyler released her from his grasp.

“And so you thought me a fool like yourself, to be trifled with and betrayed with impunity,” said she, touching her scornfully with her foot. But immediately she started back in horror—

Her sister was dead!

She walked away mechanically, and opened the sideboard. There was the fatal cup she had prepared for Dorcas. Like Judas Iscariot, she felt that she had be-

trayed innocence. The deed was done! the scorpion was warmed into sudden being by the fires that were raging in her bosom. These she sought to quench in a moment with the deadly draught, and

"Sooner than the devils hoped, arrived in hell!"

When Tyler reached London, he immediately hastened around from quay to quay, inquiring incoherently if any one had seen Dorcas. Repeated insults aroused him to a sense of the fruitlessness of his search, till when turning away in despair, he was met by one of the lower order of the police, who said to him significantly—

"Looking for a gal—eh?"

Tyler shuddered at his profanity and turned to leave him.

"Look here, my larkey; may be you wouldn't look so spiteful, an' you knew as much as I do."

He put a guinea in his hand and awaited his intelligence.

"Well now, that's clever. Pale, and wrapped up as if she didn't want nobody to see her?"

Tyler bowed assent.

"Seed her myself—went aboard the ship *Caroline*, and is this minute three days out, bound for Ameriky."

Tyler having given him another guinea, took ship immediately in another packet that was just starting for the same port. On the way, enlivened by the prospect of finding Dorcas, he became more calm. He had a rough passage, and during a gale was the happy instrument of saving the captain's life.

When the pilot came on board, the captain asked what news—and was informed that the *Caroline* had been wrecked during the storm, and every soul lost.

"What's that?" said Tyler abruptly; "the ship *Caroline*?"

"The very same."

"Any ladies lost?"

"Every soul! captain, crew, passengers and all. Three ladies aboard, and by this time eat up by the fishes."

"Where is that ship going?" said he, as one came out the channel.

"She's the *Emperor*—bound to Russia."

"Captain," said Tyler, "are you my friend?"

"I ought to be—you saved my life."

"Well, then, put me on board that ship."

"Aye, aye, sir;" and he was on his way—to Russia, or any where else—to him it mattered not.

Had he kept on, he would have found that one of the passengers, a lady, had survived the wreck. She had been washed on shore, and with difficulty restored to life. When asked her name, she replied it was Dorcas Lindsay. Under this humble title she buried the proud old English name of *Adelmar*. She came to our village; spent her life in acts of charity and benevolence, and left a record of her worth not only on the walls of our temple, but in the hearts of our villagers.

Tyler, after wandering in other climes, came to America, where he learned the fate and shared the grave of his beloved.

But the saddest feature of the miseries of poor Dorcas, was that she never knew but that her sorrows were all deeply founded in reality. She wandered among us like a banished angel, never knowing how wronged, how injured she had been, until her soul expanded in the omniscience of heaven.

N. N. N.

ALICE RICHMOND.

CHAPTER I.

I had just left college, well satisfied with my academic laurels, and the progress which I had made in literary pursuits, recollecting little of the past with regret, and anticipating a bright future of success and happiness. The next step I thought would bring me into the world—the glad, busy world, which in the distance had always appeared so inviting. The privilege of laying aside studies imposed by others, and making free choice of a profession, is so gratifying to a boy's restless and eager spirit, that it gives him fine ideas of his own importance. And the temporary confusion which it produces in his mind, makes him feel like an independent actor amid the world's bustle and conflicting elements. Soon, however, when he finds himself again chained to a task, prescribed indeed by his own taste, but superintended by his former guardians, the illusion partly vanishes, and, gradually, the imaginary man becomes again a boy. But this latter change steals over him by slow degrees, and is oftentimes preceded by a goodly season of imaginary freedom, and of dreary pleasure. I was now in the full enjoyment of this intermediate state of happiness, and if my feelings had admitted of any higher elevation, there were around me a plenty of kind friends, to give ready ear and unmeasured encouragement to all my extravagant notions and wild schemes.

A profession must be chosen, and I fixed upon the law—the stepping-stone, as I thought, to the nobler calling of a statesman. I began to dream of one day making a figure on the floor of Congress; and even the presidential chair grew and glittered before my eyes, until it lost very much of its plain, republican look, and seemed a throne, shining in purple and gold. My father resolved that I should commence the new study forthwith, under the guidance of Mr. Richmond, an old friend and college class-mate of his, who lived about a hundred miles from us, in the vicinity of a large manufacturing town, where he enjoyed the rank of a grandee, being the best lawyer in all the country, for a circuit of fifty miles, and a man of wealth and great influence.

With many blessings and some few tears, very needlessly spent upon my head, and much good advice, to which I gave, if possible, still less heed, I was dismissed, one bright October morning, in the coach for Larksborough, the town above-mentioned, near which my intended preceptor resided. A trunk, containing all my worldly store of clothes and books, having been carefully fastened on behind, with many injunctions from my father, who was somewhat proud of the reputation of being "an old traveller," and of having had great experience in steam-boats and stages, that I should look if all my property was safe at every stopping place, I took complete possession of the vehicle, being the only passenger. With the last "good by!" and the first crack of the driver's whip, I forgot all about the home I was leaving, and fell into a pleasing reverie, to which the soothing sway of the coach-springs invited, a thousand bright, fanciful images sporting gaily through my brain.

At last I bethought myself of a letter from my aunt

Nancy, which had been put into my hands just in the bustle of starting, and which I had thrust into my pocket, without breaking the seal, intending to give it a leisurely perusal at the first opportunity. I had written to her a few days before, requesting a letter to Mrs. Richmond, with whom I knew she had been well acquainted in her school-girl days. Her kind epistle, covering what I desired and expected, a very flattering note of introduction, was as follows:

"My dear Henry,

"Inclosed you will find the letter which you request. Always happy to do you any service in my power, I am doubly so in the present case, knowing how advantageous and interesting may be to you the acquaintances you are about to form. I have been intimate with Mrs. Richmond ever since our days of girlhood; and, though for several years we have been far separated, friendship has been kept alive, if indeed it were possible for it to languish, by a frequent correspondence. We first met while at school in Bethlehem, just when our young hearts were beginning to expand to a capacity for lasting affection. The loves of childhood are evanescent; and the alliances of mature years, founded on calculating selfishness, engage not half the warm feelings of our souls. But there is an intermediate season, a time when the first bloom of spring has faded, and before the fruits of autumn are gathered, which sheds a 'tint of rose,' more permanent than the colors of May flowers upon the face of nature. There is a season between the trifling sports and wayward caprice of childhood, and the chastened feelings of ripe age, when the affections gush forth, as even warm and uncontrolled, in streams that fail not even when the source seems dry—when the heart has long ceased to beat with any new emotion of love.

"When Mary Harrison, soon after she left school, married Mr. Richmond, we parted, and since then I have seen her only at long intervals and for a few hours at a time. For my sake she will show you kindness—kindness which you should repay, in the only manner it is probable you can make any return, by duly appreciating and carefully acknowledging it. You will find her a woman of highly cultivated mind, agreeable manners, and above all, of a warm, affectionate heart. Of Mr. Richmond I know very little from personal acquaintance. You are well aware of his high reputation as a lawyer, and may be assured, that, as a man, he is full worthy of the trust which your father, who has long been on terms of strictest intimacy with him, reposes in his hands. I need not say anything of your duty towards a preceptor, and a father's tried friend; one to whom he has temporarily confided part of a parent's guardian office. Your own sense of right will regulate your conduct towards him, and your own perception of moral and professional worth claim for him respect and regard.

"They have but one child, a daughter named Alice, who is just on the verge of womanhood, being about a year younger than yourself—I think you were nineteen last month. Since, if you profit by your opportunities you will be intimate in the family, I ought to give you some insight into her peculiarities; or rather her peculiarity; for I believe there is but a single point in which she differs materially from other girls of her age.

I have seen her only once, so that I know little of her personal appearance except from hearsay; yet all agree that she is very like a portrait of her mother, taken just after marriage. If so, she is no doubt beautiful; but of this judge for yourself. It is no part of my object to excite in you, by anticipation, the least interest in Alice Richmond, but merely to tell you what you might not easily discover, and thoroughly understand, and what, if not understood, might cause you some painful feelings of doubt and self-distrust.

"It is a long story for a letter, but I will try to make it as brief as possible. Mr. Richmond had an elder sister, who, after living for some time a widow, died about five years ago, leaving a son, the only survivor of four children: all the rest had died in infancy. At the period of which I speak Edward Stockton was nearly sixteen, and, on his mother's death, was taken into his uncle's family, where he resided, for almost two years, the constant companion of Alice, and treated in every respect as if he had been her brother. You may easily imagine that the intimacy and affection which sprung up between these two young hearts was of no ordinary kind. Together they studied under private preceptors, and together were joined in nearly all their amusements. Being educated entirely at home, they knew nothing of the world, and had few acquaintances of their own age even in the adjacent town, the population of which is principally engaged in manufactures, and did not furnish many young people of either sex at all suited, by birth or education, to be companions for Edward and Alice. I have already spoken of having once seen her. It was about a twelvemonth after her aunt's death, when I spent a few hours only with Mrs. Richmond. She was then a wild, light-hearted girl, and was just at that changeable season of female beauty, when the child's features are beginning to settle into the lineaments of adult age, and when no one can tell what of loveliness a year, or even a few months, may develope or steal away. I did not see Edward: he had gone a hunting; and though Alice was sure he would be back, in season at least to bid me good-by, dwelling with undissembled interest on the topic, he did not come at the time appointed. When she kissed my cheek at parting, and I expressed regret at not seeing him, I thought a tear trembled in her soft blue eye, as she said—

"'I am afraid something has happened to him: he promised to be back two hours ago, and he does not often break his promises to me.'

"Soon afterwards I received a letter from Mrs. Richmond, in which, among other things, she spoke of Edward and Alice in connection. It is now before me, and I will transcribe a few lines:

"'They are inseparable companions,' she wrote, 'and seem never so happy as when together. They study together, read together, walk together, and play together. When Edward starts off with his gun, to spend the day in shooting, Alice accompanies him some distance beyond the garden gate, looks after him till out of sight, and then, in the evening, watches his return for whole hours. She frequently goes with him a fishing, and a sail on the small lake which skirts the farm on the west, often concludes their day's duties and pleasures. Just now, while I write, I can see them from my window, which overlooks the garden, seated to-

gether under the shade of an arbor, earnestly engaged with a book. Her arm is locked in his, while he holds the volume, and, alternately, they read aloud. I will see what it is, in which they appear so much interested. Excuse me for a minute.

"'Lalla Rookh, and they are in the midst of 'The Fire Worshippers.' All the neighbors speak of them as already affianced. This is not the case, though there is certainly strong ground for the report. I do not much like matches between cousins, but still would have no great objection to their union, if sure that they really know their own hearts in desiring it. Neither has yet seen anything of the world, and therefore no just idea can be formed of the strength of their attachment. It may be the creature of constant companionship alone, and absence may prove it too weak for trial. Well, in another year Edward goes to college, and will then be cast more upon the world, and learn something of its ways. If after such probation he returns unchanged, I cannot throw any obstacle in the way of their happiness—a happiness which union alone can consummate; though of this perhaps they do not often think seriously."

"So Edward went to college, but ere he parted with Alice, vows had passed between them, showing that they looked farther into the future than Mrs. Richmond gave them credit for doing. He promised to write to her at least once a week, and her answers were to be as frequent. For some time after his departure, she appeared listless and melancholy; straying over the scenes of their happy companionship, and sitting in the arbor where they had been accustomed to read together, lost in reverie. Her only pleasure seemed to be in writing to Edward, and reading his epistles. Gradually, however, she recovered her good spirits, and was again, at most times, light-hearted as before, though relapsing occasionally into gloom. For some months Edward's letters arrived regularly at the appointed season; then they became both shorter and less frequent, and he pleaded want of time and the pressure of study. Still, those that she did receive were in the same style of affection as ever, and Alice accepted the excuse, and, in her next fond epistle, begged him not to neglect his studies on her account; but, if anything happened to him—if he should be taken sick—to write immediately. This license had a very evident effect upon him; for he became more remiss than ever.

"The first college vacation brought him back to the longing eyes of his fair cousin. In all appearance, he still loved as fondly as before their parting; and Alice, in the excess of feeling, was wildly extravagant in her expressions of delight. Again, for several weeks, they were constantly together, joining in their former sports, reading their favorite authors, and visiting all the well-remembered haunts of their retirement-seeking loves. On bidding adieu the second time, Edward breathed more fervent vows of constancy than had, at first, warmed his lips; and Alice, fond girl, trusted in him as implicitly, as are wont to do they who know nothing of a deceitful world. Another season of gloom followed his departure, but shorter than the last. For a time he wrote frequently and at great length, seeming to pour out his soul without reserve; but, by degrees, became even more negligent than previously. Still Alice

dreamed not that love like his—for she measured it by her own—could change or diminish.

"The next vacation came, and with it, again, Edward Stockton to his uncle's abode, accompanied by a college class-mate, with whom he had formed a friendship, and whom his letters had sometimes mentioned, in the highest terms of praise, as a good scholar and a 'clever fellow.' On the strength of such recommendations, Mr. Richmond had given his nephew permission to invite James Elliott to spend a few weeks at Briar-Hill—the name which Alice had bestowed on her father's domain—and received his guest with the greatest kindness, magnifying a slight acquaintance, which he had once had with the young man's father, into a just ground for hospitality toward the son.

"James was indeed a 'clever fellow,' in the proper sense of the terms. He had been brought up very differently from Edward—in the city, and under the sole care of a weak-minded and indulgent mother, his father being dead. He had always done as he pleased, and yet did not exhibit the petulance and overbearing carriage which spoiled children usually manifest. He had not passed his life among servants and boys of his own age, but had early lived completely in the world, always aspiring to the company of those older than himself, and readily learning their manners and habits. Having excellent natural talents, his education had been derived, young as he was, more from men and women than from books; though the tasks set for him at school were so easily accomplished, that, without much study, he had usually stood among the first of his class; a distinction which he still enjoyed in college. His mental powers, however, had been thus early developed at the expense of his heart. He was cold and selfish, susceptible to few of the finer emotions, and regulated every action by the dictates of passion or self-interest. Yet, to appearance, he was the very reverse of all this—in manner, frank, warm-hearted, affectionate, and earnest—the insinuating manner of an accomplished man of the world, assumed by a boy of eighteen. He was not regularly handsome, but the whole contour of his face was good, and his dark eyes and hair and strong features did not contrast unfavorably with the more beautiful but less masculine countenance of Edward Stockton. The latter was undoubtedly dazzled by his friend's sparkling genius and imposing manner, and had, already, begun to reflect, in some faint degree, his chief traits, though not at all suited to the natural cast of his own mind. Especially did he aspire to the character of a man of the world; and even affected some of the selfish, worldly principles which young Elliott had unguardedly exposed, or skilfully insinuated.

"His manner toward Alice was now entirely changed. He professed indeed, though but coldly, to feel the same strong attachment as ever; but did not, as heretofore, seek to draw her away by herself, and enjoy her company alone. Words of endearment, though often essayed, seemed to freeze upon his lips. To be sure he spoke of the attentions due to his friend, to whom all his time must be devoted, and Alice admitted the force of the plea, even in her own mind, but still felt the change, while hardly crediting its reality. Mr. Richmond and his wife saw more clearly the true state of things, and lamented the alteration in Edward's charac-

ter, yet did not see enough of James Elliott, to know what a dangerous companion he was. The latter paid much more attention to Alice than did her cousin, though he knew of their betrothment; but she had soon taken an invincible dislike to him—which, however, she did not often manifest—partly, because his attentions did not accord with the sadness of her feelings; partly on account of sentiments which she had heard him utter in an unguarded moment; but principally because love had given acuteness to her perceptions, and half-revealed him, to feeling rather than to reason, as the chief cause of Edward's scarce realized alienation. One day, in bantering her upon the subject of her attachment, he hinted something of her lover's attention to others, while absent at college. Whether he did this merely to excite her jealousy, as a source of passing amusement to himself, or with the serious intention of aiding, thereby, his own suit, certainly, the effect upon Alice was as evident as he could have desired. That was the first moment that any well defined suspicion of Edward's treachery had forced itself into her soul. Rising hastily, she left her companion, with whom she had been seated on the piazza at the back of the house, and hurried to the privacy of her own chamber, there to give vent, in a burst of scalding tears, to the most bitter grief that had ever overwhelmed her young heart.

"Yet she demanded no explanation from Edward—she spake not one word of reproach; but only seemed more sad, and avoided as much as possible his presence. Her mother saw, directly the change, and with ease divined its cause; and soon, the tale of a daughter's crushed feelings and blighted soul was poured into her bosom, now throbbing with maternal anxiety.

"The time of separation again came, but it was a tearless, and, to appearance, a heartless separation; for Alice strove hard, and with all a woman's pride, to suppress her feelings, lest they should afford amusement to James Elliott, who had several times shown a disposition to rally her upon her melancholy looks. But, about a month after Edward's departure, there came to Briar Hill a floating rumor, that he was paying court to a young lady, residing in the town where the college was established. Mr. Richmond wrote, immediately, to a friend in the place for information, and, in answer, learned that his nephew had indeed, for some time past, been very attentive to a lady several years older than himself, to whom, as was reported, his friend Elliott had once plighted his troth; that they were generally believed to be engaged, and that if not, they certainly ought to be. I shall not attempt to picture the renewed agony of Alice at this announcement. To the world her pale cheek and melancholy air alone betrayed what she labored to conceal; but to her mother were confided her inmost breathings of hopeless grief, with child-like freedom and affectionate trust. That mother, though her own heart was very sorrowful, dare not give way to feeling; for hers was the solemn duty of binding up the broken heart, and healing the crushed spirit; of awakening new hopes, and renewing fond desires in her daughter's breast.

"Mr. Richmond, on receiving this information, was at a loss what course to take, and deferred for some days, during which his professional business was unusually pressing, all action on the subject. He then determined first to write to his nephew; but his letter

had not yet been mailed, when he received intelligence of Edward's being seriously ill. Without an hour's delay he set off from home, and, on the evening of the second day, stood by the bed-side of the deluded boy, to whom he had been, and still felt, as a father. The account of his illness had not been exaggerated: his disease was an acute inflammation of the chest, and the struggle was one of life and death. But youth and a vigorous constitution seemed to prevail, and, a few days after his uncle's arrival, he was pronounced convalescent, though his recovery advanced by very slow degrees. Distress of mind seemed to retard the body's return to health. Oh! how bitter was the anguish of that repentance. The poor boy could hardly wait until his physicians allowed him to converse freely, to relieve his heavily burdened soul, by pouring forth, in accents half-stifled by pangs of shame and remorse, the tale of his treachery to Alice, and his bondage to a woman, whom he had always in his heart despised, and a hundred times resolved, though in vain, never to visit again. Of Elliott he said little, but refused to see him; and Mr. Richmond was not slow to understand, that his nephew regarded this pretended friend as the chief cause of his numerous errors. He wrote daily to his wife, or Alice, giving account of Edward's situation; and, as soon as the latter was strong enough to bear the journey, by easy stages, set out with him on the return home.

"As they approached Briar Hill, Edward seemed to feel great misgivings in regard to the meeting with his cousin; and, when the white chimnies of the house and the tall trees around it first appeared in sight, he sank back in the carriage, and, for a moment, closed his eyes, as if to shut out a painful object. But Mr. Richmond sought to comfort and re-assure him, and, in a few minutes, pointed out Alice, standing in the arch-way of the gate, anxiously looking for them, and then, as the carriage drew nearer, running back to announce to her mother its arrival. Exhaustion from the journey and the force of his emotions had overcome Edward's weak frame, and he had to be carried into the house. As Alice sprang forward to meet him, already assured of his repentance and returning love, he could only say, with an inquiring look, "Alice! dear Alice, forgive!" She did not speak, but tears—warm, gushing, delicious tears—started in her eyes, and trickled down softly upon his face, as she hung over him and pressed his colorless lips.

"Edward's disease was not eradicated: it had only assumed a more lingering form. Consumption was slowly wasting his frame, and the color that sometimes mounted to his cheek, which comforted Alice, appearing like a harbinger of health—Alas, poor girl! it was the hectic spot!—the seal of the destroyer! But he grew strong enough to walk with her again among the garden flowers, and to sit with her in the arbor; and, while her parents watched over him as one doomed to an early grave, hoping but to smooth the descent thither, she, as if partaking of his own feelings—his deceitful hopes and vain imaginings—thought each brightening flicker of the light of life a token of recovery. Edward, himself, was the first to be undeceived, and to give her a warning which she heeded of his fate. Alas! the green sod now covers his grave, which you will find in a lone, neglected, rural church-yard, not very far from

Mr. Richmond's dwelling, whither he and Alice had often strayed, to commune with the dead of another age, and where he had desired to lie. None before him had been sepulchred there for near half a century.

"I shall pass over in silence two years of mourning, and give you, in the words of Mrs. Richmond herself, copied from a letter which I received only a few days ago, some idea of the present state of her daughter's feelings:

"Alice sends her love. She is quite well, and I think in better spirits than usual. To me she is the same affectionate, confiding child as ever, but grows daily more and more indifferent to the world around. She is occupied almost wholly with her books, while not engaged in household duties, to which you know I have trained her from a child, or in rambling over the adjacent fields and woods for exercise. She sees no company, and seems to dread the idea of ever again mingling in society, especially in that of the other sex. These feelings I have perhaps too far indulged: I must try to reconcile her again to the world. So entirely does her mind often appear to have swallowed up her soul, that one would almost think her incapable of any strong emotion, but for her devoted filial love. Once, however, about a week since, I surprised her in tears; but she quickly wiped her eyes, and soon looked cheerful again, seeming anxious to hide all traces of grief. I feel much anxiety about her, which is confined to my own breast. Mr. Richmond's business cares are so overwhelming, that I do not wish to add to the trouble which he already feels on this dear girl's account. And, yet, why should we forebode evil, while she is well, and, in a good degree, happy? Ah, my dear friend, you cannot realize all a parent's solicitude for a daughter, and an only child."

"In thus communicating to you something of Alice Richmond's history, I have been insensibly led into details, supplied by her mother's correspondence, to a much greater length, than I at first intended. Perhaps I may say, that, with more time at my disposal, I should have written a shorter letter. But, if at all interested in the above account, you will not thank me for a wire-drawn conclusion, however good the advice, or warm the expressions of regard which it might contain. So, good-by, from

Your affectionate aunt,

ANNE STEVENSON.

"P. S. Write to me sometimes—I would say often, if not afraid that you would consider it a task, rather than a pleasure, to correspond with a person of my age. If you make any inroads upon the heart of Alice, let me hear of your success."

The reader may easily imagine, that this letter, with its characteristically womanish *post-scriptum*, though of such formidable length, covering three sheets, in fine, close text, was read from beginning to end with deep interest. With the self-confidence of a boy of nineteen, I felt quite sure of making an impression upon the seared heart of Alice; and, for the remainder of the journey, which the end of the next day brought to a conclusion, she was continually flitting before me, in day dreams or visions of the night.

CHAPTER II.

Though at starting I had been the only occupant of the coach, it entered Larksbrough with a full load of

passengers, gradually collected by the way side accretion, until we numbered nine "insides" and two "outs," not including the driver. Being the youngest of the party, and my looks, perhaps, being rather boyish and deprecatory, the latter singled me out as a proper victim of his forbearance; and I had the pleasure of seeing all my companions safely deposited at their respective stopping places, and of watching narrowly, as my father had enjoined, the gradual apportionment of the "plunder," lest by some mistake my own trunk might be induced to try a change of situation, before, solitary as at first, I drove up to a rather respectable looking inn—"Hotel" it was designated on the sign—in the outskirts of the town. This had been selected as the place of my future abode for several important reasons. Though my father would have preferred a private boarding-house, none such at all decent or comfortable was to be found; and, therefore, having only a choice of evils, he had fixed upon the inn aforesaid, because it was nearer than any other to Mr. Richmond's—about half a mile distant therefrom—was blazoned forth in golden letters of extra size, illustrated by a subjacent representation of a capacious black bottle, inverted in token of emptiness, as a "Temperance Hotel;" and, consequently, had a good name for respectability and the moral deportment of its customers. The coach door was opened by the publican himself, who gave me as hearty a welcome, as if the arrival of a new guest had been quite an unusual and unexpected pleasure. He was a man of small stature, but otherwise, of portly dimensions, and his full, rubicund face seemed to belie the fanciful conceit of the inverted bottle; unless, indeed, the latter were considered as the appropriate representative of all the bottles which he might have been supposed to have emptied. But, notwithstanding his caskiform appearance, he was exceedingly alert and active, and hustled about to provide for my wants, with as great alacrity, as if I had been some distinguished stranger. "Captain" I found that he was called by his associates, and of course I fell in with the prevailing mode, without particular inquiry into my host's military achievements. I afterwards learned, however, that his valor had been proved chiefly in the command of a volunteer company of militia, a post of honor which he had resigned some years before, as he found himself growing too unwieldy for the active exercises of training-days, and, withal, very fast exceeding the utmost limits of his well-stretched suit of regimentals.

On finding that I was likely to be a permanent guest, Captain Smith's attentions were redoubled, and before the supper which I had ordered was on the table, he had conducted me over the whole house, showing the different apartments, which, as he said, *happened*, very luckily for me, to be all unoccupied, and giving a full history of the former tenants of each, not forgetting the encomiums which any of them might have deigned to bestow upon his household accommodations, or good cheer. After fixing upon a chamber, and concluding a plentiful meal, feeling at a loss for occupation or entertainment, I strolled into the bar-room, where a small company of the neighbors was collected round the fire—it was a cool October evening—discussing, rather boisterously, the merits of some candidate for office at the approaching election. Upon my entrance, the noise of dispute abated, our well-meaning host—worthy proto-

type of Captain Truck—took that opportunity of introducing me to all round; and, after several hearty shakes by the hand, I was admitted into the circle. My companions, I found, were men in the middling classes of life—farmers and tradesmen, dressed in the ordinary garb of labor. The conversation turned to general subjects, but I soon discovered that several of the company, among whom mine host was not the least prominent—for, I had told him nothing of my purposes, further than as regarded taking up my quarters at his house—were very curious to know the object for which I came. I amused myself for some time in baffling their inquiries. The school committee of Larksborough, a few weeks previously, had advertised for a person to fill the vacant office of teacher in the public academy; and the supposition which seemed most prevalent was, that I intended to offer myself for that situation. In this surmise, I found matter for a half hour's entertainment, by means of vague answers and remarks, which always increased their doubt, and apparently anxious inquiries about the office, which seemed to confirm their opinion. At length, however, as I was desirous of asking sundry questions in my turn, I set their minds at ease, by revealing my true object.

"Mr. Richmond is not at home just now: he has gone to attend a court thirty miles off, and will not be back for a week or ten days," said my host.

"That is unlucky," returned I. "Has he taken his family with him?"

"O no; his wife and daughter are at Briar Hill—the name they call his place. Perhaps you can begin your readin' with Mrs. Richmond. I guess she knows enough about it, to teach you a little at first like." And the Captain laughed heartily at his own humor.

"I dare say she would make a very agreeable teacher," I rejoined. "But you spoke of a daughter: what is her name?"

"O that's Miss Alice; but I tell you you needn't be a speerin' after her. She's a dreadful shy girl, and it must be a devilish nice fellow that brings her to her bearings. But perhaps," continued he, surveying me from head to foot, "perhaps you'll do for her: there isn't anybody in all Larksborough that she'll look at."

"No, there's Harry Bowne," said another of the company, looking at a young farmer's son, who stood beside the fire-place, and had as yet taken no part in the conversation: "Harry's been trying to catch the girl's eye this twelve months; but she no more looks at him, than if he never put on his Sunday-go-to-meetings at all."

"And who wouldn't rather just look at such a girl as Alice Richmond, without her ever taking any notice, than have Jane Grove starin' her eyes out at him, and marry her into the bargain?" returned the young farmer, casting a contemptuous look on the last speaker.

The fair one alluded to in such a slighting manner must have been the other's intended; for the blood rose to his cheek, and he seemed preparing for a tremendous retort, when Captain Smith interposed.

"Hold, Bill," said he; "that's what I call being personal. I won't have any quarrelling here. You know mine's a temperance house, and you musn't behave as if you'd been spreein' it out and out at the Black Bear."

"You needn't go so far from home as the Black Bear, Captain, for a regular built spree. All you've got to do

is to open that cupboard: there's enough there to put us every one on the dead list, 'shot in the neck,'" said Bill, with a laugh in which the others joined.

I have called the apartment in which we sat a bar-room, and it had the usual fixtures of such a place; but the shelves behind the bar were nearly empty, a molasses jug, a bottle of vinegar, and two or three empty decanters being their only furniture. But in the corner was a small locker or closet, the suspicious locality of which seemed almost to justify Bill's insinuation.

"O yes," said the host laughing, "quite enough to put us all on the dead list, though it's only a few vials of doctor's stuff. We have to lock it up to keep the children from poisoning themselves."

"I wish you would give me a dose of it, Captain," said Bill. "I've been ailin' these two weeks, and I'm not very particular what sort I take."

"Now that I come to think of it," answered the Captain, "there's nothing there but a few drops of peppermint, a little camphor, and some of the patent hive-syrup. I'm afraid there isn't anything to suit your complaint—the cold water ague."

"What will you lay me on that, Captain? I'll bet you there's some old cognac in that closet—a silver dollar against a sixpenny glass."

"Done!" said the Captain. "Stake your money."

Bill forthwith produced a shining silver dollar, at the sight of which mine host, somewhat dismayed, seemed willing to escape from the dilemma, in which he found himself; but the rest of the company, with sundry winks and nods at each other, cried out for fair play; and the stake-holder contended that, as the sixpenny glass of brandy, if any of that liquor there were in the closet, must be considered as in his custody, he should feel obliged to break open the door, unless the key were instantly forthcoming. So the Captain was at length forced to the proof, and reluctantly he opened the locker, but only so far as to introduce his hand, and draw out a decanter half-full of brandy, without displaying its other contents.

"It's nothing more than I told you," said he—"a little doctor's stuff: we can't give any of it without 'the prescription of a respectable physician,' as the cold-water pledge says."

"O you won't do us in that kind of style," rejoined Bill. "Here, pay me my sixpenny glass. The doctor allows me a little for my stomach's sake."

"Yes, yes," cried several voices—"yes, yes, Captain. Fair play!"

"You know, Captain, the wet season is just a comin' on; and, as an ounce of prevention is worth a pound of cure, we'll all take a drop, to keep off the dumb ague," said another.

"Well, Bill, I'll pay you your glass; but de'il a bit of the 'cratur' shall any of the rest of you have. Here, hold the tumbler."

"Do you call that a tumbler, Captain?" said Bill, as the latter reached to him a glass of the usual exterior dimensions, but funnel-shaped on the inside. "Why it wants boring out. Howsomever, fill it up twice, and that 'll come to the same thing."

Bill extended the glass, and the Captain began to pour out the sparkling liquor, as cautiously as if in fact administering a dose of medicine. The key was still in the door, and he glanced at it for a moment, as if to

measure the distance between it and one of the company, who appeared to be sidling up toward the closet, still continuing, however, to pour. Bill, watching his opportunity, clapped his thumb as a stopper over the mouth of the bottle, and grasping the neck, suddenly jerked it out of the Captain's hand, and retreated with his prize to the opposite side of the room. The latter sprang half across the floor in pursuit; but the click of the closet lock just then fell upon his ear, and looking back, he beheld, to his great dismay, the door standing wide open, and the inside array of decanters, well filled and labelled, fully displayed to view. For an instant he seemed undecided, but speedily faced about, with a motion very much like the floundering of some huge fish in shallow water, and made for the locker, which he reached just as another decanter disappeared from the shelf. To make sure of what remained, he hastily closed the door, locked it and pocketed the key: then, turning round, more deliberately surveyed the scene, as if planning the recapture of the spoil. In the middle of the floor stood the man who had seized the last bottle, holding it up exultingly to view; while, in the farthest corner, all the others, excepting the young farmer, before mentioned, who still retained his place, and myself, were huddling in boisterous merriment around Bill, who had just commenced, after taking a "smaller" himself, to serve out the liquor to them. Seeing that he was not likely to recover anything by forcible means, the Captain beat a parley, and at length agreed to sell the contents of the first decanter, provided the second was restored to its place. This arrangement being concluded, glasses and a pitcher of water were called for, and all invited to partake. Harry Bowne and myself declined, and were, at first, excused; but as the glasses were filled up for the last time, Bill, who now felt the spirit-fire glowing in his veins, insisted that we should both drink.

"Come, Harry," said he, "it'll brighten your ideas, and, no doubt, you'll say something smart at last. Come, and we'll drink a bumper to the health of your sweetheart, Alice Richmond."

"You'd better drink to the health of somebody that keeps such company as your's," returned the young farmer sullenly. "Perhaps you can find one that you know quite as well as Miss Richmond, who would be glad to hear that a set of drunken loons had given her a bumper."

"Keep a civil tongue, Harry, or you and I will have to square accounts. You recollect how we settled the last time, up at Squire Comly's mill."

This allusion seemed to kindle feelings that before slumbered in Harry's bosom. A burning flush mantled over his cheek, whether from anger or some other emotion I could not tell; but he turned away, and was silent.

"There, you shall have it whether you will or not," continued Bill. And he flung the contents of the glass into his face.

Here mine host who had drunk nothing, but stood aloof watching with great anxiety the progress of affairs, attempted to interfere; but quick as lightning Harry resented the insult. A single blow sent Bill Davis reeling from his seat; and both he and the chair measured their length upon the floor. But, in an instant, he rose to his feet again, nearly sobered by the

concussion, and there stood Harry patiently waiting the attack; his face pale with rage; his hair still dripping brandy and water; and his eyes smarting with the hot liquor, and suffused with tears. Bill confronted his antagonist for a moment, in motionless surprise at his hardihood. He was a stout, square-built man, of middle height, about twenty-five years of age, and, as I afterwards found, the bully of the neighborhood. His clenched fist, looking like a sledge-hammer, seemed as if it might crush, by sheer weight, such an opponent as Harry Bowne; who, nevertheless, though apparently little older than myself, and of a slight, but well-shaped frame, quailed not in the least, as their eyes met in defiance. The Captain made a motion, as if to step between the combatants; but a significant look from Davis, which plainly intimated that he would not in that way be balked of his revenge, arrested him, and he seemed too much terrified even to speak a word to prevent the breaking of the peace; while the rest of the company, just drunk enough to be ripe for sport of any kind, cheered them on to the fight. The Captain had presence of mind enough left, however, to put the empty decanter in a place of safety, and to lock the outer door, lest any new comer should witness the scene of disorder. All this passed in a moment, and I trembled to see Bill's fist raised and driven with tremendous force, though without much precision, full at his boyish opponent's head. Harry avoided the stroke, and I instantly perceived that he had the most pugilistic skill, and that the other, from the effects of what he had drunk, was growing, momentarily, less fit to do battle; for, before he could recover himself, he received a blow directly between the eyes, which made him stagger back several paces. All that followed could not easily be discerned, for the combatants came to closer quarters, and blows fell thick on either side, while each, alternately, advanced and retreated over the floor, the spectators giving way, or pressing forward, at every movement. But I saw that whenever Bill drew himself back for a full exertion of his strength, Harry always managed to dodge the stroke, or to break its force with his arm. Blood began to stream, plentifully, from the mouth and nose of each; and even the half-intoxicated bystanders seemed to be growing compassionate. At this juncture, Harry, losing in the heat of the conflict somewhat of his presence of mind, suffered himself to be cornered, and found Davis pressing upon him without the possibility of his retreat. The latter also perceived his advantage, and concentrating all his remaining force for a single effort, aimed a fearful blow at his antagonist, which threatened almost to annihilate him. Harry saw the imminent danger of his situation, and just as every one expected to see him crushed, dropped lightly on one knee, and the blow fell upon a closet door, just back of where his head had been, splintering the pannel from top to bottom, and making sad havoc among the plates and dishes piled up within. Bill was, himself, almost stunned by the violence of the shock; his hand was nearly disabled, and he reeled backward. Quick as thought his agile foe was again upon him; a single well directed stroke sufficed to complete his discomfiture, and he rolled heavily upon the floor, overpowered, perhaps, by his own violent exertions, and the stupifying effects of liquor, rather than by the force of his antagonist.

As he had not strength to rise, and mine host did not wish to leave him upon the bar-room floor, exposed to the sight of any one who might chance to enter, he was removed to another apartment, still sufficiently in his senses, to mutter imprecations upon Harry's head, and to vow revenge. The latter after finding that no great harm was done, and receiving in silence the congratulations of the spectators, who all had wished him the victory from admiration of his courage, quietly retired from the inn; and, a moment after, when I had perceived his exit, and followed, I found him washing the blood from his face and hands at the pump before the door.

"I hope you are not much hurt," said I, with an inquiring tone.

"O no; very little. I should'nt have come off so well though, or perhaps Bill Davis either, if he had'nt been too drunk to fight. But I wo'nt allow any body to impose on me in that sort of style, unless they choose to lick me into the bargain: I've borne it long enough."

Having finished washing, and wiped his face and hands with his handkerchief, he bid me good night and walked slowly off. It was a clear moon-light evening, and desiring to form a better acquaintance with the young farmer, I proposed accompanying him for a short distance, for the sake of the fresh air. He agreed, and we walked on together along the road, neither speaking for some minutes. At length he broke silence.

"Yes," said he, bitterly, and as if some painful recollection disturbed him; "I've borne it long enough. Bill thinks every body is afraid of him, and so he likes to play the bully. You heard him speak of settling accounts with me at Squire Comly's mill. That was twelve months ago, and I remember it as well as if it were yesterday: scarce a day has passed since then that I have not thought of it. He gave me a terrible flogging for a thoughtless word that angered him, and I swore vengeance against him. Well, the account is square between us now, and I don't bear him malice any longer; for I believe the fellow has a good heart at bottom, so that he isn't drunk, or in a passion."

"You seem to have learned something of the art of self-defence, from the way in which you handled your fists to-night."

"Yes, some little," returned Harry. "I knew that I should not soon be a match for Bill, unless I learned how to box; and so, for fear my blood should cool before I had taken revenge, I got Ned Stryker, a friend of mine, of about my own age, to give me a few lessons. He used to live in New York, and there picked up a thing or two in that way."

"But will not Davis try to revenge himself as soon as he gets over the effects of liquor?"

"I guess not," answered my companion. "He will know that he was in the wrong. If he does try it,"—and lowering his voice, as he spoke he grasped tight my arm with one hand, and, putting the other into his bosom, drew forth a long-bladed knife, the bare sight of which, glittering as it did in the moon-beam, made my blood run cold,—“this will stand by me to the last!"

He seemed to shudder himself at the thought, and replaced the weapon in silence. We had come to a stile, leading over into a field. He pointed out his father's house, standing far back from the road. I remembered that we had walked in the direction of Mr. Richmond's place, and asked him if that was in sight.

"Yonder it is," said he, pointing to a house at the distance of about a quarter of a mile. "You can just see the white chimnies among the trees. I'm sure I never thought of such a thing as loving the girl—much less that she loved me. I could'nt be so crazy as that; though I do often think"—and he put his hand upon his head—"that there's something wrong here. But when my poor mother was sick—she has been dead only six months"—he brushed away a tear as he spoke—"Alice Richmond used to come and see her every day, and bring a thousand little nice things that she knew mother would like. I almost love her for that.—No, no: you may love her, but I never may. God bless her for her kindness to my poor, dear mother!"

He pressed my hand, uttered a faint "good night," and springing lightly over the stile, hurried on towards home; while I slowly retraced my steps, and soon regaining the inn, sought, on my pillow, rest from the fatigues of the day, and the adventures of the night.

CHAPTER III.

The first sound that I heard in the morning was the voice of my host, who came himself to wake me, and make an apology for the occurrences of the previous evening. He assured me that nothing of the kind had ever been known in his house before; and that he never allowed any liquor to be drunk on the premises, except as a medicine, though obliged to keep a little on hand as a provision for sickness. I inquired after Bill Davis, and learned that he had become sober, and gone home before day-light. My breakfast would be ready the Captain said at whatever time I chose to name. As soon as he left me, I rose, and, not without many thoughts of Alice, arrayed myself in my best black suit, wishing if possible to make a favorable impression at Briar Hill, at my first appearance. This done, I surveyed myself, as much at large, as a glass eighteen inches square would permit, with great self-satisfaction. I should here inform the reader, that I was about five feet nine, standing in my boots, and—if I may be pardoned for saying so—of by no means an uncomely face or person. At least, I arrived at this latter conclusion, before leaving the glass.

Breakfast over, I waited with impatience till the hands of my watch, in their now sluggish course, pointed to eleven, and then sallied forth on the road to Mr. Richmond's. It was a most delightful morning, and the sun had taken from the air the chilliness of the preceding night. I soon reached Briar Hill. The house was very finely situated, about fifty rods from the highway, on an eminence, from which the ground sloped almost imperceptibly in front. It was a large, white, antiquated building, with a portico before the door, and two wings. A handsome pale-fence skirted the lawn on the road-side, at either extremity of which was an arched gate-way, opening upon a gravelled carriage track, that formed, altogether, a semi-ellipse, curving gracefully in front of the portico, and lined on the whole of the inner circumference, and on the outer, almost to the angles of the wings, with double rows of towering elm-trees, which, interlapping their boughs, exhibited a vaulted covering above, and nearly concealed the mansion from view. The space inclosed within the curve was an open, velvet-carpeted green, without a tree or shrub.

Between the inner rows of elms was the foot-path, and along it I slowly sauntered up to the door of the right-hand wing, on a tin fastened to which the word "OFFICE" was to be seen. The door stood ajar, and, after ringing the bell I stepped in. The rustling of a silk dress and then a light step on the office floor fell upon my ear: I walked forward, and caught a parting glimpse of a female figure making her retreat by the entrance from the wing into the body of the house, up two or three steps. Her face was turned from me, but imagination supplied that with every charm; and the reality of what was revealed to sight fulfilled my most ardent fancies of Alice Richmond. She was above the middle height, and dressed in a tasteful negligé, which exhibited, without any of the common disguises of fashion, the outlines of an exquisitely formed person, slightly inclined to embonpoint, and a refined grace in every movement. Her dark chesnut hair was still suffered, as in the first days of girlhood, to fall in a rich profusion of ringlets over her shoulders, confined only by a slight band of the same color round her head. And that ankle—fully displayed as she bounded on tip-toe up the stair—the perfection of nature's workmanship, shaped in so delicate a mould! The foot too—so light its tread, that it seemed scarce resting on the floor. One troubled with far less susceptibility than myself might have fallen in love even with the little shoe that clasped it. "No," thought I; "it can be none other than Alice Richmond: and the bright vision is realized!" I looked around at the office. One of the book-cases was open, and a chair stood before it: Alice had, perhaps, been searching after some book. I almost wished that I had entered without ringing the bell; and pictured to myself the blushes mantling on her cheek, and the lovely confusion of her looks. How glad would I have been to have assisted her in her search!

The entrance of a servant awakened me from the delightful trance, into which I had been momentarily cast by this lovely apparition. Mr. Richmond I found was expected home in a few days. I sent in to Mrs. Richmond my letters with a card, saying that I should call again; but had scarcely returned to the inn, when a note from Briar Hill was put into my hand. Mrs. Richmond expressed her regret that her husband was absent, and begged that I would take tea with her that evening. The remainder of the day passed wearily enough—it was a lover's probation; for I loved Alice Richmond, already, with a fanciful devotion—in fact had loved her, before the adventure of the morning had given any definite shape—any reality, to the glorious creature of my imagination.

The evening came, and again I found myself upon the road to Briar Hill. Mrs. Richmond received me in the most kind and affectionate manner; but Alice did not make her appearance. I inquired after her health, and the mother made a sort of apology for her absence, though without giving any particular reason for it. Yet I could not help looking towards the door every time it was opened, with a sort of nervous expectation that she would at length enter; and I believe that Mrs. Richmond half interpreted my feelings. She was a woman of about forty, retaining much of the comeliness of person and of feature, which had distinguished, in no common degree, her youth. A shade of chastened melancholy lingered over her countenance, softening, while

it slightly saddened, each lineament. Her manner towards me was already that of friendship. She made numerous inquiries about different members of my family, and talked much of the time when she and my aunt Stevenson had been schoolmates at Bethlehem. Tea was brought in, but still Alice came not; and, at length, I was so fascinated with the mother's conversation, in which there was a sprightly ease and grace, her features becoming animated, and losing much of their usual melancholy expression, as she dwelt on topics in which she felt an interest, that the daughter's charms were for a time almost forgotten. A portrait hanging against the wall, which I had not at first observed, drew my attention. I instantly recognised its likeness to Mrs. Richmond: it had been taken, she said, just after her marriage. I remembered that my aunt's letter mentioned such a portrait, which had been thought like Alice.

"It was never a very good likeness," remarked Mrs. Richmond: "the painter sacrificed something of the truth to the beauty of his picture. I value it now chiefly for its resemblance to Alice, which is quite striking. It is, perhaps, more like her, than it ever was like me."

I examined the painting, as may easily be imagined, with no ordinary feelings of interest. As a mere work of art it was of exquisite beauty; and I could not but believe it a faithful delineation of the original; not only from the still clearly visible resemblance, but also from an ideal expression, giving soul and character to the face, which, alone, if true to nature, must have determined the likeness; and which no painter, had it been the creation of his own fancy, could have so intimately blended with the corporeal features. I shall not attempt to describe the picture. My love was fast becoming an idolatry.

A window of the room where we sat opened upon the grounds back of the house. First came a large garden, thickly planted with fruit trees, with here and there a close arbor, covered with vines bearing luxuriant clusters of grapes. On one side was a yard containing capacious barns and stabling; on the other a large orchard; while behind, a rich meadow, skirted on both sides by woodland, sloped gracefully down to the borders of a small lake, about a mile distant, and three or four miles in circumference, beyond which rose a hill thickly wooded. The woods were clothed in the hues of autumn—the gay purple and scarlet, mingled with the rich or fading green, and the sober russet. As I looked over the scene, all the mournful story contained in my aunt's letter came back to me as a sad remembrance: then the prospect brightened; but Alice was still the companion of my reverie. "There," thought I, "she wanders—the fairy spirit of the hill, the forest, and the lake. I will watch her going forth, and in fancy, at least, follow her rambling footsteps."

Mrs. Richmond desired me to take my place in the office, without waiting for her husband's return. Accordingly, the next morning I began my studies; though it seemed as if Alice had breathed such an influence over the scene, that the inspiration of Blackstone had lost its charm. Mr. Richmond returned in three days: I need say only that I found in him all I could have hoped for in a preceptor and a friend—almost a father's indulgent kindness and care.

But I fear that I am growing tedious, if indeed I have not been so from the first. I must pass lightly over eighteen months, and resume my narrative at a point where it will be more likely to interest the reader. During this period I was a regular student in Mr. Richmond's office, and a constant, and I flattered myself, a welcome visitor in his family. Every sabbath morning, Alice, with her father and mother, attended church in Larksborough, and I felt no temptation to depart from the way in which from a child I had been led; but was always in my seat at the house of worship. Even the temple of God became the shrine of my idolatrous devotion; and yet my feelings were so elevated and refined by the presence of that pure, lovely creature, who appeared always completely absorbed in the fervor of her worship, that they seemed to me less earthly—less allied to sense, than they must have appeared in the sight of a judge higher and more impartial than my own conscience. Excepting in church, where, indeed, the fear of giving pain to Alice, and of affording matter for remark to the spectators, was a continual restraint upon me, I had only occasional glimpses of her, as she sometimes flitted past the windows of the house, while I was approaching or leaving it. Once or twice, when, on suddenly looking back, I saw her for an instant lingering at the casement, I "laid the flattering unction to my soul," that I had been the object of her attention.

Mrs. Richmond, as our acquaintance grew more familiar, talked to me of Alice with much less reserve; but a sadness always stole over her countenance when she adverted to the subject. From her I learned again at different times nearly all that my aunt Nancy had communicated. Still she often seemed to think some apology for her daughter's absence necessary.

Harry Bowne I saw very frequently after the adventure recorded in the previous chapter. As I have already said, he was the son of a farmer residing but a short distance from Briar Hill. His father's circumstances were slender, and since the death of his wife had gradually declined. Harry was by no means fitted, either by nature or education, for the lot in which fortune had placed him. His mind, strong and vigorous, seemed preying on itself for want of sustenance. Feelings so acute and sensitive—capable of being aroused into the fiercest passions, yet susceptible of the nicest shades of expression, and of the softest touches of sympathy—I have seldom known. His slight, though symmetrical frame appeared incapable of enduring the toils of husbandry; yet was he active and energetic, and never shrunk from the share of labor which his father's circumstances imposed. He had been his mother's favorite—had lingered still at her side, at an age when most boys undervalue a mother's companionship and love. Her death had been a rude shock to him: he loved others, but none with such a carefully nurtured affection. When the green sward had been levelled over her resting-place, the world seemed to him the abode of spirits all cold and uncongenial with his own. But existence, without some object for the carefully trained tendrils of his heart, torn from their first embrace, to twine themselves around, was impossible. And, over his mother's grave, a part of the love which he had borne for her, went forth as a tribute to the kind-hearted charity of Alice Richmond, who followed the mourners

in the lowly funeral. But what a difference! The love of despair, glowing in the fire of hopeless passion, instead of the serene, holy, softly-gushing emotions of filial affection! He, too, made the house of God the scene of idolatry; sitting afar off from the object of his devotion, and gazing at her with his lustrous eye, until she left the sanctuary, having been all the while unconscious of that burning look.

To the neighbors poor Harry was incomprehensible: they called him a "queer fellow," and made sport of his attachment to Alice Richmond. He had no companions, for he found little sympathy, and still less akin to his own sensibility of heart, in those among whom fortune had cast his lot. Becoming deeply interested in him, I strove, by various trifling acts of kindness, to gain his confidence, and in some measure succeeded. He seemed, at length to court my society; and though he always disowned his love, I could at any time call forth the wildest expressions of it, by the mere mention of the name of Alice. Often he talked so strangely that I feared, what he himself had hinted at on the evening of our first interview—that his intellect was sometimes disordered. While disclaiming his own passion, he frequently seemed jealous of me; and, in the midst of his raving, would stop short, and eyeing me for a moment with a searching look of suspicion, ask, doubtingly, "Do you love Alice?"

I always evaded the question, yet he seemed usually satisfied with my answers. "Poor Harry!" I often thought within myself, while listening to the outpourings of his melancholy—"Thy love, already, is but despair: how soon shall thy despair be madness?"

CHAPTER IV.

One morning in the sunny month of May, I was sitting as usual in the office at Briar Hill, my elbows on the table, and a book spread open before me, my thoughts, the meanwhile, dwelling on things in general and on Alice in particular, when Mr. Richmond entered, and requested me, as he had often done before, if any person should call on business, to step round into the garden and let him know. Very soon after his exit a gentleman came in, and requesting him to sit down, I immediately went to inform Mr. Richmond of his presence. He happened to be stooping over a bed, in one corner of the spacious garden, examining a plant which had lately sprung up, and I did not at first see him. After ranging through the principal walks in my search without finding him, I turned aside upon a by-path, leading to one of the close arbors before mentioned, the door of which being ajar, I thought that he might possibly be within. On reaching it I threw the door wide open; but, instead of my finding Mr. Richmond, lo! there sat Alice, her eyes intently fixed upon a book which she held in her hand! I stood rivetted to the spot by surprise and admiration. She evidently perceived my approach, and dropped the book to her lap, still, however, keeping her eyes upon it while she marked the place.

"Oh father," said she in a sprightly tone of voice, "did you see the flowers that I got——"

She looked up and saw me standing before her! A faint "Oh!" escaped her, and the blood mounted to her

cheek, suffusing her transparent complexion with a deep crimson blush. A smile seemed contending in her countenance with looks of embarrassment and fright; her color went and came, and the book fell to the ground. I thought she had never appeared so lovely. She was dressed very much as when I had seen her retreating from the office; her hair still flowed in luxuriant curls over her shoulders; her deep blue eyes were fastened upon me, and her confusion appeared to heighten every charm. In an instant I stepped forward, and, picking up the book, presented it with all the grace that I could muster for the occasion.

"I beg pardon, Miss Richmond, for my intrusion. I was looking for Mr. Richmond, and thought that he might be here. I should perhaps say," continued I, after a moment's hesitation, "that I am sorry to have interrupted you, but excuse me if my chief regret be, that I must suffer the punishment of an intruder."

After delivering myself of this speech I bid her good morning, and, bowing as I spoke, hastened off in pursuit of Mr. Richmond, who now appeared in sight. The rest of the forenoon I spent in pacing the floor of the office, except when the entrance of some one interrupted me, thinking over the words in which I had addressed Alice, and practising my bow to her, until I came to the conclusion, that the adventure might have been turned to much better account, and had prepared a brilliant speech, and perfected a most graceful form of obeisance, to serve for any future lucky occasion of the same kind. Days passed before the beautiful vision began to fade from my sight.

It was about three weeks after this occurrence, that I had been spending a day with Harry Bowne, in fishing on the lake which lay at the foot of Briar Hill. The sun had not yet descended to his bed of glory behind the green eminence which rose from the western border of the lake, when, tired of our sport, which had been rather unsuccessful, we moored our boat, and set off on the return home. We did not take the most direct path, but went a little out of our way to visit the secluded grave-yard, in which the remains of Edward Stockton had found their lone resting place. This spot I had often before visited: indeed I had made a pilgrimage thither the day after my first arrival in Larksborough. It was situated on a gentle acclivity about half a mile from Mr. Richmond's house, just on the edge of a wood, through which a narrow lane, now overgrown by the bushes that had once formed a hedge on each side, so as to be nearly impassable, led to the adjacent highway. Here had once stood a church, of which nothing remained but a portion of the southern wall, and piles of gray stones, covered with moss and overshadowed by the wild shrubbery that had struggled up through every narrow interval and crevice. Few, probably, had ever been sepulchred in this quiet seclusion, and of fewer still were the burial places yet visible. Here and there in making your way through the tangled bushes and grass you would stumble against a low mound, or half-sunken tomb-stone, which marked some long-forgotten grave; but there was none to clear away the dry, matted herbage, of a former year's growth, that concealed the neglected memorial from view—no pious hand to deepen the faintly chiselled record of mortality. Yet there was one spot within those ruined precincts, which exhibited the marks of a more recent

sepulture, and the cure of a yet cherished affection. Around the grave of Edward Stockton had been placed a slight iron railing inclosing a narrow bed of freshly turned mould, covered with May flowers, and surrounding a plain marble slab, on which appeared no other record than the simple name "EDWARD," and no ornament but a delicately carved wreath of roses twined with ivy encircling the wood. Without the railing the green sod, for several yards round, as well as a narrow path leading to the grave, had been cleared. Here Harry and myself sat down upon the fresh, velvet sward. It was the first time we had ever been together on that sacred spot, and having never conversed with him on the subject, I felt curious to know what he remembered of him who slept under the cold marble, and what feelings the place excited. I found his recollection of Edward Stockton very indistinct; but he told me that he had often watched Alice coming to the grave, and had seen her kneel beside it, and gaze for a long time upon the name sculptured in the stone. He then began to talk of her in his accustomed wild strain, until, in pity, I sought to turn his thoughts in another direction.

"The sun is quite high still," I said. "It seems unwilling to bid good-night to our side of the world."

"In less than an hour," returned Harry, measuring with his eye the lengthened shadow of the old church-wall—"In less than an hour you will have it playing at peep with you among the trees on the top of yonder hill. But I promised father to be home before sun-down; so I must say good-night."

"Good-night! I will sit here a little while longer, as we do not go any farther in the same direction."

In a moment Harry bounded over the low stone wall inclosing the yard, and in another was lost from view in the wood through which the path led. I remained sitting upon the grass in deep reverie, with the bright vision of Alice, as I had seen her in the garden, floating before my senses; and trying to picture to myself the appearance of Edward Stockton, and, in imagination, to associate the young lovers again in their rambles over the scene before me. I had been sitting thus alone for about half an hour, when I thought I heard a step on the dry, rustling herbage near me, and looking up, saw a female figure retreating along the path-way, at the distance of a few rods from where I sat. She disappeared behind the church-wall, and then for a moment was visible again hurrying through the wood. It was Alice: she had come doubtless to pay her accustomed tribute at her lover's grave, and seeing me seated on the turf, had quickly retraced her steps, thinking to have retired unobserved. Rivetted to the spot, I gazed after her as she walked rapidly away, without looking back, until she was far out of sight, and then seeing that the sun was near the horizon, slowly followed in the same direction. Just at the edge of the wood I observed a piece of white paper, neatly folded together, lying in the path; and, picking it up, found written on the inside these touching lines:—

"I stood by thee when death his icy finger

On thy pale brow and quivering lip had pressed,
But yet thy parting spirit seemed to linger—

Thy cold cheek softly pillowed on my breast—

Once more to whisper, in earth's love, my name:—

'Twas the last breath that stirred thy shuddering frame.

"I stood by thee again when death had given,
Back to the spiritless, cold, ruined clay,
The forms of beauty which disease had driven
E'en from the memory of love away ;
And fondly watched them as the light of heaven,
Breaking upon thee ere the final day.

"That treasured image shall love cease to cherish ;
The echoed whispering of that voice grown still ;
Ere memory, itself in ruins, perish,
Or heaven earth's shadowed destinies fulfil :—
Life trembling o'er the beautiful repose ;
The whisper hushed where angels' music flows ?

"Alas ! the soul in hope and love once single,
Is now divided : other forms, unblest,
Rise in bright vision, and glad voices mingle
With the soft tones that murmur from thy rest.
Where life flowed coldly, warmer currents tingle ;
And hopes, which sadness breathes not, thrill my breast.

"My holier thoughts have fled, but still they hover
Around thy grave—a spirit vigil keep—
Rise with the incense of the flowers that cover
Thy quiet bed, to upbraid me as I weep.
Yet on the cold stone will I pour my grief ;
For tears—the tears of bitterness, will bring relief."

The verses were in a neat, feminine hand and gave internal evidence of their authorship. I came at once to the conclusion that Alice had dropped them in the hurry of her retreat, and would probably return the next day to look for them. As the thought struck me, I found myself, almost without any well defined purpose retracing my steps toward the grave ; and, in a moment, was seated again upon the green sod. On the back of the paper I wrote the following with my pencil :

"Mourner, is this thy sorrow—
That on thine hour of darkness dawns a morrow ;
That bright-hued flowerets in thy path are springing ;
That happy voices in thine ears are ringing ;
That o'er life's visage is not always spread
The gloom that pallies the dead ?

"Would he whose ashes slumber—
Clay with its kindred clay, lest aught encumber
The spirit in its rest, where pain and sighing
Come not, all tears are wiped away, and dying
Invades no more, nor e'en Death's brother, sleep—
Say, would he bid thee weep ?"

Folding the paper as before, I returned along the path, and dropped it on the spot where I had found it lying.

CHAPTER V.

On the following afternoon, about the same hour at which I had been seated beside Edward Stockton's grave, writing the above "woeful ballad," as I closed my book for the evening, and made my exit from the office at Briar Hill, the recollection that I had not seen Mrs. Richmond for more than a week determined me to pay her a visit. The servant that answered my knock, showed me into the front parlour, and without looking to ascertain the fact, told me that she was there, and immediately retired. I found myself alone, but, observing that the folding doors between the front and back rooms were thrown open, walked forward, expecting to see Mrs. Richmond in the latter. In a corner of the recess of one of the back windows, upon an ottoman, sat Alice, the rays of the evening sun streaming oblique-

ly upon the opposite corner, and reflected upon her face, and shining, luxuriant hair. She sat in a pensive attitude, her forehead resting on one hand, while in the other, upon her lap, was a piece of paper, which I instantly recognised as that which I had picked up, the previous afternoon, in her path from the grave : in fact, on drawing a little nearer, I could distinguish the faint traces of my own pencil upon the side which she held uppermost. My step was light, and she was so completely absorbed in thought, that I stood at last within a yard of her seat, without her being conscious of my presence.

"Good evening, Miss Richmond."

She started at the sound of my voice as if it had given her an electric shock, and blushing deeply, and, at the same time shutting up the verses in a book, which I had not before observed, lying open in her lap, rose from the ottoman.

"Good evening, Mr. Drayton. My mother has just left the room : I will let her know that you are here."

"I did indeed ask for Mrs. Richmond ; but I am not on that account the less indebted to fortune for having thrown me once more into your company. If I dared to hope that the fickle goddess would be propitious, I should beg that she might not so soon desert me."

"If your prayer were granted," returned Alice, still blushing, but resuming her seat, "I should not well sustain the part of my mother's representative. However, she will return in a few moments."

"I fear that I shall not look very anxiously for her return, if on laying down your representative character, you must disappear from the scene. Though, even in that case, I shall have another bright recollection—the brightest one of all—to store up in my memory."

"A truce to all compliment, Mr. Drayton. You must remember that for the present I am but a proxy, and must address me as you would my mother."

"I beg pardon, Mrs. Richmond. May I ask how Miss Alice is this evening ? The last time I had the pleasure of seeing her, she was in so great a hurry, that I had not an opportunity to inquire after her health."

"What ?" returned Alice quickly, her cheek again suffused with a crimson flush,—*"Did you see me?"* and she looked earnestly in my face.

I had made the remark thoughtlessly, and saw that it had given pain. Answering her question by a monosyllable, I instantly changed the subject, and she appeared soon to forget it altogether, as I continued, in the tone of *badinage*, to address her as her mother. Her conversation was sprightly and playful, though reserved ; her eye beamed with intelligence ; and a glowing soul seemed embodied in the expressive lines of her countenance. It was full half an hour before Mrs. Richmond returned : of course I should have thought it just half a minute, if there had not been a clock standing on the mantelpiece. On entering the room, she stood for a moment in evident surprise at the spectacle before her, and, as she greeted me with an unwonted expression of pleasure, I thought a tear glistened in her joyful eye.

"Well, Alice !" said she. "So, to make up for past neglect, your first interview with Henry has been a *l'été-à-l'été*. I do not understand by what art he has encompassed this fairy region."

"O mother, Mr. Drayton's visit is to you : I have

been acting only as a representative, during your absence; and I must now resign my place."

"I must beg that before you accept the resignation, you will take time to judge for yourself how Miss Richmond has executed her trust. I confess, that I have not been able constantly to bear in mind her representative character; yet perhaps, I am not much to blame for this occasional forgetfulness."

Mrs. Richmond invited me to stay to tea, and, as may be supposed, I readily accepted the invitation, and spent the remainder of the evening at Briar Hill. When tea was ordered, and Mr. Richmond came in from his office, he seemed as much surprised at the sight of Alice as her mother had been, but said nothing on the subject, though I thought his spirits were lighter, and his tone more gay than usual. Almost immediately after the table had been removed, business called him away, and I was left with Mrs. Richmond and Alice. The latter joined occasionally in the conversation, and always with vivacity and ease; but whenever she was not actually addressed, or engaged in talking herself, she appeared to fall into a state of abstraction or reverie, and to take little interest in what was said.

Mrs. Richmond informed me, that she had that morning received a letter from my aunt Stevenson, accepting an invitation to visit Briar Hill, and promising to be there in a week or ten days; and that she had asked two or three of Mr. Richmond's relatives to spend a few weeks with her at the same time. This I was delighted to hear; for I had always been a favorite with my aunt, and felt a very sincere attachment to her. Besides, her visit would give me a pretext for being a great deal more at Briar Hill, than I could otherwise venture to be; and then I should see Alice much the oftener; in comparison with which last anticipation every other was as nothing.

The evening passed away, and I found myself once more upon the road to the inn. After walking some distance from Mr. Richmond's gate, I saw two figures on the opposite foot-path approaching; but, as it was a dark night, I did not discover that they were Harry Bowne and Bill Davis, until they came quite near. Both recognized me, and walked across the road to meet me, the latter showing a disposition to have a parley. He had evidently been drinking, though only enough to elevate his spirits and make him a little boisterous.

"Ship ahoy! How d'ye do, Mr. Drayton? Harry said it was you, but I couldnt believe that you'd be walking so fast away from Miss Alice, and not look back occasionally."

Under other circumstances perhaps I should not have borne this rough salutation so well; but I felt in good spirits myself, and not at all disposed to quarrel with any body; and I saw, notwithstanding the darkness, that Harry's face was flushed with ill-suppressed anger.

"You are out rather late to-night," I rejoined. "Have you paid our cold-water Captain a visit?"

"Harry has I believe," returned Bill; "but I've been at the Black Bear. You can get a glass there in a genteel, quiet way; though I must say that a little cognac, filched from the Captain's lock-up, tastes sweeter. But you look as if you hadn't seen a drop to-night. Why, man, don't they do the thing that's handsome up at the Hill? Well, I wouldn't go to see

the prettiest gal in all natur, if they didn't put something on the sideboard just by way of splicin' the conversation occasionally."

Disgusted with the fellow's coarse humor, I bade them good-evening, and passed on; though not without serious apprehensions, as I thought of Bill's insolent temper, and remembered Harry's irritability, and the flush which had mounted higher in his cheek at every word spoken by his companion, that the peace would be broken before they separated. I knew indeed that Bill Davis had never revenged himself for his defeat at the inn, and that he was, as Harry had told me, a good-hearted fellow when sober. I thought, too, that he was now hardly drunk enough to be quarrelsome; yet I could not help looking back after them, as they walked slowly on. They had proceeded but a few rods, when Davis burst into a loud horse-laugh, and threw his arm round Harry's body, as if prompted by a sudden feeling of friendship, and, pretending to be more drunk than he really was, staggered on, drawing the other along with him in sundry evolutions. Harry after struggling for a moment in his grasp, freed himself, and raising a slight stick which he used as a cane, repaid his friend's rude familiarity by a sharp cut over the shoulders. I saw at once that hostilities must ensue, and hurrying back, reached the spot where they stood, just as Bill had wrenched the stick from his companion, whose right hand was buried in his bosom, as if in the act of drawing a weapon. With horror I recollected the knife that Harry had before exhibited, and catching Davis's arm, as it descended to return the blow, stepped between the two. Not being so far gone in either intoxication or passion as on the night of the former conflict, and, perhaps, respecting me more than he had Captain Smith, Bill desisted, and I succeeded in restoring apparent harmony. Still fearful, however, that the quarrel might be renewed, I walked along with them until they parted, Harry and I turning off to the stile before mentioned, and Bill passing on. Until the latter was out of sight I stood talking with Harry; then we separated, and I made the best of my way home.

I saw Alice several times again before my aunt Nancy, who came about the middle of June, somewhat later than she had promised, arrived. These interviews served to wear off still more of her reserve, and increased my admiration so greatly, that I could scarce prevent myself from declaring the love that had so long struggled for utterance. But seeing that such a declaration, then, would be premature, I prudently deferred the avowal. The day before my aunt came, Mr. and Mrs. Ducachet, the former a cousin of Mr. Richmond, and their daughter, a girl of about fourteen, reached Briar Hill; and when I called on my aunt the day of her arrival, I formed an acquaintance with the whole party. The next evening, three or four ladies and gentlemen from Larksborough were invited to tea at "The Hill," as Mr. Richmond's place was familiarly called, and I, of course made one of the little company, of about a dozen persons, assembled. For some time, as is usual in small companies, the conversation was general, and Alice took little part. But after tea, just as a glorious full-moon was breaking over a low barrier of clouds, that skirted the eastern horizon, my aunt proposed a walk in the garden; and all agreeing, we sallied forth into the mild evening air. I gave my arm to Mrs. Ducachet; but,

before long, various changes had been made in the disposition of the parties, and I found a pretext for putting myself at the side of Alice, just as she lingered behind the rest, to pick a flower for my aunt.

"Well, Miss Richmond, if you do not take pity on me, I shall be entirely deserted. Anna Ducachet seems to think me too old for a companion, and clings to her mother's apron; and all the rest pass me by as a boy. However, I shall not complain, if my loneliness attract your compassion."

"I am sometimes afraid," answered Alice, "that the objects which most excite our sympathies, are often not so pitiable as they seem; expressions of distress are so easily affected, and cover so many different feelings."

"But you will find me really deserving of pity, and in return therefor I offer you my arm. If those hyacinths have imbibed a love of nature and of seclusion from the same air that has breathed it over you, or from the touch of the fairy hand that nurtures them, they will not thank you for transplanting them to aunt Nancy's fingers."

Alice took my arm, and, for the first time, I felt the pressure of her hand, which slightly trembled. "You must think, Mr. Drayton," said she, "that my love of seclusion is rapidly dying away. Perhaps it was foolish to shut myself up so entirely from the world; yet I confess, that I feel some regret—even some pain, at leaving my retirement." She spoke in a low, tremulous voice, and her eyes were downcast.

"No, Miss Richmond; I will not say that you have done foolishly: you have yielded to natural and commendable feelings, in thus shunning society. If you have erred, it has, at least, been an amiable error."

"You know perfectly well," continued Alice, "for my mother, as well as your aunt, has told you, the reason of this seclusion. I knew very little of the real world—indeed I know little of it even now, but still less then—when the world which I had created and peopled for myself—a world of bright fancies and ardent feelings—was made desolate. True my mother and father yet remained, and you know I love them; but am I wrong in acknowledging that this affection was not the strongest feeling of my soul? Besides, we do not think of life and hope in mourning over the dead—the lost. It was hard to forget.—Even the thought of forgetting was a cruel visitant."

I could feel that Alice sobbed convulsively as she spoke, though scarcely an audible sound escaped her. The rest of the party were some distance in advance and upon another path. We walked a few steps in silence.

Alice proceeded: "But memory cannot last forever; or if it live in the head, it dies from the heart. Time has gradually changed my feelings, though not always soothing them; for I have sorrowed almost as bitterly over the wearing away of my first grief, as over the desolation that caused it. The idea that my constancy could fail—that I could cease to be true to him—preyed incessantly upon my spirit, until time has diminished even that—that last comfort—for it was indeed a comfort, though you may think a strange one. You wrote those lines upon the back of the paper which I dropped in the wood—I knew your hand, and besides, there was none other to do it. I confess that they influenced in some degree my determination, even previously half

formed, of seeking, in renewed intercourse with the world, that peace of mind which seclusion no longer afforded. My mother knew of these feelings, and, without telling me of her intention, invited your aunt and our cousins to visit Briar Hill; thinking that in such society I might best wear off my first distrustful impressions of the world. But accidentally I met you. That evening something whispered to me, that it was useless to defer the hour of trial, and I remained in the parlor. Whether I am, or shall be happier thus, God only knows. Certainly, I can never again be what I might have been, if my fond hopes had never been crushed. Hope they say is inseparable from life. It may be so, but, if hope cannot die, it can, at least, fade and wither."

It was thus that the lovely girl artlessly poured out her soul to me. I was affected by her words, and still more from sympathy in her emotions. Silence again ensued for several minutes. I thought that she, perhaps, would proceed; but she had done. At length I said,—

"Happy, Miss Richmond, must have been the one who deserved such love. Happy will he be whom it shall yet bless. I dare not hope—much less ask for that happiness; but I thank you for this mark of confidence."

"No, Mr. Drayton, I can never again feel for any as I did for him. The miserable remnant of a crushed heart—of blighted affections, which is all I can ever bestow, would be a boon of wretchedness to both giver and receiver. No, no! When I enter the world again, it is not with the expectation of reviving anything more than the common, every-day hopes and interests of the world: as to all else, I expect but to deaden old emotions; not to replenish the sources of long forgotten delights. I respect you, Mr. Drayton; I can never do much more. If you can feel a friendship for me, and care for my friendship in return, it is yours. Ask nothing further."

"Your friendship then, Miss Richmond—give me that: I shall prize it far beyond the love of any other of your sex. I cannot promise to feel nothing more, but it is all I dare ask."

"Recollect, then, that our friendship depends upon your discretion. You can never, even if you should desire it, obtain aught beyond—I have it not to give; but you deserve no less than this."

"O yes, Miss Richmond, you may bestow something else—something more:—you may love me as a brother, and yet be true to him!"

"As a brother then—even as a brother;" and she pressed my arm convulsively. "I have never known what a brother was.—Yes, I will be your sister Alice!"

"Alice, dear Alice! God bless you for those words! I too have never before had a sister. Sister Alice! How sweetly the name sounds!"

"There, Henry, you must leave me for the present. Go, join the rest: I will be with them in a moment."

She relinquished my arm, and I moved slowly towards the other members of the party, who were collected round a strawberry bed, listening to a very learned dissertation from Mr. Richmond, on the culture of this delicious fruit. They were all in a gay mood, and did not seem to have taken much notice of our absence. A few minutes afterwards, Alice joined the company,

and, with a faint smile, presented the hyacinths, which she had picked, to aunt Nancy and Mrs. Ducachet. Soon after this we all returned into the house. During the rest of the evening Alice conversed very little, and appeared sad. I was not sorry when those who had come from Larksborough rose to take leave; or to find myself at length quietly seated in my own chamber, by an open window, from which the tall trees on Briar Hill were plainly visible, in the clear moonlight, and left to my own reflections.

In my conversation with Alice Richmond, I had spoken just as the feeling of the moment prompted; but I had knowledge enough of the world to see, in looking back over what had passed, that I had gained a great advantage—nearly all, in fact, that the most ardent lover could have hoped to gain in so short a time. Friendship, between two persons of different sexes, and of suitable age and condition, is certainly the high road to love. Some have doubted whether friendship can even exist at all under such circumstances. I think it may; but only in the state of a chrysalis; and no one can ever tell at what moment a warm breath may blow over it, giving it strength to burst its shell, and expanding its wings to flutter in the sunshine.

While the company remained at Briar Hill I was a daily visitor, and saw Alice so often that it did not seem probable that my aunt's departure would much disturb our intercourse. All of the party took a walk or drive every clear day, and an invitation to me was never omitted. Sometimes we made pleasure excursions upon the lake: in short, near a month glided away most agreeably, and no one hailed the approach of the day fixed for taking leave with satisfaction. It came, however, and Alice stood by me on the front porch as my aunt's carriage drove off, about an hour after the Ducachets had left the door.

"A month has gone like a day, Alice. It has been most delightfully spent, but I hope the future will give me no reason to regret the past. Sixteen months more and I shall have finished my studies; and then—" I hesitated.

"And then, what?"

"I don't know, Alice. But even brothers and sisters must part. I count the months and even the days that I shall remain in your father's office, with a jealous care, and they seem to glide away almost imperceptibly. Happily enough, indeed, for memory, but not for hope."

She did not speak, and, after a few moments, I added,

"Well, I must not lose the present in gloomy forebodings. I hope we need not give up our rambles, because our friends have gone. Will you walk this afternoon?"

"Yes; at half past five o'clock, if you have nothing else to do then."

"At half past five. Do not forget."

During the rest of the summer I continued to ride on horseback, or walk with Alice almost daily. Mr. and Mrs. Richmond seemed to favor our intimacy; and, as I knew that they had seen too much of the world to be deceived by mere names, I felt sure of their approbation, if Alice should ever consent to look at me in a still more endearing character, than that of a friend or brother. She was all confidence and affection, and ap-

peared to be gradually becoming more uniformly gay and cheerful. Her education had been conducted entirely at home—before Edward's death under private teachers, and, since then, under the eye of her father, who, in the midst of constantly pressing business, had always found time to direct his daughter's studies—more than direction she had never needed. In fact, her superior knowledge of books sometimes put me to the blush, though I had the advantage in point of acquaintance with the world. We frequently read together, and our intercourse often recalled to me my aunt's description of the happy companionship of Alice and Edward.

Autumn came, but brought no change in our occupations or amusements. One afternoon, early in September, we were rambling together over the fields and woods, between the house and the lake, Alice appeared rather sad, and little was said by either as we walked along, she choosing the way. At length we came upon the path, leading through the wood before mentioned, to the grave yard, and as she turned into it, the suspicion first crossed my mind, that she was taking me to Edward's grave. Before, she had always avoided it in our walks, though I knew that she still visited it as frequently as ever, alone. Her step was now more hurried than usual, as if she feared that her purpose might be defeated, and I followed at her side in silence. On reaching the church yard she led the way along the narrow path; and, coming to the grave, kneeled down, without saying a word, beside the marble slab, and gazed intently for several minutes upon the name: then burying her face in her hands, and resting them upon the railing which surrounded the marble, burst into tears. I kneeled down by her, and waited the abatement of this paroxysm of feeling. At length she looked up, and though the sight of me, in that position, seemed to affect her, soon became more composed.

"I feared that it would be so, Henry. I have never yet been able to restrain my grief, when kneeling beside this grave: why did I hope to do it now? However, it is past, and I am glad that you are here. You see what feelings the place awakens. Think you that this heart can ever be true to any, if false to him that sleeps? Here, again, I warn you, that I can never be to you but as a sister. Think of me only as such. Now leave me, Henry: I often go home alone from this spot."

I rose from my knees and walked silently away. On reaching the edge of the wood, I looked back, and saw Alice gazing after me with a sorrowful eye. I hurried on, but had gone only a few steps farther, when Harry Bowne suddenly appeared in the path before me. I perceived, at once, from the expression of his face, that he had witnessed the scene at the grave.

"Miss Alice! Where is Miss Richmond?" said he.

"I left her at the grave. How did you know that she had been with me?"

"How did I know? Do I not see her with you every day; and she talks to you, and smiles, and you call her Alice. Oh! I am afraid sometimes my head will burst! You have deceived me—you love Alice!"

I tried to pacify the poor fellow, and he became more calm. Sinking into a mournful silence, he walked along by my side for some time, and then left me to pursue my way alone. My spirits were scarcely as

buoyant as when I had set out with Alice. Her words at the grave still trembled on my ear, and more, perhaps, than ever previously, I desponded.

CHAPTER VI.

How time flies, when the past and the future are forgotten in the enjoyments of the present! Despondency soon vanished. There is a sunshine that beams over the world of spirit, as perpetual as that which enlightens the physical universe: sometimes clouds obscure its brightness, and sometimes the soul's perceptions are dimmed; but there are minds, like the regions blessed with skies ever cloudless, enjoying constantly its radiance—wearing a rosy hue that never fades away. If my own were at any time darkened, it was but by the passing shadow of a bird's wing, or of the light vapor that is driven before a summer-day's breath. Though the scene at the grave caused me a few hours of disquietude, my next interview with Alice restored my wonted serenity; for I fancied that there was an increased tenderness in her looks, more than compensating for the diminished gaiety of her spirits; and as the latter again recovered their accustomed elasticity, I could not gaze upon her sunny face, and think of aught else than happiness.

One morning when I came down to breakfast, Captain Smith gave me the important information, that a stranger had arrived the preceding night, at a very late hour, and taken lodgings in his best spare room, saying that he might possibly remain some days in Larksborough. My own chamber was the best in the house, and as I had been, for some weeks, the only guest, of course, the best spare room was the next in order of excellence to mine. This will explain the deep interest which the Captain took in the fresh arrival, and his eagerness to inform me thereof. His inn was very little frequented, and he depended for support chiefly upon the produce of a large farm in the neighborhood, which he owned, and which a tenant, who lived upon it, cultivated on shares. Indeed, his tavern-sign would probably have disappeared long before, if it had not been for the zealous interference of certain warm temperance-men; who, seeing a wonderful sublimity—a moral triumph, in the free swing of this tasteful, emblematic device—one of the evil spirit's own chosen inventions turned into an instrument of exorcism—were constantly at hand to strengthen the Captain's wavering faith, by various encouraging suggestions.

Mine host informed me that the new-comer was a person of the most gentlemanly appearance and prepossessing manners. He was travelling on horseback, and being very much fatigued with his ride, had given orders that he should not be disturbed until ten o'clock in the morning. He had made particular inquiries about Mr. Richmond and his family; and as he was quite a young man, the Captain thought it probable that he was to be a fellow-student of mine. The name which he had given was Brown—"James Brown" I found written in a blank volume lying in the bar-room, which the Captain had dignified with the title of the "Travellers' Book." The latter suggested that I should remain until Mr. Brown made his appearance, saying that he had mentioned my name to him the previous

evening, and would be glad to make us acquainted. This offer I did not choose to accept, and though mine host's surmise, as to the stranger's object, had excited some little curiosity in my mind, I reached the office at Briar Hill, and began my day's labor at the usual time. I had been there several hours, and was sitting with my chair tilted back against the wall, thinking of Alice and Mr. Brown, and of every thing else, excepting the book that lay open on my knees, when the bell announced a visitor. I opened the door and Mr. Brown stood before me. I knew him instantly from the Captain's description. He was apparently somewhat older than myself, well dressed, and altogether of a pleasing exterior. He asked for Mr. Richmond, and I showed him into the back office. The latter looked at him, for a moment, with an inquiring eye, but just as I closed the door, addressed him in a tone of recognition. What ensued I did not hear, excepting a word that now and then fell from Mr. Richmond, in a louder voice than usual, which led me to suppose that the interview was not a very agreeable one, at least to him; and the scowl that darkened the young man's flushed countenance, as he passed again through the front room, in about half an hour, showed plainly that its result had not been exactly what he had anticipated. A few moments afterwards Mr. Richmond came in to speak to me, and I could see that something had disturbed his wonted equanimity.

I dined that day at Briar Hill, and did not return to the inn till near evening; then the Captain introduced me to Mr. Brown, and we sat down to tea together. If I had been pleased before with his exterior, I was now doubly so with his manners and mental qualifications. He seemed open and warm-hearted, and conversed with ease and intelligence on every subject that presented itself, showing great natural strength of mind, an extensive acquaintance with books, and an unusual knowledge of the world. He had a ready wit, which was always refined, when he was talking with me, but sunk into broad humor, when he addressed Captain Smith, who was evidently delighted with his new guest. I conceived a strong liking for him, which he seemed to repay with interest; and soon after tea, having first had a private parley with mine host, he invited me to drink some wine with him; saying that he had contrived to squeeze a little out of the Captain, having removed his scruples by the offer of a large advance on the usual price, and the suggestion of a private room. I remarked that I seldom drank wine, but for the sake of his companionship would take a glass, and followed him into the room provided by the Captain, where we found lights and two bottles of champagne, with glasses, duly arranged upon a table in the middle of the floor.

We sat down, and drank each a glass. My friend pressed me to take more, but I declined. He seemed disappointed, and there was something, I could hardly tell what, in the expression of his face, that led me to suppose that he had some particular object, other than the mere testimony of his good feelings, in thus inviting me to drink with him. It flashed across my mind that this object was connected in some way with his visit to Mr. Richmond; and I resolved, at once, to satisfy my curiosity, trusting to my own ingenuity for the avoiding of disagreeable consequences. As if with

great reluctance, I consented to take one more glass, but, after sipping a drop, managed, while my friend was not looking, to throw the remainder out of the nearest window, which was open, as it was quite a warm evening. He began to grow more gay and talkative, as if the wine had exhilarated him; but I fancied that this elevation of spirits was affected. Feigning still greater animation, I began to laugh and rattle on immoderately, and thought I could discern a gleam of satisfaction lurking in Mr. Brown's face. We filled our tumblers again and again, and as often were the contents of mine disposed of as before. Once I imagined that a suspicion of some trick crossed his mind, for he looked at me very intently; but my mirthful eye, and the easy air with which I tossed off the contents of a glass, which I took care to pour only half full, completely deceived him and put him off his guard.

We had talked hitherto chiefly on subjects of common interest, very few allusions being made by either to Mr. Richmond or his family, and these of the most general kind. Now I perceived that my companion seemed anxious to lead me to this subject, and, not unwillingly, I humored him. I saw plainly the deep interest which my apparently careless remarks excited. Despite his efforts to appear highly exhilarated, it was evident that his head was little affected by what he had drunk, though the same amount would have put me under the table. How completely was he entangled in his own net! I soon discovered that he took the most interest in what I said about Alice; and this increased my curiosity ten-fold: in fact, it became at length so great, that I was in imminent danger of betraying myself, by growing sober too suddenly. Mr. Brown seemed to perceive a change, but noticed it only by replenishing my glass.

Unfortunately, I had succeeded so well thus far in getting rid of the wine, that I began to grow too confident and careless. Without the precaution of touching the glass to my lips, I flung its contents out of the window. My friend saw the motion of my arm and the empty tumbler; this was enough to explain all. In an instant every trace of pleasing excitement vanished from his countenance, and he turned pale with disappointment and rage. I saw that farther deception was hopeless, and directly was as sober as himself. For a moment we eyed one another without speaking, a smile of derision playing lightly around my lips.

"You have drunk nothing then!" said Mr. Brown, with a forced calmness of tone.

"Very little indeed," I answered, with the utmost nonchalance: "I have been amusing myself by throwing it out of the window. You must allow that I have played the game expertly, till that last unlucky hit."

"But why such deception? Why not tell me that you did not wish to drink?"

"Deception? I have but foiled you," returned I, "with your own weapons. I did decline drinking at first, but seeing that you were disappointed, and had some secret reason for wishing to ply me with wine, I determined to discover your purpose and defeat it. How have I succeeded?"

My companion bit his lip. "I have had no secret purpose to be either discovered, or defeated," said he. "You have deceived yourself as well as me—the frequent result of such tricks."

"Yes, it was a deception—a trick if you choose to call it so. But beware what language you employ to stigmatize the act. And beware, too, how you deny what was too palpable for the veriest fool to overlook. Yes, you had a secret purpose; and that purpose was in some way connected with your morning's visit to Mr. Richmond, and with his daughter Alice."

Evidently staggered by this assertion, Mr. Brown looked at me for a moment in silence, as if trying to recover his self-command. But in vain: a burning flush reddened his face, and, in a low, husky voice, driven through his teeth, he spoke,

"You lie! Every word is false!"

Both of us sprung to our feet, and, quick as lightning, I bent over the table and dashed my open hand into his face. Luckily the table was upset by these movements, and fell heavily upon the floor, while the tumblers and bottles were shattered into a thousand pieces. We could hear the hurried step of mine host approaching, and in a moment he tried the door, but it was locked. My antagonist had put himself in the posture of attack, but the Captain's voice, asking, in terrified accents, what was the matter, made him hesitate, while I remained standing in the attitude of defence.

"This is no time or place for the continuance of such a contest; but recollect—you give satisfaction for that blow. Captain Smith is there: it may as well be an accident to him." And he moved toward the door as he spoke.

"Yes, an accident," returned I, "since you have such a pious abhorrence of all deception. You shall have satisfaction, now, or whenever you please to demand, or take it."

Mr. Brown opened the door, and forced a smile as he met the Captain's frightened look.

"O nothing at all, Captain, is the matter, excepting that the table has preferred lying down to standing, and has treated the glass-ware rather shabbily; but you shall lose nothing by this singular freak: put all that's broken into my bill."

I could scarcely restrain a smile at my friend's coolness. But not wishing just then to give such an indication of feeling, I passed out of the room, leaving him and the Captain to square the account between them, and retired to my own chamber.

I spent a sleepless night; for after the excitement under which I had labored abated, and I began to reflect seriously upon the events of the evening, many disagreeable thoughts agitated my bosom. It was certain that a meeting would be demanded by Mr. Brown, which I could not well avoid, as I had pledged myself to give him satisfaction. All my principles were against duelling; and I knew with what horror my parents would regard the combat. And Alice! I have mentioned her last, but her's, on that night of trouble, was the first image that rose before me in the darkness. By one rash act was I to lose Alice forever? I knew well her detestation of that bloody code denominated the "laws of honor," for I had once conversed with her on the subject. What, if I should fall? What if I should retire from the field with crimsoned hands? But I cannot recall the various frightful forms, which stalked before my imagination, during the hours of night. After the morning had dawned, I sunk into a troubled sleep, which lasted, however, but a few moments; for an

awful dream disturbed me, and I sprang from the bed, not awaking until I stood bolt upright on the floor. Bathing my face and hands in cold water gave me some relief, and I began to dress myself, with a sort of desperate feeling, that, come what might, I must abide the issue without flinching. While thus engaged I happened to look out of the window, and saw that Mr. Brown was up before me. He was walking along the road, away from the inn, in company with Harry Bowne, and apparently engaged in earnest conversation with him. When breakfast was ready he did not appear, and Captain Smith said that he had gone out, after ordering his horse to be saddled, but kept standing in the stable. The meal being concluded, I took my hat, and strolled off towards the lake, not feeling disposed to go to Mr. Richmond's office, and face him with the troubled visage, that even Captain Smith had not failed to notice. On the shore of the lake I sat until noon, in the shade of a small copse, engaged in skipping pebbles into the water, and abandoned to harrassing reflections. Then I slowly sauntered back to the inn, not wishing it to appear that I sought to avoid a meeting with Mr. Brown. But he had not yet returned, and after taking a few mouthfuls from the dinner table, I retraced my steps, and soon found myself again upon the shores of the lake.

About five o'clock I started off on the path leading to Mr. Richmond's, determined that I would see Alice at any hazard. My feelings had become somewhat more calm, for I thought that Mr. Brown's early departure and continued absence from the inn were indicative of no great anxiety to press on the meeting. I had reached the corner of the garden, when, on looking back, I saw Alice at a distance, approaching by a different path from the one I had taken, accompanied by a gentleman whom I instantly recognized as Mr. Brown. The object of his private interview with me, on the previous evening, and of his morning conversation with Harry, whom he had doubtless met accidentally, at once flashed upon my mind. He had wished to discover how he might obtain an interview with Alice! Fearing that she might be in danger, I resolved to watch their approach, and be ready to interpose if it should seem necessary. Walking back, along the other side of a hedge that bordered the path, I stationed myself at a point from which I could observe every step of their way, without being myself seen. As they drew nearer I perceived that Alice hurried along at a quick pace, and that her companion was talking to her very earnestly, gesticulating all the while with considerable energy. I could not distinguish a word that was said, for he spoke in a low, suppressed tone, and she answered, without looking at him, only in monosyllables, until they came nearly opposite to where I stood, the hedge only dividing us.

"Then here we stop!" said Mr. Brown, in a voice half choked with passion; and seizing Alice by the arm, he fastened the terrified girl to the spot.

She uttered a faint cry. In a moment I sprang through an opening in the hedge, and stood before the unmanly wretch. He started at the apparition, and let go his hold on Alice.

"Henry! it is James Elliott!" she exclaimed in a tone of glad surprise, and fell to the ground in a swoon.

"Ha! villain!" cried I, springing upon the coward, who trembled as my hand grasped his throat. "Villain! you feared to meet me, after provoking the quarrel; but it seems that you dare attack a weak, defenceless girl. Now shall your courage be rewarded with a more equal antagonist!" I felt suddenly endued with a lion's strength, and shook him as if he had been a child; while he seemed to have lost all power.

"Beware!" he shouted, with a convulsive effort. "Beware! or your blood be upon your own head!"

Alice had speedily recovered, and now shrieked with horror, as we both, at the same instant, discovered a pistol glittering in my antagonist's hand. What followed I could not discern. The report of the pistol cracked upon my ear; I felt a sudden pain in my side, and my grasp relaxing, fell to the ground. Then followed several events in misty succession. Harry Bowne, leaped through the hedge, just after my fall, and pursued Elliott, who had instantly fled. Alice I knew was hanging over me, for I felt her hand, and heard her voice. Presently the report of another pistol startled me. I remember thinking that Harry had been killed: then all consciousness ceased.

The reader may easily divine that my senses had not taken their final departure; else how could I be writing these words? This is a common-sense way of reasoning that any one may understand without having paid much attention to the rules of logic. But then Alice, no doubt, thought that I was dead, and the scene was certainly as affecting as if the pistol-ball had passed directly through my heart, putting an end to my life and my love at the same moment. What a pity that my eyes did not remain open and unclouded for a short time longer, that I might now melt the reader's soul by describing the poor girl's grief! Probably, however, she was almost as insensible as myself, for afterwards she could give little account of what had passed; and she was found on her knees, bending over my body, as if seeking after some evidence of returning life. As such romances usually end, I first opened my eyes again, in a strange apartment, forgetting entirely, for a little while, what had happened, and then suddenly recollecting all, up to the time when I had fallen. I was in Mr. Richmond's house, and he, with his wife and a surgeon, was standing by the bed-side endeavoring to restore me to consciousness.

The surgeon pronounced the wound dangerous, but I bore the extraction of the ball very well, and he encouraged hopes of a happy result. The next day Alice was allowed to come in and see me, but neither of us was permitted to speak. Her eyes became suffused with tears, as she approached the bed-side, and she seemed pale and worn with grief and anxiety. The smiling look which I returned, however, brought a momentary flush of joy to her cheek. She remained only a few minutes: her mother, who watched over me continually, thought that her presence would be too exciting; for all excitement I was carefully to avoid. In two or three days I was pronounced decidedly convalescent, and then Mr. Richmond wrote to my father, which he had delayed doing, until he could say there was little ground for serious apprehension. The fourth evening after the letter had been despatched, my father and mother both arrived, and found me still gradually growing better.

CHAPTER VII.

Two months elapsed before I was able to leave my bed. During this time my mother and Mrs. Richmond watched by me night and day: it would have been difficult to say which exhibited the most of a mother's tenderness. Alice was allowed to see me often, and several times Harry Bowne was admitted into the room. He had pursued Elliott—for James Elliott indeed it was—on seeing me fall, and had narrowly escaped the shot from the other pistol. Finding that he could not overtake the fugitive, he had soon returned, and carried me in his arms for some distance, until succor accidentally arrived. Elliott had fled to the inn, mounted his horse, already saddled according to his directions, and hastened away; and all pursuit proved fruitless. Mr. Richmond, at first, offered a large reward for his apprehension; but, at my own request, when my recovery was no longer doubtful, he withdrew the offer. Elliott had called on him the day after his arrival, and proposed to become a student in his office; thinking no doubt that this would be a vantage-ground, from which he might make an easy conquest of Alice. Mr. Richmond had indignantly refused his application; but, not dreaming of his real object, or that he would pursue the purpose any farther, he had said nothing about the matter to his wife or daughter. The rest need hardly be told. He had watched for Alice, after artfully drawing from Harry Bowne some intimations in regard to her frequent visits to the church-yard; had met her returning from the grave; and the violence, which my presence had arrested, was a proof that his fierce passions had been terribly aroused, by the manifestation of contempt and abhorrence with which she had met his advances.

When at last I was allowed to sit up, Alice was almost continually with me. Sometimes her sprightly conversation relieved the tedium of hours of weakness, and sometimes she read to me from her own favorite authors; giving constant evidence of a most highly cultivated mind and refined taste. One afternoon we were sitting together before the fire, and both my mother and Mrs. Richmond had been called away. She had been reading to me, and had put down the book to ask if I was tired of it.

"No, I am not tired. I never grow tired of hearing your voice. At times indeed my weak body rebels against the too eager spirit, and demands repose. But let us talk for a little while now."

"Well," replied Alice gaily, shutting up the book; "What shall we talk about? I think we exhausted the language of flowers at our last conversation. What shall we take up next?"

"O Alice, I have much to say to you—much that I may never again have so good an opportunity to say. Yet I scarce know how or where to begin."

The smile which had played on her countenance instantly vanished, for she saw that something weighed upon my spirits.

"There are few, Alice," I resumed—"few who would not have rejoiced to give you the aid which I did, even at a greater peril than mine. I too, when I held Elliott by the throat, felt proud of having rescued you from his ruffian grasp. But, Alice, I have had many bitter regrets since that hour—not that I aided you, but that

you ever needed such succor. While I have been sick you have watched by me, whenever permitted to enter my room—you have sought to comfort and amuse me, as if you felt a load of obligation resting upon you. A sense of your feeling such a burden has weighed me down. I told you long ago, when you consented to regard me as a brother, that I could not promise to feel towards you only as towards a sister. No, even then, another feeling glowed within, and every day since it has gathered strength. Alice, I love you! The fire refuses to be pent up any longer. But you are wedded to another: you cannot give me your love. Yet I have feared that your gratitude might forbid you to refuse, that which love could never have bestowed. I love you—God only knows the fervor of that love! But I abjure you, by all you hold most sacred, tell me not that you love me, if gratitude alone prompts the declaration!"

While I spoke, Alice rose, and coming to me, bent over my head, and tears began to fall upon me, from her soft blue eyes. When I had done, she replied,

"Henry, if you knew all, you would have little fear that gratitude had much influenced my conduct. I am grateful—or, at least I hope so; but this feeling is lost in one far more intense. From the first day I knew you, your image began to dispute the empire of my heart with that one that had so long held possession. I struggled against the usurpation—struggled against it as for my life; but every effort only weakened the power of resistance. A thousand resolutions failed me in the hour of easiest trial; and I often wept with bitterness over what seemed treachery to the dead. When I stood by the grave, and warned you that I could never be to you but as a sister, the effort cost me the last remnant of the strength which I had convulsively gathered up. Then—even then, I felt that my love for you was unconquerable. A word—a look would have won me to your side, and from Edward's grave our vows might have gone up to their registry in heaven. That struggle has long since ceased. For months I have loved you, without a feeling to distract my heart, but the fear that your love had departed. Henry, if you love me I am blessed!"

What a moment was that! I folded the lovely girl in my arms, and pressed her lips to mine.

"Alice, I am happy! Dear girl! Tell me yet again that I am loved!"

CHAPTER VIII.

My tale hastens to its close. Once more I was able to leave my room, and to take up my lodgings with mine host of the "Temperance Hotel." Of course he was overjoyed to see me, and declared that he had not had a guest in his house since my departure, who should have had my chamber for double the price that I paid. This was, perhaps, strictly true, for but one person in all this period, had lodged with him, and that was a drunken pedlar. The Captain further descanted upon the consummate villainy of James Elliott, maintaining strenuously, that, from the first moment the fellow had set foot within the door, he had been convinced that he was a desperate character.

Months glided away, and spring was beginning,

though feebly, to dispute the despotism of winter. It was a cold, blustering night in the end of March, when, as I was sitting in the bar-room at the inn, after returning from my usual evening visit to Briar Hill, with a small circle of the neighbors, who had gathered close round the fire, that news was brought, by a trembling messenger, that an awful tragedy had just been acted at the Black Bear, the tavern before mentioned. He could not tell us all the particulars, but only that there had been a fight, and that he had seen Bill Davis lying upon the floor, weltering in blood. In an instant it flashed upon me that Harry Bowne had been the other combatant, and, while the rest waited to extract something farther from the boy who had brought the intelligence, I hurried off to the scene of horror. When I arrived, the whole inn was still in commotion, and on the bar-room floor was stretched the lifeless form of poor Davis, stripped almost naked, for examination by the coroner's inquest, that was just about to sit, and covered with blood from a ghastly wound, inflicted by a knife: the weapon had cloven its way through his heart. I was afraid to inquire who had perpetrated the deed, lest my surmise should prove correct; but the answer to a question asked by some one near, told me that I was not mistaken. The particulars I then learned from one who had witnessed the affray.

Bill Davis had been drinking before Harry came in, and, almost as soon as he entered, had begun as usual to taunt him with his love for Alice Richmond. A quarrel ensued, blows followed words; and Harry, pressed into a corner by his powerful antagonist, had at last drawn a long-bladed knife from his bosom, and, before his hand could be arrested, plunged it into Davis's breast. The latter fell almost without a groan, and instantly expired. I asked where Harry was, and was directed to a house in the neighborhood whither he had been taken for security. I followed the direction, and on reaching the house, found a crowd before the door, which was guarded by two or three men, who refused me admittance.

"He is gone raving mad," said one of them, "and attempts to tear in pieces every one that approaches. They have been obliged to tie his hands and feet, to prevent his doing injury to himself or some one else."

I begged that they would let me see him, and after some entreaty prevailed upon one of them, with whom I was well acquainted, to admit me. Two more guarded the door of the chamber in which he was confined: they allowed me to pass without hesitation, and I stood in the presence of the wretched prisoner. He was tied down upon a bed, and four men stood near to watch his movements, and, as far as possible, relieve his wants. When I entered he was quiet, having exhausted himself by his ravings and vain exertions to release his hands and feet. One of the men mentioned my name to him: he repeated it slowly, but without any sign of feeling. At that moment, however, his eye turned towards me, and he uttered a cry of frantic joy that pierced to my very heart.

"O save me! save me! You will save me! I killed him—I know I killed him; but I was mad! And I am mad still! Yes, mad! O save—do save me!"

I sat down by his side upon the bed, and bathed his bursting temples and brow with cold water. At length I succeeded in soothing him into a quiet slumber, but re-

mained all night to watch his repose. His intellect had often before seemed disordered: this dreadful catastrophe had overthrown the tottering citadel of reason.

"Poor Harry! now is thy despair madness!"

Harry was never brought to trial. He had drawn his weapon only in self-defence, and, besides, his insanity was too fearfully manifest to be called in question. It was not until after the dreadful event which I have narrated, that I told Alice of his devoted but despairing love. His father's circumstances were too narrow to admit of his providing a suitable place of confinement for him; and Mr. Richmond, at his own expense, placed him at the most comfortable private asylum which could be found. His case was pronounced incurable—he is still a raving maniac!

The reader will, no doubt, be anxious to learn whether anything has yet been heard of James Elliott. I did hear of him, about a year after his flight from justice, as a poor wandering vagabond: his friends had cast him upon the world even before his visit to Briar Hill. Subsequently, I was informed that he had gone to Texas. Nothing more can I tell, excepting that James Elliott was the name of one of those who fell in the bloody massacre of the Alamo.

"Alice, my dear, read what I have written, and let me add your authority to mine for its truth."

* * * * *

"Yes, Henry," she answers me, with the tears that recollection has gathered sparkling in her eyes; "it is all true, excepting that about my graceful form and pretty little ankle. However I will kiss you for it, as now-a-days, you do not often say such pretty things."

"But remember, Alice, that we have been married five years, and therefore I must have impressed you, by this time, with the full belief, that your form is a model of grace, and that your ankle is pretty: so what's the use of my saying anything farther about them. Why are you going so soon? Well, thank you for your kiss: it shall last me till—till I see you again!"

THE BEECHEN TREE.

BY THE AUTHOR OF "CLINTON BRADSHAW," &c.

As Love's own altar honor me;
Spare, woodman, spare the beechen tree. Campbell.

I.

He carved two names upon the beechen tree;
Encircling them with a deep graven heart:
Beneath its shade young Helen vowed to be
His love, beloved. When she rose to part,
As summer's twilight deepened into dark,
He staid behind her there, and carved the beechen bark.

II.

He staid behind her; for there was a feud
Between their houses; and he might not go
Beside her to the house beyond the wood;
Else might their loves be fruitful but in wo:
That tree became their trysting place—there she
Came often through the woods humming a melody.

III.

And, with a like intent, he careless came—

With fishing-line, maybe, seeking the brook ;
O ! how they spoke of the deep-nurtured flame !

And when they parted, how he loved to look
After that form that brightened so the wood !
And when, alas ! 'twas gone, how sad the solitude.

IV.

Years pass'd—unwished, yet by a master power,
Their vows were broken, and they met by chance
Beneath that tree in summer's twilight hour :

Each started, as they met each other's glance,
And strangely to their minds uprose their youth,
The tree, the graven name, the oft-vowed pledge of truth !

V.

Their names had been cut out from the tree's side ;

It's silky greenness showed how deep the scar—
He looked upon her with a sullen pride,

And she turned from him hurrying afar.
He did not watch her as she homeward went,
But left, with a dark brow, upon the past intent.

VI.

No other name can ever be graved there,
In the first freshness of that beechen tree ;
And she may listen to another's prayer,
And he to other maids may bow the knee ;
Yet in their hearts abides, for aye, the token
Of the first vows they made, now miserably broken.

AMERICAN ALMANAC FOR 1839.

The tenth number, or volume, of this capital work, is on the counters of the principal bookstores. Its 314 closely printed pages contain, as usual, many things, statistic, geographic, historical, and philosophical, which it is gratifying to know now, and which will be yet more pleasing to remember, hereafter. As a small and very inadequate sample of the kind of information which this almanac imparts, we extract a page and a half from its article on "FRANCE ;" adding, that a correspondingly clear account is given of the government, &c. of each state or kingdom in Europe, and of each one in America. There are also foreign and domestic obituaries, of distinguished persons—a chronological table of remarkable events in the year ending with August last—an ephemeris of the sun, moon, and tides, calculated for several prominent points in the United States—lists of the American Congress, and the British Parliament—and in short, more valuable things than we care now to specify. Let us proceed to the extract :

Government.

The government of France comprises three powers or branches, the King, the Chamber of Peers, and the Chamber of Deputies ; and their threefold sanction is necessary in order to give validity to every law of the country ; but in other respects their functions are distinct and determinate.

The King.

The executive power is vested in the King. Participating with the other branches the right of proposing laws, he alone is authorized to promulgate them. He is the supreme chief of the state, commands the forces both of land and sea, declares war, makes treaties of peace, alliance, and commerce, appoints to all offices of government, and makes the rules and ordinances

necessary for executing the laws, without having power either to suspend the laws themselves, or dispense with their execution.

The person of the King is inviolable and sacred ; but his ministers are responsible.

Chamber of Peers.

The rights of the Peers were formerly hereditary ; but, in 1831, their hereditary rights were abolished ; and they are now nominated for life by the King, who can select them only from among those men who have held, for a certain time, high public offices, such as those of ministers, generals, counsellors of state, prefects, mayors of cities of 30,000 inhabitants or more, presidents of royal courts, members of the Institute, members of general councils, or of councils of commerce, &c.

The Chamber of Peers participates the legislative power with that of the Deputies and with the King. It is convoked at the same time as the Chamber of Deputies, and it can hold no session at any time when the Chamber of Deputies is not also in session. Nevertheless, as it has cognizance of the crimes of high treason and of outrages against the safety of the state, it may, in this case only, and for the exercise exclusively of its judicial functions, form itself into a court of justice, even at a time when the Chamber of Deputies is not in session. The Chamber of Peers occupies the Palace of the Luxembourg, which has been successively the residence of Maria de Medicis, of the family of Orleans, of the Directory, of the First Consul Bonaparte, of the Conservatory Senate, &c. Its sessions are public.

The number of members of the Chamber of Peers is about 200. Baron Pasquier, *Speaker*.

The names of the Peers may be seen in the American Almanac for 1838.

Chamber of Deputies.

This body is composed of Deputies elected, every five years, by 459 colleges, distributed among the departments in proportion to their population ; and to these colleges all Frenchmen, who perform certain conditions specified by one of the fundamental laws, are summoned. In order to be eligible as a deputy, a Frenchman must be thirty years of age and pay a direct tax of 500 francs ; and, in order to be an elector, he must pay a direct tax of 200 francs. To the King pertains the right of convoking the Chamber of Deputies ; he may also prorogue or dissolve it ; but in this last case he must convoke a new one within three months. The Chamber of Deputies meets at Paris in the palace which formerly belonged to the family of Bourbon-Condé. Its sessions are public.

All the power of the Chamber of Deputies consists in deliberating and voting respecting laws, which must also obtain the assent of the other two branches ; but, with respect to the execution of them, it takes no part. Taking no part either in the nomination or the dismissal of functionaries of any class, it exercises, in relation to the government of the country, only an oversight and control. Every year, the law relating to the finances or budget, which gives authority for collecting the taxes, and for disposing, under certain restrictions, of the revenue which they afford, is submitted to its vote, before it undergoes an examination in the other Chamber. It is then by giving its assent, or rather its refusal, that it can make known to the country whether it approves or disapproves of the proceedings of the executive power.

The present Chamber of Deputies was elected in 1837. Number, 459. Charles Dupin, *Speaker*.

ACROSTIC

On a famous belle, who had just completed a "stuff shoe," of questionable utility.

Careless she is, every one must allow—
And oh ! how bewitching, we all must avow ;
There's a great deal of nature and a little of art,—
Howe'er, she finds way direct to the heart :
And though she has faults—has not many a belle ?
Reason, in time, will her vanity quell—
In fine, she's kind-hearted, virtuous and true ;
Never willing to work—except on a stuff shoe ;
Ever ready to do good—and—evil too.

MR. ADAMS'S LETTER,

TO CERTAIN YOUNG MEN IN BALTIMORE.

Mr. White.—One of the readers of your Messenger, has a reason for desiring the insertion in your next number, the following letter of Mr. Adams to the young men of the Franklin Association in Baltimore, in reference to the selection of a young men's library.

It is desired also to append some observations farther, on the same subject, which, if worthy of a place at all in the Messenger, the admirable thoughts of the learned ex-president may happily introduce.

Washington, 22d June, 1838.

Gentlemen:—I have no words to express my gratitude for the kind feelings and more than friendly estimate of my character, contained in your letter of the 9th inst., and am not less at a loss for language to utter the humiliation of a deep conviction how little your panegyric has been deserved.

Were it even so far deserved that I could feel myself qualified to give you the advice which you desire, it would afford me the most heartfelt pleasure to give it; but situated in life as you represent yourselves to be, I could scarcely name any list of books, or of authors which I could recommend as equally worthy of attention to you all. The first, and almost the only book deserving such universal recommendation, is the Bible—and in recommending that, I fear that some of you will think I am performing a superfluous and others a very unnecessary office—yet such is my deliberate opinion. The Bible is the book of all others to be read at all ages and in all conditions of human life;—not to be read once or twice or thrice through, and then to be laid aside; but to be read in small portions of one or two chapters, every day, and never to be intermitted, unless by some overruling necessity.

This attentive and repeated reading of the Bible, in small portions every day, leads the mind to habitual meditation upon subjects of the highest interest to the welfare of the individual in this world, as well as to prepare him for that hereafter, to which we are all destined. It furnishes rules of conduct for our conduct towards others in our social relations. In the commandments delivered from Sinai, in the inimitable sublimity of the Psalms and of the prophets, in the profound and concentrated observations upon human life and manners, embodied in the Proverbs of Solomon, in the philosophical allegory so beautifully set forth in the narrative of facts, whether real or imaginary, of the Book of Job, an active mind cannot peruse a single chapter and lay the book aside to think, and take it up again to-morrow, without finding in it advice for our own conduct, which we may turn to useful account in the progress of our daily pilgrimage upon earth—and when we pass from the Old Testament to the New, we meet at once a system of universal morality, founded upon one precept of universal application, pointing us to peace and good will towards the whole race of man for this life and to peace with God, and an ever blessed existence hereafter.

My friends, if all or any of you have spiritual pastors to guide you in the paths of salvation, do not imagine that I am encroaching upon the field of their appropriate services: I speak as a man of the world to men of the world, and I say to you *search the scriptures!* If ever you tire of them in seeking for a rule of faith and a standard of morals, search them as records of *History*. General and compendious history is one of the fountains of human knowledge, to which you should all resort with steady and persevering pursuit. The Bible contains the only authentic introduction to the history of the world; and in storing your minds with the facts of this history, you will immediately perceive the need of assistance from geography and chronology. These assistances you may find in many of the Bibles published with commentaries, and you can have no difficulty in procuring them. Acquaint yourselves with the chronology and geography of the Bible—that will lead you to a general knowledge of chronology and of geography, ancient and modern, and these will open to you an inexhaustible fountain of knowledge respecting the globe which you inhabit, and respecting the race of man, its inhabitant, to which you yourselves belong. You may pursue these inquiries just so far as

your time and inclination will permit. Give one hour of mental application,—for you must not read without thinking, or you will read to little purpose,—give an hour of joint reading and thought to the chronology, and one to the geography of the Bible, and if it introduces you to too hard a study, stop there. Even for those two hours, you will ever after read the Bible, and any other history, with more fruit—more intelligence—more satisfaction. But, if those two hours excite your curiosity, and tempt you to devote part of an hour every day for a year or years, to study thoroughly the chronology and geography of the Bible, it will not only lead you far deeper than you will otherwise ever penetrate into the knowledge of the book, but it will spread floods of light upon every step you shall ever afterwards take in acquiring the knowledge of profane history, and upon the local habitation of every tribe of man, and upon the name of every nation into which the children of Adam have been divided.

There are many other subsidiary studies, to which you may devote more or less of time, for the express purpose of making your Bible reading more intelligible to yourselves. It is a book which neither the most ignorant and weakest, nor the most learned and intelligent mind can read without improvement.

There are other books of great worth and of easy acquisition, which I suppose will be accessible to you all. The libraries of useful and of entertaining knowledge—the Family Library, the Monthly and Quarterly Reviews and Magazines, which are in a continual succession of publication in this country, as well as in England, will furnish you a constant supply of profitable reading; for the selection of which, time, inclination and opportunity will be your wisest counsellors. As citizens of a free country, taking an interest in its public concerns, I am sure I need not remind you, how strong your impulse should be to seek an intimate knowledge of the history of America, from the voyage of Columbus, and even of his supposed predecessors, Prince Madoc of Wales, and the North men, down to the Olympiads of Andrew Jackson and Martin Van Buren. The American hemisphere—the continent of North America—the United States of America, before and since the acquisition of Louisiana, and every separate state of this union, is a series of historical problems of which you should systematically seek the solution. Read the constitution of the United States—the commentary of the Federalist—the constitution and history of your own state—biographies, beginning with Langhorne's Plutarch, and thence proceeding to the history of John Smith; to the American biographers of Belknap and Sparks; to Washington Irving's Life of Columbus; and to the articles of Penn, and Calvert, and Locke, and Oglethorpe, which will lead you on to others in the Encyclopedia Americana or Conversations' Lexicon. Then the *fashionable* novels and poetry of the present times: Scott, Byron, Moore, Rogers, Coleridge, Southey, Wordsworth, two Montgomeries, Cooper, Paulding, Willis, Mrs. Hemans and Lady Blessington, Mrs. Sigourney and Miss Gould, and worth them all, Miss Edgeworth—and lastly, the reports of your countrymen, travellers in foreign lands—Dr. Dwight, Dr. Sprague, Mr. Bigelow, Lieutenant Stillell, and Dr. Fisk; with many others whose names do not at this moment occur to me. But I have given you more than enough, and after all, hardly know whether the catalogue will meet your inquiries, or satisfy your expectations. After all I must conclude with the advice of the serving man to the young student in Shakespeare—"Study, what you most affect."

And I remain your friend and fellow student for life,

J. Q. ADAMS.

As a farther and succinct exhibition of the rich contents of that wonderful volume, which Mr. Adams so justly recommends, allow me here to insert an extract from the charge given a few years ago, by the late lamented Rev. James W. Douglass to his ministering brother, the Rev. Stephen Taylor, then inaugurated a professor in the Presbyterian seminary of our own state. The charge before me, speaks of the church and the Bible in the following graphic and just language.

1. "Your office supposes a church. Your duties will soon discover and describe it in its origin and progress from remote time. You will find it in the knowledge

and true holiness of unfallen Adam; in the believing worship of Abel; in the holy walk of Enoch; in the godly fear of Noah; in the faith of Abraham; and in the visible organization and endowments which it hath ever since enjoyed.

2. "For the first two thousand years, you will find it without a Bible, or a standing ministry; possessing only the Sabbath, the simplest forms of sacrifice, and guided by nature and tradition. In the next two thousand years, you will find it furnished with a few sacred books, to preserve the history which tradition was beginning to forget; to teach accurately the rules of moral conduct, which nature did not know, or could not enforce; and to put the church under such an organization, as suited its existing relations to the Saviour yet to come. You will find it again fully endowed with the Saviour's finished work; with the Bible complete; with a preaching ministry, commissioned to all the world; and with the promise of the Holy Spirit's presence and power always. Here it is advanced from Jewish types; disburdened of Jewish ceremonies; and loaded, to the Gentiles with only light, and constrained by love, it moves and is moving on to universal conquest. And finally, having described its conflicts, as the seals were opened, and as the trumpets were sounded, or the vials poured out, to our own times, you may venture into unfulfilled prophesy and show the church in its millennial glory.

3. "Under all these dispensations you will not fail to mark the strong and devoted affinities of the human mind for error and sin, and the remarkable expedients which infinite wisdom successively adopted to counteract and restrain them, and to withhold miserable man from the depths of ignorance, error, vice, misery, and hell, towards which he is ever sinking. (1.) During its first dispensation, the church, unprovided with a Bible, unrestrained by a written law, a standing ministry, or the fear of early death, became at once corrupt. The earth was filled with violence—behold it was corrupt. And as the church possessed no means adequate to sustain, much less to restore religion, that generation was abandoned to the deluge, the earth carefully cleansed of their corruption, and the race started anew in the person of Noah, who thus became the second Adam. (2.) The next expedient was to shorten human life from seven or eight hundred to seventy or eighty years; giving just a tithe and no more of the former probation. (3.) The third expedient was to separate men into small communities, by confounding their language, that they might not corrupt one-another. But still, though they knew God, they liked not to retain him in their knowledge. These distinct tribes—one and all—became idolatrous; and then (4.) God, as if weary of resisting the general current, set off a part, in the person of Abram and his descendants, for special training, and abandoned the rest to walk in their own ways. As their cup of iniquity became full, they were successively destroyed, and Abram stood to the true faith and worship of God as the third Adam. The general depravity, meantime, was powerfully held in check by the miraculous destruction of Sodom, and other cities, for their exceeding wickedness; by the plagues and ruin of Egypt, for resisting God; by the detail of law at Sinai; and by those peculiar dispensations in the wilderness, and in after ages, together with the prophetic warnings

and instructions, which accompanied them, all which would be reported among the nations, and would prove that there was a God in Israel. (5.) The last expedient is the universal publication of the gospel of Christ, accompanied by the Holy Spirit. If this fail, there remaineth no superior, no equal, no other device. There remaineth only fiery indignation to consume an incorrigible race. But this will not fail. Under this dispensation, our weapons are not natural, not ceremonial, but spiritual and mighty through God. In the first age the church advanced and triumphed; like Cæsar—came, saw, and overcame. But although the truth took strong hold of the memory, the conscience, the heart, the life of a moiety of those of our race, depraved man speedily disengaged himself, and returned to dark and indulgent heathenism. The church has at length resolved to republish the gospel in all the world."

Such is the nucleus of knowledge gotten from the Bible, and the history of the Bible alone. Definite and comprehensive as it is, it is the merest abstract, capable of indefinite, endless expansion, from the same source.

I am satisfied that Mr. Adams is right in teaching that the Bible is properly the sun and centre of the system of useful human knowledge, for this life as well as the next. All the lights of this world, while in their proper orbit, revolve around it.

1st. *Let us instance history.* Not only is it true, as the letter observes, that the Bible contains the only authentic introduction to the history of the world, but it is equally true that in the Bible alone, or gotten from it, *is the true theory of human history.* "*The Most High ruleth among the kingdoms of men.*" "*That nation that will not serve Him shall perish.*" "*The wicked shall be turned into 'hades,'*" (the grave,) (or shall be capitally executed by decree of the great sovereign of the world,) and so shall "*all the nations that forget God.*"

This is the true theory of history. Every nation is subject, in its organized or political capacity, to the general government of Providence. Willingly or unwillingly, they are so. There are no reserved (independent) rights. The government of God is one grand consolidated monarchy. Not a despotism—but a righteous government, perfect in itself.—"*God over all, blessed forever.*"

Remember this, and then read the history of ancient kingdoms—Egypt, Assyria, Babylonia, Medo-Persia, the empire of Alexander, and of the Cæsars; or of more obscure Philistia, Idumea, Moab, Ammon, and the rest; or of the cities of Sodom and Gomorrah, Tyre, Sidon, Ninevah, Babylon, Petra, Palmyra, or Thebes; or even of the still partially extant cities of Alexandria, Smyrna, Constantinople, Athens, Corinth, and Rome. The Bible, here in the hands of the student of history, or of the traveller in ancient lands, is an instructive, perfect and necessary guide-book. It is the measuring line of the whole subject. The very best key to human history is the Bible. The very best commentary upon the Bible is the actual history of the world.

As the first map in the atlas is the round world—as the first plate in a perfect treatise on anatomy is the dry skeleton, (for the reader had often seen the living man,)—so the Bible is most appropriately the first book in history, and in a sense the compend of all. The commentary, in explaining the Bible, is obliged to tell you the history of the world; and this, as Mr. Adams says, is properly the

next book; and then turn to the most full and perfect history of the kingdoms and countries in succession, with all that Moses and the prophets say about them, before you, as the text. In this succession, Egypt naturally comes first—"the mother of kingdoms," as she is in history—"the basest of kingdoms," as she is in fact, up to the letter of prophecy. Then Assyria, with Ninevah, that "exceeding great city," her capital—until for her crimes she has a master given her, and thus sinks into the common grave of the nations that forget God. Then Babylon—in her day "the golden city," "the lady of kingdoms," "the glory of kingdoms," and "the hammer of the whole earth,"—with her wall three hundred feet high, and her temple of Belus surmounting the hanging gardens and overlooking those lofty walls—with her hundred brazen gates, and her hundred and twenty provinces, ruling over the kingdoms around her, till the maturity of her rebellion against the Author of the Bible, and head of the church, and father of the race, and sovereign of all—then her glory and her sceptre depart from her. Let the Bible and truthful history together tell it. In the same way peruse and ponder the annals of her successor, Medo-Persia—and then of the rising and the setting sun of Macedonia—and then of old Rome, down till the days of her miserable decrepitude. "The lone mother of dead empires, there she sits, childless and crownless in her voiceless woe." The Bible told it all hundreds of years—

"Ere Romulus and Remus had been suckled."

Now thus balanced in the centre of the system, the Bible appears, in its perfectness, the light and the warmth of the whole subject. And the dark and intricate windings of human history are traced under an open sky-light.

The imperfectness of every historic work, written by uninspired man, is the complaint of every minute scholar. Some of them are written by infidels, and full of hollow-hearted and somewhat hollow-headed infidelity. But for the Bible, they would woefully mislead us. The Bible out of the question, they actually do. But it is peculiarly gratifying to find even Gibbon, and a score of such, with their hatred of the Bible plain enough upon their page, (about as plain as their ignorance of it,) yet writing out at immense labor and expense the literal proof and fulfilment of Bible prophecy. Perhaps this was the design of Providence, in having so much of the world's history written by enemies of the Bible. An intelligent and independent mind, enlightened in the serene and elevated principles of the Book of books, can safely enough accept the service of even infidel historians, in tracing out its wonderful predictions; and in such case will find himself richly stored in this great subject, from the pages in succession of Rollin, Gibbon, Hume, as also from Robinson, Watson, and others. A great deal of historic knowledge, both comprehensive and detailed, is gotten indirectly in the study of other subjects. Thus in reading the lights of the deistical controversy, such as Lardner or Paley, Watson, Wilson, Keith, McElvaine, Alexander, and others; and inferior to hardly anything of the sort, is, "Letters to Voltaire by certain Jews of the German and Polish synagogue." And minds of a certain order, will find themselves feasted beyond the comprehension of the multitude, in studying (not merely reading,) the works

of Isaac Taylor—Natural History of Enthusiasm, Fanaticism, Spiritual Despotism—Saturday Evening, &c. Of a somewhat kindred intellectual order are the Astronomical Lectures of Dr. Chalmers, and his book on Natural Theology, &c. Let us pass—

2d. To a hasty notice of another instance, in illustration of the point in hand. It is *Natural Theology*. If an individual of inquiring mind were to visit the wonderful temple of Jupiter Ammon at THEBES, he would ask, if he had an opportunity, and ascertain, if he could, the name and history of the architect. Well, the Bible has told us who is the architect of the much more wonderful temple of nature, with all its appropriate and interminable furniture. "By him (*Jehovah*) were all things created." Now the proof of this, found in the workmanship of nature itself, marks out the subject of natural theology. And in the general light of the true religion and the particular light of this definite Bible statement, is this vast subject explored—from the orbit of Jupiter down to the mechanism of a woodpecker's tongue, or a fly's foot, or a musquito's stomach. The work of Dr. Chalmers on this subject has already been mentioned—Dr. Paley's work on the same subject is inimitable; and the *Treatise of Ferguson of Dunfermline*, is simple, beautiful and satisfactory, and I know not how many others. But I am going beyond my intentions, and perhaps trespassing upon the editor's space and the reader's patience.

The observation is most just—that after a young man will take the trouble to make himself as familiar with the geography of our globe as A, B, C, and with the outlines of chronology, and with the simple Bible, the profit then of all his reading will be in a ten-fold ratio. Every biography he reads from Plutarch, or whoever else—every book of travels—every review or journal—every weekly or daily newspaper will naturally and almost without intention enlarge and perfect his store of knowledge.

A most valuable advantage in the acquisition of geographical knowledge is had in the missionary publications of our day. A most important help to an acquaintance with the Bible is enjoyed in the house of God every Sabbath. And a conscience at peace with the Bible is profitable unto all things—having the promise of the life that now is and of that which is to come.

LECTURE

ON THE STUDY OF THE CLASSICS.

Delivered in Washington College, Va., September 10th, 1838:
By George E. Dabney, A. M. Published by request of the students.

This is a pamphlet very neatly done up, in which Professor Dabney sets forth "the nature, the object, and the utility of this branch of education."

The author very modestly disclaims the purpose or expectation of being very original; and, indeed, how could he be, in proving "that ancient literature is not mere useless lumber?" An exceedingly conclusive argument that he is right on this point, is found in the fact that successive ages and generations, from antiquity down, have, without exception, given their practical testimony to the truth of his position.

Think of "*the vista of time*," so frequently spoken of in rhetorical efforts—a long bordered avenue or road, extending from dim and distant antiquity, down by us, and onward, till the view is lost in the future. Think of the lengthened succession of literati of all ages, travelling on it, and holding on their weary way, burdened with the thoughts of the thinking men of every past age, and proposing to show them and leave a copy of them with the living thinkers of every age as they pass. The question is whether that burden of theirs is "mere useless lumber?" Fools may think so, and doubtless do; but no one else thinks with them. The calamity is, that so much of that invaluable burden has actually been lost. Ancient literature, and foreign literature, is stored away in ancient and foreign languages; and a knowledge of these languages, particularly the ancient, Professor D. offers as "the key which will unlock these stores of information infinitely diversified, and of which there is no end." They are the record of every science and every art known to comparatively ancient times—the record of more than the half of human history—the materials of the history of language itself—the early annals of the human mind—the frame-work of intellectual philosophy—and the entire original record of inspired wisdom. Is this key a useless trifle—and because, forsooth, some few of every age, and of our age, gifted with the knowledge of its use, have gone in and brought forth for our edification, some fragments and samples of that incalculable store?

Professor D. assumes, without enforcing it, the important fact that elementary education is intended to learn students to think and investigate, rather than to store their minds with thoughts, and the results of investigation. The latter is a consequence of the process almost as much accidental as designed, while the former is the very end and essence of the enterprise.

Of course, in learning young minds to think, we must make them think—"practice makes perfect;" and in making them think, we must give them something to think about, something to think after, and something to think for. In this view of the case simply, it matters no great deal what the subject is, provided this process actually go on, and go on by rule, and go on with vigor. The lecturer offers the ancient languages for this purpose: their orthography, etymology and syntax—their structure, their spirit, their graces and embellishments—the new skies they open—the new worlds of thought and knowledge to which they lead, and the exhaustless mines of literary, scientific, and intellectual discovery, to which they are the avenue and the entrance.

"This study," says he, "when properly conducted, may be made a sort of gymnasium of the mind, giving more or less exercise and discipline to all its faculties." "If the mind should retain no single idea from the study of the classics, it will have acquired habits of thought—a muscular power—which will be of infinite advantage in the prosecution of its future researches."

In justice to the author, we insert the following paragraph as a sample of his style—reminding him, however, that the word "mobocracy" is of illegitimate composition, being the union of an English word, (scarcely English,) and a Greek one. Democracy is the word, and it is sufficiently expressive,

"This argument has been hitherto conducted, as if classical studies were merely a means to some end, extraneous to themselves; as if the Greek and Roman languages contained no ideas worthy of preservation—no specimens of true eloquence—of genuine poetry—of elegant history—of valuable moral and philosophical discussion. But the concurrent opinion of learned men, since the revival of learning, has been, that they abound with excellent models of composition and argument on all those subjects; that in them, the statesman, the poet, the philosopher, and the historian, may find materials for thought, and examples to correct and elevate the taste. The standard authors in English, as well as the other modern languages, owe much of their excellence to the study and imitation of the ancients. They abound so much with quotations from Latin and Greek, that no modern can fully understand the masters of his own literature without some acquaintance with those languages. It is not my purpose to unite in that senseless and indiscriminate praise of the ancients, so common with many, who have never really appreciated the excellence which they are in the habit of lauding. The classic writers are fair subjects of criticism, and blind admiration of them is as absurd and pernicious, as it ever must be, when its object is a mere human composition. Some authors, indeed, have been consecrated by the united approval of succeeding generations of scholars. In examining their writings, we should recollect that what appears to the superficial critic a blemish, is often a beauty in the estimation of profound scholars. A proper appreciation of their qualities requires an independent, but not a rash and conceited exercise of judgment. An examination in this spirit must bring us to the conclusion, that in works of taste and imagination the ancients have never been surpassed; while in treatises on moral, physical, and perhaps political science, the writers of Christendom have all the advantages, which increased experience and revelation can give them. To the poet, the orator, and the historian, the classic writers furnish excellent models for imitation, and constant subjects of meditation and admiration. Their simplicity, their condensed power, their ardent bursts of feeling, the perfect finish of many of their compositions, are worthy of all praise. Would that their noble models of eloquence could be imitated by some of the prolix orators of our own day, whose only excellence consists in multiplying words without either knowledge or taste! Our sickly, sentimental poets, too, whose strains abound in flowers, sunbeams, and other such common places, might well derive energy simplicity and taste from the pure masters of the ancient lyre. It is by no means my wish, if it were possible, to depreciate, in your estimation, the great men whose writings have immortalized British literature. Still farther is it from my intention to advocate the study of ancient authors, to the exclusion of an acquaintance with our own. On the contrary, I regard it as one of the happiest effects of a classical education—that it qualifies the mind for a more entire appreciation and higher relish for our own standard authors. Our Erskine, our Burke, our Milton, and our Hume, do not yield the palm to the Demosthenes, the Cicero, the Homer, and the Tacitus of ancient times. But a comparison of distinguished authors on similar subjects at periods so remote, enlarges the understanding and improves the taste. The moral and philosophical speculations, contained in the Latin and Greek writers, although not corrected and purified by the infallible knowledge since derived from revelation, are well worthy of an attentive consideration. They have much valuable truth mixed with error and absurdity. It is delightful to perceive, through the midst of pagan darkness, those gleams of moral and religious light in authors, who were not destined to see the sun of revelation arise in its brightness. In politics, too, although their authors do not deserve to be held up to unqualified admiration, as their poets and orators may be, they had many valuable ideas. The ambitious aristocracy of Rome, the licentious mobocracy of Athens, and the unnatural government of Sparta, are certainly undeserving of imitation. Yet the history of their rise and downfall, with the reflections of their great men on the excellencies which elevated, and the errors which sunk them, deserve an attentive examination and perusal. Minds, such as those of Demosthenes, Cicero, Plato, Xenophon, and Tacitus, must of necessity throw light on every subject on which they touch. They point out to us the weakness, as well as strength of the governments under which they lived, and enable us to derive lessons of encouragement from their partial success, as well as of warning from their ultimate failure."

January, 1830.

THE AMREETA, OR, DRINK OF IMMORTALITY.

*A Hindû Fable.**

BY CHARLES M. F. DEEMS.

I.

On Mount Merû,—whose top sublime
Knows not the stealthy step of time,
Around whose form, forever bright,
Is thrown the radiant robe of light,
Whose brilliant diadem,
Of many a glittering gem,
Is with the eternal glory blended,
Where human thought has ne'er ascended,—
In deep debate
The hosts of heaven in council sate.

II.

Each sinless soor,†
Spotless and pure,
Bent all his matchless powers of mind
The much desired drink to find :
And every soul
Seemed burning with an inward fire—
A deep, absorbing, fixed desire
To seize the bowl,
To quaff the nectar, and forever be
Clothed with immortality.

III.

Narayan first the silence broke,
And to creating Brahma spoke :
" With a mountain stir the ocean ;
In its raging, wild commotion,
In its billows you shall see
The drink of immortality :"
The god consented, and at his command
The soors went forth, a potent, heavenly band ;
And called from Padalon's‡ hot floors,
To aid their work, the cursed asoors.†

IV.

Frowning in the distance, far
Above the clouds, stood Mount Mandar ;
Yet, in the depths profound of earth,
That lofty mountain had its birth.
The king of serpents went, by Brahma told,
And tore the mountain from its giant-hold,
And to the ocean's side,
With his vast load he hied ;
While soors and asoors, in expectant mood,
Around him stood.

V.

The tortoise-king stood
In the depths of the flood,
And on his back the ponderous weight bore up ;
And the serpent-king wound
His soft fold around
The monster-mountain like a pliant rope :

* The fable (of which this poem claims to be little more than a paraphrase) may be found in all its details, in the last note to Southey's "Curse of Kehama."

† The soors or suras are the good spirits, and the asoors or asuras, the evil spirits of Hindoo mythology.

‡ Padalon, the place of eternal torment.

In combination strong,
They ranged themselves along ;
Each spirit showed himself intent to be
The first in gaining immortality.

VI.

And as they drew the serpent out,
A cloud of smoke
Upon them broke ;
The hurricane wind and the flashing flame,
From the dragon-mouth of the monster came,
And played about
The pure and heavenly band,
That stood upon the strand,
And licked the shore,
That echoed to the troubled ocean's roar.

VII.

The light flame leaped to the side of the mountain,
And herb and flower,
And woody bower,
Threw their blaze high
To the lurid sky ;
And the bubbling fountain
Hissed as it threw its waves away
In misty spray ;
And round the lofty pyre
Were spread the dazzling wings of fire.

VIII.

Then came a mighty cloud,
And on the conflagration raging loud,
Its dashing torrent fell ;
And the juice of the herb and the sap of the tree,
Floated downwards to the sea,
And mingled with its swell.
This was the amreeta pure,
For which many a soor,
From age to age, had heaved a sigh—
The drink of immortality.

IX.

The scathed mountain still was turned ;
And as they churned,
The moon, with her soft, silvery beam,
Forth issued from the stream ;
The goddess Fortune, from her lily throne
Came out ; then the divine
Elivening spirit of wine—
And in her cause
Followed the snow-white horse :
All bent their footsteps upward to the sun.

X.

Then came a spirit with th' amreeta drink ;
And as he stood upon the brink,
And slowly lifted up
The precious cup—
The asoors claimed it as their due,
And quickly to their weapons flew :
Narayan stooping low,
Stood 'mid the tumult, in a beauteous form,
As the bright bow
Plays on the frowning visage of the storm.

XI.

Before his smile
The cloud of battle floated back awhile,
And in the contest, from the hand
Of Narayan, the heavenly band

Received the precious cup,
In which was all their hope,
To slake their burning thirst—
And for a moment all was still;
But ere the spirits had their fill,
The asoors like a tempest on them burst.

XII.

Onward with a cry they went—
And in their wild, discordant yell,
It seemed as though the voice of hell
And all the damned were blent.
Forward their course they wended,
And like a storm, descend'ed
To sweep the earth, to crush and break,
With brand and stake,
And shouting long and loud,
Pressed on the infernal crowd.

XIII.

Then from the sun
Narayan called his weapon down—
Lovely, yet terrible to view
The sheckra* through the inane flow;
The asoors admire
That dreaded instrument of burnished fire;
And as they gazed, the lambent flame
Slowly to Narayan came,
Who seized it in his mighty hand
And dashed it at the affrighted band.

XIV.

Forth it leapt,
And o'er the earth in terror swept:
It tore, and burned, and crushed a path,
As through the asoors it rushed in wrath.
Awhile 'twould shoot on high,
And flash across the sky,
And then 'twould drop from heaven,
And run along the earth like liquid levin,
And lap the blood
That on the ground in stagnant puddles stood.

XV.

With tree and rock,
And dreadful shock,
The asuras in their desperation rushed,
And would have crushed,
The purer spirits in the fight;
And with superior might
They tore the lofty hills asunder,
And dashed them to the earth with thunder;
But in a moment all the hellish host
Were in a shower of golden arrows lost.

XVI.

O'erwhelmed with fright
The evil spirits turned to flight,—
Some threw themselves in the wild commotion
Of the raging, tempest-tost ocean,
And others found
Retreat in caverns under ground,
And sought again
The raging pain
Which fate has doomed them to endure,
Forever and forevermore.

* The *sheckra* is an instrument frequently seen in the representations of Hindoo idols. It is double-pointed, and when used is held in the middle.

XVII.

Mount Mander, the monstrous, to its former bed,
With songs, and rejoicing, and praises, was led;
The sheckra, all harmless in beauty, ascended,
And with the warm light-flood of glory was blended;
The thrice blissful spirits, their vast labor done,
Quaffed free the amreeta, so painfully won.

Then the suras rejoicing, in gladness gave out
The token of triumph, a rapturous shout—
And the sea, and the shore, and the firmament rung,
As the psalm of victory by millions was sung.

Dickinson College, 1839.

MOLA DI GAETA.

A SKETCH FROM THE RECOLLECTIONS OF A TRAVELLER.

Tu quoque litoribus nostris, *Æneia* nutrix,
Æternam moriens famam, *Caleta* dedisti:
Et nunc servat honos sedem tuus; ossaque nomen
Hesperia in magnâ, si qua est ea gloria, signat.

Virgil *Æneid*, Lib. VII.

The faintest signs of dawn were scarcely visible, when we set out from *Velletri*. We had left Rome on the previous morning for Naples, and our route this day traversed the celebrated *Pontine Marshes*—a region of disease and desolation. This "Serbonian Bog" stretches from *Cesterna* to *Terracini*—a distance of from twenty-five to thirty miles—between the first range of the *Apennines*, and an extensive forest, which bounds it with short intervals, upon the sea coast. It is caused by the want of declivity, which prevents the streams that flow from the mountains, from discharging themselves freely. Two small rivers traverse it, besides several minor streams. Many efforts have been made to drain it, both by Roman emperors and modern pontiffs: the last of which was that of *Pius VI.* in the eighteenth century, but without complete success. A fine modern road, elevated above the general level, and bordered with rows of elm and poplar, has been constructed along the course of the ancient *Appian Way*. Parallel with it is the principal canal, with which numerous smaller trenches communicate. The soil is generally let to large farmers, who reside in Rome, while the labor is performed by overseers and husbandmen from the interior, who do not long resist the deleterious influence of the atmosphere. The produce in grain is large in some places, and the pastures are rich, affording sustenance to numerous buffaloes, while great herds of swine roam through the dense forest, which, with slight intervals, shuts out the view of the sea. The popular opinion which ascribes the unhealthiness of Rome to the *Pontine Marshes*, is, I am persuaded, erroneous. They are too distant, and moreover separated from the capital by spurs of the *Apennines*, besides which the *Campagna di Romagna* itself affords a sufficient explanation of the melancholy phenomenon. As we passed through this "marish, vast and foul," this dreary "slough of despond," my feelings soon partook of the gloom of the scene, and I sank into no enviable state of mind. The sombre landscape was wrapt in a profound stillness, which was not repose, but the lethargy of "summer's noontide air." The silence of day is more impressive

than that of night. It addresses itself to the eye as well to the ear. The oblivious veil of darkness is not then thrown over nature, which seems paralyzed and oppressed rather than at rest. I could not resist the general contagion; and in spite of the popular prejudice which deems it fatal to sleep while crossing these pestilential plains, I fell back upon my seat and lapsed into a profound slumber.

When I awoke, we were already in view of *Terracina*, where we were to halt a couple of hours during the greatest heat of the day. This town, which is at the south-eastern extremity of the Pontine Marshes, though formerly of some note, is now a miserable place, notorious as the resort of bandits and outlaws. It has a population of nine or ten thousand, and boasts among its edifices, a cathedral, a dark and gloomy structure, as well as a palace, built by Pius VI., who made *Terracina* his frequent residence while engaged in the effort to drain the territory which I have just described. It is built in the vicinity of the Appian Way, and traces of the ancient port of Antonius Pius are still visible. The ruins of the ancient city of Anxur are also to be seen in its environs.

Terracina has an aspect strikingly wild and desolate. It lies immediately upon the shore of the Mediterranean, whose waves lave the very walls of the houses, stretching also upon a craggy, precipitous eminence, which rises abruptly from the centre of the town. It was here I saw for the first time, and not without singular emotion, palm-trees of spontaneous growth, whose gaunt, towering stems, surmounted by a radiating canopy of enormous leaves, struck me as fit emblems of barbaric Africa. We were detained at this desolate looking place, until my patience was nearly exhausted. I will not, as is the wont of travellers, dwell upon the discomforts of the inn, or the wretchedness of the repast. To me the greatest inconvenience was the delay, and it was with no small satisfaction that I heard, at length, the cry of the *returino*, "*Andiamo Signori!*"

In passing out of the town, I was struck by a peculiar discoloration of the rocks and adjoining waves, which emitted a noisome, sulphureous odor. These phenomena, frequent in the volcanic regions of Italy, never failed to fill me with solemn and painful emotions. They speak of a power beneath, at war with the arts of man and the beauties of nature. They vividly recall those awful calamities which have covered some of the fairest portions of the earth with "blackness and desolation." They are prelude of that final doom, which we are assured is to involve our world in a universal catastrophe. Alas, poor Italy! how many causes have combined to lay waste the beauty of her features! The enmity of nature, the violence of man, the hand of God, have all been upon her, and have left of her nothing but a lovely ruin.

Alas, o'er these fair scenes
Wild terror strides; their stubborn rocks are rent;
Their mountains sink—their yawning caverns flame;
And fiery torrents roll impetuous down,
Proud cities deluging; Pompelian towers,
And Herculaneum.

Dyer.

The road continued, at intervals, to wind along the coast, and the sea was rarely entirely out of view. The country through which we passed, formerly the theatre

of interesting events, the site of flourishing towns, and the abode of a crowded population, has sadly declined from its ancient prosperity. The traveller sees nothing but marshy plains, with here and there a wretched looking town, straggling along the edge of the water, and apparently inhabited exclusively by fishermen. Among these the most considerable is *Fondi*, which, although situated in a fertile plain, covered with poplar, orange, cypress and myrtle, presents a most dingy and desolate aspect. Its inhabitants, who do not enjoy a very good reputation, suffer much from the malaria of the surrounding plains, which are subject to frequent inundation. It is built upon the Appian Road, which is composed of large flags fitted together without cement. How admirable must be the work which has survived so many centuries!

Altogether the scenes and emotions of the day had been of a melancholy cast, and I was in no enviable state of feelings, when, fatigued in mind and body, we approached *Mola di Gaeta*, where we were to put up for the night. But how shall I describe the sudden transformation which both the scene and my feelings underwent? In the midst of a rich and fragrant valley, a lovely village lay reclined in the bosom of a gentle bay, which yields not even to Naples in the softer features of beauty. The white walls of the houses, embosomed in gardens, shone, from their contrast, with the dark verdure by which they were partially screened. Groves of orange, and citron, and fig, and mastic, and myrtle, with other beautiful or fragrant trees and shrubs, and here and there a shining cottage, or dimly discerned ruin, were scattered along the shore, which terminated in a promontory, crowned by the white walls and castellated towers of the town of Gaeta. On one side rose the blue hills of the Appennine, while on the other the eye traced an extensive outline of coast, gay with villages, vineyards, gardens and cottages. Numerous skiffs—their white sails impelled by a gentle breeze—were approaching the land, to take refuge for the night in the coves and inlets which indented the shore. The rays of the sun, which was just sinking beneath the horizon, burnished a sky of unclouded brilliancy, while the soft expanse of the water beneath, glowing with the horizontal beams of the descending luminary, and the brightness reflected from above, seemed literally to flow with molten gold. Presently a milder flush diffused itself over the gorgeous scene, which gradually invested itself with the soft, voluptuous tints of an Italian twilight.

Never had I been so affected by the tranquil beauty of nature; never had earth appeared so lovely to my eyes. I could not sufficiently contemplate the enchanting spectacle, whose charm held my spirit absolutely spell-bound. I roved among the luxuriant groves and fragrant gardens, inhaling with delight the perfume that floated on "*Favonian airs*," and listening with rapture to the song of the nightingales among the branches. By slow degrees the shades of evening came on, changing but not withdrawing the beauties of the scene. The queen of night succeeded to the king of day, shedding a mild and pearly lustre over the distant hills, the bright walls, the rich foliage and mellow waves, which broke in sparkling ripples upon a spotless beach. A gentle breeze, floating through flowers and fruitage, filled the air with fragrance, and fanned the

fevered temples with its cooling wings. The dark verdure of the orange and the cypress seemed tipped with silver, as it rustled with the stirring air. It was an evening never to be forgotten. A delightful calm diffused itself throughout my whole frame, and plunged my soul in a delicious reverie. It was not the quietude of languor, but the eloquent silence of thoughts too big for utterance. But I fear to give expression to emotions which must have been felt to be believed. Nothing, it has been said, cools us like the enthusiasm of others.

Sweet Mola di Gaeta! How often amid scenes of gloom and hours of sadness, has my spirit taken unto herself wings, and revisited thy lovely shore! How often amid the strife of factions, the din of business, the heartless sounds of gaiety, the fever and the agitation of the world, have I turned wistfully from the present to the past, and wandered in soul among thy "gardens of the Hesperides!" Sweet Mola di Gaeta.

J. L. M.

THE FIRST STATUE OF CANOVA.

(Translated from the French for the "Southern Literary Messenger.")

There are, doubtless, few of our readers who have not heard mentioned with honor the name of the great Canova, that skilful sculptor of modern times, whose admirable statues have almost taken rank amongst the master-pieces which Grecian antiquity has transmitted to us. Canova, like many other great men, owed his rise solely to himself. Diligent labor was the only source of his fortune, and the first attempts of his infancy presaged the success of his mature age.

Canova was an Italian, the son of a mason. All the education which he received from his father consisted in learning the business of his trade. As soon as his strength permitted, he learned to handle the trowel and the hammer, to mix the plaster and to place the gravel—occupations which he discharged with sufficient zeal and activity to be soon able to serve as the journeyman or rather the companion of his father, notwithstanding his youth. But in the frequent intervals of repose, which his weakness rendered indispensable, he amused himself by observing the different objects which he saw about him—with sketching them roughly with brick or hard stone upon the wall against which he leaned, or even with modelling their forms in the plaster and cement which he had just mixed. These constant exercises, practiced with as much perseverance as intelligence, soon rendered him familiar with the practice of drawing and of sculpture in relief. But his youthful talent was unknown to all, even to his father, who only concerned himself with his greater or less skill in passing the plaster to the sieve and in pouring enough water into the trough.

A whimsical event suddenly occurred to reveal it to all the world.

His father had been summoned to make some repairs in the country house of a rich lord of the neighborhood. He had taken his son with him, according to custom, to

act as his journeyman, and the genteel carriage of the little Canova soon procured him the affection of the chief cook and of all the scullions of the house, so that, the day's work being ended, Canova did not stir from the pantry, where he executed in crumb of bread or in plaster grotesque figures and caricatures, which delighted the valets, and in return they fed him in the style of my lord.

One day there was an entertainment at the country house. Canova was in the kitchen, playing with the scullions, when they suddenly heard a cry of despair from the pantry, and saw the head cook coming out in alarm, throwing up his cap, striking his breast and tearing his hair. After the first moments of astonishment, they crowded round him. "I am lost," he cried, "I am lost! My magnificent master-piece! my palace, which I had built for the dinner! see in what a condition it is!"

And with a pathetic gesture, he showed an edifice of pastry, which he had just drawn from the oven. Alas, it was burnt, covered with ashes, and half demolished. There was a general cry of surprise and grief.

"What is to be done?" demanded the chief cook; "here is the dinner hour. I have not time to make another. I am lost! My lord expects for the dessert something remarkable. He will turn me away!"

During these lamentations, Canova walked round the demolished palace and considered it with attention.

"Is this for eating?" he inquired.

"Oh! no, my little one," answered the chief cook, "it is only to look at."

"Ah well, all is safe. I promise you something better than that in an hour from now. Hand me that lump of butter."

The chief cook, astonished, but already half persuaded by his boldness, gave him all he wanted; and of this lump of butter, Canova made a superb lion, which he sprinkled with meal, mounted on a pedestal of rich architecture, and before the appointed hour, exhibited his finished work to the wondering spectators. The chief cook embraced him with tears in his eyes, called him his preserver, and hastened to place upon the table the extemporaneous master-piece of the young mason.

There was a cry of admiration from the guests. Never had they seen, said they, so remarkable a piece of sculpture. They demanded the author of it.

"Doubtless one of my people," answered my lord, with a satisfied air; and he asked the chief cook.

He blushed, stammered, and ended by confessing what had happened. All the company wished to see the young journeyman, and overwhelmed Canova with praises. It was decided at once that the master of the household should take charge of him, and have him go through studies suitable to his precocious talent.

They had no cause to repent of this decision. We have seen that Canova knew how to profit by the lessons of his masters, whom he soon excelled. Nevertheless, in the midst of his celebrity, he was pleased with remembering the adventure of the lion of butter, and said he was very sorry that it had been melted. "I hope," he added, "that my later statues will be more solid, otherwise my reputation runs a great risk."

OBSERVATIONS

ON THE ILL HEALTH OF AMERICAN WOMEN.

By Harvey Lindely, M. D., of Washington, D. C.

The remark has often been made by Europeans, who have visited this country,—and the melancholy truth has been confirmed by Americans who have travelled on the eastern continent,—that American women suffer much more from ill-health than those of other countries. My attention has for some time past been particularly directed to this subject, and I am convinced that the remark is undoubtedly true to an alarming extent, and that it is the duty of the medical profession to examine into its causes, and if possible to suggest and urge upon the public the appropriate remedies.

Not only is the average health of our country women much less robust than that enjoyed by corresponding classes in Europe, and particularly in Great Britain, but it is much more infirm than that of the other sex in our country:—I mean, after making due allowance for those diseases and afflictions peculiar to their situation and duties in society.

With respect to their inferiority in point of vigor, strength and robustness, to the women of England, as well as of the continent, I believe there is not one dissenting voice among those who have enjoyed the most ample opportunities for comparison, and whose attention has been attracted to the subject. The European has a much more florid and healthful complexion—a much more vigorous person—and is capable of enduring much more fatigue and exposure, and of performing much harder labor. The slender, and delicate, and fragile form—the pale, sallow and waxen complexion—which are so common among us, are comparatively seldom seen abroad. The feats of pedestrianism which are almost daily performed in England, even by ladies of rank and fortune, would appear almost incredible to our feeble and sedentary country women.*

That the females of our country are likewise much greater sufferers from ill health than our sex, is a fact, which the daily observation of medical men has abundant opportunity of confirming—and the class of diseases, from which they suffer most, are precisely those which we would suppose would be produced by the peculiar causes operating upon them. They are, derangements of the digestive and nervous apparatus. Every physician of much experience must have been

* As an illustration of this remark, it is mentioned by a recent traveller, in his letters from England, that while staying for a few days at the house of a friend in the interior of the country, it was proposed one morning that the family, including the ladies, should make a call on another friend, who lived about five miles distant. They accordingly started on foot, without any remark being made as to the mode of locomotion, as if it were an ordinary occurrence, and on their way home, were on little fatigued as to be desirous of making a digression of some two or three miles, in order to exhibit some picturesque view, which they thought might be interesting to their guest, as a stranger. Such a pedestrian excursion by an American woman, would be an event to be talked of for life!

struck with the fearful extent and obstinate nature of these affections—always difficult to remedy and frequently even to alleviate—and they seem confined almost exclusively to females and men of sedentary habits. They are always productive of great and protracted suffering.

It is important, if the existence of these premises be admitted, to ascertain the causes which operate to produce them. There are, no doubt, some circumstances beyond our control, which may tend to render the health of our country women inferior to that of females in Europe; but even if this be granted, there seems to be no reason why it should not be as good (with the qualifications before mentioned) as that of our sex. The deleterious effects of our changeable climate, is the only irremediable difficulty. It is a general impression that the climate of our country is less favorable to robust health than that of Europe: that it is more variable—being subject to greater and more sudden vicissitudes of temperature—and that this fact alone is sufficient to account for much of the ill-health that exists among us. This is perhaps partially true, although I am persuaded, at the same time, that a great deal more is attributed to the influence of climate than its importance deserves. It is said that not only are our summers hotter and our winters colder than in corresponding latitudes in the old world, but that the range of the thermometer within short periods is vastly greater here than there: and that these sudden and violent changes are productive of disease in all its Protean forms. Something must undoubtedly be yielded to this cause; but still I am persuaded that its influence both by foreigners and ourselves has been vastly overrated. It is probably true of Great Britain, which, on account of her insular situation, enjoys a much more equable climate than the rest of Europe. The extremes of winter and summer are not so great as with us, and the changes are much less within any given period. The mercury seldom rises above 80° of Fahrenheit in the shade in summer, whereas here it almost always rises to 90°, and occasionally to 100°.* This, and the corresponding mildness of winter, present a striking contrast to our temperature; but this difference is much less obvious on the continent, where, although the cold may not be as intense in winter, or the heat as oppressive in summer, as with us, yet the variations of temperature are quite as sudden and as great. I do not recollect ever to have seen a greater change than forty degrees recorded as taking place within twenty-four hours, in this country—while I have the authority of a distinguished

* At Penzance, in the south-west of England, for several years in succession the mercury has not risen above 75° in the shade. The mean temperature too of our summer months, is much higher than that of England; and, of the winter months, proportionably lower. The mean temperature of the winter months in New York and Philadelphia is from 28° to 32°, while that of London, for the same season, is about 40°. The mean temperature of the summer months, in the former places, varies from 72° to 76°, but in London reaches only 62°.

traveller for asserting, that a change of fifty-three degrees has been occasionally witnessed in the old world in the same period. The sudden and violent changes that are frequently exhibited in Italy, have become almost proverbial—where the scorching sirocco, “Auster’s sultry breath,” and the freezing transmontane, hold alternate sway, and with such short intervals, too, that the unwary traveller, who has sought this fair but treacherous clime in search of health, often discovers to his sorrow, that he has left the comforts and pleasures of his own fireside but to find a grave in a foreign land! Nor are those sudden and fatal vicissitudes of temperature confined to Italy. Although more striking, perhaps, “in that land of glory and of song,” they occur in a greater or less degree in France, Germany, and every other part of continental Europe.

The difference as to climate then, I am persuaded, is so slight, as to produce but little effect in favor of European health—and in fact (always excepting that portion of our southern country bordering on marshes and stagnant water and swamps,) I firmly believe that the climate of America is as favorable to health and longevity, as any equally extensive portion of the eastern continent.* The United States, it should be recollected, cover almost as great an area as the whole of Europe, and of course, taking in their whole extent, as much variety in the temperature of the weather is to be expected. Indeed, the middle, Atlantic, and north-western states of our confederacy, possess as salubrious a climate as any in the world. The difference then which we suppose to exist between the health of American and European women, cannot be attributed in any considerable degree to the difference of climate; and of course this can have no effect in rendering it inferior to that of the men, as here the causes operate equally on both.

There is a variety of causes tending to deteriorate the standard of female health in America, some of which are common to both sexes, and some peculiar to females. The former I consider as of no great importance, comparatively, and I shall, therefore, merely glance at them.

A much greater quantity of animal food is eaten here than in any other part of the world; and I have no doubt, that with females and men of sedentary habits this is no inconsiderable source of ill health—while, very probably, with the poorer laboring classes it is decidedly beneficial, and (together with more comfortable

abodes and better clothing,) is the principal reason that dysentery and typhus fever are much less frequently epidemic, and much less fatal in American than European cities. There, a vast number of individuals being congregated together in crowded, filthy and ill ventilated apartments, and living on crude, indigestible food, and this in scanty quantity, furnish a very hot bed for these and similar fatal diseases. In this respect we are pre-eminently favored.

But while a sufficiency of animal and other nutritious food is important to the health and comfort of those who labor hard in the open air, it is equally certain that a large quantity of meat is injurious to others whose pursuits are of an inactive and sedentary kind. Every body here is too much in the habit of using animal food three times a day, whereas once a day, and then in moderate quantity, is as often as any, except the hard-working laborer, requires it. Its excessive use tends to derange the general health, to debilitate the digestive organs, and produce a plethoric state of the whole vascular system, and should therefore be proscribed by every medical man, to all females, with very few, if any exceptions.

Perhaps a still more injurious practice is that of using hot, unleavened bread at our meals, and particularly at breakfast. Almost every family in this country, and more especially in the southern portion of it, is in the habit of having hot bread of some kind, and frequently three times a day. Every physician knows that this is much less digestible than bread which is properly leavened and has had time to become cold after being baked. It is, in fact, often but little better than half risen dough, and its digestion is a most unreasonable task to impose on any stomach, except such as can form chyle out of brick-bats. To make the matter worse, large quantities of tea and coffee are taken at a temperature little less than that of the boiling point, as if we were determined to do our utmost to violate the laws of nature and derange the functions of the animal economy.*

Another habit, in which undoubtedly all classes here are deficient, is the daily practice of ablutions. This subject has of late been frequently discussed, and its importance urged upon the attention of the public; but still I am afraid that little progress has been made in its general adoption: and yet every one who reflects a moment on the nature and functions of the skin, the importance of removing every obstruction to the insensible perspiration, and the increased danger of cutaneous diseases from want of cleanliness, knows that the importance of frequent friction and constant ablution can hardly be overrated. The habit of daily or at least

* The relative mortality of different countries, is of course the only fair criterion by which to estimate their comparative healthfulness. I am aware that implicit confidence cannot be placed in the bills of mortality, yet as they are the only guides we have, and as in most cases they probably make a near approximation to the truth, no great error can be committed in making calculations from them. During the year ending on the first of October last, particular care was taken to have full and complete returns of all interments in the city of Washington: and as these were made under my superintendence, as connected with the Board of Health, I know that they are correct, so far at least as the number of deaths is concerned. In that time we had about our average amount of sickness, and I cannot, therefore, be far from the truth in assuming the number for that year as a standard. There were 419 deaths during the year, and as our population is fully 25,000, including strangers, it gives a mortality of but one in fifty-nine; while in London, which is undoubtedly one of the healthiest cities in Europe, the mortality is one in forty; and in Rome and Naples one in twenty-seven pays the debt of nature annually; showing a decided superiority in favor of our national metropolis, and which I believe is likewise applicable to all our principal cities, except those of the south.

* All foreigners are struck with the diseased appearance and premature decay of our teeth. How much of this *national* and most unfortunate defect is to be attributed to our taking our food, and especially our drinks, at so elevated a temperature? It would be an interesting subject of inquiry, if some one who has the requisite leisure and suitable opportunities, would investigate this matter thoroughly and philosophically; and he would confer a public benefit of no little magnitude, if he could ascertain its causes and point out the appropriate remedies. There can be no doubt, that extremely hot drinks always injure the teeth, giving rise to inflammation and subsequent caries and destruction of these important but delicate and susceptible organs; and probably the iced water, too, so freely used during our hot summers, may be equally injurious, as it is the sudden change of temperature to which the teeth are exposed that causes the mischief.

frequent bathing or washing the whole body, is decidedly more necessary to the health of women than of men, as a general rule, because from the very nature of their employments (being sedentary and within doors) they need something to make up for the deficiency of more active occupations. Bathing and rubbing the skin afterwards with a flesh brush, or a coarse towel, is the very best substitute for this want of general activity, because it actually affords considerable exercise, and because it accomplishes one of the most important objects of exercise—a healthy state of the skin.

Our whole national habits need a thorough reformation in this respect. If we may judge of the domestic habits of the people, by the condition of our public hotels, there is no civilized nation on the face of the globe, so deficient in the conveniences for cleanliness, (and of course, we may suppose in the reality,) as ourselves. We are certainly behind most European nations, and still more inferior to many of the Asiatics, in the practice of this most delightful and beneficial of all the appliances for health. Mr. Stuart, who presents a much more favorable portrait of us than the generality of his countrymen have, in his travels in this country, remarks, that "the practice of travellers washing at the doors, or in the porticoes or stoops, or at the wells of taverns and hotels, once a day, is most prejudicial to health: the ablution of the body, which ought never to be neglected, at least twice a day, in a hot climate, being altogether inconsistent with it. In fact, I have found it more difficult, in travelling in the United States, to procure a liberal supply of water at all times of the day and night in my bedchamber than to obtain any other necessary. A supply for washing the face and hands once a day seems all that is thought requisite."

When the saline and other elements caused by perspiration and by exposure to the air and dust, are allowed to accumulate on the skin, they necessarily obstruct its pores and derange its functions; and if this state of things is permitted to continue for some time, obstinate cutaneous diseases and not unfrequently violent internal affections, particularly of the stomach and bowels, will almost infallibly ensue. I have again and again witnessed that most obstinate and disgusting complaint, the scald head, arise from apparently no other cause. The quantity of dry, white scurf, which collects on the skin and which can be removed even by the flesh brush, is really surprising; and travellers in the east, who have enjoyed the luxury of an oriental bath at Constantinople or Cairo, and who considered themselves not previously deficient in habits of cleanliness, express their astonishment at the immense amount of these scaly particles, which a single ablution will remove—and they tell us, after using the bath two or three times, the skin instead of presenting the dry, rough, husky feeling so common with us, has all the elasticity, delicacy and softness of the finest velvet.*

The daily use of the bath has often been objected to, as inconvenient and as occupying too much time, and time too which can ill be spared by the industrious and busy American. But the fact is, it can easily be so managed as to occupy but little time, and occasion but little inconvenience. A basin of water, a coarse

towel, and five or ten minutes at rising or going to bed are all that are necessary. And where is the man, woman or child, in the whole land, so busy or so poor, as not to be able to afford all these? It is desirable that this ablution should be performed every day, but it should never be neglected for more than two days. There can be no doubt, that this habit alone, perseveringly and regularly continued, would do very much to restore the feeble health and invigorate the enervated constitution of American females.

The absurd system of dress too, adopted by the sex, is often productive of serious mischief, and not unfrequently leads to fatal results. It seems as if a mode of dress could hardly be devised, which in some respects would more infallibly produce disease, suffering and death, than the one now in vogue. The exposure of the feet, neck, breast and arms, to cold, wet and sudden vicissitudes of temperature, is exactly fitted to bring on pleurisy, coughs, consumption, dysentery and various other serious complaints. The exposure of the feet alone, in the way in which it is often done, is enough to cause the most fatal attacks. For example, I have seen a lady walking to the capitol, through the streets of Washington, when the snow was two or three inches deep and melting rapidly, with nothing to defend the feet but silk stockings and thin morocco shoes. Nor is this a very uncommon occurrence in any of our cities—and at any rate, exposures almost as suicidal are daily taking place. Instead of wearing boots with India rubber over-shoes and thick stockings, (concealed, if fashion render it necessary, by silk or cotton over them,) they at best have only worsted hose, thin low shoes, and perhaps over-shoes, all so low as readily to admit snow and water. Again, it is a very common practice for them to wear worsted or cotton stockings in the house and by a warm fire, and to put on silk when going out, thus rendering the dress thinner instead of warmer on being exposed to a lower temperature. The same dangerous practice prevails likewise with respect to the arms and neck, both of which will be more or less warmly covered at home, but at parties, where they are constantly exposed to sudden changes of air, they are either naked or nearly so. These and a hundred other instances of imprudence and carelessness, with respect to dress, are constantly occurring with females of all ages—but more particularly at that period of life when they are most dangerous, viz: at the commencement of puberty, when nature is exerting herself to effect those changes in the constitution, which are indispensable to fit the female for her peculiar and important duties in society.

Consumption too, is often caused by exposures of this description—and in fact, the greater number of instances of this complaint, which occur among females than among males, between the ages of sixteen and twenty, (a difference which certainly exists,) can, I suspect, be accounted for only on the supposition that their dress and habits generally render them peculiarly liable to it. What stronger proof could be adduced of the necessity of a radical change in these respects? This subject need only be referred to, to convince every individual of its importance and its truth.

To enjoy perfect health, it is absolutely indispensable that the feet should be kept dry and warm—and this is decidedly more necessary for females, for very obvious

* Several of the remarks and illustrations contained in this article, were published by the writer in a series of essays in the Philadelphia Saturday Courier of 1839.

reasons, than for the other sex. Every woman should therefore have her feet guarded with the most sedulous care from wet and cold, and then take as much exercise in the open air as her situation and circumstances will admit of. She should always, in the winter season, wear woollen stockings, stout shoes or boots with thick soles, with over shoes in wet weather, and all sufficiently high to effectually exclude snow and water. Flannel drawers also, and sufficient covering for the breast and neck, should never be omitted—and above all, those capricious and dangerous *changes* of dress, (now so common,) should be most carefully avoided.

The mode of female dress is bad enough in all fashionable circles throughout christendom, but unfortunately for us, it is decidedly worse in America—at least that commonly worn in the street—than in Europe. In London it would not be considered *genteel* (a most important and potential consideration,) for ladies to be seen in the street as thinly clad as is customary with us. There, the rules laid down in the preceding paragraphs, are in general fully adopted, and the principle is carried even farther: for India rubber over dresses are not uncommon as a defence against their sudden showers—a precaution, to be sure, which our more regular climate renders in part unnecessary.

There is another custom, peculiar almost to American women, which prevails to a great extent in some parts of our country, and which is productive of immense suffering to the individuals themselves, as well as of great injury to the constitutions of their children: I refer to the extremely early age at which females are often married, particularly in the southern and western states. This is not a proper place to discuss this subject in all its painful aspects, and I will therefore only remark, that every physician of extensive practice, is often called to witness and lament the distressing and irremediable maladies caused by the indiscretion referred to.

The most prolific source, however, of disease and suffering to the female sex, is, unquestionably, the want of proper and sufficient exercise in the open air. This is an evil that I despair of ever seeing completely remedied so long as *fashion* throws so many obstacles in the way; but still I have no doubt a great deal may be accomplished by perseveringly calling the attention of the public to its injurious consequences; and there is no class of men who can do so much and act so appropriately as the medical profession, in bringing about this desirable reform.

The habit of confining the female sex within doors to the certain and irremediable injury of their health, is begun in early childhood. From the time the child can walk, till she sinks into her (perhaps premature) grave, confinement in close, ill-ventilated and may be crowded apartments, is her lot. While the boys of the family are allowed, nay urged to spend much of their time, when not at school, in active out-door sports, which are considered important, if not necessary for *their* health, a totally different course is pursued with the daughters, as if their systems were constituted in a manner to require no such adventitious aid to invigorate and strengthen them. The natural consequences of such a plan of education are too soon apparent in the pallid countenance—the feeble frame—the languid appetite—the restless night—the feverish tongue—the nervous head-ache of the daughter—while the rosy complexion,

and generally vigorous health of the sons, as clearly indicate the propriety of the opposite system.

The practice is continued as the girl advances from infancy to childhood and youth. At the age of three and four years, and sometimes even earlier, she is sent to school to spend six or seven hours a day, in a crowded room, with the atmosphere rendered impure and unwholesome by the congregated breaths and bad ventilation. And, as if this were not doing enough towards enfeebling her health and undermining her constitution, she is, in addition, placed on a seat without a back, so that the muscles of the spine and trunk are kept continually on the stretch in order to support the body, instead of being allowed the alternate contraction and relaxation so essential to their active growth and perfect development. These muscles from being placed in this unnatural state, soon become enfeebled and drawn to one side, and that dreadful malady, curved spine, is the frequent consequence. And, to make the matter still worse, the enervated frame is now encased in tight stays, with an abundance of steel and whalebone, and thus all motion of these muscles is literally prevented, and nature wholly obstructed in her attempts to counteract this absurd and dangerous violation of her laws.

Curvature of the spine is found to occur much more frequently in girls than boys, owing without doubt (for no other reason can be assigned) to the more active habits of the latter when out of school, which invigorate their muscular system, render it more elastic, and thus enable them successfully to withstand the effects of this confinement. I am fully satisfied that the great and increased frequency of this harassing and obstinate affection among girls, arises chiefly if not wholly from their improper and useless confinement in school when very young, superadded to their general languor and debility, from want of active exercise in the open air.

This view of the subject is confirmed by Dr. Forbes in his excellent article on "Physical Education," in the Cyclopædia of Practical Medicine, where, in speaking of the regulations of a boarding-school for girls, which prescribe daily one hour's exercise, (a walk on the public road,) and that only when the weather happens to be pleasant, at the precise hour assigned to it, he remarks, "That the practical results of such an astounding regimen are by no means overdrawn in the preceding pages, is sufficiently evinced by the following fact—a fact which we will venture to say, may be verified by inspection of thousands of boarding-schools in this country. We lately visited, in a large town, a boarding-school, containing forty girls; and we learned on close and accurate inquiry, that there was not one of the girls who had been at the school two years, (and the majority had been as long,) that was not, more or less, crooked! our patient was in this predicament; and we could perceive (what all may perceive who meet that most melancholy of all processions—a boarding-school of young ladies in their walk,) that all her companions were pallid, sallow and listless. We can assert, on the same authority of personal observation and on an extensive scale, that scarcely a single girl, (more especially of the middle classes,) that has been at a boarding-school for two or three years, returns home with unimpaired health; and for the truth of the assertion, we may appeal to every candid father whose daughters have been placed in this situation."

The whole school system, as generally adopted in this country, with respect at least to the very young of both sexes, is absurd and vicious and should be reformed. This is not the place to discuss such a question, but I cannot forbear remarking on the folly of confining children of from three to seven years of age, six or seven hours every day in the close, crowded and ill ventilated apartments, called school-rooms, in order that they may employ about *twenty minutes* in reciting their lessons—for in point of fact they do not spend more time than this at their books. They are generally called on to recite twice in the forenoon, and as often in the afternoon, and not more than *five minutes*, and frequently less, are devoted to this object each time. The remainder of the day (for they are too young and inexperienced to know how to *study*;) is spent in listless and to them hateful inactivity—or in petty mischief, annoying to their teacher and their school-mates. This course is exactly fitted to disgust them with the very name of study or of school—to injure their health and depress their natural energy and sprightliness. How much more useful would it be to the child, and how much more agreeable to the teacher, (for it would save him the trouble and vexation of constantly watching the little urchins,) that this unemployed time should be devoted to play and exercise. If children must be sent to school at all, at an early age,—of the necessity and policy of which, however, we are altogether incredulous—why not have play-grounds attached to the school-house, where these active little beings may be agreeably and usefully occupied, except when actually engaged in reciting?

Mr. Friedlander who has written well and much on the subject of education, gives the following table for the hours of rest and labor as best adapted to the development of the intellectual and physical powers of children.

Age.	Hours of sleep.	Hours of exercise.	Hours of occupation.	Hours of repose.
7	9 to 10	10	1	4
8	9	9	2	4
9	9	8	3	4
10	8 to 9	8	4	4
11	8	7	5	4
12	8	6	6	4
13	8	5	7	4
14	7	5	8	4
15	7	4	9	4

The habits of most girls, after leaving school, are very little if at all improved, as it respects exercise in the open air—and in fact it is fortunate, if they do not become even worse than before. The natural buoyancy of youth, and the excitement of companionship, will often lead them to engage in sports at school, which are entirely relinquished in solitude and retirement. As they advance in age, these inducements grow less and less, and the opportunities for their employment more and more rare. They now go out but seldom; whole days, and sometimes several in succession pass on, without their once enjoying the exhilarating effects of the fresh breeze; and at best, this indispensable requisite to health, is not resorted to one-fourth as much or as often as it ought to be. Instead of spending from *two to four hours every day* in the open air, probably half an hour is the maximum, and even this is

frequently wholly intermitted. Every physician knows what must soon be the lamentable consequences of such a course—an utter prostration of all corporeal vigor—and that inevitable result, a nervous state (the immedicable disease) of the system.

There is no such thing as enjoying perfect, robust, vigorous health, without exercise—and without exercise in the open air. A naturally hardy constitution may bear up, with apparent impunity, for a considerable time against this gross violation of nature's laws—but the day of bitter and lasting retribution, ever to such will surely come—while those, who are constitutionally feeble and delicate, very speedily suffer the punishment due to their folly and carelessness.

I have no doubt, that nine-tenths of the suffering endured by nervous females is owing entirely to the neglect of this single habit—and that an invigorated constitution, renewed health, renovated strength, a healthy and therefore beautiful complexion, increased appetite and elasticity of spirits, would very soon follow in the track of altered habits.

Among all the various classes of individuals who suffer in this way, my sympathy has been most frequently excited in behalf of those women who earn their scanty and precarious livelihood by sewing. These unfortunate persons are perfect martyrs to the various diseases we have been considering. Head-ache, pain in the side, weakness of the back, stricture of the chest, dyspepsia in all its harassing and peace-destroying forms, habitual and obstinate costiveness—these, and even more than these, are common attendants upon their life of privation and suffering. And when urged to adopt the only effectual remedy, they tell us they have not time—that the supply of their own necessary wants and of their families, renders the employment of every moment absolutely indispensable. This is a plea, which at least, must command our respect and excite our sympathy, if its correctness and truth do not claim our assent.

It is, however, undoubtedly a mistaken and short-sighted view of the case, even on the score of interest and economy. The body, as well as the mind, requires rest and recreation, and *change*—and although, perhaps, not to the same extent, yet certainly the same in kind. We all know that the student who devotes but eight or ten hours a day to literary pursuits, and employs as many more in active exercise, will accomplish more in a given period, than he who spends double that time in poring over his books; and for the simple and obvious reason, that the mind cannot be applied *rigorously* and *effectively* more than eight or ten hours a day to one subject. Just so it is with the body. If these good women could be persuaded to devote two or more hours each day to walking, or, where it is practicable, to riding, or some other efficient exercise in the open air, enough would be gained in renewed vigor and increased elasticity to more than compensate for the little loss of time—and more, I have no doubt, would be actually accomplished, than in the present mode, to say nothing of the incalculable benefit that would result to their permanent health and comfort. And I hardly know a greater benefit the medical profession could confer on the public, than to lend their powerful and efficient aid in accomplishing an entire change in the habits of American women in this respect.

This change is equally necessary in all ranks and conditions of society. From the lady of fortune, who spends her time over the piano and the latest novel, to the humble seamstress, who devotes perhaps fourteen hours out of the twenty-four to her needle, all suffer from the want of active employment, and all need the cautionary advice of their medical friends. The wealthy indeed have much less excuse for their deficiency here than those in poorer circumstances. A great variety of modes of exercise, agreeable and convenient, are accessible by them, while the others are necessarily more restricted in their choice. Riding on horseback, in carriages, walking, swinging, battledore, &c. &c., are all good, and might all be usefully resorted to in their turn, and all these too, except the first, could readily be enjoyed by all.

The importance of this subject can hardly be overrated. Robust and vigorous health is necessary to the physical, intellectual and moral advancement of a nation, and every thing, therefore, which tends to its more rapid improvement and more extensive diffusion, should never be neglected by the patriot or the philanthropist.

CURRENTE-CALAMOSITIES: TO THE EDITOR.

BY THE AUTHOR OF "THE TREE ARTICLES."

NO. II.

CHRISTMAS AND NEW-YEAR'S.

Christmas day, 1839! One of the smiles the old year, dying, puts on to make his old friends remember him! And we will remember him: for what says quaint Tennyson?

"Old year, you shall not die!
We have so laughed and cried with you,
I've half a mind to die with you,
Old year! if you must die!"

Keeping Christmas is a very ancient custom: and our fathers in the "old cuntry," have been longer renowned for this usage than any other people, and for a much longer time, moreover, than they themselves have celebrated any other festive occasion. Of yore, they appointed at the king's court, (as old Stowe tells us,) a "lord of misrule, or master of merry disports:" the same merry fellow made his appearance at the house of every nobleman and person of distinction; and, among the rest, "the lord mayor of London, and the sheriffs, had their lords of misrule, ever contending, without quarrel or offence, who should make the rarest pastime to-delight the beholders."

Then there was the "hagmena," a night or two before Christmas, when folks went about in the garb of beggars, wishing happy Christmas and New Year, and carrying away money, pies, puddings, nuts and apples:—a very olden custom. Kindred with it is "mumming," which is, the different sexes changing attire and going about, from house to house, on the "hagmena," or begging frolic. I believe this is kept up in our own more sober land, "a custom," however, to quote Hamlet, "more honored in the breach, than in the observance."

The idea of bedecking churches and houses with green boughs was Druidical; and has been used in Britain, ever since the times of those ancient pagans. They covered their dwellings with ivy and holly boughs, to invite thereto the sylvan deities they worshipped, to protect them there, till the woods should again put on their foliage. This custom is continued, in this country, among the Catholic and Episcopal congregations, as well as in the father land. It is an erroneous derivation of the origin of it from that passage in Isaiah's prophecy, which tells of the box, the fir, and the pine, as beautifying the sanctuary, and making the place of God's feet glorious. The custom is clearly a pagan, and not a christian one, in its origin.

In "Poor Robin's Almanac," as given in the "Popular Antiquities," by Branel, there is a Christmas carol that shows how that festival was commemorated in 1695, and so worth copying here.

"Now, thrice welcome, Christmas,
Which brings us good cheer!
Minced pies and plum pudding,
Good ale and strong beer!
With pig, goose, and carpon,
The best that may be,—
So well doth the weather
And our stomachs agree!

Observe how the chimnies
Do smoke all about!
The cooks are providing
For dinner, no doubt.
*But those on whose tables
No victuals appear,
Oh! may they keep Lent,
All the rest of the year!*

With holly and ivy,
So green and so gay,
We deck up our houses,
As fresh as the day.
*With bay and rosemary,
And laurel complete,
And every one, now,
Is a king,—in conceit!*

* * * * *
But as for curmudgeons
Who will not be free,
*I wish they may die,
On a three legged tree!"*

How clearly does the old prophet-bard, above named, throughout the whole sixty-six chapters of that divine poem, foretel the coming of the Father, Prophet, King, whose birth millions are, at this hour, engaged in celebrating! And how does his song call to mirth and gladness, in its every burst of prophetic eloquence! "Break forth, break forth into joy! Sing, sing together! Wasted Jerusalem! Jehovah hath comforted his people! Jehovah hath redeemed Jerusalem! He hath bared his arm in the sight of all the nations! All ends of the earth shall see his glorious salvation!" And they have!

Eighteen centuries ago, it was one perpetual night which veiled the whole earth. To a handful of the human race, upon the remote corner of Judea, there shone the faint light of ancient prophecies; but they were only like distant stars, which sent their trembling rays upon the darkness, and adorned, but not removed the curtain that hung its folds over the world. As to the Gentile nations, their "philosophy" had now sunk into

profound repose, in complete despair of being able to furnish the wanderers with guidance and light. Then, all which loves the shroud of darkness was awake and active. Profligacy indulged, freely, its enormities. Superstition fastened its chain upon the multitude. Idolatry built, every where, its shrines,—and power clashed with power,—and nation rose against nation, filling the earth with wars,—until, in those sad hours, no step was taken, and no event occurred, that served not to add fresh discord to the raging of the people. It was the season, when penitence had no hope,—the passions no guide,—and the world yielded to the empire of sin and of death! Thus, “darkness covered the earth, and gross darkness, the people.” When, suddenly, a light broke from the east! The clouds rolled off from the heavens! The spirits of the night were surprised by a day-beam from on high! Ignorance stood detected! Philosophy was humbled and amazed! The bosom of the penitent was filled with joy! The grave seemed decked with flowers! For the Sun of Righteousness had spread over the world the healing of his rays,—and the pure air was filled with the melodies of celestial spirits giving “Glory to God in the highest,” and, on earth, proclaiming “Peace—good-will,—toward men!”

This day, then, is the anniversary of the hour that admitted an emanation from the One only true God into the humble and sinful abodes of benighted man, to take upon him our nature, and to become to us a glorious Redeemer. We are bidden by inspiration to hail him as “The Mighty God! the Everlasting Father! the Prince of Peace!” The only perfect image of God in man, as an example of pure holiness, first exhibited for the elevation of a fallen race! The only prophet, whose influences of the spirit are unmeasured! Messiah,—in all the authority of that relation! King,—in all the power and dominion of that sovereignty!

How meet is it, then, that such an anniversary,—the hour that gave birth to One in whom *all* faith and hope are centred,—should never return without receiving the fullest distinctions, and honors, it is in our power to give it. Why should we refuse to go to the cradle of Christ, and, like the philosophers of the east, render all homage to Him, the Prophet, King, Redeemer? We encircle the days of national deliverances, with every demonstration of gladness: those, on which the chains of the oppressor were broken, and liberty returned on the banners of armies and fleets. Why, then, shall we decline to commemorate the advent of the Conqueror, who burst, for us, the heavier bondage of evil desires, and the dark prison of the tomb? who proclaimed the more glorious liberty of the sons of God, and shone in triumph over the influences and domination of an infernal foe? We mark the period with rejoicing, in which the mild influence of peace descends, like refreshing rain, after the thunders and commotions of war. And shall we refuse respect and the evidences of delight, to the hour when a holier peace was announced on the lyres of angels;—when all fears of God’s offended justice vanished in the presence of a Mediator?

We deem it to be an important duty to consecrate the hour of *the natural creation*, when the Creator rested from his labors,—by weekly observances and honors,—when God said “let there be light! and there was

light!” and a world of beauty and brightness sprung from the confusion of chaos! And shall we neglect the annual return of that period, when, at the rising of a brighter light, *the moral world* sprang up in the freshness of a new creation, and spiritual influences moved over the face of a wilder chaos of perverted, misguided and corrupted affections, to summon into life an empire of knowledge, holiness, and peace?

* * * * *

New Year’s, 1839. What a soft delicious day, for mid-winter! Peacefully, and with a smile of rare beauty dawns the New Year on us: and may it so continue, to the end. Some there are who view with a too solemn and serious air, the recurrence of this merry season of the year. “Is this a time to be cloudy and sad?” Shall we greet the approach of the stranger with gloom on our brow? We have sped the parting guest, and drank the peace-cup, in hearty libations, to his memory.

“He frothed his bumpers to the brim,
A jollier year we shall not see!
And though his eyes are now so dim,
And though his foes spoke ill of him,
He was a friend to me!
He was full of joke and jest,
But all his merry quips are o’er;
To see him die, across the waste,
His son and heir hath rid, post haste,—
But he was dead, before!

Every one for his own!
The night is starry and cold, my friend!
And the New Year, blithe and bold, my friend!
Comes up, to take his own!

* * * * *

Alack! old friend! thou’rt gone!
Close up his eyes! Tie up his chin!
Step from the corpse! and let him in,
Who standeth there alone,
And waiteth at the door!
There’s a new foot on the floor, my friend!
And a new face at the door, my friend!
A new face at the door!”

Tennyson.

Then the health we drank to thirty-eight, let us drink to thirty-nine! May it be a year of prosperity and success, to the readers of the Messenger, and to the Messenger itself! May a smiling spring, a fruitful summer, a rich autumn, an abundant harvest, and a gentle fall and decay, be the records of its career, as set down in the great volume of nature, kept by the patient and truthful finger of old Time!

“And let the shepherd’s flute, the virgin’s lay,
The prompting seraph, and the poet’s lyre,
Still sing the God of seasons, as they roll!—
For me,—when I forget the darling theme,
Whether the blossom blows, the summer ray
Russets the plain, inspiring autumn gleams,
Or winter rises in the blackening east,—
Be my tongue mute; may fancy paint no more,—
And, dead to joy, forget, my heart! to beat.”

Thomson.

New Year is the seventh day from Christmas, and comes into “the holidays” with all that merry season’s claims upon our attention. Its observances are, generally the same; though, in different sections of this country, as well as in different countries, it is celebrated in various ways. In olden time, that quaint and most veracious chronicler, old Stowe tells us, the young women went about with the famous “wassail bowl;” which was a bowl of spiced ale, on New Year’s eve

and morning, with some appropriate verses, which they sang from door to door. "New Year gifts," it seems, were even then as much in vogue as now. I think the huge bowls of egg-nog, apple-toddy, whiskey-punch, mulled wine, and other similar potations, which are set up by the hospitable keepers of New Year's, in some sections of our country, are but so many improved lineal descendants of the old "wassail bowl." Instead of carrying this bowl from door to door, however, as was then the custom, "the young women," more wisely and modestly, stay at home, and receive the visits of those who are inclined to partake of the merriment of this happy season. And thus are well brought in, moreover, the presentations of the "gifts," which still characterise the mode of celebrating the coming of the New Year. In this respect, too, the moderns have improved vastly on the ancients. See the array of Souvenirs, Tokens, Bijoux, Books of the Boudoir, Books of Beauty, Gems, Tableaux, Keepsakes, Forget-me-Nots, Scrap Books, Gifts, Violets, and the whole host of annuals, with which the compters of the booksellers, and the centre tables of the fair and lovely of the land are glittering. Old Stowe would have written a few more quartos and folios, by way of commemorating the celebration of such festivals, had they been characterised by features like these. But yet, I doubt whether, after all, with this increase of luxury in the mode of keeping up these memorable days, we have not lost a good deal of that real feeling with which our fathers held them in remembrance.

"'Tis good to be merry and wise,"
saith the old song: a sentiment of deep meaning and pith. So felt and so acted the people of a simpler day. I am of his mind who has quaintly said,

"I like them well! the curious preciseness
And all pretended gravity of those
That seek to banish hence these harmless sports,
Have thrust away much ancient honesty!"

And, searching among these musty records, I have found a bit of valuable information for my fair readers, who have not yet made up their minds as to which of two emphatic monosyllables they will fix upon, in a certain contingency. Old chronicles say, that at the first appearance of new moon, *after New Year's*, if any unmarried woman will go out, at evening, and look over the spars [bars] of a gate, or stile, and, looking on the moon, repeat the following lines—

"All hail to the Moon! all hail to thee!
I prithee, good Moon, reveal to me,
This night, who my husband must be!"

and then go directly to bed, she will dream of her future husband.

Here is a queer proverb of very great antiquity, which I insert as appropriate to the month I write in:—

"If the grass grow in Janveer,
It grows the worse for't all the year!"

And another for the month of this present publication:

"All the months in the year,
Curse a fair Februaire!"

But I must "draw up." I cannot ask more room, this month—for there are other and more amusing correspondents of the Messenger, who must have fair play. And so farewell for another month.

Washington, January, 1839.

J. F. O.

YOUTH.

"There was a time when meadow, grove and stream,
The earth, and every common sight
To me did seem
Apparelled in celestial light,—
The glory and the freshness of a dream!
It is not now as it hath been of yore,—
The things, which I have seen, I now can see no more!"
Wordsworth.

I.

Oh! give us back the happy time
In life's young hours,
When roving in a fairy clime,
'Mid fadeless flowers,

The heart leaped up, in its young delight,
At the meanest thing that hails its sight;—
When we saw a beauty, in the days of yore,
And heard a music we shall hear no more,—
In the Heaven above, and the Earth below,—
In the rain-bow's arch—in the river's flow,—
In the flowers that flush in the steps of Spring,—
The fountain's gush, and the butterfly's wing;—
When the sea, and the earth and the star-gemmed sky
Were filled with a brightness and melody,
Ere the carking cares of life had away,
Or custom had chased the charm away!

II.

Oh! it is not now as it was of yore,—
The spell hath departed forever more!
The rose still gladdens the face of Spring,—
Still the butterfly glances his golden wing:—
The bow still gleams in the Heaven above—
The emblem eternal of Peace and Love!—
The waves still leap on their march to the sea,—
The fountain still gusheth in melody:—
Yet tho' their hue be as bright, and as sweet their tone,
We see not—we hear not—as once we have done,—
For, the charm is now broken,—the fairy spell gone!

Oh! give us back the happy time
In life's young hours,
When joyous we roved in a fairy clime,
'Mid fadeless flowers!

III.

The charm is broken,—the fairy spell gone,
And wiser and sadder the heart hath grown!
We've learned to unweave the cunning woof
Of the bow, that spanneth yon star-wrought roof;—
We hear no more in the thunder-tone
The angry voice of th' Invisible One;—
The lightning leaps on its dazzling path
No longer the fiery sword of his wrath!
We have lifted the veil! and the cold hand of Truth
Hath broken the vision that gladdened our youth,
And its golden dream, yielding to reason's proud away,
In life's sadder wisdom hath melted away!
But what tho' that dream were deceitful and vain?
Oh! who would not wish to live o'er it again?
We've entered the garden,—we've plucked from the
bough,—
We've tasted the fruit,—are we happier now?
Oh! give us back the happy time
In life's young hours,
When joyous we roved in a fairy clime,
'Mid fadeless flowers.

ELIA.

RECOLLECTIONS OF A RETIRED LAWYER.

RECOLLECTIONS INTRODUCTORY.

I brought away from the practice of my profession, nearly the full measure of reverence for it, with which I commenced the study at nineteen. And that measure exceeded even the reverence attributed to honest Dandie Dinmont; of whom it is written, that in his heart, next to his own landlord, he honored a lawyer in high practice. Not one of my teachers—neither he who carried me, cyphering, through the Rule of Three, nor any of those who taught me Greek, Latin, and Mathematics,—no, nor our neighborhood preacher himself—ever half so filled my soul with idolatrous emotions, as a certain eminent barrister did, who sometimes, in going to or from one of his courts, called to spend a night or a day at my father's house. In conversation he was capital: fluent, copious, and lively; full of anecdote, drawn from both life and books; duly fond of fighting his forensic battles o'er again; and in the opinion, as well of my father (who was no bad judge) as of all our public,—one among the truest of men, and safest of counsellors. At the bar, he ruled juries, and some courts, with absolute sway, by his ingenuity, eloquence, and reputation for knowledge and honesty; insomuch, that (as was said of a great Edinburgh advocate) any litigant thereabouts would have deemed it 'a mere tempting of Providence to omit retaining' John Mason. With talents which, had he been ambitious, would have raised him to what dignity he pleased,—the more readily, as his political opinions were of the popular cast—he never sought office, and therefore never held it: for the days of *Regulus* and *Cincinnatus*, when consular robes went to seek retiring merit, have not been our days. When solicited to stand as a candidate for Congress, he constantly shrunk back, appalled at the obloquy sure to bedaub public men, and disgusted at the base compliances which general usage or party discipline exacted from them. The life of an independent country lawyer, was the life for him. In serving his clients, whom he served just as ably when they could pay him no fee as when they paid him hundreds—in scourging fraud, as he always did when it came in his way, without ever abetting it, even in a client—in vindicating wrongly-accused innocence, and sometimes (it must be owned) in screening guilt behind the ægis of his eloquence—in the bosom of his happy family, the enjoyments of friendship, the sports of the field, and the pursuits of literature—he found pleasures, oh, how little known to those who tread the steep yet miry path, leading to the bright, bleak, and barren summit of vulgar ambition! Still, he was not indifferent, far less ignorant, on public questions. He examined them all, thoroughly; reading, for that purpose, the newspapers on both sides, with the impartial eye of one who looks only to truth, and the public good. Oftener than once, at critical junctures, he addressed the people in resistance or in support of men or measures that appeared dangerous or beneficent; and with those auditories, no antagonist could ever withstand him. It may seem strange to many, that being so gifted, he should have so shunned those walks, wherein his endowments might have displayed themselves in their full amplitude and lustre. He held not only political distinction, but the very professional trophies which every court-day brought him, as of little worth, com-

pared to the joys of society and the chase. Our house was one of his resorts, at proper seasons, for hunting. I attended him and my father afield, from the time when I was able to carry a hare, or half a dozen partridges; and it was he, John Mason, who, in my eleventh year, placed a gun in my hand, to fire at a flock of larks, of which I killed three—my first exploit at gunnery. Those three birds were veritable *opime* spoils to me. Their killing was an epoch in my existence. From that day, for ten good years, the great theme of my thoughts and dreams, was hunting. Yet it was not alone that mastering passion,—it was rather the blandness of his tone and the paternal fondness of his whole manner,—that printed on my heart his words, as, upon my begging him to let me shoot, he handed me the gun; 'That you shall, my dear boy!'—At fifteen, I was his rival in winging game. But our chief strife was in deer-hunting. He preferred my father's big gun, called 'Ben Bowles,' that would chamber five buckshot, and carry forty at a load. I used the rifle. With these, and six good hounds—But I am garrulous: let all this pass.

John Mason died, a year before my law-studies began: disappointing all my well-founded hopes of advantage from his instructions, and his matchless example. Undesignedly, however, he gave me lessons which were of the most signal use; lessons, contained in what I myself remembered of his manners and character, and in the innumerable traits of integrity, benevolence, and high bearing, long preserved by tradition through the whole country-side. A most important influence those lessons have exercised upon my life. If my professional deportment was at all remarkable for the absence of those foibles vulgarly ascribed to lawyers; if, when consulted about the propriety of bringing a law suit, I always rigidly cross-examined my client touching the grounds of his claim, and dissuaded him from proceeding when I found it ill supported; if the suits which I thus prevented, were more than the many which I carried through; if I ever disdained pedantic display, appeals to prejudice, misplaced pomp of language, and every form of charlatanism; if I invariably strove to avoid misrepresenting either the facts in a case, or the argument of an adversary; if I was ever careful to lay down as *law*, to court or jury, nothing, save what I knew or believed to be law; if, instead of attempting to brow beat or abash younger lawyers, I did all in my power to encourage and assist them; if I never tried, by laughing, or grimace, or interruption, to impair the effect of an adversary's speech; if clients much oftener wondered at the lowliness than complained of the exorbitancy of my fees, while I was always anxious rather to overgo than fall under the charges of my brethren; if I never would gratify an employer's ill nature by wounding the feelings of an adverse witness or party; nor could be deterred by any personal danger, from lashing fraud, perjury, or impertinence;—it is all owing more to John Mason, than to any other human being, except my parents.

My early reverence for the profession of the law is now explained. Identified in my thoughts with John Mason, it could not but appear to me a sanctuary of the virtues. Nor has experience, the great dispeller of youthful visions, taken much away from the mass of my esteem. The law has its anomalies: what inexact science has not?—but in the reasonableness and happy fitting together of its principles; in their appli-

ability to endlessly diversified facts; in the beauty and aptness of its analogies; in the delicate nicety, yet clearness, of its distinctions; in the multitude of subjects with which it is conversant; in the number, as well as magnitude, of the interests it guards; and in the noble field of exercise it affords to the highest and best faculties of the human mind; the law leaves all other sciences, all other professions, immeasurably far behind. Its votaries, too, if comprehensively viewed, are worthy ministers at such a shrine. Ridiculous, and evil traits, undoubtedly, many of them have. Brought daily into contact with depravity, and forced to see it, often, in those whom the world believes immaculate, the lawyer runs a fearful risk of infection; nor does he always escape. But when he does escape, his quality is like treble refined gold—pure, bright, and precious. And, whether it is, that lawyers generally see the frightful mien of vice so palpable, as to hate and shun it of course; or that their professional training and practice contain some antidote to the poisoned atmosphere they breathe;—so large a proportion of them actually do escape the threatened contamination, that whoever meets a lawyer, feels reasonably sure of meeting a man of honor, as well as of intelligence. The instances to the contrary are exceptions to a general rule; and the wittings, here and in England, who have made such instances the pretext for throwing odium or ridicule upon the whole fraternity, rank but with the saucy jester who held up Socrates to derision, or the punier ones who have circulated the numerous current witticisms in disparagement of woman-kind. In looking for genuine representatives of the legal profession, a candid investigator will turn not to such impotent abortions in morals or intellect, as appear now and then at the city and country bar; but to those who tread emulously (no matter, whether conspicuously or not) in the foot-steps of D'Aguesseau, Somers, Erskine, Sir Wm. Jones, Quincy, John Adams, Wythe, Wirt, and Marshall.

Law-practice has one unhappy effect, upon many of its virtuous followers; in leading them to think ill of human nature, from the obliquities they behold. This, however, rarely happens except to those whose digestion is bad, or who have been defeated in some political aspiration. A few, I have known to acquire this form of misanthropy from mistaken views of religion and the Creator; and one or two, from having been early imbued with the head-wise but heart-foolish Maxims of Rochefoucault. The judgment of these last, has an affinity to that of knaves; whose discolored optics naturally transfer their own hues to whatever they contemplate. Those who have Juvenal's cardinal object of prayer—a thoroughly sound mind, in a sound body,—learn to make allowances for human weakness; to know how hard passion is to resist, when it concurs with tempting opportunity; to perceive that much of the villainy apparent to a lawyer, is seen through the blackening and distorting medium of his client's interest or prejudices; and to balance against the worst man's worst actions, some partially redeeming virtue, which even *he* is sure to possess. The vilest I ever knew—one who was universally deemed well worthy of the penitentiary, though his cunning always kept him out of it, and whom it was my lot once to expose and scourge before a jury so that they utterly discredited his oath, for his notorious perjuries,—had yet so kind a heart, that he was known to share his last dollar, and was ever ready to

divide his last loaf, with a distressed fellow creature. Nay, so little prone was he to malice, that even towards me, who had repeatedly been obliged to gall and thwart him, he preserved, I believe, something more than the semblance of good feeling.

Few lawyers practice long and with tolerable success, without witnessing, and being actors in, scenes or incidents more striking, by their pathos, or their comic power, than many which have made the fortunes of novelists and play-wrights. Strangely ingenious villainies, defeated by chances or devices no less strange; crimes, brought to light and sometimes to punishment, by oddly combined circumstances, or shielded by professional skill and eloquence; unexpected turns of evidence, covering the most hopeful suitor with blank dismay; displays of simplicity or of humor in witnesses or counsel, that set the court room in a roar; instances of sordidness, fraud, generosity, integrity, at which it were doubtful whether the laughing or the weeping philosopher might give the more scope to his propensity; these are a few of the objects which pass before the lawyer's eyes—a living drama and romance, where a sensible man may learn more of human nature, than from a dozen Shakspeares. I have had my share of such incidents. These, of which (I could say almost with Father Æneas) 'I saw all, and was myself no small part,' I have occasionally narrated to my children and grandchildren; who flatter me into the fancy that what they have so eagerly listened to, may equally please strangers to my name. Possibly, too, good may be done by putting honesty on its guard against fraud, and showing how to unmask knavery. Whether my memory, or my skill in selecting and arranging the facts I tell, will suffice to make them interest a reader as they have done my partial auditors, is very questionable. It is harder, for most people, to tell a story passably on paper, than by word of mouth. My eldest daughter's eldest daughter, however, promises to overlook my handiwork, correct the punctuation, improve the language where needful, and then read it to her mother, who is to set the part of Moliere's old woman, in deciding whether the piece will suit the public taste or not. Emboldened by their assurances of success, and promises of help, I begin. But let me advertise the reader, that if he meet any fine flourishes, of sentiment or of diction, in these narratives, they will be chargeable not to me, who am a plain writer, and a matter-of-fact man; but to the clever hussy aforesaid, who will retouch and 'improve' (as she says) all my effusions. Her style is sometimes too ambitious: a rare fault in women.

RECOLLECTION I.

THE PLEA OF INFANCY.

In the year 17**, a young man named T—E— commenced the trade of merchandise in a county adjoining his native one of B. His capital was not more than four or five hundred dollars; and his stock in trade consisted only of a barrel of sugar, a bag or two of coffee, two casks of whiskey, one ditto of hard cider, some nails, bar iron, and half a dozen small 'notions,' such as pins, fishhooks, &c. &c. Nothing particular was known of him, in that neighborhood, though some of the wise heads had been occasionally shaken at the idleness of his life. It had certainly verged upon dissipation. His father had never con-

trolled, never usefully employed him; but had suffered him to raise pocket money in the three stages of childhood, boyhood, and youth, successively by selling hare-skins and racoon-skins, and by gambling. He was at times a roystering, turbulent blade, as ever pitched a dollar or drained a glass; but, like most 'do-nae-goods,' he could be, when he pleased, smooth and specious in word and manner, as Belial himself. He was moreover handsome; of precisely that feminine beauty, which in any man is apt to betoken a light mind and frivolous character, but in one whose lot of life is low, hardly ever fails to indicate, if it does not cause, utter good-for-nothingness.

Such was our young merchant. But none of his new neighbors dreamed of half the ill that was in him: the good was on the surface, and every body was captivated by it. Never had so small a grocer, so large a run of custom. His sugar and coffee had to be renewed every two months, and his whiskey every two weeks. E——'s 'store' became the favorite haunt of all the good fellows within five miles around. All Saturdays, and many other days beside, were devoted there to tippling, pitching with dollars or with flat stones instead of quoits, playing 'old sledge' (or 'all-fours') with dirty, greasy cards; quarrelling and fighting. E. was the inspiring genius of every such frolic; not only by dealing out the liquor, but by mixing with the drinkers, and driving forward the jest, the laugh, the game; nay, sometimes, (for he could bully very plausibly) the quarrel and the fight. If he ever himself fought, it was in a very slight way, merely to maintain a reputation for spirit, which was indispensable to good standing, in that region. It never lost him a friend, or gained him a black eye for more than three days. He was the darling of the toppers. He was so gay, and frank; his laugh was such ready chorus to all their jokes; he poured out his good drink for them so ungrudgingly, not only while their money lasted, but so long as they had a cow, or a feather bed at home; he took such care of them when they were overcome with liquor—helping to lift them from the floor, where they would be trampled upon, to his own bed in the counting room, and when that was full, to a snug corner, where they might lie and v——! Then, if one of their horses at night-fall, tired of standing all day, gnawing the fence rail to which he was tied, happened to get loose and set off homewards, E. was sure to catch and secure him for the night, either by tying him to the same stake again, or by putting him in a pen hard by; often, too, throwing him several cornstalks to browse upon—which the animal, if it were only for variety' sake, relished better than the rail. There was nobody like T—— E——.

The women of the neighborhood, one might well think, would be with most difficulty won over to E.'s interest. Their discomfort certainly increased with his trade. Husbands and fathers were oftener and oftener seen staggering home, with red bloated faces, shiny, stupid eyes, their whole persons exhaling insufferable odors, and their tempers ready for furious out-breakings. Female wailings were sometimes heard, on such occasions. Mothers began to wear clouded countenances, and lift up deprecating hands and eyes to Heaven, when they heard their grown up sons talk of going to E.'s store: daughters hung their heads, and almost hid their faces in their long-eared calico bonnets, to conceal their sorrow and bruises, as they entered the meeting-house on a Sunday after one

of their fathers' convivial Saturdays: and wives drooped in silent, unutterable woe, under the brutality which was now requiring the surrender of their young hearts, and the constant devotion of all their womanly energies. Yet, unaccountably, they did not view T—— E—— as the author of their griefs. It had always been the custom, that every man who could find his account in selling spirits, should do so if he pleased. He had never been regarded as a mischievous tempter; nor had any of the misery he caused, been laid at his door. Besides, E., personally, was so pleasing—he flattered the dames and flirted with the lasses so winningly—he was so demure and moral when it was his cue, and so handsome at all times—that he was no less a favorite with the women, than with the tippling men.

Among his female friends, was a widow woman, who became desirous to turn her little farm and farming stock into money, which she thought would yield her a more certain and easy support. So infatuated was she with the manners and ostensible character of T—— E——, that she suffered him to be the purchaser, at the price of 1500 dollars, upon his own, unsecured bond, for paying her an annuity during life. It never occurred to her that this flourishing merchant and charming young man could possibly be insolvent; nor (what proved more material) that he was not of an age to bind himself by a contract.

For one or two years, the annuity was duly paid; but for the third and fourth, it was unpaid; and, all other means having failed, the bond was placed in my hands, "to be collected by suit." The suit began, and proceeded to that stage, at which, if no defence were made, a judgment by *default* would be confirmed against the defendant. Just at that stage, he, by counsel, entered his appearance, and pleaded *infancy*; i. e. that when he made the bond, he was not twenty-one years of age. The case was laid over (*continued*) till the ensuing term, at his instance; the loose practice then prevalent, not requiring him to make affidavit that his defence was just—else, in all probability, he would have so sworn.

At the next term of the court, when the cause was called, both parties announced themselves ready for trial. My client had for her agent a kind neighbor, who saw to the summoning of her witnesses, and served as a link of communication between her and me. Her adversary was present in person, prompting his counsel, and holding earnest conversations with his only witness—his father—who stood near, with a puffy book like a Bible, under his arm. As we could neither allege that the obligation had been given for *necessaries*, nor that the defendant had confirmed it by any promise made since he came of age, there was no alternative but to dispute the fact of infancy. The great question to be tried therefore, was, whether he was under age or not, when the bond was made?—In opening the case, I stated to the jury the nature of the transaction; exhibited the bond; told them what question they were to decide, and that the burthen of proof was on the defendant, to show his infancy; touched briefly upon the general dishonesty of that defence; adjured them because of that dishonesty, and because this money was literally *the all* of my poor widowed client, to be satisfied with none but the most clear and convincing evidence of what her debtor alleged; and then recited the circumstances on which I relied, to repel his allegation. These were merely, that he had transacted business with many persons on his own account; that

his father had not, for a year or two before his becoming a merchant, exerted the slightest authority over him; that his features and appearance were those of an adult; and that he had voted in an election previous to the date of the bond.

The defending counsel then rose, to make the opening statement on behalf of his client. He justified the young man for pleading infancy, by the general good policy and presumed justice of the law which authorised it, and by the particular fact that in this instance he had, through inexperience and youthful confidence, been induced by the plaintiff's artful representations, to offer her twice the value of her property. As to the question of infancy, the learned counsel said (with an air of undoubting triumph) that he would offer proof which would defy all my ingenuity to parry or elude, and any amount of skepticism in the jury to disbelieve; proof, by the oath of his client's own father, a man of unimpeachable character, that on the day when the bond bore date, the obligor was only nineteen years and some months old.

This was what I feared. The old man was sworn in solemn form (and methought the clerk propounded the oath with unwonted solemnity) to speak 'the truth, the whole truth, and nothing but the truth; so help you God!' He was then desired by my adversary to tell, if he knew, on what day of what year his son, the defendant, was born?

I objected to his answering the question, if there was a register, any where, of the son's birth. The register itself must be produced: no other evidence was admissible.

The court assented to my proposition. The adverse counsel and client exchanged sly looks of triumph. Their witness too, looked wise and self-important, as, with an air which said 'I expected it—I am ready for you'—he produced from under his arm the pury book above mentioned.

'Here's my son's birthday, written by me with my own hand in this here Bible. It's my own hand-write.'

'Read it,' said the counsel.

The old man put on his spectacles, and read an entry, importing that 'T—E—, son of the above' (meaning his parents, whose marriage was noted on the same page) 'was born on' such a day, 17**; being just nineteen years, eleven months, and six days, before the date of the bond.

'When did you write this?' said the counsel.

'The very day after he was born,' said the old man, nodding at his son.

'You are clear and distinct in your recollection of that?'

'O yes; for I've had the Bible ever since, and read over this register a thousand times.'

'Very well,' said the counsel again, and with a big, exulting look: 'I am satisfied—and so, I presume, are the jury. But perhaps, Mr. W., you still wish to cross-examine the witness?'

I certainly did wish to cross-examine him; and said so. Meantime, I had scrutinized the old man's Bible. It had no pages marked off between the two testaments, for a FAMILY RECORD, as modern Bibles have: the register of marriages, births and deaths, was written on a blank leaf at the beginning. It was observable, that all the entries, though purporting to cover twelve or fifteen years, were not only in the same hand, but made with ink of exactly the same color. Several different pens did appear to have been used;

but this, it struck me, might be only a finesse, to make the times of writing seem different. The identity of ink and handwriting, was extremely suspicious.

'Mr. E——,' said I, 'upon your solemn oath do you say, that you wrote this entry of your son, T.'s birth, here in this Bible, on the very next day after he was born?'

'Yes, if I was to die this minute, I say so!'

'And did you write these other registers?'

'I did—at the partikkler time every one of 'em bars date.'

'Then, if so, why is the ink in the last, exactly as old-looking as the ink in the first, which, you say, is fifteen years older?'

'I don't know—the long time, I suppose, has made 'em all look old alike. Can you see any difference in teeth, betwixt a horse that's fifteen and a horse that's twenty? Besides—the ink is pale, and here was different pen marks; that's evident.' And his counsel, delighted with his reply, held the book ostentatiously towards the jury; who seemed but too much of the old man's mind.

Staggered but not desperate, I again took the Bible, and turned to the title page; where, to my surprise and joy, I saw that it had been printed only ONE YEAR before the bond itself had been executed! The book had not existed, until nineteen years after the time when, as the father swore, he had there registered his son's birth!

Hiding my joy, however, and composing myself as much as possible, I again, by reiterated questions, made the poor old man repeat, beyond all chance for retraction or denial, his well conned story; and then, by reading aloud the printed date in the title page, and showing it to the jury, I satisfied them that the book had been bought, and the entries made in pale, oldish colored ink, with pens purposely varied, since the present suit began, and for this very occasion.

The wretched father sunk down in confusion, upon the witness bench. Without leaving their box, and without another word of testimony, the jury found a verdict for the plaintiff.

Still the judgment could be final only for the two delinquent instalments of the annuity. For future instalments, a resort to the court again and again would be necessary. And to satisfy even the present judgment, the caitiff debtor had no personal property upon which an execution could be levied. I therefore caused an execution to be issued, which, as I expected, was returned 'no effects.' I then filed a bill in equity, stating the facts; and praying that the land which my client had sold, might be applied to pay its own purchase money. As no security had been taken, and E— had not sold the land to any third person, her 'vender's lien,' for the purchase money was held valid: the farm was decreed to be sold on terms very similar to those on which E. had bought, but the new purchaser was required to give good security for his payments: and my client spent the rest of her days in tolerable comfort.

All who have read Miss Edgeworth's admirable 'PATRONAGE,' must remember an incident somewhat similar to this which I have narrated: the forgery of a will, detected by finding, under the wax of the seal, a sixpence coined long, long subsequently to the date of the will. The witness, (there also an aged man) had sworn, that on attesting the instrument, he had himself placed this sixpence under the seal. Instead of one coined in Queen Anne's time—which he ought to have used, to

make his story good—he had put in one of George III. “So weak is guilt, when destined to destruction!”

In crime, as in literature, there is less absolute novelty than the slight observers of either imagine. Authors, of the greatest reputed originality, are often found, wittingly or unwittingly to have taken unnumbered ideas, nay whole skeletons of books, from humble forerunners: and many tricks or atrocities, which their beholders deem without precedent or parallel, are in their leading features mere duplicates of each other. The resemblance between the two foregoing *detections*, exemplifies this. My own experience affords another example of the same kind. It was my fortune a second time to expose a foul fraud, by means of a blunder in the criminal, very similar to the former.

An executor, who had been in that office for several years, and had brought its duties nearly to a close, came one day to inform me, that an alarming claim had been brought forward against the estate of which he was just about to clear his hands. It was a bond, signed by his testator, and binding him to pay one L., nine hundred dollars. It bore date, two years before the testator's death. The executor had funds enough (*assets*) in his hands, to pay the demand; but he doubted its authenticity. L., had always lived within twenty-five miles of the deceased, and of his executor; had known the latter to be executor of the deceased, and to be ready to pay all just demands; and had himself been not at all affluent, so as to make it probable that he would long forbear to present his claim. The signature to the bond (my counseler said) seemed to him genuine: if a forgery, it was a most skilful one. L.'s character had not been entirely fair: so, coupling this with the other circumstances, I advised the executor to let him sue upon the bond.

Suit was brought. When the declaration had been filed, and with it the bond, I took the first opportunity to examine them. The latter was in the old fashion, of an obligation, with condition to pay 900 dollars; very long and wordy, covering more than half a page of foolscap; all printed, except the date, sums, and parties' names, which were written in blanks left on purpose. The paper and ink looked old as the date: the signature appeared to be the testator's own, (for I knew his hand;) but the blanks were filled evidently by a different hand, which the clerk said was L.'s. I pleaded, that the supposed writing obligatory was not the testator's deed, [*non est factum*] which plea my client made oath, that he believed to be true. An additional cause of suspicion had occurred to me. Holding up the bond towards a window, I read, wire-woven in the paper, its maker's name, T. AMES, S. Now I had a strong impression that Mr. Ames had not established his manufactory in S. more than five years: the bond purported to be seven years old. I held the necessary communication with him by letter; gave the needful instructions to my friend the executor; and at the trial, when L. had proved by several respectable witnesses that the signature to the bond, as they believed, was in the testator's own hand writing—I produced, properly taken and certified, the deposition of Mr. Ames—who resided in another state. He testified, that his paper manufactory in S. had not been established until the year 1809—two years after the date of the pretended bond; and that no other person of his name, had ever manufactured paper there, or elsewhere to the best of his knowledge and belief.

The jury found for the defendant; and the plaintiff escaped a prosecution for forgery only by his promptitude in leaving the court and the country, before the requisite measures were taken to apprehend him.

THE STEAMBOAT NEPTUNE.

BY MRS. SIGOURNEY.

The boat glides o'er the calm blue sea—
The vernal skies are bright—
The tuneful waves right merrily
Propel her flight.

But clouds arise—the ruffian winds
Rush from their prison-cell;
The shelving coast frowns dark and dread—
Mad surges swell.

'Tis night—drear night! the troubled bark
Reeling and headlong goes:
Or groaning, like a wounded man,
Buffets her foes.

The boldest mariner turns pale;
Hark! to the trumpet's cry—
How faint—while awful thunders roll,
Rending the sky.

The boat! it strikes—it strikes the rock!
The cry, the shriek, the prayer,
Are mingling with the deadly shock,
In wild despair.

There was a little child
Upon the mother's knee—
Who said her simple prayer
Amid that raging sea;

She sang her tender hymn—
Then spoke so free and mild:
“Mother, our dear Lord Jesus .
Doth love the little child;—

“You told me of his happy home,
Above the stormy sky;
Mother, he'll take us there to dwell—
We're not afraid to die.”

So there they were, as peaceful
As the pearl beneath the deep,
When the booming battle-thunders
Across the ocean sweep.

Hoarse came the words of horror,
Swell'd by the strong man's breath;
But innocence and holy faith
Look'd fearlessly on death.

Morn! morn! the clouds are breaking—
The tempest's wrath is o'er—
The shatter'd bark creeps slowly on,
To reach the welcome shore;

For lo! the appalling danger
Past by on wing of flame;
Prayer touch'd the glorious gate of Heaven,
And listening Mercy came.

BABYLON—A POEM:

By C. W. Everest. Hartford: Canfield & Robins, 1838.

It may be truly said of the American poet, that, with him, "poetry is its own exceeding great reward." We can imagine no destiny darker and sadder than that of the youth, who, conscious of his lofty powers, and feeling within himself the fires of genius, should devote himself, in this country, to poetry as a profession. Deny it as we may, the taste of the people of the United States is any thing but poetical. We do not allude now, in the cant phrase of the day, to the want of "patronage," in the absence of which, genius is said to droop and wither, like a sun-loving plant in the shades of the wilderness. We do not believe in the necessity of royal and munificent patronage, for the perfect development of genius. The true poet, while his soul is filled with the beauty and glory of his own divine imaginings, can bear poverty, and even neglect, while his heart is cheered by hope; and perhaps even the uncertain prospect of posthumous fame, might support him in the midst of despondency and gloom. But by what hope is the poet cheered, who pours his songs upon the deaf ears of our countrymen? He is like the merchant, who should expose for sale the rich silks of the east, the diamonds of Golconda, and the pearls of Omar, to men who were dying of thirst, and imploring Heaven for water on an Arabian desert. Intelligent and enlightened as are the people of the United States, their situation and pursuits are such as almost necessarily to give them a distaste for the works of genius and art. The excitement, which these works create in the quiet and leisure, in which thousands of Europeans pass their lives, we find in the active pursuits of business. The bewildering and exciting uncertainty of speculation, and the rapture of political strife, are our substitutes for the more refined and peaceful pleasures which the works of genius might supply. Hence it is, in part, that in a land full, both in its physical structure and in its history, of the elements of poetry, we are a nation of prosers. The beauty of our mountain scenery, the deep green of our beautiful vallies, "the red-bird's wing, the gleam from crystal lake and new discovered fountain," delight us far less than our rail roads and "iron mountains." There is no painting that can charm our eyes like the map of an imaginary "new city;" and with all our "internal improvements," we are far too apt to forget the improvement of the mind,

— "that inner eye,
That is the bliss of solitude."

The destiny of him, therefore, who in this country would make poetry his profession, is sad and dark in the extreme. His songs may be as sweet as those of the nymphs of Calypso, but the ears of his countrymen are sealed, and the sound dies away and is forgotten ere the echoes in his own heart have ceased to ring. Neglect—cold and heartless neglect—this it is that must chill his burning aspirations and dampen the ardor of his genius. If he can bear all this, and, satisfied for the present with an "audience few, but fitting," like Milton await calmly the decision of posterity, let him devote himself to poetry—but as he

would escape disappointment, let him not expect to hear, in his own day, "the thunder voice of immortality replying to the lightning of his thoughts."

Devoid as we most certainly are of a national taste (if such a thing there is) for poetry, we have among us many, who, had they, like Wordsworth, made poetry the study of their lives, might have attained the highest point of perfection in the "divine art." In the moments which they have stolen from the graver pursuits of business, they have given us some of the most perfect poems in our language; but after a brief visit to the Castalian springs, they have invariably returned to their daily toil in "the cotton line and sugar trade." Among these, the writer of the poem, the title of which we have placed at the head of this article, is destined we think to take a high rank. It is his intention, we believe, to make poetry rather the amusement than the business of his life. Bestowing upon it such attention, as the intervals of leisure in a professional life may allow, he will find poetry a most delightful pursuit, and the applause of the comparatively few who care for such matters, will cheer and encourage his more weighty and important labors.

We had no expectation, when we listened to the part of this poem, which was delivered at the late commencement of Washington College, of seeing it in print, and we therefore bestowed upon it a more careful attention than we usually devote to the exercises of such occasions. We were not then sure that our high opinion of its merits, was not, in part, to be attributed to the finished elocution and graceful manner of its gifted author. Its effect upon the audience, from these causes, and from the intrinsic merit of the poem itself, was more striking than any thing we recollect to have witnessed on a similar occasion. The opinion which we then formed, we are happy to find confirmed by our more mature judgment, after a careful and critical perusal of the printed work.

The subject of the poem, as its title would indicate, is the history and fall of Babylon, commencing with the reign of Nebuchadnezzar, when over the empire

"Still shone the star of conquest,—mighty Tyre,
Of high renown, the ocean's peerless bride,
Though fighting bravely through long years of ire,
Yielded at length to battle's gory tide;
And ravaged Egypt wailed in dust her pride,
When his tired cohorts ceased their vengeful slaughters:
And while the song for distant Zion sighed,
Lonely and sad, by Babel's gushing waters,
Saw Judah's captive sons, and Judah's mourning daughters."

p. 9.

The poet thus describes the splendor and glory of Babylon, in her "high and palmy days:"

"But not to empire's growing sway alone,
Did Babylon's realm her greatness owe;
Her city's grandeur all unrivalled shone,
Since torn Assyria in the dust lay low;
The home unwilling of her captive foe,
Her strength the mightiest of the orient clime—
Her grace and beauty passing human show:
Thus hated, feared, beloved: in glory's prime,
She mocked Destruction's dart and mocked the spoiler Time.

And science came, a pilgrim, to her walls,
And learned Magi, from the distant shore;
There the Chaldean, in her nursing halls,
Delved o'er his mystic, astrologic lore,
And wealth to genius opened her glittering store:

In learning's, honor's, grandeur's varying scene,
 She brooked no equal, no companion bore;
 But peerless, lone, in proud, imperial mien,
 Like mighty Juno swayed—earth's universal queen." p. 20.

We have not space for the ample quotations, with which we should be happy to gratify our readers. We cannot forbear, however, citing the following beautiful lines as an evidence how completely Mr. Everest has triumphed over the peculiar difficulties of the Spenserian stanza, as well as of his skill in a lighter and less majestic verse. The author of such poetry as this, is entitled to no humble place among American poets.

The sun was sinking down the purpling west,
 And bright the god poured forth his parting beam:
 Rejoicing earth the soft refulgence blest—
 His bright rays glinted o'er the quivering stream,
 While flashing lance and glave gave back his gleam:
 Then sunk adown his crimson pathway, slow,
 While—sad to say 'farewell,' may fancy deem—
 He bathed high Babel's top with molten glow,
 As lingers christian hope, till falls death's final blow.

* * * * *
 'Tis Revel's hour—she comes with cheer to all—
 Nor will the soldier at his post remain:
 The gates which guard Euphrates' shielding wall,
 Shall ne'er, forbidding, close in might again:
 The thronging streets pour forth a blithesome train:
 All hearts, all sounds the beaming gladness borrow—
 Save some sad Hebrew maiden's mournful strain:
 While Rapture rules, all thoughtless of the morrow,
 She, from the throng apart, thus breathes her plaint of sorrow!

THE HEBREW MAID'S LAMENT.

Oh, sweet o'er Judah's distant hills,
 The wandering zephyr mourning sighs:
 And sweetly gush the crystal rills,
 And sparkle 'neath the tranquil skies;
 And light waves, in the moon's bright beam,
 Along the blue lake's beach deplore,
 And Jordan rolls his hallowed stream,
 All silent by the lonely shore!

Oh, sad o'er Salem's mournful walls
 The mantling ivy's tendrils cling:
 There, lone, the solemn night bird calls,
 There folds the bat his blighting wing!
 And o'er the temple's crumbling stones
 The loathsome serpent leads her young—
 And dreary desolation moans,
 Where erst the songs of gladness rung!

For Judah's sons in exile stray,
 And Judah's daughters weeping roam—
 Far from their own loved land away,—
 Lorn captives in the oppressor's home:
 And while their souls in anguish mourn,
 And sigh to view their natal hearth—
 Loud is the foeman's taunting scorn,
 And wild the godless heathen's mirth!

O thou, the Shepherd of thy flock,
 Who led'st thy people through the wave;
 And gav'st them water from the rock,
 And bar'dst thine arm in might to save:
 Hear thou the strain our hearts prolong—
 List—list the suppliant captive's cry—
 Oh, when shall cease the mournful song—
 Oh, when shall Judah's tears be dry!

p. 30.

On the whole, we hesitate not to say that considering the youth of the author, this poem is a most admirable production. We do not speak of the youth of Mr. Everest, because we think his poem needs any such apology, but merely because we have been greatly

surprised that so finished and elegant a production, should be the work of so young a writer. It is entirely free from the gewgaw ornaments and bombastic flourishes with which young men are apt to disfigure their writings. Throughout the whole is a polish, a finish, and a chasteness, which shows how severely the author has disciplined his fancy, and curbed his imagination. That the poem is without faults, we do not contend. There are doubtless inaccuracies in thought and expression, which in a work of fifty pages can hardly fail to occur. Its merits are, however, far more palpable and striking. The sweetness of the versification—the elegance and appropriateness of the language—and the stately march of the noble measure in which it is written, with the deep vein of poetical feeling running through the whole, have satisfied us that the author of "Babylon" is no ignoble pretender to the honors of a poet. His is the true Promethean fire, and we trust he will not suffer it to be extinguished on the altar of his heart by the smothering cares and trials of life. May its light cheer him in the stranger-land, whose hospitable soil he treads, and

"Hope still light the fevered brow,
 And sweetly sing the coming day."

INAUGURAL ADDRESSES.

Inaugural Address of the Rev. B. H. Morrison, D.D., pronounced at his inauguration as President of Davidson College, N. C., August 2, 1838. pp. 23. Philadelphia; W. S. Marsten.

Inaugural Address of the Rev. P. J. Sparrow, A. M., pronounced at his inauguration as Professor of Languages in Davidson College, N. C., August 2, 1838. pp. 24. Philadelphia; W. S. Marsten.

These addresses came to hand by a late southern mail. Although some time has elapsed since their "pronunciation," we feel that their intrinsic, as well as relative importance, demand some brief notice. Literature of this character, has indeed become a plentiful commodity on our tables; and if the value of a work is to be estimated by its capacity to do good, we would not regret even a greater abundance of "the article." Such addresses do not generally circulate extensively, and attract the attention of but few others than those in whom local attachments may excite an interest. To many of our readers a brief synopsis of their contents we feel assured will be acceptable. We feel a right of common property, in this country, to whatever tends to advance the interests of education; and we welcome these accessions to the mass of addresses, essays, and reports on this subject, as valuable aids.

President Morrison's theme is the Value of Moral Education; and in setting out, he very ably distinguishes between instruction and education—a distinction which is not always sufficiently borne in mind. We have repeated that celebrated maxim, "Knowledge is power," but are properly reminded, that it is not necessarily "power" to do good. To give a proper direction to the influence of knowledge, there must be an education of the mind and heart and body, as well as instruction in the usual departments of a liberal course of study. President M. does full honor to knowledge, and indeed enhances the value of his position by a

comprehensive view of its advantages to its possessors, of which he finds happy illustrations in the ascendancy of England and America, by their application of the sciences to the arts.

To sustain his views of the importance of moral education, he presents us the opinions of some of the most distinguished philosophers—Locke, Kaimes, and Milton among the English, and the two brightest ornaments of the present day in France, Cousin and Guizot. To this succeeds a historical view of the subject, showing that the most distinguished champions of science and literature since the christian era, were mostly the champions of christian truth. We have no disposition to dispute this point with the President; but it occurs to us, that a more prominent discussion of it would have been better. No rule or statement of this character is without exception; and the exceptions made by such men as Gibbon, Voltaire, Frederick the Great, Bolingbroke, and others, should be fully weighed and thoroughly examined. These exceptions, it is true, detract nothing from the position, p. 13, that "christianity fosters and diffuses sound learning;" but we think the most solid basis of argument in favor of that position, is found, p. 14-15, in the extract from Burke—the substance of which is, that from the connexion of scripture and the christian religion with the laws, languages, opinions, manners, sciences and histories of so many nations and periods, the student of the Bible must be a man of letters, and wherever the christian religion progresses there is "always" a progress of letters. Some weight is due to the coincidence in the revival of letters and the Reformation. Dependant as they were, however, on different causes, humanly speaking, we should confine our attention rather to the influence of the latter, or the progress of the former. Too much cannot be said on this momentous subject, and we rejoice to hear from such high places the sentiment expressed, that religion and learning should be united: what God has joined, let not man put asunder.

We learn from p. 16-17, that Davidson College, in Mocklenburg Co. N. C., was so named in honor to General Davidson, who fell six miles from its location, in one of the battles of our Revolutionary struggle, Feb. 1, 1781. The institution, we learn from other sources, was first proposed about three years and a half since; but such has been the liberal zeal and activity of our fellow-citizens in Western Carolina, that there are now eighty-six students, a president, and professor, and tutor, occupying buildings erected for their accommodation. Efforts are making to extend their facilities, and among other things petitions were presented to the legislature of North Carolina, at its last session, to secure a charter.

We have not space to notice some very sensible remarks on the manual labor system, with which this address closes. There has been a mania and wildfire about this, which we are glad to see is gradually subsiding. We never could have much faith in the doctrines generally broached on the subject, but have no doubt that the principle is a correct one, and feel persuaded it will be so applied in the present case, as to be productive of good only, and that continually.

We have paid so much attention to this address, that a very brief notice of Professor Sparrow's must suffice. His subject, as might be supposed, is *Classical Literature*;

and, after a lively introduction and complimentary allusion to the ladies, the speaker proceeds in a style of merited severity to discuss the opposition to the study of language which modern reformers have made. We are sorry that he made so broad a charge as, "*dead languages they assuredly are, to those who raise this cry,*" because, judging others by ourselves, Mr. Grimke must share the denunciation—a man whose enthusiasm for biblical literature often carried him too far, but who, while disparaging the classics, was himself a most conspicuous example of their beneficial influence. Prof. S. is, however, mainly right; and his sentiments respecting the qualifications of *cheap teachers*, on page 9, deserve to be inscribed over every academy and school-house in the land. When parents who, as he says, "are better judges of the worth of money than of literary qualifications," shall have learned that he is the cheapest teacher, who best understands his business, the profession as well as the pupils and the general cause of learning, will be infinitely gainers. We had marked several portions of this address peculiarly worthy of notice—especially the discriminating views on what constitutes a classical education and what does not—but our limits forbid, and we have only space to echo the well said things, pp. 16-20, on the importance of the study of Hebrew in our colleges. While boys under seventeen or eighteen, across the water, can out-strip, in Hebrew literature, many even of that profession in this country, who of all others should understand the language, it becomes us to wait a little, ere we boast of being "the wise ones." We trust that in its youthful vigor and manliness, Davidson College will soon step ahead of our older institutions and vie with more favored spots in giving a thorough course in classical and sacred literature. This is no place for discussing this subject, though we hope the hints of Prof. S. will tell well on the cause. A word more and we have done: To show that these hints are not so utopian as some suppose, and that Hebrew study is increasing among us, we may remark, that the English are procuring their elementary books to a great extent in our markets, and in a few years past five editions of one and two of another Hebrew grammar have been demanded, besides one each of some others, and three or four lexicons have appeared; the second edition of one, (a Manual,) having appeared in 1832.

THE GUITAR.

Sing me that air he used to love so well:

But softly, sister—let its tones come stealing,
That echo wake not—gently weave the spell
To mournful memories of the past appealing.

Nay, that's too lovely—sing in sadder strain,
Like the lone bird that 'neath night's planet holy
(Methinks there's human passion in her pain,)
Pours forth her soul in richest melancholy.

Ah! didst thou love—and he were far away—
Thy heart's one thought, one life, one hope, one sorrow:
The voice had sweeter been, but far less gay—
For, music pensive tones from love doth borrow.

Selected.

A REVIEW.

OF TWO PIECES ENTITLED "NEW VIEWS OF THE SOLAR SYSTEM, BY A VIRGINIAN,"

And published in Vol. IV, Nos. VII and XII, of the Southern Literary Messenger.

To entertain what sentiments we please in respect to the constitution of the physical world around us, and to express those sentiments freely yet modestly, is a right we all enjoy; and which no person desires to infringe. That an individual disbelieves the Newtonian system of the universe—that he has chosen to say so in a literary journal—and that he has undertaken to exhibit the peculiar views he entertains upon the subject, is a matter of no consequence so far as the stability of that system is concerned. And had he done this with a becoming modesty, and with the true spirit of an inquirer after truth, this review would not have been perined. But when I hear a man saying of himself, "I stand in relation to the Copernican system, as Copernicus stood in relation to the system of the Egyptian astronomer,"—and of others who differ from him, "that they are destitute of common sense:" when I see a man, who cannot perform accurately the division of one decimal number by another, (unless his printer has done him injustice,)—and who is incapable of solving the simplest problems of uniform motion, rising up and impertinently and unlearnedly attacking the labors of men, not one page of whose works is he capable of comprehending, if it contains so much as a single mathematical formula, I will not forbear to rebuke him, humiliating though the task be to notice such productions. In the sequel I shall abundantly prove what I have here asserted of *our author's* mathematical abilities; but as a present specimen of them let us take the following problem, viz: A travels 400 miles at the rate of 4 miles per hour, and B 300 miles at the rate of 10 miles per hour; required the comparative lengths of time they are travelling.

As B's distance : A's distance :: B's time : A's time,
that is,

300 : 400 :: 1 : A's time; in which B's time is regarded as unity.

$$\text{Then A's time} = \frac{400}{300} = 1.3333.$$

That is B's time of travelling is to A's as 1 to 1.3333.

Substitute in this problem, for A and B and their distances and rates, Venus and Mercury and their paths and rates; and we have the problem given by our astronomer on page 769; and such precisely is his manner of solving it. Now any tyro in arithmetic knows better than this: and will tell him that when the rates of two travellers are *unequal*, their times of travelling will be proportional to their distances divided by their rates respectively. Thus, if B travels 300 miles at the rate of 10 miles per hour, his time of travelling will be 30 hours; if A travels 400 miles at the rate of 4 miles per hour, his time will be 100 hours. Then

B's time : A's time :: 30 : 100 :: 1 : 3.3333.

That is, B's time of travelling is to A's as 1 to 3.3333; and not as 1 to 1.3333, as would be given by *our author*.

And this is the mathematician who is to pass condemnatory sentence upon the profound and elegant researches of Newton and Lagrange and Laplace!

This my conjecture in respect to the competency of the author of "New Views" to decide upon the merit of mathematical questions, is so confirmed by every page of his communications, that I am willing to rest this controversy upon his ability to develope and explain any one mathematical process employed in the "Principia" or the "Mecanique Celeste." I hope my readers will not consider these remarks invidious. When one presumes to "revolutionize" the whole system of mechanical philosophy, and to put aside as useless lumber the labors of the most gifted and distinguished men the world ever produced, we have a right to inquire into the qualifications of our new guide, so far as they may be legitimately deduced from his own productions.

Our author proposes to himself to show, "that our physical systems of astronomy are not true, either in the distances of the planets from the sun—their velocities in their paths—the kind of orbits they describe—the forces by which they are impelled through the heavens—the cause of their perturbations, and the entire insufficiency of that something called gravitation to produce the phenomena we observe."

It is then against *physical astronomy* only, that *our author* professes to wage war. Both in this extract and in a remark he makes upon page 435, we see this distinction clearly made between plane and physical astronomy. Now *plane astronomy* treats of the appearances, motions, distances and magnitudes of the heavenly bodies, and is founded entirely on observations, without having any regard to the *causes* of their motions. *Physical astronomy* treats of these *causes*, and traces these causes to their effects. Then *our author* is self-deceived in supposing that his attack is only against the *theoretical* parts of the science. Expunge every thing relating to motion, distance, magnitude, from our system of plane astronomy, and what have we left? It is then not to the theory of gravitation only, as developed in modern times, that *our author* objects, because the motions, distances and magnitudes of the heavenly bodies are independent of all speculation as to the nature of the force which produces these motions;—but it is to those elements of the system to which the Grecians, Arabians and Egyptians made rude approximations, according to the construction and accuracy of the instruments they employed:—which were still more nearly obtained by Brahe and Kepler—and which last of all, have been accurately determined in modern times, by the great perfection of astronomical instruments. These measurements are in no respect different in principle, from those that occur in the determination of "heights and distances" by plane trigonometry. If *our author* knows any thing of mathematics, I ask him to show wherein the calculation of the distance of the Moon, or Mars, or Venus from the earth, is different from the calculation of our distance from a terrestrial object by plane trigonometry. I expected *our author* to have commenced his attack in the only way which is rational, by showing first, that our instruments employed in astronomy are constructed on principles which lead to false results—and, secondly, that the application of trigonometry to those results has been made in an illegitimate manner. Upon these observations, and upon the relation subsisting between the sides and angles of a triangle as taught in geometry, plane astronomy is

based. Then it behooved *our author* to show that in both these respects the system is false. When he does this, I, for one, will give it up as untenable; but until then, I must be permitted to smile at the conceit of overturning a system, the foundations of which are as stable as the demonstrations of Euclid. But let us examine more particularly the nature of the objections urged by *our author*.

1°. "It will be admitted by both the philosopher and the mathematician, that if the Sun is a *progressive* body, then the planets cannot describe round him orbits returning into themselves, as now taught by astronomers. It will also be admitted that our systems of astronomy, as they now exist, had their foundation in the supposition that the Sun is a stationary body. It is now, I believe, generally admitted by astronomers in England, France, and Germany, that the Sun is not a stationary body. Then if we admit this fact, and the whole phenomena of the heavens tend to prove it, there is not a diagram in any of our systems of astronomy, which represents the solar system as it is. I have no hesitation in saying, that the *progressive motion* of the Sun proves clearly that the whole system as it now exists requires recasting." *July No., page 433.* (Compare pages 434, 769.)

The great majority of the "astronomers in England, France and Germany, admit that the Sun is not a stationary body." But do they at the same time reject any principle or result of the Newtonian system? If they do not, (and their writings show this,) and if their opinion be worth appealing to at all, then it evidently follows, that they do not regard the *progressive motion* of the Sun as incompatible with the system as it is at present taught. If this doctrine of the orbital motion of the Sun is believed by modern astronomers, as he says it is,—if it forms a part of the modern system, why war against it as such, and yet receive it into his own system and hold it up as its contra-distinguishing feature? If it be false in the one, it cannot be true in the other.

That our system has a motion of translation, I hold to be highly probable. This opinion was maintained with ability by Mayer in 1760—by Lalande in 1776—and by Herschell in 1783. The arguments of the two first were wholly of an analogical character; the last named astronomer supposed that he had discovered a proof of translation in the widening of the stars about the region of the constellation Hercules. But any one may convince himself that we are not in a condition to decide upon this question, by referring to "Biot's *Astronomie*," vol. 3, chap. 3. Additions; or to Delambre's *Astronomie*, vol. 3, chap. 32.

But in whatever way this question shall ultimately be determined, it will require no change to be made in a single diagram or demonstration of modern astronomy; as a few considerations will show. Were *our author* to take a pair of dividers, and placing one of its legs upon a point, were he to sweep the other leg around, would he deny that he describes a circle about that point? And yet to be consistent he must do so; for the leg as it moves around the point is carried rapidly on by the rotation of the Earth on its axis, as well as by the motion of the Earth about the Sun; and does in fact describe in space a curve of a very complex character, and wholly different from a circle. A nail, in the rim of a carriage wheel rolling over a level surface, describes, in a plane vertical to the one on which the wheel

rolls, a curve called the *cycloid*; the properties of which are wholly different from those of a circle: but are we to be charged with stupidity when we assert that the nail revolves in a circle about the axle? Were a progressive motion given to an orery in operation—for instance, were it placed upon the deck of a smooth sailing vessel, would this progressive motion alter in any respect the *relative motions* of the machine? And as the *relative motions* of objects upon the surface of the Earth are unaffected by the motion they all have in common with the Earth; just so the *relative motions* of the bodies composing the solar system, would not be affected by any common progressive motion they might have in space. And, furthermore, as we must make abstraction of the rotatory and orbital motion of the Earth, in order to investigate and understand to any useful purpose the motions of bodies around us; so also, we must make abstraction of any supposed orbital motion of our system, in order to understand any thing about the phenomena of the heavens. The diagrams of astronomy, therefore, were never intended to represent the *absolute paths* of the planets in space; but their *relative paths*—the only ones essential in the study of the system. No astronomer ever asserted that the path described in space by the first of Jupiter's satellites is a circle, or that in any revolution it passes through the same points in space, it passed through in the revolution just preceding; but they all assert that its path in respect to Jupiter is a circle. Recur to the nail in the rim of the carriage wheel: in each revolution of the wheel, the nail passes through very different points in space from those it did in the revolution just preceding, yet in respect to the axle, the nail is revolving in a circle. And just as we call the circle, the *path of the nail about the axle*, so do we call the circle the *path or orbit* of the first satellite about Jupiter. Once more: suppose a material circular ring to be attached to Jupiter as a centre, of a radius equal to the distance of the first satellite; and the satellite to slide around and around the ring, as the ring is carried along by the planet in its revolution about the Sun. The satellite would always be found on some part of this ring; and in this sense we speak of an *orbit returning into itself*. When we say then, that the first satellite revolves in an orbit which returns into itself, we do not intend to imply, that in each revolution, the satellite traverses the same points in space, but that in respect to its primary it is always found in a curve whose property it is to return into itself; for example in a circle or an ellipse, and not in a parabola, an hyperbola, or a spiral.

I have used in these illustrations, Jupiter's first satellite, because its path about its primary is sensibly circular, and therefore it was not improper to speak of its orbit as a true circle. They are, however, equally applicable to those orbits which are elliptic. For, suppose Jupiter to be in the focus of a material elliptic ring, the dimensions and position of which suited the orbit assigned to the fourth satellite, and to accompany Jupiter in its revolution about the Sun: the fourth satellite, if supposed to slide along this ring, would have the same motions with those now observed; and who in this case would deny that its orbit about Jupiter was elliptic and returned within itself. To use mathematical language, which is after all, the plainest and most

concise; we say that a planet revolves about the Sun in an ellipse, because its observed distances from the Sun bear the same relation among themselves, that subsists between the *radii vectores* of an ellipse whose major diameter is equal to the mean distance of the planet.

It is then evident that our author has never understood the meaning attached to some of the most common terms employed in astronomy. He has need to keep himself awhile longer at his *horn books*; and yet he assays to effect a new era in the science!

2°. At page 433, in speaking of the purposes for which the Moon was created, he says; "the object of this creation was for a very different purpose from that usually supposed. We see that the Moon revolves on her axis once only during her revolution round the Earth. This would have been the case in relation to the Earth, if she had not been supplied with this agent; she would have revolved once only on her axis during her revolution round the Sun, as is the fact in relation to the Moon. To give quick successions of day and night, suited to the well-being of vegetable and animated nature on this Earth, the Moon was given. That this is the fact, the agency of the Moon, in raising the tides, abundantly proves. I will, however, now, only say, that the planets give rotatory motion to the Sun, and the moons to the planets."

In this extract a very important point is conceded, to wit: that the Moon rotates about its axis, and also the Sun. If there be other evidence of these motions, than that derived from observations upon the spots of those bodies, our astronomer will state it. If this evidence be sufficiently strong to produce conviction upon his mind in respect to the Sun and Moon, (and it seems to have done so,) he cannot refuse to admit that Mars has a rotatory motion also, which is completed once in 24.66 hours; for the evidence in this case is just the same. Now if the Earth would have rotated but once during a revolution, had not a Moon been given it; why does not Mars, which has no moon, so rotate? Why does not Venus?

Another question:—if the Moon was necessary to cause the Earth to revolve on its axis, what causes the Moon to revolve on its axis?

At page 749, our astronomer expresses his opinion that the satellites of Jupiter do not revolve on their respective axes. I have then yet another question to propound, viz: what is the difference between the relation subsisting between the Earth and its moon, and that subsisting between Jupiter and its moons, or any one of them; which renders the cause, that is efficient in producing the rotation of the satellite of the former, inoperative in producing the rotation of the satellite of the latter?

I have another question to ask just here: how does the Moon, in going but once round the Earth, cause it to revolve on its axis 29 times nearly? The matter supposed by our author to be gyrating about the Earth, cannot be imagined to possess intrinsically such a rotation and to impart it to the Earth; for this would be shifting the cause which just now was the Moon. Nor will it do to say, that though the Moon revolves around the Earth once in 29 days, it nevertheless apparently revolves about it for every rotation of the Earth; because this apparent revolution is caused by the rotation in ques-

tion, so that this would be making the *cause*, what just now was the *effect*.

Each of the foregoing questions, if unsatisfactorily answered, points out a palpable absurdity in the quotations which stand at the head of this article. How admirably will his own language apply here—"every theory or system must be consistent with itself. If it is not—if it involves inconsistencies, it cannot be accepted as true."

3°. "Astronomers have been long engaged in efforts to discover the magnitude of the Sun, of the planets, and their distances from one another; but with what success, a few of their supposed discoveries will show. It is universally admitted, I believe, that the magnitude of a body diminishes as the distance increases. Then, at the distance of the Sun from the Earth, whatever it may be, he presents an apparent diameter, I will say, of about thirty inches; but they have, in retracing the distance of the Sun from the Earth, brought up that apparent diameter to a real one of 780,000 miles. Now suppose the Sun to be 95,000,000 of miles from the Earth, with an apparent diameter of 30 inches, and then suppose him removed 95,000,000 of miles further off, what would be his apparent diameter at that distance? We might see him, perhaps, as we now see the light of some distant star. They give to Jupiter a measurable apparent disk, and say that his nearest approach to this Earth is about 390,000,000 of miles; but in tracing back that distance, more than four times the distance of the Sun, they give to him a real diameter of only 90,000,000 miles. Then taking into view the distances given the two bodies, the real diameter of Jupiter ought to be much greater than that of the Sun. Now what can be said in favor of a mathematical theory involving such discrepancies?"—*July No. p. 433.*

I answer:—every thing in favor of the mathematical theory of Newton, but nothing in favor of our author's mathematics. To show that his calculations are altogether erroneous; and that the modern system of astronomy is, in respect to the distances and the real and apparent magnitudes of the Sun and Jupiter, entirely consistent with itself, as well as with the established principles of optics, I will here give a table of these elements as they are found in our standard treatises:

Distance of the Earth from the Sun, considered as the unit of distance,	1.000
Sun's diameter, that of the Earth being = 1,	112.024...
Jupiter's mean distance from the Earth,	5.201...
Jupiter's greatest distance from the Earth,	6.242...
Jupiter's least distance from the Earth,	4.075...
Jupiter's diameter, that of the Earth's being = 1,	10.885...
Jupiter's app. diam. at his mean distance, by observ.	0'.30"
Jupiter's greatest app. diameter, by observation,	0'.46"
Jupiter's least app. diameter, by observation,	0'.30"
Sun's mean apparent diameter, by observation,	32'.02"

Our author in the extract quoted above, obtained first the apparent diameter of the Sun as it would be, were it removed as far again from the Earth. This apparent diameter he makes *nothing*; for he says, we should see it, "as we now see the light of some distant star:" and it is well known, that in our most powerful telescopes, a star has no appreciable diameter, but appears as a mere point. Since the apparent diameter decreases as the distance increases, to find what the apparent diameter of the Sun would be at double its present distance, we have this proportion, viz:

As twice the present distance, is to the present distance, so is the apparent diameter at the present distance, to the apparent diameter as it would be at double the present distance; that is, in figures:

2 : 1 :: 32'.02" : the apparent diameter required.

$$\text{Whence, the app. diam. req'd} = \frac{32'.02''}{2} = 16'.01''.$$

At the distance then supposed by our author, we should see the Sun with an apparent diameter of one half its present diameter; and it would, in respect to its apparent disk, be 480 times larger than the apparent disk of Jupiter when nearest to the Earth. I leave our profound mathematician to show, how he reduces, at the distance of 190 millions of miles, the apparent diameter of the Sun to a point, and makes him appear "like some distant star." No wonder that he should mistrust the mathematics, and sneer at its results, if it be after this fashion that he applies its principles.

Having thus proved that the premises, in the foregoing extract, are wholly false, the conclusions are so of necessity; nevertheless, it may not be improper to show how perfectly consistent with themselves, are the magnitudes and distances of the Sun and Jupiter, as assigned by modern astronomers. For this purpose, let us first inquire, what would be the apparent diameter of the Sun were it removed to the distance of Jupiter from the Earth.

5.201 : 1 :: 32'.02" : app. diam. req'd;

$$\text{Whence, the app. diam. req'd} = \frac{32'.02''}{5.201} = 6'.09''.$$

Such would be the apparent diameter of the Sun at the mean distance of Jupiter. But at the same distance from the eye, the real diameters of objects are to each other as their apparent diameters. Knowing then the real diameter of the Sun we may find what ought to be the real diameter of Jupiter so as to present an apparent diameter of 36" at his mean distance. Thus,

6'.09"-5 : 36" :: 112.024 : the diam. req'd.

$$\text{Whence, the diam. req'd} = \frac{112.024 \times 36''}{6'.09''-5} = 10.9.... \text{ diameters of the Earth;}$$

which agrees with the results of observation. (See table above.)

Again, what ought to be the apparent diameter of Jupiter at his greatest distance from the Earth, his app. diameter at his mean distance being 36" ?

6.241 : 5.201 :: 36" : app. diam. req'd.

$$\text{Whence, the app. diam. req'd} = \frac{36'' \times 5.201}{6.241} = 30'';$$

which is the value given by observation.

Let it be required to determine from Jupiter's diameter at his mean distance, what ought to be his apparent diameter at his nearest approach to the Earth; we have in this case

4.074 : 5.201 :: 36" : the diam. req'd,

$$\text{Whence, the diam. req'd} = \frac{36'' \times 5.201}{4.074} = 45''.96;$$

which is within 0.04 of a second of the result of observation. And were we to test in a similar manner the magnitudes and distances assigned to the other heavenly bodies, they would all be found to be perfectly consistent with themselves.

40. "Our physical systems of astronomy teach us, that the Moon makes one revolution round the Earth in 29 days, at the distance of 240,000 miles from her primary. They also teach us, that Mercury makes one revolution round the Sun in 87 days. Then three revolutions of the Moon round the Earth, will be performed

in the same time, (87 days,) that Mercury performed one round the Sun, leaving out fractions in both cases. Suppose then, for convenience, we place the Moon three times her supposed distance from the Earth, which will be 720,000 miles, and give Mercury his supposed distance from the Sun, 37,000,000 of miles, and use their several velocities as given by the mathematicians, the Moon 70,000 miles an hour, and Mercury 110,000 only. Then so far as time is concerned, the Moon, at 720,000 miles distance from the Earth, would make one revolution round the Earth, while Mercury makes one, at the distance of 37,000,000 of miles, as supposed, from the Sun. The Moon moving 70,000 miles an hour, and Mercury 110,000 only. Here then mathematical astronomers have blundered most extraordinarily. But this question having been submitted for the consideration of a distinguished mathematical professor, he at once dismissed it, by saying it was 'an incorrect principle to compare a body moving round one, with a body moving round another,' without giving any reason why it was so. I will admit, that if the two bodies belonged to different systems, and existed under different circumstances, that then it might be considered an incorrect principle. If, 'to compare a body moving round one, with a body moving round another,' be an incorrect principle, it must be, because the bodies compared, belonged to different systems. But in this case, the Sun, Mercury, the Earth, and the Moon, belong to the same system,—they move in the same direction, never vary in their times, and are indissolubly bound together. Mercury moves round the Sun—the Earth moves round the same body, and so does the Moon. Then if the Moon is 240,000 miles from the Earth, and moves 70,000 miles an hour, and three periods of the Moon are equal to one of Mercury, it is evident, that, if there is any truth in figures, in mathematics, or in anything else, Mercury cannot be 37,000,000 of miles from the Sun. Then, if the comparison here made, is made upon correct principles—and I see no defect—what is the probable distance of Mercury from his luminous leader? The question may be thus stated:

Moon's velocity.	Distance.	Mercury's velocity.
70,000	720,000	110,000
	110,000	
	7,000,000	79,200,000
		1,131,428,4-7 miles.

Now if the distance and velocity of the Moon are rightly given in our physical systems of astronomy, then the distance and velocity of Mercury cannot be. This discrepancy or inconsistency, would, however, very naturally grow out of the discoveries of Galileo, and Copernicus. Copernicus assumed that the Sun was a stationary body, and he whirled the planets round him, in paths returning into themselves. This led his followers to suppose, from the times or periods of the planets, that they must have different velocities."—*July No. p. 434.*

I have shown in (1°,) that the progressive motion of the system, if it exists, can in no manner affect the relative motions of the bodies which compose it. Different velocities have been assigned to the planets, therefore, for reasons quite different from those stated in the above extract. Velocity, from its nature, must be measured by the space passed over in a portion of time assumed as the unit. If an hour be taken as the unit, then the velocity of a planet is measured by the portion of its path passed over in one hour; and the only means of ascertaining this velocity is to divide the whole length of its path by the number of hours it requires to describe its whole path. Then the accuracy of the velocities given to the several planets depends upon the accuracy of their estimated distances and the times of their revolution. If these

latter be correct, the former cannot be wrong. Now in respect to the distance of a planet, our instruments give us the angle that the Earth would subtend if seen from the planet. The real diameter of the Earth we know by actual measurement: then to find the distance of the planet, we have only to find the hypotenuse of a plane right-angled triangle, in which the radius of the Earth is one side, and the angle above referred to is the angle opposite to that side. Our author can refer to any treatise on astronomy and see the details of the solution which are few and simple; and if he has any objections against the indications of the instruments we employ in these measurements, or the trigonometrical results deduced from them, and will specifically state them, they will be confuted. To assert merely that these processes are wrong, will make an impression upon no one who has attended at all to this subject; and our author owes it to himself, to say nothing of the interests of science, to show explicitly wherein they are defective. In respect to the periodical time of a planet, it is only necessary to observe the two periods at which the planet's latitude is zero, in order to obtain this element. It is useless then to talk about velocities, until distances and periodical times are shown to be false; for, as remarked above, if these be correct, the velocities cannot be false. Our author, therefore, has not touched in the slightest degree, the grounds upon which astronomers assert the planets to have the velocities usually assigned them; and for this reason, I might here dismiss, as irrelevant, the foregoing extract: but since he says that he does not perceive the incorrectness of the comparison therein instituted, I will add a remark or two by way of pointing it out.

The reader will bear in mind, that our author is testing the consistency of the Newtonian system with itself. Now, the consistency of any theory with itself can be tested only by comparing its own principles and results among themselves. It is true that a comparison may be instituted between the principles and results of any theory and some other principles and results considered as better known and more accurately determined; and this is not only a legitimate, but a very satisfactory mode of deciding upon the truth of a theory. But then we are comparing the theory with something else besides itself: and so far as the Newtonian theory of the universe is concerned, it invites the most rigid comparison between its principles and results, and those facts and principles which are considered the best established within the compass of human knowledge. But here, however, the object of our author is, to compare the system with itself. Then by what right does he compare it with a principle, which finds no place in the system;—nay more, which is not to be found in any department of science? Whence did he derive the principle, either in respect to circular or elliptic motion, that the periodical times are as the distances? Not from dynamics; for there it is proved that the squares of the periodical times are as the cubes of the distances. Not from Newton's system, for that is based upon the dynamical law just referred to. And yet, it is upon this principle that he calculates the periodical time of the Moon, supposed to be removed to three times its present distance. Had he committed no error in this particular, it is certainly a very novel method of showing the inconsistency of the Newtonian system, by adducing as a contradic-

tory result, that which the system requires as a consequence of its own principles. Thus, if the Moon were removed to such a distance as was necessary to make its periodical time equal to that of Mercury; if there be any truth in the Newtonian system, the orbit of Mercury should be much greater than that of the Moon, because the force exerted by the Sun is to the force exerted by the Earth, at equal distances, as 354936 to 1. And if the path of Mercury be greater than that of the Moon, and these paths are described in the same time, it follows of necessity that the velocity of Mercury must be greater than that of the Moon. So that this result, which is held up as a fact contradictory to the system, is just that which the system requires. Now, our author may deny that the Sun exerts a greater force upon Mercury than the Earth exerts upon the Moon. But this has nothing to do with the matter now in hand. We are trying the consistency of the Newtonian system with itself: we must look therefore at its results in the light of its own principles. It is quite another thing to prove these principles false. In this exertion of a greater force by the Sun, consists the error of comparing a body moving around the Sun, with one moving around the Earth. Let our author turn to any treatise on dynamics, and he will find that the force operating upon revolving bodies enters into all investigations respecting velocity, periodical time and distance: and hence, to have omitted this primary consideration in the comparison he instituted, was to violate the principles not only of astronomy, but also of mechanics. And if our author places no reliance in the laws of mechanics, as at present developed and taught; then he should have commenced with enlightening the public upon that subject. And the only hope of subverting the physical system of astronomy, consists in the possibility of subverting the whole science of mechanics: for its laws were merely extended by Newton, first to the Moon, then to the planets; and were found adequate not only to explain the leading phenomena, but the minutest changes observed in the system; nay farther, to serve as an instrument of research, by which perturbations and periodical and secular variations were discovered, which had not been detected by the most skilful observers, but which subsequent observation confirmed. Now, our author may call the force which causes a stone, when unsupported, to fall towards the centre of the Earth, what he pleases, and we shall not quarrel with him. But for this we do contend; that this force, be its nature what it may, when developed upon dynamical principles, and extended, according to the laws of the Newtonian system, to the heavenly bodies, perfectly explains every motion, every perturbation, every variation in the elements of their orbits, with the last degree of accuracy.

I am the more astonished at our author's conceit of a common velocity belonging to all the planets, since on page 750 he speaks of the importance of studying the system of Jupiter and his satellites as a true type of the whole solar system. He certainly has studied that system to very little purpose. Does he there find the periodical times to be as the distances? Certainly not: and yet this must be so, in order for the satellites to have a common velocity about their primary. If the semi-diameter of Jupiter at his mean distance, be assumed equal to unity, the mean distances of the satellites from

its centre and the durations of their sidereal revolutions, as given by observation, are as follows :

	Mean Distances.	Durations.
I satellite	6.04853	1.769137789148 days.
II sat.	9.62347	3.361181017949
III sat.	15.35034	7.154552783970
IV sat.	26.99835	16.088769707084

A comparison of these mean distances with the durations of the sidereal revolutions, will convince our astronomer, that the squares of the times of the sidereal revolutions are as the cubes of their mean distances. What then becomes of his favorite hypothesis, that the satellites have a common velocity about Jupiter ? for were this the case, the times would be as the distances.

Observations show, that the relation above established between the periodical times and distances of Jupiter's satellites, holds equally true of the planets. This being so, any treatise on dynamics will prove the following consequence, to wit: that the planets must tend towards the Sun with a force that decreases inversely as the square of the distance from the Sun's centre.

50. But let us pass to the December No. of the Messenger, and see if our author has been more successful in producing difficulties respecting the Newtonian system. We find that he has presented but one, and in the following words, viz :

"The European mathematicians say, that Mercury performs one period in eighty-seven days twenty-three hours—Venus in 224 days 17 hours. Then, for greater convenience, I will reduce these days or times to hours. Mercury's time will be 2,111 hours, and Venus' 5,393. Now divide the time of Venus by the time of Mercury :

$$\begin{array}{r} 2,111 \overline{) 5,393} \quad 2,111 \\ \underline{4,222} \\ 1,171 \end{array}$$

Here then we have two periods for Mercury and nearly half of another, while Venus makes one. This is very plain, very simple, and very easily understood. But I will now give to Mercury 110,000 miles an hour in his path, and to Venus 81,000, as it is said to have been demonstrated, (and always mathematically, of course,) to be the real facts, and are so stated in our books, and so taught in our schools :

Mercury 2,111 hours. 110,000 miles.	Venus 5,393 hours. 81,000 miles.
<u>232,210,000</u>	<u>5,393,000</u>
	43,144
	<u>436,933,000</u>

If we divide the distance Venus moves to make one revolution, by the distance Mercury moves to make one, the result shows the error of the mathematicians in giving different velocities to these two bodies.

$$\begin{array}{r} 23,222,000 \overline{) 436,753,000} \quad 1,204,532 \\ \underline{232,220} \\ 204,532 \end{array}$$

By giving the velocities to these two planets, according to our mathematical teachers, Mercury would make but one revolution and part of another only, while Venus makes one. Whereas it is well known that Mercury actually makes two revolutions and nearly half of another while Venus is performing one. Now, what is true of these two planets, is true of all the others ; and whatever may be the real velocity of Mercury, is certainly the real velocity of all the other planets. Give to Venus the velocity given to Mercury, and then their periods correspond, and all is harmony ; but give them different velocities, and the results cannot, by any correct mathematical process, by no conceivable arrangement of figures or numbers, be made to correspond and harmo-

nize with the real facts as they exist in this our field of creation. If we take the Earth and Jupiter, similar results will follow." (Pages 769, 770.)

By the division of the paths of Venus and Mercury, the one by the other, our author obtained the ratio of the lengths of their paths. Thus, if A travels 800 miles, and B 200; if we divide 800 by 200, we ascertain merely how much greater the distance of A is than that of B ; in this supposed case, four times greater. Now if A and B travel at the same rate, the ratio of their distances would be the same as the ratio of their times of travelling : otherwise not. Thus, suppose the rate of each to be 10 miles per hour : then A would travel 80 hours and B 20. And 20 and 80 have the same ratio as 200 and 800, that is of 1 to 4.

But if A travels 8 miles per hour and B 10, A will be travelling 100 hours and B 20. Or, B's time will be to A's time as 20 to 100, that is, as 1 to 5, and no longer as 1 to 4, the ratio of the distances travelled. I have been thus minute, to make it plain, that it is incorrect to divide the distance of A by that of B in order to arrive at the ratio of their times, excepting in this one case, viz : when their velocities or rates are the same : and that in every other case, the ratio of the distances must be different from that of the times.

Now on the supposition that the velocities of Mercury and Venus are different, our author obtains their respective paths. Then in dividing the path of Venus by that of Mercury, he calls the quotient the ratio of their periodical times !!! This is mathematical to perfection. Let us recur to our example above: A travels 800 miles at the rate of 8 miles per hour, and B 200, at the rate of 10 miles per hour ; what will be the relative lengths of time they are travelling ? Dividing A's distance by B's, our philosopher would make B's time to A's time as 1 to 4 : while any school-boy will tell him that B would be on the road 20 hours and A 100 hours, and that 20 are to 100 as 1 to 5.

But let us apply to the velocities, periods and paths of Mercury and Venus the principles of uniform motion, which give this relation between them, viz :

$$T : t :: \frac{S}{V} : \frac{s}{v} \quad (\text{See any treatise on Dynamics})$$

where T and t represent the times Venus and Mercury require to describe their paths respectively, S and s the length of their paths, and V and v, their respective velocities. Then assuming Mercury's time to be unity, we shall have, (employing the numerical values given by our author,)

$$\begin{array}{l} T : 1 :: \frac{436933000}{81000} : \frac{232210000}{110000} \\ \text{Whence,} \\ T = \frac{436933}{81} \times \frac{11}{23221} = 2.5 \end{array}$$

That is, the time in which Mercury performs one revolution is to that in which Venus performs one, as 1 to 2.5 ; or, in other words, we have two and a half revolutions of Mercury for one of Venus, as we ought to have.

In the example of the Earth and Jupiter, our author made the same unpardonable blunder, and obtained, of course, results alike absurd. To apply, however, the true laws of motion to this case, we have, (using the numerical values of our author,)

$$T : 1 :: \frac{3014086000}{29000} : \frac{596088000}{68000};$$

where T is the length of time Jupiter requires to perform one revolution, the time of the Earth's performing one revolution being unity.

Then

$$T = \frac{3014096}{29} \times \frac{68}{596088} = 11.8$$

This is, the Earth will make nearly twelve revolutions while Jupiter makes but one: which agrees with observation.

Here then we see, that the velocities, periods and paths of the planets harmonize perfectly with each other and with the established laws of dynamics.

Go. I have now noticed briefly, all of the objections urged in the two papers before me against the Newtonian system of astronomy, and showed that they were all founded, not upon any inconsistency of the system either with itself or the principles of science generally, but upon the ignorance of their author; who, notwithstanding, gives out himself to be a better mathematician than Newton, and altogether a wiser man.

With the exception of the questions propounded in article (2^o.) I have not noticed at all his own peculiar theory, nor is this necessary, until he has redeemed his promise, of favoring the public with a complete exhibition of it, accompanied with diagrams and demonstrations.

I shall conclude this review, with making two remarks upon the following extract from the July paper, page 435:

"Because the practical astronomer predicts transits, eclipses, &c., many suppose that he is indebted to the *physical astronomer* for this art; and that gravitation, attraction and projection are necessary; and that he could not get on without such supposed forces. But this art was brought into practice thousands of years before Copernicus had an existence, or such forces were even thought of by our modern astronomers. In fact the practical astronomer derives no advantage whatever from the physical department of the science."

My first remark is, that the eclipses calculated before the time of Hipparchus were executed in a rough way, and by means of the period of 6585.3338 days, in which the Moon makes 223 revolutions with regard to the Sun, 239 with regard to the upsides of her orbit, and 241 with regard to her nodes. According to Diodorus Siculus, the ancients did not attempt to calculate the eclipses of the Sun, because these last are much more difficult on account of the parallax which enters into the calculation. The most accurate eclipses recorded by Ptolemy are not within an hour of the truth. While therefore, the period of 6585.3 days above referred to, enabled astronomers to predict lunar eclipses in a rude manner, it was not until the motions of the Sun and Moon were expressed in tables, that these predictions were made with any degree of certainty. The formation of these tables were based upon the *periodical times* of the Sun and Moon, and their distances from the Earth. The very first step which it is necessary to take in forming a solar table, is to convert mean into true anomaly; this involves the eccentricity of the Earth's orbit, which is the quotient arising from the division of the distance from the centre of the ellipse, in which the Earth revolves, to its focus, by the semi-axis major. The true mean distance of the Earth is then

one of the elements which enters into these tables. So likewise in forming tables of the several planets, their periodical times and distances enter as elements in the calculation. These tables are found sufficient to predict all of the phenomena of the heavens with accuracy; and yet it is against these very periods and distances that our *author* makes his attack. It is not true that predictions were made with any accuracy until such tables were formed; and how could they have served so admirably this purpose, if calculated upon false data? Moreover, our *author* will much oblige us, by calculating the latitude or longitude of a place, or an eclipse of the Sun or Moon, in no part of which the dimensions of the solar system shall enter. Take the simplest of all problems, that is, to find the latitude of a place by the meridian altitude of the Sun. How will he correct the observed altitude for parallax, without taking into account the distance of the Sun?

My second remark is—that the tables of the Sun, Moon and planets, which have made astronomy available for practical purposes, as any one may see by merely referring to a nautical almanac, owe their *perfection to physical astronomy*. Observations could never have made known and expressed in numerical values the various perturbations of the system. Physical astronomy has been the instrument of research for detecting and developing them and applying them to our tables in the form of *corrections*. Let us see in what manner our best tables have been formed. Their title pages will fully show:

"Tables of the Sun according to the theory of Laplace." By Delambre. "Tables of the satellites of Jupiter, from the theory of their mutual attractions." By Baron Damoiseau. Paris, 1836.

"Astronomical Tables, published by the Bureau of Longitudes of France, constructed according to the theory of the *Mécanique Céleste*; by M. Bouvard." Paris, 1821.

"New and correct tables of the planets, Mercury, Venus, Mars, according to the theory of Gravitation of Laplace. By Bernhardo De Lindenau." Gothæ, 1810.

Then physical astronomy has given us our only accurate tables; and considered in this point of view, how vastly are we indebted to the immortal work of Laplace, the *Mécanique Céleste*. From these improved tables, all our ephemerides are constructed, upon the accuracy of which the mariner depends for determining his path through the trackless ocean—and the practical astronomer for making all his calculations. And yet our *author* says, "there is no advantage to be derived from the physical department of the science!"

The truth is I am weary of reviewing such stuff. Here are tables which are constructed exclusively upon the theory of gravitation, and upon the distances, motions and masses of the planets as taught in modern astronomy. By means of them we can with the last degree of accuracy predict all the phenomena of the heavens for centuries to come. We can fix to-day the axis of a telescope upon the precise spot which any one of the planets shall occupy at a given moment a century hence. True to its appointed place, at the very spot and moment predicted, the planet is seen at the centre of the cross wires of the telescope: and yet all of the data upon which these calculations are based are declared to be false. If any theory in the world has been severely tried by practical results, that theory

is the one of which we are now speaking. I will conclude this paper in the language of professor Garland, in the *Messenger* of February, 1838.

Speaking of astronomy, he says,—“All the phenomena of this science depend upon a *single law*, which has been repeatedly put to the severest trial, by a series of discoveries unparalleled in number and delicacy:—such as the precession of the equinoxes—the nutation of the earth's axis—the aberration of light—the oscillations of the ocean and atmosphere—and those variations in the elements of the planetary motions and orbits, termed *secular*, requiring in some cases the lapae of ages for their development. In all these instances we have not only seen every anomaly disappear, but each becoming a striking conformation of the law it seemed likely to subvert. Nay, farther, this law itself has been our most efficient instrument of discovery. Many variations in the planetary motions, so delicate and refined as to elude the nicest observation, have been brought to light, by being first deduced as mathematical consequences from the general law. Such instances as these are among the triumphs of science; and we cannot put from us the consideration of them in an essay on the importance of astronomy. To do so, were to reject the noblest use of the sublimest of sciences.”

SHORT CHAPTERS:

BY PATRICK PEDANT, SCHOOL MASTER.

CHAPTER I.

I am not ashamed of the title *school master*. It is expressive—it is time-honored; methinks it savors of dignity, and of times when the *ferula* was, in some sort, a sceptre. There was a pedagogue, (he is now in Canada,) who whipped a boy for calling him a “school master.” So would not I; and I lament, in an age when many a good old thing is going into desuetude, that our masters are shot up (a spindling growth,) into preceptors, principals, and professors, and our schools into institutes and seminaries. We live in a grandiloquent age, and among a grandiloquent people: and Americans are detected in Europe, not more by saying “sir,” than by *talking big*.

I am a school master; call me by none of your new-fangled names. Why should I be ashamed of a compellation which has been offered for ages by those who afterwards grew up to be the pride of England, into the wigged heads of Eton, Westminster, and Rugby? I am content to sit on the same form with Busby and Parr.

Being then a school master, *emeritus* it is true, yet still delighting in the old title, I have to crave my friends' pardon for sometimes forgetting where I am, and schooling my company; for interlarding my discourse with bits of Latin—nay, even of French, of Italian, of German, and of Greek, if these happen to jump with my humor; and, in general, for being given to rehearsal of too many old things, in an age when every body is after something new. To say truth, there is no way

so certain of intimating to the public, one's knowledge of classic antiquity, as by an apt quotation of recondite morsels. There is, not far from New York, a learned doctor, whose English is so piebald, that it is said he could not ask to be shaved, without a sesquipedalian phrase which should bewray his erudition; and though I know not at what university he was graduated, nor what nepenthe quieted his conscience, under that which the Germans call the *doctor's hat*, yet I can attest that many a collegian has stood aghast at the latinity of his English. My scholars, good judges surely, think him very learned. I will therefore not repress the rising quotation, when it trickles over my tongue; nor fear to affront the ladies, in a day like this, when every “female seminary” has its course of Latin.

But over and above this, I am somewhat old; I cannot choose but be old; and, you remember what Horace tells the Pisas about the *garrulus senex*, I have a right to be *laudator temporis acti*. My grandfather on one side, (my father's,) was an Englishman, who intermarried with a Frazer of the Highlands; my maternal grandfather and grandmother were of the county Cavan; so that, as I sometimes used to say to my lads, when they had gone far enough to take the joke, I have in my veins *tris juncta in uno*. Being therefore more Irish than any thing else, I have a right to be called Patrick. My surname, Pedant, is truly English; and was said by my great-great-grandfather, (obit 1707, at Cirencester, where he taught a grammar-school,) Roger Pedant, to have been originally *Pendaunt*, or *de Pendaunt*; the family being called by the last of these names in Domesday-Book; which see, in the library of the university. But the *n* being sucked in for euphony, or, as we say in Hebrew, assimilated; and the *u* being knocked out by some predecessor of Noah Webster, that giant of spelling-book-memory, (who will ere long succeed in giving us a New England tongue which shall not be intelligible in Britain;) and the aristocratic prefix *de* being disused out of modesty; our name has come to be simple *Pedant*.

There are many branches of the Pedants, and therefore I hope that the race will not cease, even though it should be my lot to die, as I have lived, in celibacy. And O! let me in passing say, fair ladies, think not I have been such, as doubting of, or not reverencing your charms; inasmuch as the day was when I have well-nigh forgotten the time at which my school was to open, so sedulous was I in fluttering and philandering about the lovely Mistress Mildred Maltby, then of Williamsburg, but now of Elm-Row, in the Isle of Wight. But, *à nos moutons*, there is one of my second cousins professor in a college, and my father's uncle, Plutarch, though much more hale and abdominous, has, on a hasty glance, been taken for myself. He is now settled in the Holston river country.

To get on with this introduction of myself, be it known, once for all, I am a Virginian by birth, and partly by education; but my days have been days of pilgrimages; I have seen London; I have seen Rome; I have seen Etna: it has even been my lot *adire Corinthum*. I have walked in Switzerland and the Highlands, and smoked in Göttingen and Wiesbaden; and almost died at Oxford, where a kinsman is fellow of Caius (they call it there *keys*) College. But I am not the less a Virginian, and a warm one. I have, how-

ever, seen a little of the world, and am persuaded that all the excellency of the world does not centre in my own state. Time was, (I was a very young and very green lad,) when I was proud of mere heat, and used to say to my Yankee friends, "the cold in clime are cold in blood." It was kind in them only to smile. They had been foolish and raw themselves; and somewhat pitied the juvenile gascon. *Semel insanivimus omnes.* The compatriots of Hancock and of Putnam, forgave the enthusiasm of a Virginian boy, who had never been much further than to the nearest court-house. I have learned to love my native country more wisely, as believing that she suffers shame when her sons grow boastful in her behalf; and yet I am, every year, more an old Virginian.

CHAPTER II.

THE OLD-FIELD SCHOOL.

No Yankee or Englishman can possibly understand what is meant by an *old-field school*, for two reasons. First—(or *firstly*, as overseers are wont to say, just as they manufacture an analogous adverb, viz: *illy*, for *ill*,) no such foreigner has the faintest idea of what an *old-field* is. Secondly—for a moment conceding such knowledge, a *school*, in such locality, would be inconceivable. Though I never presided in such an institution, I was taught in one. It was but for a season, and before I was ready for my Latin Accidence. But the scene is before me! There, in the picture of memory, is the log-hovel, its interstices crammed with reddish earth, and its chimney not unlike a tall partridge trap, ever tottering to its fall. There, within, is the fire-place, ample as that of ancient baron, cheered by the crackling blaze and odoriferous exudation of the pine knot. There, also, mending his pen at the only window, (as a square aperture was by courtesy called,) is the schoolmaster—a white hat on his head; (for surely a preceptor may do that among his subjects, which a *soi-disant* gentleman has been known to do before his host,) and bluish-grey Virginia cloth for the remainder of his person. There, upon crazy, slender forms, sit the flaxen-haired urchins, who are to be the boast of a county, or the magistrates of an embryo state in the west.

At such a seminary, among chinquepin bushes, and the haunts of "scorpions," (a genus greatly meliorated, and as I may say mitigated from the fabulous *scorpio*,) and the thorn bushes, where mocking-birds would sing day and night, I received rudiments which I still prize, and which will "stick to my last sand."

I wonder where the boys are who used to meet me at the Bear Creek school? In many of them the foundations were then laying of a noble, independent manhood; I mean not so much the influences of the in-door as of the out-door instruction. It was less the horn-book and the slate, that wrought great effects, than the brave walk through sleet or snow, three good miles to school; or the races on break-neck colts; or the scuffle for wild-plums or flying-squirrels; or the desperate plunge to save a comrade, perhaps a rival, from the deceitful pool. These are the things to make men. Did not the Romans, even when wealthiest, teach their sons to be tolerant of hunger and cold, to go bare-

headed in the Campus, and to swim the Tiber in January? I have my fears of a fire-side discipline, which shall keep a lad so near his cradle, as to give a too tender mother the decision on every hazard he shall submit to. Such was not *our* early privilege; and if we emerged from the old-field school with little book lore, we knew what many a perked-up master Betty never knew, *videlicet*, to curb a fiery horse; to bear a rib-breaking hug without complaint; and to climb, hatchet in hand, to dislodge the rackoon from its lofty hole in the red-gum tree.

But, again I say, I would fain know where are the playmates of my early boyhood. Where is Offley? the first that ever called me friend. I have seen his name, as I suppose, in the list of a foreign embassy. Ernest Sackley? the last I saw of him, he took from his pocket the first pair of dancing shoes I ever beheld. He had travelled a little, and told us of ships and of fire-works. There was one Bruce, a knotty chap, whom our orbilius chastened with the strap of a shoemaker, for a good hour, so as almost to kill, though not to mend him. *Frangas non flectas* is, I dare say, the motto of Bruce to this day. There were the three Macklins, brothers, the gayest, cleverest, handsomest boys in our circle. I saw them afterwards at Norfolk; two of them doctors; they were something worse when I last heard of them at Vicksburg: *jacta est alea!*

I have often wondered that in Quintilian's matchless inventory of the uses and functions of the human hand, next to voice and eye, the implement of elegance, he has said nothing of the hand of woman. In that period next to infancy, while boys and girls sat intermingled on the same forms, I was already sensible that the little plump hand of Cornelia Bray, who sat next to me, conveyed a tactual impression somewhat magnetic, and different from the attrition of a male paw, seamed with cuts and indurated with dirt. *N'importe*, I will say no more of thee, Cornelia, nor of the bevy of sun-bonnetted lasses, who gave us of their pies and apples, when we pick-nicked by the muddy spring.

Let those who so please, praise the joys of childhood; it hath its sorrows too; and I am frank to say, that my youth was happier than my infancy, and my maturity than my youth. Were it not so—what were the worth of experience, of philosophy, of religion? What the excellence of increasing vigor, knowledge and virtue—what the vaunted bliss of conquering evil, and conferring good—the luxury of temperance—the gains of benevolence—the hope of futurity and its prelibation—which even heathen Tully was transported with? What, I say, would the voyage of life avail, or why not remain in the haven of infancy, and never put out to sea, unless there were some port to gain, and some summer-isles to touch at? Nay, while I abhor the ethics of the utilitarians, yet I crave to know the final cause of a discipline such as ours, if the progress in every thing we hold to be best, lead only to successive losses. Perhaps, however, they who look back to childhood and youth, as to an irretrievable golden age, an Eden guarded by a flaming sword, have been travelling in a wrong direction, with their backs on happiness. If they have lost the comparative innocence, they may well bewail the departed joy of boyhood. But I follow the serene effulgence of a philosophy which teaches me to look for better things—for things perpetually better;

and under the guidance of such a hope, I will not, even amidst gray hairs, shed any drops on the convex glasses of my spectacles, at recollection of the old-field school.

CHAPTER III.

AFFECTATIONS.

No author can long conceal himself from his readers; the innate quality will betray itself first or last, and the mask of an assumed character, worn with constraint and labor, cannot but fall off, during the collisions of an unceremonious acquaintance. It is for this reason that in my humble and fugitive papers, I would discard all affectation, and be the simple schoolmaster. There are divers things I might pretend to be: as, for example, I might claim to be a foreigner travelling in Virginia; or I might set up for a gentleman of ease, and suppress my quotations, which, my friends say, are redolent of the shop. But I despise all sham, and as I was never able to carry on a feint for ten minutes together, and hope never to be ashamed of my name or calling, I really cannot hear of being any body but plain Patrick Pedant, schoolmaster.

To bring the matter down to the level of even a low capacity, we may see how futile all simulation is, by the ancient fable of the ass in the lion's skin, or that of the daw with borrowed feathers. Suppose, for an instant, that those famous ecclesiastics, Rabelais, Erasmus, Swift, Sterne and Sidney Smith, had undertaken to put on the vizard of sanctimonious gravity!—the very notion of the disguise, presents the figure of pug in a full-bottomed wig. Nature will come out. *Naturam expellas furca, tamen usque recurret*: apropos of which verse, I make no doubt that the poet derived his metaphor from having seen the Roman hinds, when treading out their corn, trying, ever and anon, to keep some hungry bullock away from the open area, or threshing-floor. Again, suppose Æsop to have tried to be Solon; for some make them contemporaneous; or Sir Thomas Browne, (the Charles Lamb of the seventeenth century,) to have put on the garb of Jeremy Taylor; or Gifford to have jingled the bells of Peter Pindar; or Tom Moore to have attempted the thong of Cobbet. Suppose these things, or any of them, and you will perceive how vain, how frustrate, nay, how absurd would it have been for me, in my humble den, to have taken on any supposititious character.

When Sir Thomas More and Erasmus met at a certain feast, without being mutually presented, they still found out, each for himself, that he had met his match. On this Erasmus exclaimed, *Aut Morus es, aut nullus*; to which the Chancellor replied, *Aut Erasmus es, aut Diabolus*! So, likewise, I nothing doubt that sundry of those who have formerly sat in my various schools, having not forgotten the crack of the whip, (I speak *per translationem*, or metaphorically,) will at once recognize the hand of a former mentor.

An old man may be allowed to gossip; I cannot speak by the square, but must utter my thoughts as one thing brings up another. And if any of my too hasty friends find my work too long, I may say as Dr. Garth says in the preface to his translation of Ovidius, (which, be it observed, I always retained in my desk, lest the boys of the fourth form should use it in a clannish manner, instead of plying their Ainsworths,) "it

is in the reader's power to make it as short as he pleases."

The prejudice runs against school masters, especially of the old sort. We are too frank. We tell fools that we cannot reform them. We tell idlers that they cannot excel. We tell fond parents that they err in expending money on the training of young asses. And, suiting the action to the word, we do somewhat gall the wincing creatures by timely argumentation of the birchen sort, wherewith we come down upon such as are refractory: which reminds me of Niles Upton, a clever though crabbed youth, of Surry, since an auditor of the treasury, having come for a whole year to my school, without learning ten pages of his Ruddiman; and having been duly mulcted for the same, by the process known among ancient persons as *horsing*, he was called upon by his ireful grandfather, at my quarterly *examen*, to declare whether he could conjugate a single verb: "Yes, sir," he blubbered out, overawed by the red face and eyes of the old gentleman, who was, as usual, three parts drunk; "Yes, sir—I have been putting *one verb* through all its moods and tenses; which is *Vapulo-Vapulabam-Vapulatus sum vel fui*." I forgave him for that quirk.

In all the countries where I have sojourned, I have eschewed affectation of foreign manners. There is, I think, a certain neutral manner, a native politeness, a generalization, as it were, from the mannerisms of different times and regions, which is equally current at Paris and St. Petersburg. It bears the same relation to the conventional ways of any particular *clique* or court, that the *κοινή διαλεκτός* of the Greeks doth to the several inferior dialects. It is the sublimation of manner, the beau-ideal of politeness, pleasing alike in the camp, the boudoir and the hamlet; above imitation of any thing, without ceremony, without "fuss;" the first prompting of native benevolence, and the last attainment of laboring art. Such is the manner which comes back only simplified by foreign travel: I have seen it in a French beggar; I have seen it in the king of the French; I have seen it in Lafayette, and Sir Walter Scott. I wish I could see more of it in my countrymen; and most of all, I wish I had attained it myself. I endeavored to come home no worse, even if no better than I went. Therefore I imported no profound bows, learnt of *valets de place* and *commissionaires*; no gold chains, colored neckerchiefs, black satin bosoms, (or whatsoever may have been the lineal predecessors of these insignia;) no whiskers, moustache, *impérial*, or ear-rings. I saw, that in the Hague, in Potsdam, and in Florence, genuine breeding was evinced by doing little, rather than doing much; by showing little, rather than showing much; by quiet, by repose, by transparency of manner; and that bowing, scraping, refusing to go out of doors, or to go into coaches, palavering and bobbing, and "sir"-ing and "madam"-ing, were rather the tokens of the poor count, or the poor count's spruce gentleman, or the *partenue*. And seeing all this, I became really quite content to come back as I went, so far as regards externals. And, as to *internals*, I am afraid even our most travelled bucks realize the truth of the hackneyed verse—

"Coelum non animum mutant, qui trans mare currunt."

an adage which was a favorite with Van Benthuyzen,

a skipper, whom I often saw at Coenties-Slip, and which he sometimes expressed in very good Dutch, as followeth—*De aart verandert zelden met de luchtstreek*. But though climate seldom changes character, voyaging often changes home-bred youth into expensive baboons, which are manifestly as proud of a silver fork, a Nantes dressing gown, or a filthy tuft on their porcine lip, as they ought to be ashamed of their unmannered coxcomberies. So much for "affectations."

CHAPTER VI.

ANTIQUITIES.

Since the disuse of large outer pockets, there is less hope for the literature of our gentry. I used to carry a volume of Heyne's Homer in each skirt, and sometimes read in the same, while our horses were feeding. But we have changed all this.

Such were my thoughts, as I lately saw a traveller take from his capacious pouch an octavo volume, and begin to turn over the pages. It was on the left bank of the James river, below that classical locality, denominated (no doubt from the buoyancy and illumination of the inhabitants) *Rocketts*. I had found myself, for some hundreds of yards, gaining upon a man who rode along very leisurely, often gazing towards the stream, and apparently jotting down something in his pocket-book. He was stout, and broad in the back, and bestrode his strong bay horse, with the air of a man used to long journeys. The bisection of his person by a transverse umbrella, piercing a rolled cloak or coat behind the saddle, together with a pair of corpulent saddle bags, pointed out the wayfaring man. And when he pulled out his book, I was at a loss whether to set him down as a land surveyor, a preacher, or a doctor. But when he turned his head, and displayed a broad and seamed face, and a pair of circular spectacles mounted in heavy tortoise-shell, I was satisfied that he was not any one of the three.

"Perhaps," said he, after an ordinary salutation, "you can ease me of my doubts, as to the ancient residence of Powhatan. I find from captain John Smith's History, that it lay about the head of tide-water, and a little below the falls."

I gave him such information as every Virginian may be supposed to have concerning the residence of the late Mr. Mayo, and referred him to the British Spy: adding, "It is a work, in various respects, worthy of your attention."

The traveller checked his horse, and looked steadily in my face. "Sir," said he, emphatically, "I have it by heart: and the memory of the writer, I cherish in my heart of hearts!"

"Then you knew Mr. Wirt?"

"Scarcely: except as all the world knew him. Yet I might perhaps say I had some private acquaintance with him, since, on two occasions, by a sort of accident, I was thrown into his company; on one of these times for several days. And no man was ever half an hour in the presence of William Wirt, without receiving impressions which are memorable. But that which suits my vein at present, is the recollection that he was one of the few who have spent a little pains in giving a graceful touch to the antiquities of my native state."

"You are then a Virginian?"

"By birth, such; I might say by education too; but long expatriated. I grieve to think that in a state eminent for the national pride of her sons, there should be so few to lay up any of the still extant memorials of the first plantations. But the pound-shilling-and-pence philosophy prevails even here, and there is no profit in being antiquary."

"You perhaps know," said I, "that we republished the Travels of Smith, almost twenty years ago."

"Very true," replied he, with an acrid smile, "and that in a very creditable shape; but you should not forget to add, that the impression was never sold, and that the patriotic clergyman who essayed it upon his own responsibility, was all but ruined by the venture."

"I have heard," said I, "of Dr. Rice's endeavors; and I admit that appearances are against us. But a few of our younger men are beginning to make collections."

"Good! I hope they may succeed. I am something of a captain Grose myself, and intend shortly to make a second pilgrimage to the site of old James Town. Does the remnant of the church still remain?"

"It does: and I have seen it within the week. There is nothing on this continent which more resembles some of the transatlantic ruins. If the mulberry mania should continue, we may have silk worms fed on that consecrated tongue of land, where Smith once entertained the same project."

"Indeed!" cried the traveller, "and is the mulberry business of as long standing in America as that? I have, indeed, this very morning, seen in the daily paper, the copy of an act of date 1663, to encourage the growth of the mulberry: but you seem to refer to something earlier still."

"If the book," I replied, "that you are replacing, is, as I suppose, a volume of Smith's History, I can at once direct your eye to a passage. Aye, see here—(2 Smith, 86)—'For my own part, although I found neither *Mulberries* planted, houses built, men or victuall provided, as the honourable Adventurers did promise mee in England; yet at my own charge, having made these preparations, and the *Silke-Wormes* ready to be couered, all was lost, but my poore life and children, by the Massacre.' You perceive that the date is necessarily fixed at, or near the year 1622; and there are several passages of similar import in this work."

"I thank you heartily for your information. Allow me also to congratulate myself that there is here and there an 'Old Mortality,' even in the vicinity of Richmond. But further, can you tell me what library contains a complete collection of books relating to the early settlement?"

"I am afraid," I answered, "truth would compel me to say, no library whatever: shame on our oscitancy that it should be so. Many books exist in several collections; but all, I think in none. I am acquainted with no one library which has even taken the trouble to procure the works on American antiquities, known to be in London, and of which a catalogue was presented to me by Mr. O. Rich, Bookseller, Red Lion Square. My only reason for not adding them to my own poor stock, was the *res angusta domi*."

"Our New England rivals have more highly prized the doings of their progenitors. There remain but few

lacunae to be filled in their archæology. I dare say, you will have to import a Farmer or a Sparks to tell your own story for you. Hawkes has already done something in ecclesiastical matters. I am not a little ashamed that no Virginian has ever been duly authorized to ransack the archives of Great Britain for documents, which must be there, throwing light on the founding of the old 'Colony and Dominion of Virginia.'"

Here our roads diverged, and I went on alone.

THE TRAGI-COMICAL HISTORY OF THE LOVERS OF QUIMPER-CORENTIN.*

Madame de Marcel was about forty years of age, rich, and lived at Paris in a handsome style. She was accustomed, the greater part of the year, to have at her house a select society of men of letters, and of women, who were interested in the success of all new publications, particularly such as regarded the theatres. She was, however, obliged, by the will of an uncle, to pass six weeks or two months every autumn at a country seat in Poitiers; but to console herself for the ennui of a country life, and of country company, which she could not avoid seeing, she had taken care to have her chateau well filled with a set of acquaintances sufficient for her amusement while thus banished.

The company consisted, independent of her husband, the president, (who found enough of occupation, in the management of his land, in settling with his tenants, and in the embellishment of his place,) of Madame d'Aigremont, nearly of her own age, and whose taste, as to literature, was perfectly conformable to her own. This lady was accompanied by her daughter, an exceedingly handsome girl, sixteen or seventeen years old, who had already made herself mistress of every agreeable talent, and gone through a proper course of reading to form the heart, taste, and mind of a young person.

The president's brother, called the Chevalier de St. Marcel, had been in the army many years, and had been thought amiable in all the towns where his regiment had been garrisoned. He was indeed thought so in many parts of Paris, but, to be sure, they were not the most fashionable. He frequently attended the theatres from want of something to do—read all new pamphlets and journals for the same reason—and saw and heard the discussions of the learned at his sister-in-law's. An abbé, the complaisant of Madame de Marcel, known as the author of some works of science, but who, to extend the atmosphere of his reputation, had condescended to discuss works of lighter importance, had agreed to pass the autumn with the persons before named, and so much the more willingly, as the house was handsome and convenient, and the table excellent. He had brought with him his nephew, a young man really amiable, whom the abbé was introducing into life, and who joined to a fair outside a brilliant and well cultivated mind. If he had an earnest desire to please (and the presence of the young lady seemed to animate his exertions,) it was without any fixed plan; but it is

always right to endeavor to be amiable, for that leads to every thing.

The first week after their arrival was taken up by receiving formal company, and cards were of course introduced, which tired our Parisians exceedingly; scarcely could the president and abbé find time for a game of chess after dinner, or Madame de Marcel in the evenings for a game of tric-trac with her brother-in-law the chevalier.

After some time the influence of company diminished, and they were left to amuse themselves, or rather to their own tranquillity. Madame de Marcel lost no time in proposing an amusement that would occupy the mind and employ the memory—a plan she had formed the preceding winter, and it was instantly put into execution. At first, when it commenced after supper, it consisted of innocent games, in which forfeits are paid, and punishments ordered to redeem the forfeits. These punishments were always to relate some story, to recite verses, or to sing; and the company were delighted whenever the nephew of the abbé incurred a penalty, for he never failed to produce something agreeable, inspired, no doubt, by his wish to please, and to display his talents before the object who seemed to notice him.

Madame de Marcel and her friend had very cultivated minds, and if they did not trouble or fatigue their imaginations, showed off at least their memories. The abbé was not behind hand; but he was diffuse, often obscure, and always in prose. The chevalier related feats of war, and modestly owned they were not his own. But the two persons who were the most embarrassed, and whom they were very soon forced to excuse from paying their forfeits, were the president and the young lady. The first excused himself by saying, that nothing was so difficult to him as the making a tale off-hand—that he would a thousand times rather sum up the evidence in the longest trial that ever came into court. But he soon got rid of it, by falling asleep immediately after supper, which prevented his taking any part in the amusements.

The young lady did not want either understanding or talents, but it was thought unbecoming her age or situation to appear too well informed. The nephew therefore willingly undertook the payment of her debts; and his security being accepted, the game continued for several nights.

At length, Madame de Marcel wishing to refine upon this kind of amusement, said to M. de Verbois, "Sir, you seem to have so much wit and talent, that I should think you capable of succeeding at a trifling game, which I have heard was formerly played at the Hotel de Rambouillet, when the Duchess of Montausier was known under the name of the fair Julia d'Angennes. It is said that she, and each of the ladies and men of letters who were used to assemble there, began a story, and continued it until the history became exceedingly complicated, and the hero placed in the most embarrassing situation,—and that then one of the company undertook to dispel all the chaos, and clear up the embarrassments that had enveloped the different personages. I have heard that the famous bishop of Avranches had a particular talent in the unravelling these histories, however difficult. You know that this prelate, when young, was a frequent visitor at the Hotel de Rambouillet, and as he was very short, he was called the Julia's

* Copied from Blackwood's Magazine, 1819.

dwarf. Now, M. de Verbois," continued she, "do you think yourself capable of acting the part of M. Huet?"

"Assuredly, madam," replied the young man; "I am neither so short nor so learned as the bishop of Avranches; but what that prelate did in his youth for his divine Julia, I think myself capable of undertaking, in the honor of paying my court to you, and to those ladies."

"That being the case," answered Madame de Marcel, "I will begin a history—you shall continue it, my dear," looking at Madame d'Aigremont; "we will dispense with your daughter from interfering, for, as it will be a romance, she cannot as yet be supposed capable of forming one. The president shall sleep, because he makes up, after supper here, for the little naps he used to take in the mornings when on the bench. The abbé shall employ his genius to increase the intrigues of our history, in such wise that the winding up shall become very difficult; it shall be for him to form the veritable Gordian knot. My brother-in-law must be careful to avoid cutting it; on the contrary, he must multiply events as much as he can. M. de Verbois will then have to unravel the whole; and I am persuaded, that whatever pains we may take to embarrass him, he will produce a denouement at once simple, rational, and fortunate."

"You expect a great deal from me," said M. de Verbois, "and will make me modest as to any talent I may have for the unravelling such histories; but I do not despair to succeed to your satisfaction in this point, either by the stroke of a wand, by a little fairy assistance, or by magic; besides, I know full well, that in a romance, when any personage becomes too embarrassing, how easily he may be got rid of by poison or by the sword. "Oh! that is not the case here, if you please, sir," exclaimed Madame de Marcel; "it is not so that we understand you are to perform your task. Not one person that may be introduced in our history shall disappear; and they must all be forthcoming at the end, and all happy. The aid of magic and of fairies is forbidden: neither the president nor myself believe in sorcerers—all the events, if not exactly true, must be probable, and the conclusion simple and natural."

"These laws are somewhat severe," said the abbé; "but I dare say that my nephew will glory in submitting to and observing them." The nephew confirmed his uncle's assertion by a bow, and Madame de Marcel thus began her history:

"The town of Quimper-Corentin, is renowned throughout all lower Brittany, for the beauty of the women, the refinement of the men, and the singularity of the adventures which happen there. I shall begin by making a slight sketch of some of them; but what I shall say will be trifling in comparison of those singular and interesting adventures that will be told; they will astonish, affect, and confound you, and prepare you for the most unexpected and happy conclusion. If ever it may be said that the end crowns the work, it will be so in this instance, and redound to the glory of M. de Verbois." The young man perceived how much she was bantering with him, but allowed her to proceed, uninterruptedly, as follows, without despairing of final success:

"M. de Lokrenan, high steward of Quimper-Corentin, was one of the richest and most respectable persons of

the province: his house was frequented by all the young men of abilities or talents; and it was the more agreeable to them, from its being inhabited by four young ladies equally amiable. Two of them were the seneschal's daughters, and made only part of his family, which was numerous; the eldest was called Balzanie—the younger Gabrielle. The two others were his nieces, whose parents, residing in foreign parts, had sent them to the seneschal's lady, a woman of abilities, who had taken charge of their education. One was named Adelaide, and the other Aline.

"M. de Kerenflute, son to a rich and celebrated merchant—accustomed early to the dangers of the sea—brave, well made, and amiable—seemed strongly smitten with the charms of Mademoiselle Balzanie, who, to a lively imagination, added wit, and the grace of a fine figure.

"M. du Courci, the son also of a very respectable mercantile family, showed an inclination to marry Mademoiselle Gabrielle, whose too brilliant eyes announced a romantic head, and a disposition for great adventures.

"Monsieur de Sainval, an officer in the East India Company's service, was much in love with Aline, to whose pretty face was joined simple manners and good temper.

"M. de Saint Leon, a reduced infantry officer, had yielded his heart to the beauty of Adelaide the more readily, as her disposition seemed inclined to favor his passion and meet his advances.

"For a period all these lovers passed their time very agreeably in the house of the high steward. Their amours were confined within the bounds of the strictest decency and decorum; and all that the gossips of the town could say, was sometimes, in laughing, that one of these days they should see eight persons married at once. The high steward replied, that this could not be, for that his daughters were not such desirable matches, and that his nieces would return to their parents, and not marry in Brittany. In truth, these comfortable arrangements were cruelly broken up. The young ladies were forced to quit Quimper-Corentin, and I shall explain the cause.

"The high steward had two sisters: one had married an officer of infantry, who had successively risen to the rank of lieutenant-colonel, and had been appointed governor of Colicoure, a sea-port in Roussillon; the other was settled with her husband, a rich merchant, at Cadiz in Spain. These two sisters not having any children, and knowing that their brother, besides many boys, had two girls, had written to him, to desire that he would send each of them one, hinting their intentions of making them heiresses, and of establishing them advantageously in the countries wherein they resided. The high steward thinking the proposals most advantageous, and the aunts having provided for the expenses of the journey, he sent off his two daughters in proper carriages, under the care of trusty servants of both sexes. They traversed France to Roussillon, and the eldest remained at Colicoure. The youngest having rested herself a few days, continued her journey to Cadiz.

"The adieus had been most tender and affecting. The lover of Balzanie was plunged in the deepest affliction. He seemed to foresee some melancholy event; and his mistress had nearly the same presentiment, but she had wrought up her mind to support whatever might befall

her, like a true heroine of romance. The lover of Gabrielle was less afflicted: not that he was less attached to his mistress, but he had formed a plan, the execution of which he thought certain, namely, to go himself to Cadiz, where he had relatives, and flattered himself that he could there continue his court to Gabrielle with the same ease as at Quimper.

"Immediately upon the departure of the daughters, preparations were made for that of the nieces. Aline was to be sent to her father, brother to the high steward's wife, at Pondicherry, where she might flatter herself to gain a brilliant establishment. She would never have undertaken such a long voyage without shuddering, had not Sainval, who, we have said, was in the India Company's service, promised to meet her in India. She set out, therefore, for L'Orient, somewhat consoled by this hope, where Sainval was already arrived. They embarked on board different vessels, but bound to the same port, and set sail together.

"There now only remained at Quimper the tender and romantic Adelaide; but she was soon recalled to Italy by her father, another brother to the high steward's lady, and speedily departed for Leghorn. Saint Leon was in despair, and daily mingled his tears and regrets with those of the wretched Kerenflute. Having thus made you acquainted with the heroes and heroines of my history,—having painted their characters, and pretty tolerably dispersed them over the globe,—I believe," added Madame de Marcel, "I may be permitted to take some rest. It will be your turn, my dear friend, (looking at Madame d'Aigremont,) to tell us to-morrow what afterwards befell these young ladies and gentlemen."

On the morrow, at the same hour, that is to say, after supper, the president sleeping, and the rest of the company listening, the friend of Madame de Marcel thus spoke:—

"The lovers, separated from their hearts' delight, continued to afflict themselves; but the other inhabitants of Quimper looked for nothing but agreeable news from these young ladies. Balzanie seemed contented and satisfied with her aunt in Roussillon. Gabrielle had arrived at Cadiz before Du Courci, and her aunt had pressed her to marry an old Spaniard, lately returned from Peru, immensely rich, which she refused as much and as long as she could, because he was very old, very ugly, and, as it was said, very jealous; but they remarked to her, that as he was so old, he might possibly die soon; and as he would leave her his whole fortune, she might in that case, if she then pleased, enjoy it with Du Courci. This excellent reasoning had its effect upon her, and it was thought that she had made up her mind to marry the rich Peruvian.

"Adelaide was at Leghorn. It required a year at least to receive any news from those who had sailed to India. Every one's mind, therefore, was tranquil about them, when two couriers arrived with letters that plunged the whole town of Quimper into the utmost distress. The melancholy news they brought had been preceded by an accident that had happened to one of the couriers, as he was passing through the forest between Nantes and Vannes. He was attacked by robbers, who carried away his portmanteau, and opened it, in search of jewels or gold; but not finding any, they tore all the papers and letters to pieces, and threw them

into a rivulet, whence they were taken out in a miserable condition, and, when carefully dried, they were all, or in parts, delivered accordingly to their different directions. The letters from Spain and from Roussillon had been sadly damaged; however, the high steward's lady decyphered him that of Balzanie, as follows:—

"Imagine, my dear mamma, what was my despair, when carried off in spite of my resistance, I found myself transported on board the vessel of Barbarossa, who instantly setting every sail, made for Algiers. I arrived there more dead than alive; and with what horror was I not penetrated, when I saw myself shut up in the *seraglio* of this barbarian! It was in vain that I called for assistance on all my relations, and even on M. de Kerenflute, who had so often amused us with his exploits at sea, and who had told me twenty times, that if I ever should fall into the hands of the Turks, he would find means to deliver me.' The remainder of the letter was illegible; but this was sufficient to throw the family of the Lokrenans into the utmost grief. Kerenflute was present at the reading of this fatal letter. In any other circumstances, with what pleasure would he have heard that Mademoiselle Balzanie had kept him in her thoughts! At present he eagerly seized the idea that she had hinted to him, to hasten to deliver her from the hands of these barbarians. 'Yes,' cried he with joy, 'I hear, dearest Balzanie, that thou callest on me for succor. She has need of my courage; I fly to her aid: and I swear never to re-enter Quimper again, until I shall have obtained her liberty.' Having said this, Kerenflute quitted the house, and began instantly to collect all his own money, and made use also of the credit of his friends, to raise a sufficient sum. Should he embark from Quimper, he would be obliged to employ longer time, and pass the Straits of Gibraltar: he determined, therefore, to travel post on the wings of love, through France, to Toulon. On his arrival at Toulon with good letters of exchange, he instantly bought, armed, and equipped a vessel, in which he embarked with the utmost haste, and made sail for Algiers. Feeling hearts, be not alarmed for Kerenflute; the motive that animates him will preserve him from all accidents. In fact, he arrived safely at Algiers; and I recommend him to the person who is next to continue this history.

"We will now return to Quimper. The unfortunate accident that happened to Balzanie was nothing to the affliction which the letter from Mademoiselle Gabrielle added to this miserable family. This is all that could be made out from her torn letter:—

"What horror! Who can even support the mere idea of such horror? The wretched Gabrielle has then, without knowing it, devoured the heart of her lover, Her husband, insulting her grief, said, 'dost thou know what meat thou hast just been eating? What a dish I had prepared for thee? The feasts of Atreus and Thyestes, of Pelops and of Tantalus, were nothing in comparison of what thou hast just done. It was—it was the heart of Du Courci.' At these words, my dear mamma, I fainted. I long lost all my senses. They were forced to carry me out, and I know not even now where I am—'

"Had the rest of the letter not been torn, there was no one in Quimper that would have had the courage to hear it read. Everywhere sobs and lamentations resounded: all pitied the miserable Gabrielle; all tried to

console her relations, without being able to receive any consolation themselves. There were no longer any suppers or amusements in the house of the high steward: visitors came thither but to weep. Saint Leon, the only one of the four lovers who had remained in Lower Brittany, hastened with eagerness to partake of their grief; when a letter received from Leghorn made him as much in want of consolation himself.

"Adelaide had written to her aunt, that her father had intentions to marry her in Calabria, to a merchant of Reggio, who was his friend and correspondent; but that, from the description she had of him, she had conceived such a disgust, that she had rather die a thousand times than be his wife. That her father had forced her to set out with him, to deliver her into the hands of this villainous Calabrese; but that she should ever regret her dear uncle, her dear aunt, her cousins, and the unfortunate Saint Leon. Saint Leon, having the example of Kerenflute before his eyes, thought himself equally bound to succor and avenge his mistress by land, as the other had done by sea. He formed, therefore, a similar resolution; and having adopted like measures, set out to traverse Calabria after the fair Adelaide, as his friend had crossed the seas after the handsome Balzanie.

"I shall now leave them, with your permission, ladies and gentlemen," said the friend of Madame de Marcel. "Monsieur L'Abbé will tell us to-morrow whether their expeditions have been fortunate, or the contrary."

"Ladies," said the Abbé, on the morrow, "romances and such light literature are not my forte; it is well known that I have pursued other studies, but I will risk every thing to please you—I shall prolong your history and labor against mine own blood, by embarrassing, as much as in my power, my nephew, who has undertaken the denouement.

"Kerenflute had a prosperous voyage to Algiers: having secured the protection of the Consul of France, he landed at his house, and made instant inquiries if the Corsair Barbarossa had not lately returned from a cruise with some French female slaves. The consul assured him, that he had not heard of any such thing, but each having made farther and more exact researches, they learned, that an European slave,—but from what nation was not exactly known,—had lately been admitted into the seraglio of the Corsair. Having paid largely an eunuch to know the name of this slave, he said, she was called Bolsani or Basani. 'Ah,' cried out Kerenflute, 'it must be my dear Balzanie—new cares and fresh expenses to obtain a sight of, and to speak to her.' Alas, all his cares were ended, by hearing that the Bashaw of Algiers having a present to offer to the grand seignor, he thought he could not make a more acceptable one than this beautiful slave, and that two days ago she had been embarked on board a large vessel bound to Constantinople. At this intelligence, our Breton lover did not hesitate a moment—he re-embarked, and made sail for the capital of the Ottoman empire. Scarcely is he arrived, than he torments himself and acquaintance to find out whether his mistress be in the seraglio, and what may have happened to her. But it is well known that nothing is more difficult than to penetrate into the seraglio of the grand seignor. The despairing lover exhausts his purse and credit in vain; all attempts to enter that asylum for neglected beauty

are equally disagreeable and dangerous. He paraded sorrowfully day and night round the walls of this gulph, wherein are buried the beauties of Europe and of Asia. One day he overheard, in a coffee-house, some Greeks and Jews conversing, in lingua Franca, on a terrible adventure that had just happened in the seraglio: a beautiful European slave, that had been lately brought thither, had made great resistance to the desires of the grand seignor. The sultan, as much animated by her charms as by her resistance, was about to employ violence to reduce her to submission, when this courageous person drew a poignard from her bosom, and declared to his highness, that she would rather lose her life than fail in the vows she had sworn to a lover in her own country, and whom she was expecting would deliver her. The Sultan despising her menaces, she put them into execution; and having given the Sultan a stroke with her poignard so ill directed that the wound was not dangerous, she stabbed herself to the heart and instantly expired.

"If this recital had alarmed Kerenflute, what he heard and saw on the morrow convinced him of its truth. He was told, that a head was exposed on a pike on the walls of the seraglio, with an inscription below it in the Turkish language, and in such large characters that every one might read it. He hastened to the spot with an interpreter, who, having read the inscription, translated it to him as follows:—

"People, behold the head of a culpable slave, that dared to raise her hand against the Emperor of believers, instead of submitting herself to his supreme will. She prevented the horrible punishments that would have followed such a crime by putting herself to death. Tremble, rebellious and cruel slaves; submit yourselves with patience and humility.—Her name was—the interpreter hesitated a moment, and read 'Alzamire.'

"'Oh, heavens!' exclaimed the wretched Kerenflute, 'it is Balzanie;' he raised his eyes with fear to the head of the criminal, which, although disfigured by the agonies of death, still appeared handsome. Her eyes were closed, the cast of her countenance, her little mouth, and long chestnut hair, every thing recalled to the unfortunate Breton the idea of the person he adored.—'It is Balzanie,' cried he a thousand times, while rolling himself in the dust, and attempting to dash his brains out against the walls of the seraglio. With great difficulty was he carried away to the suburbs of Pera, where he lodged, exclaiming incessantly, 'Oh, heavens! it is Balzanie.'

Madame de Marcel and all the company agreed that the situation was most touching, and complimented the Abbé on his having shown such ability—and the more readily, he had bawled so loudly "Oh, heavens! it is Balzanie," that all the servants who had heard it in the first anti-chamber ran to inquire what had happened. It had awakened even the president; but they were all made easy by learning it was but a tale.

The Abbé continuing his recital: "let us return," said he, "to the other adventures of our Quimper-Corentin:—

"You have been told, that Saint Leon had set out for Calabria, in the hope of delivering Adelaide from the hands of her tyrant. As the distance is great from Quimper-Corentin to that country, it required all the ability, courage, and patience of Saint Leon, to discover

the residence of his mistress, as he was perfectly ignorant of the name of the person she had married. We are unable to render an exact account of all the circumstances of his journey, or of the events, without doubt terrible, that marked the catastrophe. What was known at Quimper was sufficient to throw the whole town into consternation. It was said, that Adelaide, having suffered greatly from the jealousy of the Calabrese, was dead, and buried in the convent of capuchins at Reggio; and that, not long after, a thread merchant of Quimper, who made yearly very extended journies, and sometimes carried his ware to Italy, had asserted, on his return home, that he had seen Saint Leon, who had become a capuchin under the name of Father Guignold de Concarneau; that he had heard him preach in the parish church of a village in Lombardy—that not only he knew him from the features of his countenance, but had talked with him; and that Saint Leon had begged of him not to say anything about him in Brittany. The fate of the family of M. de Lokrenan appeared as afflicting as extraordinary, when news was received from Aline, which, without being of so melancholy a cast, was not the less strange. It was not contained in written letters, but a history so much the more deserving of belief, as it was printed. This history was current through France, which, if considered as a romance at Paris, it was solely owing to the personages mentioned in it being unknown in the capital, whereas at Quimper it had quite a contrary effect.

"The ship on board of which Aline had embarked having been wrecked on the coast of Golconda, its rich contents were plundered by the subjects of the monarch of that rich country, and they had presented to their king a beautiful French woman called Aline, as the most precious part of the booty. The Indian prince was so much of that opinion, that he generously ordered the rest of the prisoners to be set at liberty; and falling desperately in love with our young Bretonne, he had wholly yielded up his heart, and had divided his empire with her. The Golconders, enchanted with the beauty and sweet temper of Aline as much as their monarch, had submitted themselves so totally to her power, that on the demise of the sovereign of the richest diamond mines in the world, they had unanimously chosen her mistress of the empire.

"The new queen could not forget her country, nor quit the idea of Sainval, who had testified so strongly his affections. She offered to conclude a treaty of alliance with the governor of the French settlements in India; and as the attachment between her and Sainval was no secret at Pondicherry, he was chosen to execute the honorable commission of assuring the queen, of the respect and devotedness of his nation. Aline, it may be imagined, gave him a handsome reception; she had even imagined to please and to surprise him, a scene which all Paris admired, as the fruit of a fertile imagination, but the full value of it could not be felt without having lived at Quimper.

"M. de Lokrenan had about a league from the town a very beautiful summer retreat; in fact, it was merely a cottage, but decorated with every thing such a place was susceptible of: on one side was a grove, intersected by a rivulet that was crossed by an elegant wooden bridge; on the other was a meadow full of cows, whose

milk made the best butter in Brittany. The ladies Lokrenans and their cousins went often thither for a walk, and with their fair hands made such butter as would have done honor to the most splendid tables. Aline took greater pleasure in this amusement than the rest, and succeeded far superior to them—she used to dress herself as a shepherdess, and her butter was distinguishable from that of all the others.

"Sainval had often assisted her in this innocent occupation: the remembrance of the hours they had so often pleasantly passed at a spot dear to both, was so present to the mind of the queen of Golconda, that she had built, at a small distance from her capital, an exact copy of the cottage and its surrounding objects. It was there the queen of Golconda gave the ambassador a private audience, and assured him of the duration of her affections. On his part, Sainval swore, that the recollection of the butter made by Aline's fair hands was far more delicious than the diamonds of Golconda appeared brilliant.

"The description of the queen's cottage was so minutely detailed in the history, that there was none in Quimper did not know it for that of the high steward's; the whole town, on learning the circumstance, went thither with the book in their hands, saying, 'aye, there's the grove—there's the bridge—the meadow—the cows; let us console ourselves for the misfortunes of our three young ladies, for here at least is one who has been fortune's favorite. In truth, it was just that it should be so, for she was the most amiable.'"

At this part the Abbé stopped, finding that it was rather late, and that he had fulfilled his task. "It is now your turn," said Madame de Marcel to the Chevalier, "and to-morrow night we shall expect you to finish the history." "I will do what I can," replied the Chevalier, "and as shortly as possible: for, in quality of a soldier, I ought to be expeditious, and fortunately it is not my lot to relieve all these lovers from their embarrassments."

On the morrow, the Chevalier said; "I should find it very difficult, I believe, to add any thing to the misfortunes or to the cruel situation of the lover of the defunct Adelaide in Italy, or to the miserable Gabrielle in Spain. I shall leave M. de Verbois to bring them out of the scrape if he can; I shall content myself with continuing the thread of the two other histories.

"The joy that the good fortunes of Aline and Sainval had caused in Quimper, was of no long duration; a continuation of the history was received, of which they were the hero and heroine; and it was related that the project the Queen of Golconda had formed of raising her lover to share her throne, had not succeeded. The Golconders had voluntarily submitted themselves to the government of Aline, because such is the power of beauty, that the hearts of the greatest barbarians cannot resist it. The Indians doubted not of her ruling them with kindness, and although their manners were different from hers, that she would permit them to follow their ancient customs without oppression or constraint; but when they found that she intended to place a French officer on the throne, who would soon open their harbors to the vessels of his nation, would introduce French garrisons into their strong places, and force them to conform to the maxims of Europeans, the discontent became general. Sainval having ordered a small

body of French troops to advance to support his pretensions, and execute the commands of the queen, was instantly attacked, and surrounded by the army of Golconda; and, notwithstanding our troops defended themselves with the utmost courage, they were overpowered by numbers. The people besieged the palace wherein the queen and her husband had shut themselves. Sainval, wishing to repel the mutineers sword in hand, was slain. Aline herself appeared on the balcony, in the hope her presence would have some effect; they wished indeed to spare her, for the intention of the rebels was not to put her to death; but the arrows flew about in all directions, and one gave her a fatal stroke, by piercing her heart."

After a moment's silence,—“Let us now see,” said the Chevalier, “what is become of M. de Kerenflute. The horrid spectacle he had witnessed on the walls of the seraglio had affected his head and heart; his senses were gone, and he fancied he saw the Turks in a fury, massacring the fair Balzanie; and on the other hand, all Quimper in tears, and the family of M. de Lokrenan overwhelmed in grief for this cruel event. Who, in fact, could have retained his senses in such horrid circumstances? All the physicians of Constantinople, Franks, Greeks, Jews, and Mahomedans, declared that Kerenflute was incurably mad, and kept him tightly bound until there should offer a vessel to carry him to France. During his passage, he constantly exclaimed in the same tone the Abbé did yesterday, ‘Oh Heavens, it is Balzanie!’ Fancying he wore a sabre, he was continually drawing it to cut off the head of every Turk his wandering mind made him see in the ship; but all offensive weapons had been taken from him. It was in this miserable condition he disembarked at Marseilles; and having undergone quarantine, he was placed in the house of a surgeon, who, in concert with an apothecary, applied every possible remedy, but in vain.

“At length a Quimper-Corentin coming into Province, hearing talk of the misfortunes of Kerenflute, went to see him. He undertook to convey him safely into his own country, which he did with all imaginable prudence and precaution. During the journey, with the intent of calming him, he told him of all the miseries that had befallen the sister and cousins of Balzanie. Kerenflute sighed deeply at the recital, and concluded, that misfortune, when once attached to a family, it was impossible for any part of it to escape.—It is now the turn of M. de Verbois,” said the Chevalier, “to tell us the remainder,” as he stopped short in his narration.

“That cannot take place to-morrow,” said Madame de Marcel, “for I must inform you, gentlemen and ladies, that we shall have to-morrow a very large company, which will oblige us for some days to discontinue our evenings’ amusements. The bishop of Poitiers writes me word, that he is on his visitation, and will dine here to-morrow, and desires me to permit him to remain until after Sunday; and that same evening, the intendant of the provinces will arrive to pass two days with us.” “By Heavens!” exclaimed the Abbé, “these episcopal visits are very inconvenient: you see, ladies, how I am equipped—my hair in a club, and a green coat. Since you are to have a bishop visit you, I shall be obliged, out of consideration to him, to return to my curled head and my black coat.”

“For my part,” said the president, yawning, “I don’t care a fig for an intendant; I sit above him in our courts of justice.” “Ah! for Heaven’s sake, president,” said Madame de Marcel, “quit these pretensions; an intendant is a man of whom we may always wish to make use of when we have lands and tenants: besides, who knows what these people may come to.”

“Well,” added M. de Verbois, “I am very thankful for these visits; they will be of use to me, for I was embarrassed how to conclude these histories of the lovers of Quimper-Corentin, and a few days of reflection will help me out of all my difficulties.”

The bishop and intendant having quitted the castle of Madame de Marcel, and left the company free to pursue their former amusements, M. de Verbois, who had undertaken to conclude the history of the lovers of Quimper-Corentin, acquitted himself as you shall now see.

“We left the unfortunate Kerenflute on his road from Marseilles to Quimper, conducted by one of his countrymen, who to console him told him of all the misfortunes that had happened to the family of M. de Lokrenan. The lover of Balzanie inconsolable for his own loss, cried out incessantly, ‘Oh, Heavens! it is her; it is her head that I see fixed on the walls of the seraglio at Constantinople.’ However, they at length arrived in their own country; but when about two leagues distant from Quimper, Kerenflute’s guide, having placed him safely in the house of a clergyman of his acquaintance, hastened to the town to inform his friends and relations of the melancholy state he had left him in. But how greatly was he astonished himself to learn, that since he had left Quimper a year ago, Mademoiselle Balzanie was in perfect health at her father’s house, having returned very rich from Roussillon, as the heiress of her late uncle, the governor of Collicoure. It was on a groundless report that Kerenflute had made his expeditions to Africa and Turkey, and it was not the head of Balzanie which he had seen on the walls of the seraglio. His own head, however, was turned, and it was necessary to use the utmost precaution to prepare him to receive the news of the happiness that awaited him; for Balzanie, having heard what strong proofs of affection Kerenflute had shown, was resolved to arouse his love with her heart and hand, so soon as he should return from his fruitless voyages, and her parents did not disapprove of her intentions. But whence arose this cruel error, in which not only Kerenflute, but the whole family of the Lokrenans, were plunged? It was owing to a dream, which I will now relate. Mademoiselle Balzanie, while at Collicoure, on the Mediterranean shores, was invited to a party of pleasure on this sea, which was happily put into execution. A galley, elegantly ornamented, conveyed the company from Collicoure to Port de Vendres, where they found a tent pitched near the shore, surmounted by several arbors of branches of trees, a ball room, and tables laid out for a collation.

“When they were about to sit down to table, they saw a chebec, bearing the flag of Algiers, steal from behind Cape Béarn. It had cannon, which fired broadsides slowly, while distant; but when it approached the shore where the ladies were, they redoubled. Balzanie at first did not know what to think of this unexpected visit, and was much alarmed; but her companions

comforted her by saying, that the Turks she saw were very polite and gallant. In fact, the chebec having entered the port, those who disembarked, though disguised as Turks, were soon known for the officers of the garrison of Collicoure, having at their head a young and amiable marine officer, who, being desirous of partaking of the feast, had thus dressed out the vessel he commanded. She was laden with an excellent supplement to the collation already prepared; having done the honors of it to the ladies, they danced until evening, when they all returned to Collicoure as fortunately as they had set out.

"Nevertheless, during the repast, and in the course of the day, they assured Balzanie that her fears were not totally groundless; and they related a great many stories which tradition had preserved, tending to prove that corsairs had often made captures on the very shore which they had danced upon. 'They hide themselves,' added the captain of the chebec, 'as we did, behind Cape Béarn, and suddenly rush on the shepherds and their flocks, at a moment the least expected, for the shore near Port de Vendres is defenceless.' 'It is not more than ten years ago,' said another, 'that the corsair Barbarossa carried off a whole wedding party, who were amusing themselves on those sands. The bride, being very pretty, was carried to the seraglio of Barbarossa, of which she made the chief ornament, while her unfortunate husband was condemned to labor the ground, and his shoulders regaled with stripes.' The reflections that were made on these stories were so gay, that the governor's lady was forced to impose silence on the young officers. But the conversation had continued so long and so incessantly, on Barbarossa, rapes, and corsairs, that Mademoiselle Balzanie dreamt of them all night. One of her dreams was quite connected; and as the morrow was post day, she wrote a long letter to Quimper-Corentin, when, having detailed a full account of the pleasant fête that had been given her, she could not help speaking of her dream at the end of her letter. It was this unlucky letter, brought by the unfortunate courier whose portmanteau was plundered, and papers dispersed and wetted between Nantes and Vannes, that had caused an alarm, which threw the whole town of Quimper into consternation. All that remained of Balzanie's letter was the end of it, and the whole of her dream, which had been taken for a real adventure; for the rest was quite blotted and illegible. This sad mistake had sent the wretched Kerenflute to seek her; and fully convinced of the imaginary disaster of his mistress, he thought he had heard her spoken of at Algiers, where fortunately no French women have been transported for a long time. The name of an Italian, Bolzani, had deceived him; and on his arrival at Constantinople, the resemblance to the name of a young Greek, Alzamire, had also deceived him. She had made resistance to the grand seignor's desires, for which her head was cut off. It is easy to mistake the features of a beauty when thus situated, and especially when a false idea occupies the mind. About a fortnight after the receipt of this fatal letter from Mademoiselle Balzanie, others were received, which made the family perfectly easy; but Kerenflute had in his impatience set out for Toulon, and, from that moment, no one could tell where he might receive more fortunate intelligence.

"When Balzanie had passed some months at Colli-

coure, making the governor's house pleasant and agreeable to the whole garrison, her uncle died, leaving her his heiress; and her aunt, having settled her affairs, retired to Quimper-Corentin, ready to confirm to her niece all she was possessed of. We have said that Mademoiselle Balzanie had heard all that her lover had undertaken for her sake. She waited impatiently to tranquillize him, and to make him happy—she did not, however, wait long; but the state of Kerenflute's mind demanded every attention in announcing to him this unexpected happiness. They began by hinting doubts of what he had seen; then giving hopes of more fortunate events, and to tell him, at last, that he might make his mind easy, for that he would speedily be completely happy. He was admitted to see Balzanie, and joy was now causing the same effect that despair had done. Marriage alone could cure him of his delirium; this was tried, and succeeded.

"'Yes,' exclaimed Kerenflute, recollecting what his companion had told him on the journey from Marseilles to Quimper, 'I am now happy; but the rest of M. de Lokrenan's family, his other daughter, his nieces, and my friends, who are so much in love with them, are still plunged in despair.' 'Oh no,' replied she, 'all the world are happy at Quimper-Corentin; Mademoiselle Gabrielle is here on her return from Spain with her dear Du Courci, at present her husband. Of the two nieces, one of them is come back from Calabria with St. Leon, who has not turned Capuchin; and Mademoiselle Aline is just returned from India with the amiable Sainval.' 'By Heavens,' cried Kerenflute, 'I believe you are all determined to make me more mad than ever: how can what you say be true, after what I have heard?' 'You shall have no further doubts on their account, if you will but listen to me,' said one of the company.

"If the uneasiness that was suffered for Mademoiselle Balzanie was owing to a dream, what was felt for Mademoiselle Gabrielle was merely founded on the representation of a tragedy. On her arrival at Cadiz, the relations she had there, formed a plan to marry her to an old merchant, who had lately brought immense wealth from Peru. She was afraid of opposing their will, feeling, on the one hand, that this alliance would make her very rich, and, on the other, that, from the age and infirmities of her future spouse, she might soon hope for the enjoyment of all his wealth in uncontrolled liberty. She married, therefore, the Peruvian, and her marriage was scarcely concluded when Du Courci arrived. In spite of the jealousy of the merchant, he found means to see Gabrielle, and make her some tender reproaches. The amiable Bretonne was not displeased at hearing them, but advised him not to risk again entering her house. 'Be on your guard,' said she, 'especially as to husbands of this nation, for the presumptuous French have often felt the effects of their revenge. I am interested in your days; be careful of them, for my sake, in times more fortunate.' She would have continued, but a noise she heard made her retire.

"Gabrielle was confirmed in her fears from the representation of a Spanish play, said to be a translation from the French, but which the mistress of Sainval believed to have been originally Spanish; for the savage character there drawn of a jealous husband was more analogous to that nation, than to the manners, thinking, and acting of French lovers or husbands. The heroine of

this drama was called Gabrielle, like herself; and, as the catastrophe of this revolting tragedy, she was forced to eat the heart of her lover, named Conci, but which was translated into Spanish, *Da Courci*.

"*Du Courci* was present also at this play, seated on the opposite side of the house to Gabrielle, who was with her husband and another lady in a side box; and she no sooner heard from the stage those names that were so dear to her heart, than she became affected and uneasy, which increased as the interest of the piece advanced. It was superiorly well acted, for it costs little to a Spanish actress to play impassioned parts, and an actor of that nation can easily perform a jealous husband. Gabrielle burst into tears, and as, towards the conclusion, the name of *Da Courci* was often repeated, she was quite overpowered, and after sobbing aloud, fainted, and was carried home senseless.

"It was on the morrow that she had written to Quimper, and her letter had met with the same accident as that of *Balzamie*, and caused a similar mistake, which had given such uneasiness to the family of the *Lokrenans*. But this scene was not productive of such melancholy effects in Spain; some of the gossips made malicious reflections respecting Frenchmen and French manners, especially such as had heard of the prior attachment of *Du Courci* to Gabrielle. The husband, however, was not any way jealous, and had no thoughts of punishing it, or perhaps he had not time, as he very shortly after fell dangerously ill, and died. The young widow, now amazingly rich, settled her affairs, in which she was assisted by *Du Courci*; and, having sent her most valuable effects to France, followed them thither herself. *Du Courci* was not long behind her, and on the expiration of her year of mourning, they were married at the time when *Kerenflute* had returned to his native town.

"The adventures of *Mademoiselle Adelaide* were not near so simple as those of her two cousins; for what had happened to her was indeed extraordinary. She had been forced by her father to accompany him into Calabria, where he had married her by menaces and violence, omitting some essential forms, to a very rich but very disgusting Calabrese of Reggio. Her father returned to Leghorn as soon as he had accomplished this fatal establishment, and left her a prey to her stupid husband. She fell ill with chagrin, and not daring to explain the cause of her affliction, complained bitterly that she was not allowed a confessor to whom she might open her heart. She would readily have obtained this satisfaction, had there been any French monks in the country, but for a long time none had been in those parts. Unexpectedly, they learnt that a Capuchin from Lower Brittany was arrived at Reggio, to remain some time before he continued his journey to the missionaries in the Levant. The husband, penetrated with all the esteem and confidence the monks of that austere order obtain in catholic countries, instantly introduced to his wife *Father Guignold de Concarneau*, by whom he was politely received.

It was the enamored Saint Leon, who, under the disguise of a beard and hood, had come to offer her proofs of his zeal and tenderness. She did not discern him until they were left alone, and Heaven knows with what joy and sensibility she reproached him for his imprudence, and for thus risking his life. Saint Leon

assured her, that he had employed certain means to prevent any suspicion or jealousy, and soon their whole conversation turned on how she could be withdrawn from the tyranny of such a husband. The two lovers agreed that nothing could be more difficult; and the plan they at last adopted was certainly most singular. It was settled that *Adelaide* should counterfeit being dead, and measures were taken accordingly. The wife of the Calabrese, although more contented, and in excellent health, since she had met again Saint Leon, made believe that her disorder was increased; a physician, gained over by the presents of the false Capuchin, certified her danger, and soon the pretended *Father Guignold* no longer quitted her chamber, and every thing was so well managed, that she seemed to expire before their face. The funeral was arranged by Saint Leon, as he said, according to the last wishes of the defunct, who had desired to be buried in the convent of the Capuchins at Reggio; and on the night following the burial, she was taken out of the vault and transported to the cell of *Father Guignold*. After she had reposed some days in this sacred and inviolable asylum, the Breton missionary announced his intention of departing for Sicily, on his road to the Levant. A vessel conveyed them speedily to Russina, attended by a youth to serve him as a lay brother; and it may be easily guessed who this companion was. Instead of crossing from Sicily to Turkey, they sailed from Messina to Naples, and from Naples to Rome, under the same disguises.

"In this capital of the christian world, Saint Leon found protectors, and employed them to obtain two considerable favors; but both founded in justice, when the situations of himself and *Adelaide* were considered. *Adelaide* retired to a convent of nuns, and demanded that her marriage with the Calabrese should be set aside, because she had been married by force: some of the most essential ceremonies had been omitted. Saint Leon solicited to have the excommunication taken off, which he had incurred for having put on the dress of Saint François, without having a right to wear it; and for having forged a false order from the general of the Capuchins to go to Reggio; and for having, under this disguise, assisted in the evasion of his fair countrywoman.

"The cause of the lady appeared to the courts more just than that of the gentleman; her reasons seemed perfectly sound—and as it was only necessary to have a verification of facts, letters were sent to Reggio for information. The affair of Saint Leon was considered as more serious. They were for having him remain a Capuchin, since he had counterfeited one so well: but that was not his intention; and it was necessary for him to press every friend to exert himself, that such a rigorous sentence should not be put into execution. It was while this matter was pending, that, passing through a village in Lombardy, he met with the thread merchant from Quimper, whom those who have commenced this history have spoken of. As he continued to wear the Franciscan dress, he was obliged, through a singular circumstance, to preach a sermon in honor of the patron of the parish. He had arrived at this village exactly as the rector was sitting down to dinner, for, as it was the feast of the patron, he was regaling his brethren of the cloth. The pretended *Father Guignold* was handsomely entertained, and after dinner the

rector was to preach the panegyric of his patron. Unluckily he had made himself unfit for this brilliant function; and the travelling Capuchin was intreated to perform it for him. He felt that it would be unhandsome to refuse, having been so kindly treated; but not being well acquainted with the character of their saint, whom he was to praise, he bawled loudly and so inarticulately, that his words could not well be understood, accompanied by gesticulations of such vehemence, that he fulfilled his task to the great satisfaction of the clergy, and even to the edification of the parishioners.

"At length St. Leon succeeded in obtaining his pardon, and liberty to lay aside the dress of Saint François. During this time news was brought of the death of the Calabrese, husband to Adelaide: her father was also dead; and his daughter, having succeeded to his wealth, and at liberty, gave her hand to Saint Leon, who, renouncing alms and the hood, brought back triumphantly to Quimper-Corentin her who had given him such extraordinary proofs of her love.

"There now only remained to satisfy the unhappy Kerenflute, as to the fate of the fair Aline and her lorn Sainval. They assured him they were returned from Pondicherry to Quimper as happy as kings, but without having otherwise reigned than in the hearts of each other. Hence it may be readily concluded, that the history which had been made of their adventures, was a pure fiction, and only a romance. But how could it have happened that, in this spirited history, the names of Aline and of Sainval, the description of the country house of M. de Lokrenan, and other circumstances, should have squared so exactly with the truth, that the writer must have been a sorcerer from Quimper-Corentin to have done it so marvellously well? I will explain the riddle: A young officer of dragoons, full of wit and vivacity, had passed two years in quarters with his troop at Quimper: during so long a residence he became acquainted with the best company in that town and neighborhood, and of course had frequented the house of M. de Lokrenan; he had even paid his court to Aline, and had often accompanied her to the country house where she had made butter, and assisted her in this rural employment—and the idea of it had remained strongly fixed in his memory. He quitted Brittany about the same time that Aline embarked for India—and, when at Paris, admitted to the society of some pretty women, who desired him to compose to them an agreeable and interesting tale, he, therefore, imagined that of the Queen of Golconda.

"The names of Aline and Sainval, and the details of the country house, being ever in his mind, he introduced them into the tale, and what was considered at Paris as a novel, was at Quimper believed as authentic news; which, if it wanted confirmation as to some of the circumstances, had a strong foundation of probability. There was not, however, one word of truth in it: Aline had safely arrived at her uncle's in Pondicherry, and Sainval had likewise made the same fortunate voyage to that town. The niece had captivated the heart of an old merchant, who had settled all he was worth on marrying her. Sainval had offered himself when she was freed by death from her old husband, and had met with her uncle's approbation, as he was young and agreeable. A year afterward they had embarked to enjoy

their fortune at Quimper; and you will agree with me, that no story can be more simple and less romantic than theirs. Fortunate inhabitants of Quimper-Corentin, what a happy lot is yours! You only suffer from false alarms, whilst others endure real evils. I sincerely congratulate you on your happiness, and wish the same to all who hear me."

Thus did M. de Verbois conclude the history of the lovers of Quimper-Corentin. Madame de Marcel and the company applauded this denouement—and should any critics dare to say that there is very little probability in the manner these heroes and heroines of this history were extricated from their embarrassments, the more just will allow that the restrictions imposed were very hard and difficult to execute, and that, from the exclusion of magic and poison, they could scarcely have been otherwise brought home again safely and happily.

NOTES AND ANECDOTES,

Political and Miscellaneous, from 1796 to 1830—drawn from the Port-folio of an Officer of the Empire, and translated from the French for the Messenger, by a gentleman in Paris.

M. MANGIN IN 1830.

M. Mangin is one of the men of the restoration who has accumulated upon his own head the largest share of public hatred. His uselessly cruel conduct in the affair of General Berton, and his vexatious and injurious proceedings while prefect of police, concurred to make him fear the effects of popular revenge, after the overthrow of the power which he had served.

More lucky than the ministers of Charles X., who were much less detested, he succeeded in leaving France without being disturbed. M. Mangin was indebted for his quiet escape to M. Bavoux, his immediate successor in the prefecture of police. Let us suppose M. Bavoux under similar circumstances, in the power of M. Mangin; would he have got off as easily?

When the royal guard, driven from the streets of Paris, was concentrating itself at the Carrousel and the Louvre, the *gendamerie* of Paris, which guarded the prefecture of police, had to abandon its post and follow the general movement. M. Mangin, whose wife had recently been delivered, precipitately abandoned his hotel, without even taking time to conceal or destroy important papers which were afterwards found on his table. He had obtained a temporary asylum in the house of a superior officer, employed in the prefecture of police, who, after having served under the empire and during the hundred days, had the rare happiness of not being stripped of his office by the restoration.

A provisional government, under the name of a municipal commission, had been installed at the Hotel de Ville. M. Bavoux, appointed prefect of police, had taken immediate possession of the prefecture. His modesty had induced him to accept with great readiness the advice and assistance of Count Real, who had been sent to him by M. Mangin, one of the members of the municipal commission. They were together engaged in the despatch of business, when a superior officer,

belonging to the prefecture, was announced. He had served under M. Real during the hundred days, and was known and esteemed by him.

"Sir," said he, on entering, "I have a confidential communication to make to you."

"What is it?"

"Madam Mangin has demanded an asylum from me. She has just risen from child-bed, and is suffering a good deal. You will suppose that I have accorded it to her."

"You have done well."

"If she is unwell," added M. Bavoux, "let her return and occupy her apartments. I will not lodge there. She will be respected and properly attended to. If she has occasion for money, let her be supplied."

"No; she says she wants nothing."

M. Real, perceiving some hesitation in the manner of the officer, quickly replied:

"You have something else to say. Is madam Mangin alone at your house?"

"I must confess that M. Mangin is there also."

"Speak low, sir," said M. Bavoux; "do not let every body into our confidence."

"He must leave immediately," added M. Real. "If he were discovered I would not answer for him."

"How can he go?"

"If he has taken nothing with him—if he wants money, he must be furnished with it, and his effects sent after him: but he must leave this very day."

"He cannot without a passport."

"We will have one made out for him."

"But under his own name he will be recognized."

"Let some other one be taken, and let him disguise himself. Take the first name that occurs, and let him pass as a merchant, and all will be well."

The passport was immediately made out, and M. Mangin left Paris that very evening for Switzerland.

As prefect of police, M. Mangin was irresponsible; but, whether with or without reason, he was detested. Though the law could not reach him, he might not have been entirely safe from popular vengeance. Thanks to M. Bavoux and M. Real, M. Mangin, happier than many of the exiles of the restoration, was enabled to return to his country, and to die in his native land.

A PATRIOTIC GIFT.

After the revolution of July, the high officers of state hastened to abandon a part of their salaries in favor of the victims of the memorable days. I had gone to the Luxembourg palace, where I met one of the great officers of the Chamber of Peers. He observed an editor sitting near me, and came up to us.

"Do me the pleasure," he said to my friend, "to announce in your next number, that I have abandoned 10,000 francs of my salary in favor of those wounded in July." (The salary of the noble peer was 100,000 francs, exclusive of a house, wood, and lights.) "You must understand that I shall lose nothing by this, but, on the contrary, gain. I have, heretofore, given 20,000 francs for concerts during the winter. I will now give no more: so I shall make 10,000 francs."

MARTAINVILLE.

Martainville died of gout on the last day of the revolution of July. It was a piece of good fortune for him. The new government would not, like the restoration, have paid for the treason of Recque in 1815, or the labors of the monarchical writer. Martainville had many artificial wants, and was not young enough to recommence the precarious and joyous life which he led under the empire.

Let the reader figure to himself, Martainville dining in a café with his friend M. Etienne, then a *collaborateur* of his, now a deputy and a rich proprietor, and waiting patiently until the latter could obtain the means of paying for their meal, M. Etienne having gone to ask some little money in advance for a manuscript which he had just finished. Martainville often said that this period of daily privation was the happiest of his life.

He discovered a singular method of discharging a debt contracted with a confectioner on the Boulevard du Temple. Martainville walked, during a part of the afternoon, up and down the pavement opposite the shop of his creditor, and rarely any person of his acquaintance passed without offering to take something with him. He never refused. They entered the nearest confectioner's, which was that of his creditor. Martainville asked for kirschenwasser, which he stated to be excellent in that establishment. The garçon filled the glass of the friend with the liquor, and Martainville's, without its being perceived, with clear water. When a second glass was proposed, Martainville always accepted it. The same thing was repeated several times during the evening, and Martainville thus succeeded in diminishing his account, while he threw custom in the way of his creditor.

Martainville was an excellent story teller. I have heard him tell the following anecdote, which I take to be true; for there was nothing in it to gratify his own vanity:

One evening in a café he was quietly looking on at a game of billiards. One of the players was an Englishman. A stroke had been made about which there was some doubt. The question was about a carambol. The persons standing around are consulted, and the Englishman approached Martainville.

"Did I not, sir, carambol?"

"I did not see the stroke, and I cannot conscientiously decide."

"Sir, you ought to have seen it, and you ought to say that I caramballed."

"But, sir, I have the honor to repeat to you that I did not see it."

"You have seen it, sir, and it is bad faith on your part not to state that I have caramballed."

"I protest to you that I did not see the stroke."

The Englishman, in a rage, seized a billiard queue and gave Martainville several blows, from whom he was at last with difficulty separated. Martainville demanded satisfaction from his brutal adversary; it was promised, and the meeting was fixed for the next morning.

At the appointed hour Martainville was on the ground with his witness and his arms. The Englishman had not yet arrived. At last he came, but alone and on horseback. Without dismounting, he approached Martainville.

"Did I not, sir, carambol?"

"That is not the question at present: you have grossly insulted me, and you must give me satisfaction. I told you yesterday that I did not see your stroke: since that time I can have seen nothing."

"Ah! I have not caramballed?"

And the Englishman gave Martainville two strokes with his riding whip, spurred his horse, and rode off at a gallop.

Martainville never saw him again.

M. PARCEVAL DE GRANDMAISON, AND HIS BROTHER.

M. Parceval de Grandmaison, after having formed a part of the sort of institute which accompanied Bonaparte into Egypt, became a member of the French academy. He was a literary man of distinction and modesty—a man of intelligence, good-natured and serviceable, and generally beloved and esteemed. His death caused deep and just regret. M. Parceval de Grandmaison was at least as absent as *le Menalque de la Bruyère*.

One day, about five o'clock, M. Parceval de Grandmaison returned home for the purpose of dining. The door of the house in which he lodged was closed by a heavy five horse wagon. It being impossible to pass behind the wagon, he had to go around the farthest horse—the horses being driven *tandem*. In his passage around, M. Parceval entirely forgot that he was going to dinner, and proceeded to the café, which he was accustomed to visit every evening, to read the journals. On entering, he looked at the clock, and was astonished to find it so early. "I must," said he, "have dined earlier and quicker than usual." He ordered some coffee, surrounded himself with all the journals that he could procure, and commenced reading them as a means of whiling away the time until the opening of the theatres.

In the course of the evening he felt some uneasiness about the stomach. He attributed these disagreeable symptoms to a difficult digestion, and determined to speak to his housekeeper, whom he supposed had furnished him too heavy food. Time passed on—the uneasiness in his stomach redoubled. M. Parceval determined to return home and get some tea. It was served: he took four or five cups without experiencing the least amelioration. On the contrary, the tea acting on an enfeebled stomach, produced still more violent irritation. The housekeeper became alarmed, and called in a physician.

The symptoms of too great abstinence have, it appears, some analogy to those of indigestion. The physician was deceived himself; and inquired of M. Parceval what he had eaten for dinner.

"I dined at home, and as usual; I do not remember what was served up to me."

"But, sir," replied the housekeeper, "you did not dine here."

"How! not dine here?"

"No, sir; I waited for you till seven o'clock, but you did not return home."

After some reflection, M. Parceval concluded by convincing himself that he had not dined at all.

M. Parceval de Grandmaison had a brother, like himself, a man of talents. This brother had another species of singularity, that of dressing like a pauper. One day he presented himself for the purpose of entering the Tuilleries. The sentinel taking him for a beggar, refused him admission. An officer passed at the moment. M. Parceval, in a passion, addressed himself to him, asking why it was that he was refused permission to enter a public garden.

"It is, my brave fellow," replied the officer, "because you have the appearance of a robber, and the orders to the guards compel them to exclude beggars and such persons."

"I! I look like a robber? it is rather you that do so."

"How! I?"

"Yes, you, with your silver laced coat, your silver epaulettes, &c.: you look more like a robber than I do. I may, very probably, look like one who has been robbed: if you had said that, I might have understood you."

And he walked off muttering, "a robber—a pretty robber indeed!"

AN ADVANCEMENT WITHOUT INTRIGUE.

The little history I am about to relate belongs to the period of the empire, but I omitted to insert it in the first volume. I hope that when the account has been read, I shall be pardoned for this additional infraction of the chronological order, which I have endeavored to follow so far as my memory would allow me.

Writing for the journals has always appeared to me the best political and literary school for young men who propose any serious objects to themselves. In the journals, in fact, one sees every thing, one writes about every thing, and one examines every thing. It is then not at all extraordinary that many statesmen, many legislators, and many public functionaries, should have risen from the press. Regnaud de Saint-Jean d'Angely, the duke of Bassano, M. Réal, M. Rœderer, were all a long time writers for the public journals. During the restoration the journalists enjoyed but little favor. This profession could then scarcely raise one beyond a seat in the chamber of deputies, very rarely to the council of state, and then only to the rank of a master of requests. Since the revolution of July we have seen at least sixty journalists elevated to the rank of ministers, of peers, deputies, counsellors of state, prefects, sub-prefects, &c.

The life of an editor has this additional advantage for young men—that it brings them necessarily in connection with remarkable men of all parties, causes them to be properly appreciated, and thus furnishes them useful and solid support in their future career.

I have to mention an instance of brilliant fortune in an individual who was originally a journalist, and one of the most subaltern class. M. de M—— was during the consulate employed on the *Journal de Paris*, of which M. Rœderer was a part proprietor, when he was accidentally removed from that situation to be placed in one which led him afterwards to the most intimate confidence of the emperor.

M. de M——, a grandson of Pallissot, had received a good education; but by nature mild, modest, and even timid, he required that his first steps should be

aided. He required the assistance of accident or friendship, without which he would have remained where he originally was. His place in the *Journal de Paris* was one of but little importance and but badly paid. He was charged with the preparation of little items of news, such as suicides, fires, and broken legs; and in addition, as he wrote handsomely, he was expected, at leisure moments, to write directions.

Louis Bonaparte having been nominated colonel of the fifth regiment of dragoons, applied to M. Rœderer for a secretary, who gave him M. de M—. Thus this young man passed several months at the *Ecole Militaire*, in transcribing the orders of the day, and writing the correspondence of a colonel of dragoons.

Joseph Bonaparte had collected a large quantity of books at his chateau of Morfontaine, of which he wished to form a library. Meeting his brother Louis one day, he inquired of him if he knew of any young man capable of classifying books, and preparing a catalogue. Louis thought of M. de M—; and, without any further knowledge of him, without even knowing his name, Joseph Bonaparte sent the young man thus recommended to him, to Morfontaine.

For fifteen days M. de M— worked with great assiduity, but soon found himself in great difficulty. No longer enjoying his place in the *Journal de Paris*, he ceased to receive the moderate wages attached to it, and Joseph had thought of any thing but of fixing the salary of his new librarian. One day having visited his chateau, he bestowed a great deal of praise upon the work that had been executed; but M. de M—, who did not know how to support himself, was yet too diffident to speak of his wants. At first he obtained some little money from the *Journal de Paris*; and, at last, assuming great courage, he undertook to write to Joseph, to beg him to fix his compensation. Joseph hastened to repair his neglect, and M. de M— was appointed his secretary and librarian, with a salary of 3000 francs. M. de M— would have remained in that position all his life, if he had been permitted to do so; but he was called to a higher destiny.

One day the first consul conversing with Joseph, mentioned that he wanted a young man who worked well, and could assist M. de Bourrienne, who was overpowered with labor.

"Can you furnish me any one?" he said, to Joseph.

"I am not certain; I have a young man at Morfontaine, whom I have employed in arranging my library. I have seen but little of him, but he seems to be intelligent. He is mild, modest, and his writing appeared to be very handsome."

"What is his name?"

"I have known his name—he has written it for me; but I have entirely forgotten it."

"No matter, send for him."

An officer is sent for; he is ordered to take a carriage and to proceed to Morfontaine to find a young man whose name is not given, but who he was informed was employed in the library of the chateau. The officer thought that the person was to be arrested. He sat off, having procured an escort, arrived at Morfontaine, possessed himself of M. de M—, without allowing him a moment of time, without furnishing him the least explanation, and guarding him with great care as a prisoner of state. On his return to Malmaison, the

officer gave an account of his mission. He was ordered to conduct the gentleman into the cabinet of M. de Bourrienne. He is scarcely in the room before M. de M— is installed in the bureau, and set to work. He had not breakfasted at the time that he was taken from Morfontaine. At dinner time, no one thought of him. He continued to work, and was about to sink down from mere want of food, when M. de Bourrienne, seeing the alteration in his countenance, thought of asking him if he was not sick.

"No, sir," he replied, "but I am extremely hungry."

"How! extremely hungry?"

"Yes, sir; I had not breakfasted before I was brought here, and I have not dined since."

"And why did you not say so?"

"I did not dare to do so."

M. de Bourrienne hastened to have every thing furnished to his young assistant that he had occasion for, and gave the first consul an account of what had happened. The modesty and simplicity of the young man pleased Bonaparte very much. He saw M. de M— from time to time, and easily perceived that he was endowed with qualities which only required to be developed. He became more and more attached to him; and when he was compelled to remove M. de Bourrienne from near his person, M. de M— was appointed his successor.

THE WHITE SULPHUR, TWENTY-FIVE YEARS SINCE.

By A. C., of South Carolina.

Just as the guests at the White Sulphur, about the middle of July, 1813, had risen from dinner, it was remarked that there would soon be a shower. In a short time the thunder began to growl. There was not a breath of air: all was as still as death. The sky and surrounding mountains were black. The large drops began to fall. Then came the rustling breeze. Peals of thunder followed upon peals, and clap after clap. The wind swept down the intervening vallies. Quick and sharp flashes of lightning made the inmates of the cabins start up and pace their rooms in alarm. Suddenly there was a loud crash, followed by the falling of an immense oak, that stood in the adjacent wood. Instantly smoke began to ascend. The tree had been struck by the electric fluid and set on fire. The rain fell in torrents, accompanied by hail. In an hour the storm passed away to the southward, and the sun broke forth in cloudless glory. The terror that had filled every bosom was dispelled, and the company left their apartments. The hum of the crowd was again heard, and at the usual time the ladies reappeared in their evening dresses, moving in different directions along the walks.

Curiosity is on tip-toe at all watering-places, whenever a new comer makes his appearance. It is asked, eagerly, who is he? Where is he from? Does any body know any thing about him? Silent comments are made by the spectators upon his manner and personal attractions, and most commonly he is placed in that rank which he actually maintains in general society.

A young man wearing the undress uniform of a naval officer, well mounted, and accompanied by a servant, stopped at the spring. It was evident that he had encountered the recent tempest, and had been drenched by the rain. All eyes were fixed on him as he walked up, slowly and feebly to the house. Those women who saw him pitied him; for his pale countenance and emaciated frame proved that he had really come in search of health, and that his sufferings had been neither light nor of short duration. The stranger was tall and finely proportioned. His carriage was more gentle and graceful than is common to men of his vocation; his eye was of the deepest blue; his complexion, which was unusually fair, was shaded by a profusion of light hair, which curled thickly and spontaneously. There was an uncommon share of energy in the expression of his countenance; and although he could not be more than three and twenty, he seemed already to have endured much hard service. A close observer would have concluded that his soul was the seat of noble and generous sentiments, and that he was just such a man as would strike the imagination of an accomplished and highly intellectual woman, and, if he wished it, take her affections captive: for however much the softer sex may admire in the opposite one, genius, courage, acquirements and humanity, their delight in the contemplation of these qualities is heightened to rapturous enthusiasm, when united with personal elegance. The Lieutenant soon mingled with the throng. Although naturally shy and unobtrusive, he met all advances towards an acquaintance kindly and politely. But he was laboring under a deep depression of spirits, owing, as all supposed, and as was the fact, to the shattered condition of his health.

Early one morning, a carriage drawn by four horses stopped at the White Sulphur, from which there alighted an elderly gentleman and lady, accompanied by a girl who appeared to be about nineteen. The equipage of the visiter was splendid, and indicated his expensive tastes, and the extent of his private fortune. He was a native and a citizen of South Carolina. Mr. H—, when young, had resided in Europe for several years. During his absence, he had perfected his knowledge of French and Spanish, by an intimate intercourse with men of education and rank, who spoke those languages with classical purity. In general society his manner was easy and polished, yet decided. He expressed his opinions upon all subjects boldly and frankly, yet with marked respect for those who differed from him. He had studied no science profoundly, yet he had collected a large mass of valuable information, which he detailed to those with whom he associated in an acceptable manner. Whilst he paid on all occasions the most delicate regard to the feelings of others, he repelled as quick as thought, the slightest intrusion on his own. When his resentments were aroused they were vehemently expressed. That he was proud of his ancestry, and jealous of his personal dignity and honor, was manifest to every one with whom he became acquainted. Mrs. H—, when young, was beautiful. She was gay, sensitive, devoted to such society as suited her tastes. With her equals she was agreeable, spirited, and even fascinating. Towards the honest poor she was bountiful—towards the vulgar she was intolerant. With the afflicted she sympathised deeply,

and even gave them her personal assistance, as well as a portion of her ample pecuniary means. On great occasions she was distinguished by the richness of her attire, and the loftiness of her manner. If others expected to partake of her hospitalities, or to be honored with her smiles, they were required to pay her that homage which she conceived to be due to rank, talent, and opulence.

The daughter, Anna H—, was not perfectly beautiful. She had been carefully and usefully educated. Her mother had desired to fit her to adorn either the most elevated station in society, or to sit by an unambitious hearth, a domestic queen, where grandeur should be unknown, and where her husband in her society could not fear the worst of fortune's malice—where she might banish melancholy from all her household, and speed the hours with lively cares.

No woman ever felt the power of poetry and song more deeply than Anna H—. On several occasions she had composed slight poetical effusions, bearing marks of genius and a cultivated taste. Devoted to music, she touched the strings of her harp with infinite tenderness. It was impossible for any ingenuous youth to resist her smile, or to be content with a single view of her. And he who loved her felt as though he could not permit the winds of Heaven to visit her too rudely.

It was not to be wondered at that Anna H— commanded the homage of the first young men in the part of the country where she resided. That she was delighted with the attentions which were paid her—that she rejoiced in the conquests achieved by her personal charms, it was impossible to doubt—for she was a woman! On her first coming, the Lieutenant, who was recovering his strength, often passed and repassed her. Both seemed willing to halt and converse upon indifferent topics. On more than one occasion she adverted to his travels abroad, as he had been much in the countries bordering on the Mediterranean. He imparted his valuable knowledge with eloquence and power. The susceptible girl listened with delight to the graceful sailor. If she had not wished to reciprocate the enjoyment which she felt in these hasty, partial, and interrupted interviews, she would have done violence to her nature, and to that mysterious and irresistible attraction which exists between the sexes. At the evening dance, she felt a secret pride, and why, she did not exactly know, when the Lieutenant demanded her hand, and accompanied her through its mazes. How light her air—how delicate her glee! It seemed as if there was nothing that could disturb the serenity of her temper—or sadden her brow—or repress the smiles which she bestowed in profusion upon those who followed in her train.

It was proposed one evening, that the younger part of the visitors should make an excursion to the neighboring hills on horseback. If a young female of the present day—repining in indolence in her deeply cushioned carriage, with colorless cheek, the ringlets of her hair and the folds of her rich dress undisturbed—be an object to be *admired*; still she, who, wrapped in her riding habit, brushes away the dew of the morning, decked in the roses of health, is an object to be *loved*. The one is the lifeless statue of the sculptor—the other the living animated child of nature.

There was a bustle amongst the wayfaring party.

The grooms were called, and the necessary orders given. The servants, who were going along, were directed to put up some refreshments—those of the gentlemen who played, took their flutes and clarionets. When it was announced that all was ready, a spirited Virginian led up for the “little South Carolinian,” as Anna H— was called, a small and perfectly beautiful blooded filly, that looked like a domesticated deer—she was so docile. Anna was struck by the symmetry of her form, and making a sudden spring adjusted herself in a twinkling in the saddle. The balmy air had given a deep color to her cheek and unusual animation to her dark intellectual eye. Her blushes sprung from the joy with which her bosom was almost bursting. Over her countenance a thousand shadows were moving. Set off with a becoming green riding dress, a silk handkerchief around her neck, fastened by a glittering diamond pin, a small light hat, and seizing the whip which was handed her, she touched the animal gently, who put forward as though she moved on springs, and was even conscious of the precious burden which she bore. Leading the van, Anna was followed by a splendid train of more than forty, and a proud and happy train it was of southern chivalry and southern beauty. How much of virtue, of affection, intelligence and accomplishment, was there in that joyful company! How many of those who went forth on that day have since been wrapped in their winding sheets, and become the prey of icy, unrelenting worms! Of those who still survive how many of the world's afflictions have they suffered—how many vicissitudes of fortune have they encountered? Already some of them have begun to feel the withering influence of accumulated years, whilst others are care-worn widows and anxious mothers.

Passing rapidly over the rough road, along which the sojourners pursued their way, they arrived at the foot of the mountain, which they were to ascend by a winding and difficult path. Having at length reached the summit, they were amply compensated for their toil. The sun had risen unobscured by the slightest cloud; his golden beams had dissipated the mists which had gathered through the night upon the deep valleys that separated the tall cliffs. A number of hunters, who resided near the White Sulphur, had gone upon the chase with the hounds, at the first dawn of the morning. The indistinct cry of the dogs that were afar off was heard. The sound, first in one and then in another direction, marked the doublings of the stag which they were hotly pursuing. The crack of a rifle told that he had passed one of the stands that was occupied. The busy and rejoicing reapers, in the fields that were miles off, appeared no larger than children. Here and there a farm house was discovered, and the cattle grazing around on the luxuriant grass. The teams were hauling the heavily laden waggons to the barns. The hours passed off delightfully. Some of the gentlemen had cut away the branches of a wild grape vine in the low grounds, which the servants had brought along, and out of which a rude swing was made, which if not very comfortable in the use, was the cause of much merriment. A while after mid-day the provisions were spread out upon a broad and smooth rock. The waiters were despatched down the side of the mountain, with their pitchers, to a cool and gushing fountain.

The Lieutenant was fond of music. He had found

relief from the monotony of a seaman's life, in the cultivation of his taste for this delicious art. He was devoted to his guitar—often the companion of his melancholy hours. His powers of execution had been greatly improved during his visits to the sea coasts of Spain and Italy. He sung several spirited and humorous canzona and ballads. Now the company were all clustered together, and now divided into small parties. A few of the fair maidens, accompanied by gentlemen, moved off under the pretext of hunting wild flowers. But they soon halted and separated into pairs. Anon they were espied listening to the soft words of their lovers, either in breathless confusion, or with arch audacity.

Whilst all were wholly unconscious how rapidly the time was flying, one of the servants announced that clouds were gathering in the west, and that they might be overtaken by a gust—an event so common and so sudden in those elevated regions. Every one was startled at this unwelcome and unexpected intelligence. Taking their departure in the utmost haste, they proceeded but a short distance before it became evident that they would not be able to reach the Springs before the falling of the rain. It was then suggested that they should take shelter in a waste house, about two miles off, which in former days had been used as a stopping place, by the numerous emigrants removing to the rich lands bordering on the Kanawha and Ohio rivers.

Although the horses flew along the path, the travellers had scarcely reached their desolate retreat, before the rain began to pour down in torrents, and continued falling for several hours. The situation of the company became irksome and uncomfortable. At last they set out, fearing that they might be overtaken by night, and proceeded at a rapid pace. In the morning they had passed a stream which was scarcely three feet deep; but on now approaching it, all were surprised to find that it was greatly swollen and impetuous. Still those who were in front, led by a resident of the vicinity, plunged in, and passed over without much apparent difficulty. Anna H— was about midway of the crowd. When she reached the brink of the creek, several behind her were precipitated upon her. The filly, on entering the water, diverged from the shallow ford, slipped, and her rider fell, before her immediate attendant could make the slightest effort to save her. The terrified girl floated off in a moment on the angry stream, sinking gradually—being drawn down by the water absorbed by her clothing. She made not a struggle to avert her destiny. Suddenly there was a loud and penetrating cry from the rear, to clear the way! The Lieutenant came running with all his might, and as he ran threw to either side of him his hat, coat, neckcloth and waistcoat. In all his movements there was a desperate fury. Casting himself upon the flood, he made eagerly after the object of his heroic pursuit. At a considerable distance from the spot where she had fallen, the victim wholly disappeared—but as she rose to the surface, the Lieutenant seized her by her hair, which was disengaged, her hat being lost. The main difficulty now lay in taking the sufferer to the shore. The water ran so rapidly that the Lieutenant was compelled to swim obliquely, dragging Anna after him, and having caught a bush, he thus held to his charge until he received assistance. At last the pale and senseless

body was laid upon the ground. All who were present were in the deepest distress and alarm: the females were overwhelmed with grief and horror. A young physician who was along, suggested that the patient might be restored. Having placed her in such a position as to throw the water from the chest, he ordered her to be rubbed, and made many unsuccessful efforts to draw blood. After an hour, there were symptoms of returning respiration. A messenger was despatched to the Spring to quiet the fears of the visitors, and to procure a carriage.

After much conversation about the sad and nearly fatal accident which had happened, the guests retired for the night, but resumed the subject the next morning at the breakfast table. Every tongue was loud in praise of the heroism of the Lieutenant. Whilst all were anxiously looking for him to enter the room, one of the waiters stated that he and his boy had left before daylight. This intelligence filled every one with amazement. Nobody knew or could guess whither he had gone, or what could have caused his sudden and apparently mysterious departure.

Anna H—, under the influence of an anodyne, had become composed. When she awoke at a late hour, she found her father and mother sitting by her bed-side. Slight allusions were made to her almost miraculous preservation. In the course of the day her female acquaintances visited her, and spoke in raptures of the noble young sailor. One of them observed, "How strange it is that he went off so suddenly—and without saying good-bye to a soul; without permitting any one to thank him for saving the life of our friend, at the imminent hazard of his own." These words had scarcely escaped from the lips of the speaker, before Anna, raising herself up and placing her head upon her hand, and her elbow on the pillow, exclaimed—"Gone! gone where?" To which it was replied—"He is certainly gone, and no mortal can tell where." Throwing herself back, the distressed girl fell into a deep reverie, and the tears trickled down her cheek. She seemed to be saying to herself, "It would have been far better for me if I had not been snatched from a watery grave." The vigilant mother beheld those tears with unutterable anguish, because she saw that the recent incident might give color to the whole future life of her only child. Her pride and affection revolted at the thought of her daughter becoming the victim of a hopeless and unreciprocated passion.

The approach of autumn admonished the visitors at the White Sulphur that it was time to return to their homes. The pleasures of the last two months had been enjoyed, and were gone forever. First one and then another family had bade adieu. Mr. and Mrs. H— became anxious to depart. The daughter was thoughtful and solitary—a feeling to which she had before been a stranger. At length the driver was seated, the postillions mounted, the carriage moved off rapidly, and soon disappeared from those who had collected to say farewell. The journey to Anna was long and wearisome: her thoughts were forever fixed on the Lieutenant, whose manly graces became every day more captivating in her view. She recollected certain slight incidents that had occurred at the creek after her restoration, and amongst others, that the Lieutenant had asked her with trembling anxiety if her person had

been in any way injured by her fall; and when the carriage had been drawn up for her to be laid in it, he lifted her up, folded her in his arms, and bore her along with a degree of delicacy, tenderness and care, which had filled her heart to overflowing. However, she imagined that her domestic engagements would drive off those painful recollections that haunted and annoyed her.

When she arrived in sight of her father's magnificent patrimonial establishment, situated on an island on the coast of Carolina, she was partially aroused from her despondency. She was returning to the spot where she was born. How many fond endearments are associated with the remembrance of even the humblest home! As the travellers passed in at the gate that opened upon the broad avenue, planted on either side with the beautiful magnolia and china trees, the numerous field hands espied them, stopped their work and gazed. As they approached the stately mansion-house, the younger slaves came forth from their cabins to welcome the arrival of their lordly master. The privileged house servants presented themselves, and whilst engaged in removing the baggage, were telling how lonesome they had been, and detailing all the news which they had heard about the people of the neighborhood. The superannuated negroes came, limping along, and offered their respectful congratulations, which were graciously returned.

Anna's ancient and affectionate nurse followed her into her apartment, and inquired how she was pleased with her jaunt—observing with an exulting smile that she knew there was not as pretty a girl as her at the Springs, and that she had expected to see some handsome young men coming home with her. After a pause, she said, "But I reckon they will be along after a while." Anna drew away the kindhearted creature gently from this painful topic.

The next morning after an early breakfast, Mrs. H— and her daughter set out on a visit to the dwellings of the slaves. The children that had been born during their absence were presented with maternal pride; the cares of the sick were considered; whatever was amiss in the houses was promptly corrected; kind encouragement was given to those who were seriously ill, and the necessary refreshments ordered. Fanatical devotion to abstract principles, without due regard to attendant circumstances, is one of the hallucinations that marks our age and country. But can a single being be found, who after viewing the working of this patriarchal system, would desire to break it up, founded as it is upon reciprocal affection, mutual interest, and perfect protection?

The Lieutenant proceeded on his journey with all practicable despatch. Having passed the Blue Ridge, he took to a public conveyance, directing his course to the north. He had left his port with the greatest reluctance, and at the earnest entreaty of his physician and friend. Like all his associates in the same service, his faculties were absorbed in the thrilling events which were then occurring on the land and the water, and like them was watching eagerly for an opportunity to try the perils of battle, and "pluck up drowned honor by the locks," amidst its carnage. The Lieutenant had been ordered to join one of our national vessels, just ready for sea. Her equipments were complete: her

Crew counted on certain victory, whenever the enemy could be met and fought. The anchors were weighed—the star-spangled banner and silver sails were spread out to the propitious breeze; her commander proudly trod her deck; her parting salute was answered by the buzzes of countless thousands: she moved away from their anxious gaze “like a thing of life,” followed by many a pious prayer to Heaven for her safety and success.

The family on the island soon became settled. Mr. H— was engaged in the preparation of his annual crop for market. His wife was giving a general superintendence to the extensive arrangements of her household. Their friends came in numbers from the main land to congratulate them on their return. Anna was often sad. The mother perceiving that her wounded spirit had begun to feed upon itself, persuaded her to invite her school-companion and friend Henrietta R—, to visit and spend some time with her. This girl was almost a mountain nymph; she had been born and raised in the upper country of Carolina, where her father owned a baronial estate. The natural dispositions of the two girls were opposite; and yet whilst the frolic graces of the one had charmed the heart of her companion, the retiring diffidence of the other had enkindled a like feeling of regard. Henrietta was as pensive as the morning; all her anxious hopes were subdued by the patient fortitude of woman, and her griefs, from which even she was not wholly exempted, settled into gentle rest. Her bright and peaceful brow added to the lustre of the rich ringlets that floated over it; her deep meditative eye overflowed with pious sentiments; her aspirations pointed to a seraphic immortality; on her cheek there dwelt the tenderest bloom. No sensitive mind could contemplate her thoughtfulness and beauty without yielding the profoundest homage to both. She seemed to tread upon the dew-drops of her mountain skies, as if she feared to crush them too roughly.

The meeting of the two maidens was full of affection. Anna, feeling no restraint, poured out her inmost thoughts into the bosom of her friend. She stated, that after she had reached home, she had gotten hold of a paper which announced the sailing of the ship to which the Lieutenant belonged. This was all that she had learned concerning him, since his sudden disappearance from the Springs. Why he had gone without announcing his intention to any one—without waiting to receive the grateful and everlasting thanks of her parents—without knowing whether she would recover from the shock which she had suffered, it was impossible for her to divine. Then she asked in a tone of the deepest distress, “Ought he not to have delayed at least a few hours?” All these matters perplexed the mind of Henrietta, who was unable to suggest even a plausible explanation of them.

Part of the winter had passed away. Some gentlemen visited the island, bringing with them invitations for Mr. H— and his family to a new year’s ball to be given in Charleston. The ladies were earnestly pressed to attend. Anna’s mother was anxious that all should go, believing that a change of scene might enliven the spirits of her daughter, who at last consented to gratify the wishes of her parent.

Carriage after carriage rolled over the streets of the city; the spacious rooms blazed with a thousand lights;

party after party swelled the joyous crowd; beauties after beauties were escorted to their seats, attired in all the decorations that fancy could invent and hand prepare. What an eager assemblage it was! The young and the old exchanged mutual congratulations; the music imparted life into the weary, and cheered the mourners; the anxious were at rest; the dancers moved off merrily. After some hours, there prevailed through the principal apartment an almost clamorous revelry. At the lower end of it there was collected suddenly a small group of gentlemen, to whom one of them was giving an impassioned narrative with much gesticulation. They were quickly joined by many more. In a moment the noise ceased and every sound was hushed. It was announced that one of our frigates had met one of those of the enemy, and had, after a contest of an hour and a half, gained a brilliant victory. When the deep feeling which this glorious intelligence aroused, had partially subsided, there was a loud outcry for the particulars, which had been only partially communicated to the throng. The name of the American vessel had fallen upon the ear of Anna, and that alone was sufficient to excite all her fears. That the general anxiety might be relieved, a person was appointed to read the official despatch of the commander from the elevated seat of the musicians. How the gentle bosoms of the maidens heaved and sunk, as the reader proceeded with the thrilling narrative. How proud was the exultation of those patriot southrons, who, alive alike to the national honor and to their own, would quarrel upon the ninth part of a hair! Towards the close of this account, the brave captain stated that so obstinate a conflict could not but be attended with loss,—that the enemy had suffered immensely, and his ship considerably. Lieutenant Y—, he observed, had conducted himself with the utmost gallantry and skill, and it grieved him to say that when the action was nearly over, he had fallen badly wounded.

The mother and Henrietta preserved their self-possession. When they learned the fate of the Lieutenant, they led Anna away, and sought a private apartment. Placing her upon a bed, they employed the language of comfort, and insisted that he would recover. Anna said in a soft whisper to her friend, “I should be willing to end my sufferings in death, if I could only enjoy the privilege of standing beside him, and staunching the blood which is flowing from his wounds, with these feeble hands of mine.” Before the day dawned, the crowded apartments were silent as the chambers of the dead. The tired domestics—the exhausted votaries of pleasure—the grave matrons—the blushing fair ones—were wrapped in sleep, that blessed corrector of our bodily and mental excesses.

Week after week rolled away, but no tidings of the Lieutenant or his gallant ship reached the family on the island. Her books, which were taken up and soon thrown aside, brought no relief to Anna, from the anxieties by which she was tortured. She gladly vanished from the sight of every stranger, and longed for that repose of heart which she had once enjoyed; but she was affrighted by busy dreams and wild fancies: her harp alone cheered her privacy and soothed her sorrows. Formerly she had been passionately devoted to her dabbles, in all their richness and countless varieties—to her japonicas and blushing roses, fit emblems

of herself. But now her hair was unadorned, and she was content with only one flower, which she wore beneath her bosom more for love than ornament.

At last the spring arrived. The air became soft, and all animated nature rejoiced; Anna alone seemed doomed to carry in her heart a remembrance of grief, spotless and gentle as she was. She and her friend sometimes directed their steps to the sea-side, after the sun had gone to rest in his western bed. The breeze was slumbering—the curling and dashing waves were no longer struggling with each other. Only a heaving of the mighty deep still survived. The moon held undisputed sway in the heavens; and the frail vessels that had been driven before the recent tempest, now glided over the waters peacefully, courting fresh gales to waft them to their destined ports. The solitary owl, alarmed by the approach of the wanderers, broke from his resting place, and sailed away to a deeper solitude.

As the heats of the summer approached, it became evident that Anna was rapidly losing her strength—that her spirit was nearly crushed, and that she mourned as one without hope. Sometimes she was shocked at the thought that she was nurturing a passion for one who had never wilfully by word or act sought to excite it. But her conscience whispered soft and lulling excuses, since none could blame her for cherishing a grateful feeling towards the preserver of her life. Those medical advisers who were consulted, suggested that a voyage by sea to the north, and a change of scene and objects, might exercise a salutary influence over a mind that was evidently laboring under a feeling of desolateness, which it seemed impossible either to control or to resist.

The family on the island at length embarked for Newport in Rhode Island, where they proposed to spend the summer. The enemy's cruisers were hovering all along the coast; but the captain alleged that he could run away from every thing that might be sent in pursuit of him. For two days the vessel moved slowly over the weary waves—the slight breezes died away; now she glided smoothly over the mighty deep, and now with graceful motion she breasted the huge billows when roughened into hill and valley; and then again she wantonly washed her sides, rebounding and rebounding. After much anxiety the land was seen indistinctly by the man at the main top—then from the deck—then it broke broadly upon the view of the delighted passengers—then the town was spread out before them—they flew over the water—cast their anchors, and received the congratulations of the rejoicing crowd.

About a month after the party from Carolina had landed, the arrival of the frigate to which the Lieutenant was attached was announced. This intelligence was delicately communicated by the mother to her daughter. Was he then in the same land with herself, and so near her? A delicious hope sprung up in her bosom. Would he make any inquiries about her? Had he ever thought of her since he left her? Had she made any favorable impressions upon him? These were questions which Anna asked herself a thousand times, without being able to resolve them. Mrs. H— was uneasy and perplexed. But it was impossible for her to pass the boundaries of female delicacy, by apprising the Lieutenant that they were in that part of the coun-

try. It might even be improper for her husband to address him and offer his thanks for the preservation of his child, and congratulate him on his gallant defence of the rights of his country. What the one sex achieves by power, the other effects by expedients. The ever faithful Henrietta, having learned that there were several young naval officers in the town, determined to obtain an introduction to them through the interference of a friend. She spoke of the late engagement, and of the part which the Lieutenant had taken in it, and then inquired if they knew him. One of the officers replied that he was his most intimate friend—that he possessed every virtue, and was universally beloved by his companions—that he had returned in perfect health, as he had been informed. Beyond this she dared not go. That night Henrietta communicated what she had learned; her companion went over it again and again, and held her in conversation until deep in the night. At last both fell away into a refreshing sleep, that "balm to hurt minds—that death of each day's life." The next morning Anna arose at an early hour; her heart was at least relieved, and she breathed more freely. Once more smiles played over her long saddened countenance. There was an exultation and healthfulness in her hopes, which lent a charm to every thing around her. The secret cares of her toilet had been neglected; but now she was almost prepared to resume them.

As she was sitting alone one evening at the window of her room in the hotel, she was startled by the rushing of six or eight young men from a door of one of the parlors, into a paved yard that was in the rear of it, and which was covered by an arbor of vines. The night was excessively hot and close. Servants followed with chairs and a table, on which decanters of wine and glasses were placed. It seemed as if some old companions, who had long been separated, had suddenly met. Many inquiries were made by each of the other; but Anna could not hear the replies, owing to her distance from them. Henrietta joined her, and both endeavored unsuccessfully to ascertain of whom this party was composed—whether of residents or strangers. Both hoped that the Lieutenant might possibly have arrived, yet each feared to communicate her thoughts to the other. The party soon became gay—the welkin rung with peals of laughter. Anna arose frequently, and paced the room with her hands folded on her bosom; her heart and temples throbbed. Then she recanted herself. Several songs were sung—one of which she had heard before. The voice she thought was that of the Lieutenant, and she so said to her companion.

At last universal stillness prevailed. The breezes from the sea were at rest. Looking out, Anna watched the immeasurably distant stars rolling through the firmament. Now and then she shed a solitary tear in the silence of the night, and poured forth those sighs which are not meant for human ear—but even these were mingled with the joy of hope. The welcome dawn arrived—welcome, because she longed for that certainty which would set her spirit free from the doubts by which it was tortured—until then, it was impossible that her mind could settle down into a peaceful calm.

Mr. H— sallied forth to learn whether the Lieutenant had really arrived, and soon found that he had.

Having ascertained his lodgings, he called. He congratulated himself that he was at last able to return his acknowledgments for the rescue of his child; stated that his family was with him, and would be happy to see him. On receiving this kind and frank invitation, a deep glow passed over the countenance of the Lieutenant, who replied, that he would do himself the honor to call in the morning. Mrs. H——, alive to the situation of her daughter, counselled her to control herself as much as possible.

Never did hours pass off so heavily, as those which intervened between the time when Anna was apprised of the intended visit and its actual occurrence. She feared that she might betray her real feelings, from which her feminine delicacy shrunk back in dismay. True, her heart was full of nature, kind and forlorn, and had made a thousand tender sacrifices. She had long mourned in meekness, and a high and holy affection had taken possession of her. Her gratitude had opened the way to love, and she was unable to resist. Still the bare thought of revealing the secrets of her bosom shocked her; and yet she suffered no self-reproach, for she asked herself if the object on which she doated was not brave, generous, full of benevolence and manly gracefulness?

Anna arose with the sun. At the proper time she made her toilet with anxious care—attired herself in a rich dress, somewhat grave—decked out her hair with a modest ornament which she had worn at the Springs, and of which the Lieutenant had expressed his admiration, to which she added a single flower. More than once she asked her friend how she looked—viewed herself in her mirror, and made some alterations which did not please her. She sat down and endeavored to drive away her agitation. But, in a few moments, she was again unconsciously on her feet. The family were seated in the parlor, when several visitors came in, who soon engaged in familiar conversation. In a short time the Lieutenant was announced, when Mr. H—— arose and met him at the door; his wife gave him a cordial welcome, and, with all the thoughtful readiness of woman, accompanied him to the side of the room where her daughter was sitting, remarking that she had been indisposed, but was now recovering. Anna attempted in vain to rise—she was dumb—but she extended her hand, which was cold, clammy, and nerveless; and which the Lieutenant took in the most respectful manner. He was painfully struck by her altered appearance, for she was no longer light and free—a gay image of cheerfulness and health—but was so fallen away that she looked like a lovely apparition, between life and death. His bosom was instantly filled with the deepest commiseration, and his equanimity was disturbed by a poignant distress. When he took leave he was invited to call again, for which he returned his thanks. Anna expected and hoped that it would be soon—but she was disappointed, for he came not for several days. In this interval of anxious suspense her hopes sank and her spirits flagged.

At an earlier hour than usual, whilst the two friends were alone in the drawing room, the Lieutenant arrived. He was dressed in full uniform, and was unusually gay. He pressed his conversation upon Anna—spoke of her music—hoped she had not abandoned it—was tenderly solicitous about her health, and made many inquiries concerning their favorite acquaintances, who were at

the White Sulphur with them, and even passed some flattering compliments upon herself. She felt her heart leap in her bosom—her cheeks were suffused with blushes—the emotions that possessed her were too delicious for utterance, even if her maiden modesty had permitted her to speak. When he was gone Anna observed that she had never seen him look so handsome before. Each succeeding day drew the brave young officer and the enamored girl closer together. He came often, and was surprised to find how long he had remained and how rapidly the hours had flown. She joined him in the performance of some pieces of music full of sentiment and passion.

The ladies were anxious to learn the minuter incidents of the recent battle, in which the Lieutenant had been engaged, but which he modestly declined giving, until he was earnestly requested, when he favored them with the following narrative:

“On putting to sea a universal wish prevailed that we might meet a force every way equal to our own, and have a close, hard conflict. We almost envied those of our brethren who had already gathered so many and such rich laurels at the expense of the enemy. The sailors were in the best spirits—the lieutenants and midshipmen talked in their mess-rooms of nothing but fighting. Whenever a vessel came in sight every one was eagerly on the look-out. But all our hopes ended in disappointment. The discipline of the ship was perfect. At about eleven o'clock one morning, the man at the main-top cried out, ‘a sail!’ Every body caught the word in an instant. Directions were given to put the ship about, and we were in full pursuit. Others were sent aloft, who confirmed the intelligence already given. The top-sails of the stranger were first seen—then, after a long interval, her larger sails became visible. The boatswain blew his shrill whistle with more than his accustomed energy, and all hands were piped to quarters. The decks were cleared for action; the charges in the guns were drawn, and they were reloaded; the matches were lighted; the younger officers flew to their posts; the powder boys assumed their appointed stations. The commander paced the quarter deck, then halted and applied his glass to his long practised eye; then called the first lieutenant of the ship, and made some new suggestions to him.

“The hostile ships gradually approached each other. The hull of the enemy slowly rose to the view, as though she was breaking from the bottomless deep. The wind blew freshly. She seemed to play with the ocean, and to ride wantonly on the white-capped waves. We ran up our flags, and our antagonist did the same. She moved on proudly, and came so near, that by the aid of our spy-glasses, the number of her port-holes could be counted. To several discharges from our cannon, she made a quick and defying reply. The long wished for moment had arrived, for it was evident that a battle was inevitable. A whisper might have been heard amongst our people. As the sea was much agitated it was a long time before we could attain the desired position, for the order of the captain was not to fire until we were so near that every shot would tell. The foe was equally busy with ourselves, and manœuvred for the advantage with a skill which extorted our admiration. Finally the word was passed—we gave three hearty cheers, and poured in a heavy broadside,

which was returned. One of our guns was dismounted—four of our brave fellows were killed and five wounded. Our ship was put about, and our batteries again vomited forth death and desolation upon our fearless enemy. As the opposing vessel as well as our own was thrown up by the waves, our gunners held up their fire; but as she descended they blazed away, and she was struck point blank in her hull. After another round, her mainmast gave way and fell by the board with a heavy crash. At this our crew spontaneously raised a loud shout, and our veteran commander exclaimed in a paroxysm of feeling, and with an oath, "That ship is ours." A scattering fire at us was kept up for some time; but at last the proud banner of the enemy was hauled down and all resistance ended. An officer was despatched to receive the sword of the vanquished but gallant leader. But he was overwhelmed by pity, when he looked on the spectacle which his own valor had assisted in creating. The commander was just breathing his last. More than sixty men lay dead upon the decks, weltering in their blood; amongst them were two manly looking lieutenants and several midshipmen, who had not yet lost the beauty and bloom of youth, and but a little while before had luxuriated in all the buoyancy and energy of robust health and joyful hopes. The common sailors and their superiors lay around promiscuously and unheeded amidst the groans of the wounded. The survivors, who were unhurt, departed themselves with the dignity and gravity which became them in their misfortunes.

"After a slight examination, the vessel was found to be an unmanageable wreck, which attested the skill of the victors, and the indomitable courage of the vanquished. At once the shouts of conquest were silenced by the sympathies of a generous humanity. Immediate steps were taken to save the persons and their property who were on board the sinking ship, which had already begun to settle. The pumps were kept going. Our boats as well as her own were gathered about her. The wounded, whose cries pierced every heart, were raised up and borne along by the rough sailors with all the gentle tenderness of mothers for their offspring. Each party spoke in a subdued and sorrowful tone. Those prisoners who came away, looked back upon the once proud barque in which they had marched over the mountain wave with unaffected and unrestrained grief. At last she went down suddenly and with a plunge—the dark blue waters closed over her, and she, with all her pale and lifeless tenants, was in the deep ocean buried. The last rays of the setting sun lingered on the far bounding sea. We then hoisted all sail and bore away from the scene of our glory."

Before he closed, the countenance of the narrator was dilated—the tones of his voice became deep, full and elevated. Both he and his auditory were moved by these affecting incidents.

Week after week passed away. Anna's eye beamed with all its former brightness. Her bosom heaved and spread—even her stature grew, and she moved with alacrity. The current of her thoughts became full and smooth. All the objects of nature around her—the rich verdure of the earth on which she trod—were clothed in their accustomed fascinations. She studied elaborately all the attractions of dress, and longed to meet the Lieutenant at the dance. For some time his atten-

tions were free, cordial and devoted. But a gradual change came over him, and he delivered himself up to sadness and to gloom: a change which Anna accounted almost miraculous in a youth of such impetuous blood. Her keen perception quickly detected this unlooked-for revulsion in his feelings. His manner was embarrassed and constrained, and even wore an air of timidity and irresolution.

One evening about dusk the Lieutenant called. He seemed to have relapsed into a state of entire abstraction. After the usual salutations, he uttered not a word. At last Henrietta withdrew. Lifting up his chair, he seated himself near Anna—and, after a long pause remarked: "When we first met at the White Sulphur my country was contending with a powerful enemy. My commission had been given me at the earnest solicitation of a mother in humble circumstances—the wife of a brave and departed revolutionary officer. It would have been impossible for me to abandon my post in a time of national danger, when honor was to be won at the cannon's mouth. Whilst on my visit to the Springs for the recovery of my health, a vehement affection took possession of me. I shuddered at the thought of any woman putting on a widow's weeds and mourning my premature fall, whilst she was yet in all the freshness of youth and beauty. I wrestled with my passion, and tore myself away, a bleeding victim, from the presence of her who had enkindled it. Then I had nothing to offer her but my person and my sword; now, nothing but my person, my sword, and the approbation of my country for my humble public services." Placing his hand in his bosom he drew from it a small case, to which was attached a golden chain, observing, "This was executed at my request by the painter whom we saw at the White Sulphur. From that hour to this, I have worn it next my heart. On each succeeding day I have gazed on it and have imprinted on it many a fervent kiss." Anna trembled as she received the present. Perceiving, on opening it, that it contained a likeness of herself, she shrieked, threw her white arms around his neck—fell upon his bosom—thanked God from the inmost recesses of her soul, and sobbed aloud.

I HAVE BREATHED THY NAME.

I have breath'd thy name on India's shore,
When the stars and flowers were bright,
And amid the fierce tornado's roar—
In the sable gloom of night!
I have breath'd thy name in dreams of home,
When my proud and gallant bark
Was dancing o'er the tempest's foam,
And even hope grew dark!

I have breath'd thy name, when other eyes
Were glancing into mine,
But still I kept my heart's pure sighs
To lay upon thy shrine!
I have breath'd thy name, when music's spell
Was stealing o'er my heart;
That name was the pure, the magic well
That drown'd the sorceress-art.

I have breath'd thy name, when in my ear
 Came beauty's dulcet tone;
 'Twas a spell-fraught word, that name so dear,
 My idol-love! my own!
 I have breath'd thy name, when the midnight sea
 Seem'd Heaven's star-spangled shrine;
 And each thought was marshall'd back to thee,
 To that glowing heart of thine!
 I have breath'd thy name on the burning mount,
 As if 't were life's last shield;
 'Tis a mystic word, 'tis a sacred fount,
 Where my love and my heart is seal'd!

February, 1839. EGERIA.

A GROWING YOUTH.

"*Sic itur ad astra.*"

Reader, have you ever known what it is to grow? Not as most mortals do, with that imperceptible and comparatively easy movement towards the stars—not thus, but rather as groweth a hop or a cucumber vine, in that most growing of all weathers, yeapt "muggy," now with a leap, and now with a jerk, advancing with that "hop-skip-and-a-jump" sort of motion, which so wonderfully accelerateth him that makes use of it. Time was when I was on a par with the least of mortals—yes, and so marvellous has been my growth, that methinks, that time seemeth but yesterday—but now, alas, how changed! However, I see that I am outrunning my reader—let me commence anew, rehearsing all matters faithfully from the beginning.

I have always been a rare youth from my birth—and, doubtless, at that most interesting period of my existence, divers portents were blazing in the sky to declare my coming. However, this is mere supposition, for as, according to the best authority, I was ushered into the world at about "three o'clock i' the morning," all the star-gazers, having waxed sleepy, had drawn themselves and tubes into a "state of retiracy;" and, as for any others who chanced to be abroad at so untimely an hour, they unfortunately were in a state to see so many stars, that their assertions, however confidently made, would probably receive little credit from my unbelieving readers.

From my birth to my sixteenth year, no peculiar marks did I bear about me, except in my capital parts—the general outline of which was oval, slightly elongated from ear to ear, and flattened at the poles, and remarkably uniform at the surface, which uniformity was only interrupted by the indentures and excrescences necessary for those organs of sense which are seated in a man's cranium. With these trifling exceptions, a more beautiful and uniform piece of workmanship than my head-piece could scarcely be imagined. The only trouble was, it was slightly disproportioned to the rest of my figure.

Now a man's visage may have all the beauties of the rainbow displayed on it, yet unless it bear a certain proportion to the rest of his figure, the good people of this world at once pronounce it "no go;" and the poor devil is forthwith hustled off the stage, as though, if he had had the moulding of his figure, and if the

proportion of his several parts had been left to his taste, he would of course have insisted on his present shape.

Have you ever seen a cherry, reader—of the kind called "short stems"—that which bears upon its cheek so ruddy a hue, and then insensibly shades away into a fair and pure white, which the lily might envy? Such, oh reader, was the beauty of my phiz, from my earliest infancy; but, alas, as is the aforesaid fruit to the stem which sustains it, so was my head to the trunk which it adorned. Indeed, reader, take one of the aforesaid cherries, and skilfully bisect the stem of the same midway, longitudinally, and you have a most noble idea of the "*cut of my corpus*," perfect in every respect, even to the coloring—not that dame Nature had given me this latter hue—"by no sort of manner of means;" she had only given that turn to my fancy, which prompted me to shine out in "*living green*," whenever a new garment was a thing to be compassed. With this general idea of the appearance of my body, the reader will please to proceed, with me, to the subject more particularly under discussion.

Until my sixteenth year, as I have already remarked, my growth corresponded to that of the rest of mortals—but alas, *since then*, "*horresco referens*," I tremble to think of it. The first monition I had of the change going on in my system, was a certain dizziness in the head, accompanied by a painful sort of *cracking* at the joints of my body—something like (to compare small things, with great,) the cracking in the frozen surface of a lake which seems at one and the same instant to proceed from every point. My friends became alarmed—the doctor was called—yes, and he brought with him seven other doctors, wiser perhaps than he, though their united wisdom, after a consultation of eight hours, brought them, poor souls, only to the conclusion, that there was going on a "*lapeus membrorum*," in English, a *wreck of matter*. Their advice was, "a straight jacket, wherewith to keep the osseous system properly disposed." My measure was taken, and one was made—by that time, it was too small: another was made,—and it too lacked compass. A third fitted—the second day

—"the waistband split;
 The next, I burst five buttons off,
 And tumbled in a fit;"

at least I *should* have done so, had I dreamt of half the misfortunes my expansion and elongation were about to cause me. In vain was every remedy tried. For a fortnight I walked with a fifty-six pound weight on my head: I might as well have exchanged my straw hat for a beaver. Next, I was put into a sort of a crib bedstead, which was then screwed up my exact length: I woke in the morning with distinct recollections of dreaming of thunder, and found the foot-board burst through. Every thing proved vain, and at last I was suffered to grow—yes, reader, and I *did* grow.

My first annoyance was from my acquaintances. I have two elder brothers, who, unfortunately, resembled me somewhat. At first I was mistaken for Thomas, and the greeting was, "How d' you do, Thomas?"

"A slight mistake, sir: it's not Thomas, but his younger brother William."

"William, eh? why, William, *how you have grown!*"

Next I was exalted into Richard, and—

"How are you, Richard?" was the salutation.

"It's not Richard, sir."

"I beg pardon; I should have said Thomas."

"You'd have said wrong then, for you *should* have said William."

"William! good Heavens! is it possible? why, William, *how* you have *grown*!"

Now, reader, it's bad enough to undergo the pains that necessarily come with a man's misfortune—but then, in addition, to have it continually thrown in his teeth—I protest against it.

I pass by innumerable minor vexations, such as splitting of indispensables, bursting of suspenders, hazards incurred of strangling from forgetting to loosen my cravat every three hours, and things of the like kind. These are but trifles, and might be endured: other things, however, can not. Innumerable were the jokes at my expense.

"Friend," observed a Quaker to me, one evening, "methinks when thee gattest up this morning, thee thrust thy legs unnecessarily far thro' thy pantaloons."

"Sir!" retorted I, fiercely, "do you intend to say—"

"Oh, no offence, friend. I am a man of peace. Thou art choleric, and art *growing*——"

"Silence, you scoundrel, I say."

"Nay, friend, grow not——"

"Sir, you're an impertinent puppy, and beneath my notice."

"Of a verity, friend, I am *beneath* thee;" and he walked away, leaving me to the titterings of a circle of auditors and my own reflections.

Unfortunately I have a spice of gallantry in my composition, and would fain persuade myself that I am not wholly disagreeable to the diviner sex. Certainly if smiles are a sure index of the satisfaction afforded by one's presence, I may pronounce myself happy, for my appearance seldom fails to excite them. However, I have had my suspicions of late—but I'll keep my suspicions to myself.

When in company, I cannot cross a room without thrusting the toes of my boots through the carpet, or kicking them against every article of furniture in my path—nor can I promenade the streets, without displacing every other stone on the pavement; for how in the name of all that's reasonable, reader, can a man make any certain calculations as to where he is about to step, when he carries about with him a foot or two of length at his extremities of which he is wholly unconscious?

In fine, reader, I am become a miserable and unfortunate man. Why, it was only last evening, that instead of placing my feet on the fender, at a party, I rested them on the *fore-stick*, and was only roused to a sense of my situation by the extravagant mirth of the company, and an overpoweringly strong savor of *burnt leather*.

"Something's burning!" I cried, drawing up my heels, and overturning the fender in the operation.

"There's no mistake about that," observed several, pointing to my smoking boots.

And now, reader, for the end of my case—for, you may rest assured, I have not uttered forth my complaints without some object in view—what remedy is there for my misfortune? physic's of no use. Brandreth's, Morison's, Hygeian and Tomato pills! why, reader, I actually *thrive* on them. Daily, for a fortnight, I swallowed

a double dose of rhubarb; but alas, it was the opinion of my friends that, of the two, I grew a trifle *faster* than usual about that time. So the physic was soon thrown to the dogs. And now, reader, what *shall* I do? The ladies all advise me to take a "tuck" or two in my frame. The idea is not a bad one, but none of them will venture in the operation farther than giving the advice. This last idea suggested another, namely, that I should tie myself up into a couple of *knots* or more. From a hasty calculation, I find, that one knot at the knee, and another at each waist, will about reduce me to the level of my more fortunate fellow mortals. Thus far nothing seems more easy. However, after several attempts, I find that in the *practical* part of the operation there are insurmountable difficulties. Besides, I doubt whether the effect on my personal appearance would be on the whole, desirable. Still, some way or other a remedy must be found. I have become tired of my towering supereminence. Doubtless it brings with it some advantages—I breathe a purer atmosphere—I enjoy sunlight somewhat longer than others, and I have decided advantages in making all meteorological observations. These, however, are but trifles, and gladly would I waive them all to descend and be on a level with my fellows.

Listen, reader, to the *groans* of an unfortunate, and if it be possible, devise me some release from my sufferings. So shall you be rewarded with the approbation of your conscience, and the friendship of one who only longs to be on an equality with you to testify his gratitude.

Baltimore, February, 1839.

H. R. M.

THE GREEK CAPTIVE.

Ye quiet stars!

That look so bright with beauty thro' the air
From your blue home—is nought of sorrow there
That gladness mars?

Ye gem-like flowers!

That mind me of my far-off happy home,
Upon your perfumes dark-wing'd mem'ries come
Of brighter hours.

What mystic spell

Have ye entwined around my withering heart!
Making it yearn from earthly things to part—
To say farewell!

And thou, my own,

My sad, sweet mother! what is there on earth
To gladden now the dear, familiar hearth,
So dark, and lone?

We may not meet!

I cannot break the gilded prison-bars
That rise between me and the pearly stars,
So soft, and sweet!

They cannot chain

My soul within its cell; it yet is free,
And oft it wanders fondly back to thee,
O'er hill and main!

Beneath the sod,
Or if, perchance, within the earth's cold breast
A refuge be denied me, I shall rest :
Forgive me God !

The bugle's blast !
He comes, to rivet now the fatal chain—
One look upon the blue sky—once, again !
It is my last !

Mother ! a spell
Will come around thee with my sadd'ning name,
When thou shalt hear I died to save my fame.
Mother ! farewell !

The tyrant came ; his proud and lofty step
Brought in its sound no terror to her heart.
He came, and gazed : she lay upon the floor
As if she spurn'd in death the gilded couch.
The breeze had wander'd thro' the splendid bars
That kept her in that gorgeous prison-house,
As if in pity to her loneliness,
And swept with low sweet moans among the flowers
That climb'd along the walls, from marble vase
And costly ornament, and from her brow
It lifted up the shining locks of gold ;
Her hand still grasp'd the bright and glittering steel,
Stain'd with the life-blood oozing from her heart,
As drop by drop it still stole slowly forth,
Thro' the small fingers, yet so tightly clasp'd
Upon her bosom ; but upon her face
There was no trace of agony—or grief.
He came to claim his victim—death was there !
He had not deem'd before, that woman's heart
Could nerve her hand for death ! He did not know
That honor was more dear to her than life.
She was a Greek—she could not be the slave,
The play-thing of a Turkish tyrant's will !

Clark's Mills, O., February, 1839.

EGERIA.

NOTES OF A TOUR

FROM VIRGINIA TO TENNESSEE, IN THE MONTHS
OF JULY AND AUGUST, 1839.

By Rev. H. Buffner, D.D., President of Washington College, Va.

CHAPTER II.

From Kanawha to Louisville.

Just below the salt works, the traveller enters the most beautiful part of the Kanawha valley. The mountains sink to hills, and a wide tract of rich, level bottom opens to the eye, all highly improved and cultivated. The town of Charleston, stands in this bottom, a short distance above the mouth of Elk river, as the white settlers, with their usual lack of taste, called a large tributary of the Kanawha. The Indians called it Tiskilwah, a name which ought to be restored.

This Charleston (and who can tell the number of Charllestons ?) is a handsome growing village of about 1200 inhabitants : but it would have enjoyed its beautiful situation much more, if the river bank, instead of being covered with houses, had been left adorned with

its native trees, whose lofty tops would not have obstructed the view of a fine water scene below the town. But the same miserable improvidence and destitution of taste, characterises nearly all our new settlements in America. No sooner does a settler get into a forest with his axe, than he begins to lay about him without forethought or discrimination ; his only thought seeming to be to fell and destroy the ancient denizens of the forest to the utmost possible extent. Thus they have stript the banks of the western rivers of their ornament and their safeguard, against the wear and tear of the floods. After depriving themselves of the finest shade trees in the world, they build their houses and their villages in the open field ; and when they feel the scorching rays of the sun, they begin to plant young trees for shade ! They often carry this sylvan tyranny to such a wasteful excess, that in a few years they have made a scarcity of good building timber in the country, and have reduced to ashes and dust a valuable treasure, which nature had been 300 years in preparing for them. The same blind hostility against forest trees, has exposed our roads in summer to the full blaze of the sun, and greatly aggravated the discomfort and fatigue of travelling. If this nakedness of the roads makes them less muddy in winter and spring, the advantage is lost during the seasons when most men travel. But in fact a few trees by the way side, sufficient to mitigate the burning sunshine, would not sensibly affect the state of the roads. The practise is, however, to destroy every tree where fields approach the road, unless perchance here and there, one in some nook or neglected corner.

From the salt works, or Charleston, the traveller has, during most of the year, the option of going by steamboat or by stage to Guyandotte. But the Kanawha was becoming too low for any but the smallest boats to navigate : so I took the route by stage ; but while the river is navigable, the coach is superseded by a small steamboat, from a point twelve miles above Charleston to Coalsmouth, twelve miles below. This affords to passengers a pleasant change in their mode of travelling, and gives them a full view of the river scenery which is various and pleasant. Above Charleston no shoals occur for twelve miles, and the river is deep and still ; but below, it spreads to a greater width, and the channel is obstructed by gravel bars and islands for four or five miles, when the current again becomes gentle and deep.

Coal river, twelve miles below Elk, is a considerable stream. Near its mouth, it falls, within a few miles, over two ledges of rock, in all above twenty feet perpendicular, affording valuable sites for manufactories. A company from New York had contracted for the purchase of the lower falls, in order to erect extensive works. The sudden death of the late proprietor Col. Thompson, and the recent commercial distress, seem to have suspended the enterprise.

Mounting the coach again, we were driven off from the river, up a long but gradual ascent, into Teaze's valley, between the Kanawha and Guyandotte rivers.

This valley, though remote from the long vallies between the parallel ridges of the Alleghany, nevertheless conforms to them, lying in the same direction, and being crossed by streams of water as they are.

Descending by the valley of Mud river, we reached the Guyandotte at the poor village of Barbourville,

seat of justice for Cabell county. Here we diverged from the state turnpike, which goes directly to the mouth of Sandy, and descending the Guyandotte by a branch turnpike, seven miles, we reached the Ohio in the evening, two days' journey by stage from Lewisburg. The whole distance is nearly 150 miles: from Charleston, not quite fifty.

The village of Guyandotte, at the mouth of the river whose name it bears, is situated at a point where a stranger from the east is struck with a fine view of the Ohio, descending through its broad rich valley with a gentle current. From the Guyandotte to the Sandy, a wide bottom on the Virginia side is distinguished for its pleasantness and fertility. To an agriculturalist it offers great advantages, and will probably become, ere long, one of the best cultivated and most densely peopled tracts on the Ohio.

We had to wait twenty hours at Guyandotte, before we got a boat descending the river. A packet runs twice a week between Cincinnati and Guyandotte; but it had gone the morning before our arrival. It is rarely necessary, however, to wait more than four or five hours for a boat on the Ohio, except when navigation becomes difficult from the low state of the water. I had resolved to be very prudent in my choice of boats, after the late fatal explosions. But twenty hours of hot weather in a dull place, made our whole company glad to embrace the first opportunity of pursuing our way; so without asking any questions, we made signals to the first boat that approached. She proved to be the *Avalanche*, a boat of moderate speed and tolerable accommodations. She took us safely to Cincinnati, in about eighteen hours.

When one first stands on the lofty bank of the Ohio, and takes a view of the stream, he is ready to exclaim, "Oh, how beautiful!" When he embarks, and is wafted along in mid-channel, his admiration is increased: a broad placid current, winds gracefully between high banks, where the soil throws up a luxuriant vegetation: sometimes wide low grounds spread out on both sides, backed in the distance by woody hills; then the serpentine channel cuts the base of the hills on the one side—presently again on the other side: rivers come in with open mouths—brooks steal in through narrow umbrageous ravines—fields and farm houses, villages and towns, alternate with forest scenery, and exhibit the recent achievements of industry. When summer droughts have shrunk the volume of water, the stream is often bordered with a shelving margin of gravel, in which a great variety of beautiful pebbles is found; occasionally a broad bar will turn the channel into a sluice by the shore, or an islet will throw its beachy head and woody top between the regular banks of the stream.

But with all these beauties, the Ohio will not long interest the voyager. In one hour he will have seen a specimen of the whole. The mind becomes wearied with the constant recurrence of similar forms and appearances: the same serpentine curves of the channel, the same banks, the same low grounds, the same hills. Some variations occur, it is true; but they are not sufficient to keep up a lively curiosity. In respect to scenery, therefore, the Ohio is not comparable to the Hudson from New York to Albany. But how few rivers can present such various scenes as the Hudson!

Compared with ordinary rivers, the Ohio will nevertheless justify the French appellation of "*La Belle Rivière*."

These general remarks on the Ohio, will serve for the whole distance of my voyage on the river. The towns above Cincinnati deserve little notice for size or beauty. Portsmouth, at the mouth of the Sciota, has become a flourishing town since the Ohio canal was brought to its termination there.

Maysville is a flourishing place, at the foot of a hill, where travellers from above to Lexington in Kentucky, disembark and go sixty miles by stage, over an excellent McAdamized road. Forty miles above Cincinnati, we passed Augusta, the seat of a college. Pleasant hills appear behind the town; which, however, is distinguished by nothing so much as the fiery redness of its brick walls. British travellers ridicule our fondness for red brick; and they have reason, for it is really painful to the eyes to walk the streets of our towns in a cloudless summer day. I would specially warn blear-eyed voyagers not to look steadfastly at the "*flamman-tia mœnia*" of Augusta, lest the fiery glare should "blast their eyeballs."

Six or seven miles above Cincinnati, the Little Miami comes in through an extensive plain. Just below is a straggling village called (like some dozens of others) Columbia. Then high hills advance to the Ohio shore; their tops are finely wooded, except at intervals, where handsome houses, whose sites are evidently selected to command fine prospects, indicate the vicinity of a place where wealth and refinement have made considerable progress. As we followed the bend of the river, a thickening row of houses along the base of the hills, and presently steamboats on the stocks, and the smoke of large manufactories, showed that we were by the outskirts of the city. Winding with the stream still more to the left, we observed that the hills suddenly receded from the shore, and presented the upper end of the city to full view, with steamboats closely arrayed along the shore, and among them, lodged at the base of the great steam-mill, was the wreck of the unfortunate *Moselle*. When I thought of the mangled limbs and bodies of 200 men, women and children, so lately mangled and scattered in all directions, through the reckless ambition of her captain, I could have execrated his memory, if I had not heard that his head was blown off his shoulders by the first column of steam that shot from the exploding boiler. So let his awful fate excite some pity, as his rash and foolish presumption should excite indignation; and both should be a warning to steamboat captains, to beware how they expose the lives of those who entrust themselves to their care, by a criminal vanity, that will hazard every thing for a display of speed.

The landing place has a fine appearance. It is an open space about 500 feet along the shore, extending 300 feet back, and surrounded on three sides by handsome buildings. Wharves or quays would not be adapted to a port, where the water rises and falls often thirty or forty feet, and sometimes more. To make the landing convenient at all stages of the river, the bank has been cut down to a regular slope, on which drays and carriages may move in every direction, and against which, steamboats may lie at either high or low water. The surface is consolidated by a strong pavement.

Landing amidst a crowd of steamboats, we ascended the slope and entered Main street, which runs back at right angles to the river. This street, and others near it, are as well built, and have as much the sound and bustle of commerce, as the streets of our chief seaports on the Atlantic. Cincinnati is in fact one of the handsomest towns in the United States. Much taste is exhibited in the style of building. Eyes that blink at flaming red walls in the sunshine, are here relieved by the frequent occurrence of white, and of the softer colors. The public buildings are numerous, and mostly handsome, if not elegant. Among the churches, the Episcopal attracts notice by its purely Gothic style, and the second Presbyterian by its large Doric portico and high steeple. Twelve city school houses as large as churches,—all built alike,—are distributed equally among the inhabitants. A fantastic sort of structure called the Bazar, owes its erection to the notorious Mrs. Trollope; who, failing in her speculative enterprise here, betook herself to writing on the “Domestic Manners of the Americans,” to raise the wind. In this new line of adventure her success has been astonishing. Mrs. Trollope is now among the popular writers of the day; she has only to take a trip and make a book, to be regularly reviewed, and to profit by the coarse and sometimes dishonest effusions of her pen! I call her a dishonest writer, because I am sure that some statements of what she pretended to have seen in America, are false. But enough of this John Bull woman.

Cincinnati is beautifully situated, with the Ohio river in front, and a semi-circular range of hills in the rear. A narrow strip of low bottom lies next to the river; then a second bank elevates the ground about fifty feet more. Between this second bank and the hills is a level plain. Below the town, Mill creek empties into the Ohio, after flowing through a rich valley from the interior country. Below Mill creek, the hills advance again to the river bank. Beyond the Ohio, other hills in Kentucky rise behind the towns of Newport and Covington, except where they are parted by the valley of the Licking river. From Dayton and Hamilton on the Great Miami, a canal is brought by the valley of Mill creek into the higher part of the city, and passing upwards, is made to discharge its waters, by a series of locks, first into Deer creek at the head of town, and then into the Ohio. Here the water, which first feeds the canal, is made to turn a succession of mills, before it is finally discharged.

The town buildings now extend on Main street quite to the base of the hills, a distance of nearly a mile and a half; two or three roads lead up the hills at several points. On arriving at the top, among the handsome houses which crown it, you have a delightful view of the city, the Ohio and its valley for ten miles, Newport and Covington on the Kentucky shore, and the wide sweep of hills which bound the prospect on every side. You are struck with the moving scene on the river, and in the streets; steamboats shooting along with their trains of smoke; drays, market waggons, coaches, rushing by one another, between lines of foot passengers. Twenty steeples draw your attention to the public buildings; their sizes, forms and uses. After looking at particular objects too tedious to mention, you sweep your eye over the magnificent whole of the

city and towns that lie before you, and feel your heart swell with wonder, to think that all this scene of architectural elegance, of a thronging and busy population, and of accumulated wealth, has been created within the last thirty years. Forty years ago, this was still a station for troops to guard the frontier against the incursion of savages. A village had then grown about the fort. In 1814, when I first saw the place, the village had grown to a town of 500 houses. The rush of its after growth was then just beginning. On a subsequent visit, three years later, rafts of boards and shingles from the Alleghany river, and of timber from all the upper country, lined the shore for five miles; lumber yards on the shore were filled a fathom deep; on every street piles of brick and mortar obstructed the way, and walls were rising as fast as busy masons could rear them; while the sound of the plane and hammer, in buildings more advanced, was mingled with the click of trowels. I was told of surprising feats in building—such as this: that a builder contracted to begin and finish a three story brick house in thirty days, and that on the thirtieth day he delivered the keys to the owner! So much can human industry effect by division of labor; and thus it was that Cincinnati sprang up, in one third of a century, from a village in the woods, to a rich and beautiful city of 40,000 inhabitants: not like the walls of Thebes, by the sound of a lyre, but by a less melodious concert of carts, hammers, trowels, and the frequent cry from above of “mortar!” and by the same energetic industry of a free people, did the state of Ohio grow up, in the same short period, from a few small villages to a thriving population of more than a million.

Cincinnati is still increasing, but more slowly than heretofore. It must depend for its future growth chiefly on its manufactures, of which it has a greater amount now than any city in the west, except Pittsburg. Steam machinery and boats are made here largely. As a commercial emporium, this city is less advantageously situated than Louisville and St. Louis. It has a very rich back country on the two Miamis; but on the Kentucky side, the country near the river is but partially rich, and there is less convenient access to the rich interior from Cincinnati, than from Maysville and Louisville.

I must not leave this city without noticing its literary institutions,—the Cincinnati college—the Roman Catholic college—the two medical schools,—and the Lane seminary on the hills, where candidates for the Presbyterian ministry pursue their theological studies. All these institutions are sustained by a respectable number of students, and are sufficient to show that the higher branches of learning are cultivated in this new city.

One thing more, and I will close my notes on Cincinnati. German emigrants have been pouring into this place, mostly in the capacity of common laborers, till they amount to thousands—I was told 8000! By superior economy and industry they have ousted many of the Irish laborers, and threaten to supplant the ordinary sort of them altogether. They are more sober and orderly in their habits, and the city is benefited by the change. The Catholic population of the city is made up almost entirely of these foreign emigrants. The protestant Irish are generally better educated, and make better citizens, than the Catholic; though some of them are very worthy characters.

From Cincinnati I went to Louisville in the mail packet, General Pike, which made the voyage in about thirteen hours. The scenery on the river varied little from that above. Most of the villages present themselves perched on the high, naked and crumbling banks, amidst fields, out of which, and about which, the fine forest trees have been diligently destroyed.

The nakedness of the banks is exposing them to be undermined by the current, and the waves thrown up by the steamboats. The soil is of a loose sandy description, and is underlaid by a deep bed of sand and gravel. When the river is sufficiently high to cover the shelving bars of gravel at its margin, the current comes in contact with the steep part of the bank, and washing out the sand underneath, causes frequent slides and falls of the soil from above; the lighter materials are swept away by the current, while the heavier gravel is washed down to the shelving beach, which is thereby enlarged from year to year. This effect is much hastened by the steamboats, which cast out on either side an oblique line of billows that roll and break against the shore. When the dash of these waves is carried against the friable soil of the banks, the effect is more destructive than that of the current. The only remedy—and that should be promptly applied—seems to be, to plant willows and other trees of quick growth and tenacious roots, and to fortify their position with a layer of stones.

The most thriving town between Cincinnati and Louisville, is Madison, on the Indiana shore. Near this is the South Hanover college and theological school. The institution was founded some years ago on the manual labor scheme. The cheapness of education here, as well as the merit of the instructors, soon attracted a large number of students. The manual labor department was here as elsewhere attended with much difficulty, and has failed to yield all the advantages that were anticipated. Still it is deemed so far beneficial, as to be worthy of continuance; but it is now left to the option of the students whether they will labor or not. Two or three years ago, a destructive tornado passed over the place and almost ruined the college buildings.

The only instance of gambling which I saw on my whole tour, occurred on the General Pike, shortly after we left Cincinnati. A party at a card table played a few games for money. But another card party, among whom no bets occurred, excited my attention. The boat was scarcely under way, before an elderly lady, large and fair to look upon, came into the gentlemen's cabin, and looked about as if she wanted somebody or something. She addressed several gentlemen; and soon, she and three of them sat down to cards. They shuffled, and cut, and dealt out, and played away; till some of the gentlemen showed signs of weariness: but not so the lady; she held them to it more than two hours, until the party was broken up, by the setting out of the dinner table. No sooner was the cloth removed, after dinner, than the same elderly good looking lady came forth again, looking round and round, till she gathered up the party for another *set to*. They shuffled, and cut, and dealt out, and played away, till late in the afternoon, when two of the gentlemen fell back in their chairs, and yawned, and finally got up. When the lady saw this backing out, she turned to the

third gentleman by her side, and detained him with some questions on the subject of card playing, and a proposal to show him certain mysterious manœuvres with cards, which he admitted himself to be ignorant of. She seized the pack, shuffled, divided, dealt out, lectured, explained; shuffled, dealt out, lectured explained, in continuation—putting her finger first on one card, then on another, as she commented thereupon:—whereof I understood nothing; but whereat I was amused, nevertheless, when I observed the indefatigable earnestness of the lady, and the listless patience of her auditor. When the supper table was set, the lecture ended. No sooner was the table cleared, than forth came the self-same lady once more, and the self-same operations of the forenoon and the afternoon, were repeated and reiterated and gone over, times innumerable—the shuffle—the deal—the cut—the turning up the trump—the playing out, &c. Now it so happened, that the lady sat at the card table with her back almost touching my berth; and being of considerable dimensions, she debarred me of access to my place of repose. When I became very sleepy about ten o'clock, I politely requested the company to allow me space to enter my dormitory. They promptly complied,—the lady rose and pushed the table forward a little, and drawing her chair after it, she turned about, and finding by inspection that I could pass and drop my curtain, she sat down and resumed the game. I crept in, and dropping my curtain close to her back, doffed my garments and lay down; but the rustling of cards within three feet of my ears, and the frequent pronunciation of the words, "ace—queen—knave—trump—trick"—and other terms of the card playing vocabulary, kept me awake for some time. Finally these sounds had a lulling effect—dreamy thoughts stole upon me—thoughts of card playing ladies—"an old age of cards," as Pope has it—till I fell asleep with this sort of reflection: "Well, Mrs. D. (for I had heard her name,) if I were a Drake I should not choose you for my *duck*."

Our boat landed about eleven o'clock at night, and lay till morning. When I got out and looked about, I found on the bank, the city of Louisville, and along the shore the greatest sight of steamboats that I ever beheld. They lay as thickly as they could crowd, with their noses to the land, for the space of half a mile, many of them vessels of large burden, giving evidence at once, that here was the greatest commercial mart on the Ohio.

The river is here of great breadth—more than half a mile at the falls, and somewhat less for some miles above and below. The falls, or rather rapids, are made by a ledge of rock, swelling up in the channel, but most on the Kentucky side, so as to force the current towards the Indiana shore, where it runs with violence, when the river is low, down a sluice about a mile long; but when the river is much swollen, it spreads over the whole space between the banks, and affords a safe passage to boats over the rapids. At other times the canal on the Louisville side must be used.

Louisville is neither so large nor so handsome a city as Cincinnati, nor has it such pleasant scenery about it. Several streets next to the river are compactly and handsomely built; but there are as yet few public

buildings of any note. They are erecting an edifice, however, which, in point of magnificence and solidity, will exceed any thing of the kind on the western side of the Alleghany. They call it the court house, but it will give ample room and verge enough to accommodate the legislature also, and I heard it suggested that its dimensions were made so large with this view. Nor does there seem to be any sufficient reason why the seat of government should not be located in Louisville, which stands indeed on one side of the state, but midway between the extremities. Steamboats and railways will make this great commercial depôt the chief point of convergence, and afford easy intercourse with all parts of the state. This building is of a fine grey sandstone from the Kentucky river, and presents a front of more than 200 feet.

The country about Louisville is an extensive plain of dark rich soil. The town was formerly unhealthy, from the pestiferous effluvia of ponds and marshes in the vicinity. Those nearest the town have been drained, and Louisville is now *almost* as healthy as the towns of the upper Ohio. But the situation will never permit it to be a *very healthy* place in the autumnal season. The city now contains 25,000 inhabitants, and it is growing with such rapidity, as to threaten Cincinnati with rivalry in population, as it now rivals that "queen of the west" in trade.

On the Indiana side, are the towns of Jeffersonville, above the falls, and New Albany, below. The latter is a thriving place, pleasantly situated near the only hills apparent from Louisville, over which it has some natural advantages, but which it can never rival for want of an equal start. Capital and population have fixed on Louisville as their seat—having made their location, they will keep it. Experience proves that a city once become populous and wealthy, will in the ordinary course of events triumph over natural disadvantages; and by means of capital and industry, maintain its superiority over neighboring towns more favorably situated. Where natural advantages are very great, they may nevertheless, in the end, attract capital and population from their ancient seats.

WINTER.

Now Winter, from the chilling east,
Converts each dew-drop to a gem;
Pendant on ev'ry spray they rest,
Like jewels on a diadem.

How bright each crystal drop appears,
Touch'd by the sparkling sunbeams sheen;
But when the moon her crescent rears,
Then is display'd a lovelier scene.

Glitt'ring beneath her gentle beam,
That fairy frostwork brings the thought
Of palaces, which poets dream
The genii of the east have wrought.

For never but in fairy land,
Whose fleeting pageants cheat the sight
Dissolving by a magic wand,
Was aught so transient, or so bright.

Upon the forest's rugged boughs
The stainless snow-wreaths lightly rest,
Like plumes upon a warrior's brows,
Or beauty on her lover's breast.

No longer now in verdure drest,
Earth seems a dead and lifeless thing;
The snow-storm comes, a funeral guest,
Its shroud upon that corpse to fling.

The howling blast, that shakes the grove,
Its requiem chaunts in accents deep:
But soon shall Spring's warm touch remove
The torpor of that deathlike sleep.

Thus, when our vital warmth expires
Beneath the chilling grasp of death,
Religious hope relumes its fires,
And renovates our fleeting breath.

Through fields all bleak and trackless now,
The shiv'ring flocks their way explore,
With hunger pinch'd, and bleach'd with snow,
While their mute looks our aid implore.

Silent the birds to covert fly,
Save Winter's harbinger, whose form
Soars gaily through a freezing sky,
And sports amidst the threat'ning storm.

While thus in icy fetters bound,
Torpid and mute, all nature lies,
In human dwellings still is found
A spot, which Winter's power defies.

There, gather'd round the cheerful hearth,
While books the languid hours beguile,
Or converse prompts to harmless mirth,
The social homebred virtues smile.

D.

THE COPY-BOOK—NO. V.

THE NEW WORLD.

It is not yet three centuries and a half since Columbus

"first unfurled
An eastern banner o'er a western world."

All those objects, therefore, whose interest is owing to their antiquity, are wanting in America. Time has consecrated nothing here by her venerable hand. Fancy here finds no grey ruins of crumbling palaces and deserted cities—no feudal battlement or tower, no marble temple, nor monkish cloister.

Here is no Athens with learned porch, or philosophic grove—where

"The warrior's weapon and the sophist's stole
Are sought in vain, and o'er each mouldering tower,
Dim with the mist of ages, grey flits the shade of power,"

nor any of those ancient scenes where poetry inhales her inspiration and loves to

"Strike the deep sorrows of her lyre."

Such materials of imagination, the trophies and tombs of departed greatness, are scattered over Europe, and Asia, and Africa—but not in America.

Virginia is the oldest of the United States, yet how short the thread of her history—not two centuries and a half. And an elegant writer found in the chronicles of his native state—the most flourishing in the union—materials so scanty and so inconsequential, that the Livy of New York descended to the burlesque of Knickerbocker. It is true, that although destitute of classic antiquity, we have nature in her fresh and lovely form—the river, the prairie, and the mountain, the lake and the cataract—but it is naked, solitary nature, devoid of association. No spot is shown where a Roman legion has encamped, or a knight errant slain a dragon or a giant. Here no tyrant has been slain—no conqueror has returned triumphant from the spoil of distant nations; here no poet has sung—no martyr died in “victorious agonies.”

As to the Indians, after all that has been done to sublimate their character, it must be confessed, they are an uninteresting people. Their ideas are few, and for the most part connected with war or the animal necessities. The life of an Indian is a monotonous repetition of a few simple incidents. Their history is nothing but a detail of petty skirmishes—“of no more consequence than,” as Milton says, the “wars between the hawks and the crows of a neighboring wood.” Their life is passed between the tomahawk and the pipe. A glimmer of reason, a touch of sentiment, a rare burst of generosity or eloquence, is all that the most extravagant poetaster can make out of these poor extolled and exterminated savages.

The Indian characters of Cooper's novels are remarkable for their sameness. The Trapper is only Hawk-eye in his old age. Like family portraits—see one, you see all. A writer may paint the hunt, the war-council, the fight, the dance—he may shift a few scenes, and ring a few changes, but the fountain of Indian story is shallow and will soon run dry. Poetical men have to lament that in this country there is no bastille, no “bridge of sighs,” no “cloud-capped towers, nor gorgeous palaces;” that with us every thing is fresh, modern and provincial: and if European writers, will lay aside the aids of antiquity, and put themselves, in this particular, on a footing with the writers of the western hemisphere, they will perhaps be less surprised at the paucity of pure, home-made, original American works. Stripped of the borrowed plumage of antiquity, the European peacock will be reduced to a level with the common barn-door fowl of America. Our artists and writers are apt to abandon their own country, for the kingdoms of Europe: there, in the schools and galleries, they find the noble models of the most celebrated masters—the collated wonders of an age; there, too, they may meet

the master spirits of the present day. The conceptions expand, the taste is softened, mellowed and refined—the imagination is kindled and the judgment invigorated. At home the quiver of subjects was soon exhausted; here it may be replenished from an older and richer armory.

America abounds in incomparable scenery; but what is mere scenery unconnected with man? What is mere physical nature unconnected with moral existence? The Connecticut and the Hudson are picturesque—the Potomac and the Missouri majestic—but what are they, in a classic point of view, compared to the little yellow, muddy Tiber? Let us not then blame our artists and writers for repairing to Europe: they are migratory birds, flying where they can find their proper aliment, and rejoice in the influence of a genial sun.

Again, the stamp of original American character has not been as yet deeply impressed on the people of this country—they are hardly yet melted down in the crucible of time. Perhaps the time will come when the American face and the American genius will assume distinct and definite features. Added to this, of all people on earth, the Americans are the most restless and locomotive. The continual attrition of travel obliterates local originality and extinguishes provincial mother wit. The Revolution indeed is a topic worthy of a great mind, and we may wonder why some Homer has not arisen to celebrate a hero of higher virtue than Achilles. But the subject is too recent, perhaps, to compete with those that loom to a false magnitude through the mists of time. “*Difficile est communia dicere.*” Centuries alone can cast a halo on a name. The time may come, when America shall have her epic poet; when her rocks and fountains shall become classic; when the “chorded shell” shall be struck on the cliffs of the Hudson, and the harp resound at the foot of the Alleghanies.

“Westward the course of empire takes its way,
The four first acts already past,
A fifth shall close the drama with the day:
Time's noblest offspring is the last.”

DEFORMITIES OF GREAT MEN.

Sir Walter Scott and Lord Byron were both lame. Pope was called the ugly little wasp of Twickenham.

Lady Montague had a dirty looking face, and so had Dean Swift, who could never bring his to look clean though he washed with “oriental scrupulosity.”

Appius Claudius, Timoleon, Tiresias, Democritus, Homer and Milton—blind.

Ignatius Loyola and Epictetus—lame. Coutus-off, Hannibal, Epictetus and Euler—one-eyed.

St. Paul, Alexander the Great, Julius Cæsar,

Horace, Bonaparte, Madison, General Charles Lee, Chancellor Kent, John Quincy Adams and Santa Anna—small men.

Melancthon—short and hard-favored. Soame Jenyns on hearing that Gibbon had published his history, said he wondered how so ugly a man could write a book—which made the company smile, for he was himself remarkably ugly.

Cicero had a long neck—and Homer, according to Lucian, compares Helen's neck to a swan's; not because it was as white, but because it was as long.

The head of Pericles was shaped like an onion; that of the present king of the French is compared to a pear.

Queen Elizabeth had red hair, and black teeth; Cromwell a red face, and the aquiline hook and fiery color of his nose was a standing jest of the cavaliers.

It is thought by some philosophers that the smaller the body, the more active the soul, as being the less diffused. While on the other hand it is commonly believed, that the larger the body, the larger the soul. The better opinion perhaps is, that nature, in this particular, follows no uniform rule; and that there is no settled proportion between the material and immaterial man. Personal deformity is apt to modify in some way the character; it may create jealousy, or stimulate to counterbalance bodily inferiority by mental superiority, or may superinduce a gloomy melancholy. In regard to ugliness we may remember, that the best affections are often concealed under a homely exterior, and that the wisest heads are sometimes the most knotty.

PATRICK HENRY.

In the course of my peregrinations, I have had the pleasure of becoming acquainted with a daughter of Patrick Henry—a lady of the old school. She was entirely affable, and ready to communicate whatever she remembered of the olden time. Yet I confess it was quite a damper to my antiquarian fervor to hear her say, she remembered hardly anything of her father. Indeed what she knew on that head was so familiar to her mind that she deemed it scarcely worth relating. Her reminiscences I will set down here, at random, as they were at different times mentioned to me.

She had seen General Washington and Albert Gallatin in conversation with her father at his house. General Washington was grave and never laughed. Her father on the contrary was a hearty laugh. Gallatin talked broken English. Patrick Henry while governor of Virginia, often cut wood and made up his own fire. He was singularly fond of his children. When

he rode out on his farm, he frequently carried one of them before and another behind him. Of his speeches she knew little or nothing. At that time she was young and gay, and cared more about balls than politics. Puffendorf, (she thought that was the name,) was one of his favorite authors. On Sunday he never failed to read a sermon to his family. He was in general inattentive to dress; but when equipping himself for court, he mounted a smart wig and was particularly fond of a red cloak. He had no taste for fine horses—having received several falls. When he appeared in the streets the people took off their hats to him, and showed him every mark of respect, to avoid which he oftentimes sneaked out of town by some private way. From the shabbiness of his dress he was sometimes mistaken for a clodpole, and greatly diverted at the questions propounded to him upon these occasions. John Randolph took up a strong dislike to him, for calling him one of the hobtail politicians. Patrick Henry and General Henry Lee were intimate friends at one time, but they afterwards fell out. Of her father's letters she retained fourteen. They were short, familiar, written on the spur of the moment, and some of them in a hurry—just such as any private gentleman would write to his family. They were written on small sheets, or half sheets of common paper; the hand writing good, the style occasionally inaccurate.

The following sentences, extracted from these letters, are of interest only as coming from the pen of

“the forest-born Demosthenes,
Whose thunder shook the Philip of the seas.”

“His conduct is such as would surprise any body not acquainted with him. However, you will remember, that Providence hath ordered to all a portion of sufferings and uneasiness in this world, that we may think of preparing for a better. I hope my dear child will keep up her spirits, and rub through every trial.”

The word Christmas he spells Xmas.

“I have no doubt of my dear B's resignation to the divine will, in the afflictive stroke she has felt since last year. The same good sense and piety which have placed you so high in my esteem and that of every one of your acquaintance, will, I trust, bear you up cheerfully through life. I do assure you the comfort I feel, from reflecting on your character and disposition, is very great.

“I hope God will bless my dear B., and be her support and protection, and carry you through life under the guidance of his good providence.”

1798. “I find my own health and strength declining; but, on the whole, not more than my time of life might expect.”

“I hope she will sometimes see you, and learn of you everything that is praiseworthy.”

1791. “I am obliged to be very industrious,

and to take on me great fatigue, to clear myself of debt. I hope to be able to accomplish this in a year or two, if it please God to continue me in health and strength."

"I hear A. has lost her second son. Poor, dear girl, I hope she bears it well."

"I wish you were with us to enjoy the agreeable society of your sisters, at this place, which is very retired; indeed so much so, as to disgust them. But as we go to Redhill in about five weeks, they will be relieved from their solitude, as that is a more public place."

"I must give out the law and plague myself no more with business; sitting down on what I have. For it will be sufficient employment to see after my little flock and the management of my plantation."

"I have lost my crop of tobacco on Staunton, from a great fresh, and was otherwise damaged."

Postscript, by his wife: "My dear B. will be so good as to excuse my writing a few lines in her pappa's letter, as we are very scarce of paper."

"This will be delivered you by your brother, who, with his wife, will visit you. You will no doubt see that she is a genteel person, and one who has been bred in polite life; and as she has an amiable character, I doubt not you will think her a very agreeable connection."

1787. "At present your mama and all our family live at one fire, and have not one out-house that will assist."

"I am preparing for Charlotte court on Monday, for my necessity's oblige me to take up my old calling again."

HYPOCHONDRIA.

"A thousand miseries at once
My heavy heart and soul enconce." *Burton.*

It is remarked of hypochondriacs, that each one thinks his own the worst possible case; and that, notwithstanding every body they meet is able to cure them, they never get well.

Goldsmith I think it is, that remarks, that it is surprising people should be so obstinate as to die in a world where there are so many infallible remedies for every disease. Pill Garlick, laboring under indigestion, applied to Dr. Abstemio, who advised him to starve the enemy out. After the lapse of some months, however, finding himself reduced to a lean anatomy, he abjured bran-bread and Bohea tea, and laid his case before the famous Dr. Humbug. Dr. Humbug put him upon a more generous regimen, and in a short while set a thousand more blue devils to work, hammering on the noddle of Pill Garlick.

The brain is head quarters of the body, and "*rendezvous generale*," of the sensations—the will, commander in chief; and the animal spirits, the

sentinels to convey all intelligence instantaneously to the brain. The stomach is like a mill—the power failing, it grinds more feebly—so, in indigestion, the stomach carries on a feeble, painful process. Nostrums, in this case, bring, if any, only temporary relief; such efforts are no better than to set a mill wheel in motion by the hand. Nothing less than a full tide of water will impel the one; nothing less than the spring-tide of health will set the machinery of digestion again into full play. The brain seems to be a counterpart of the stomach—the "*camera obscura*," on which all the sensations are pictured. Indigestion, though in general engendered in the stomach, sometimes originates in the brain. This is especially the case among students and literary men, in whom the exciting cause of indigestion is undue exertion of the brain. Excessive exertion weakens this organ, diminishes the nervous influence (formerly called the animal spirits,) which is essential to digestion. Some writer affirms that every idea of the mind is produced by an expansion or contraction, or some other motion of the brain. If so, it may be readily imagined how study, which requires so many motions of the brain, should injure that "*viscus*," and bring on indigestion, melancholy, phrenitis, and "all the thousand other ills that studious men are heirs to."

It appears, however, to be a well established fact that authors and literary men whose cerebel organs have been continually exercised are healthy and long-lived. The brain, therefore, is strengthened by cultivation, just like any other organ of the body; and an Almighty Benefactor has not bestowed the desire of knowledge without the capacity of obtaining it. "We are fearfully and wonderfully made." There is a mysterious sympathy between mind and body. In strong cases this is quite palpable. Fear drives the blood back to the heart—anger and modesty fill the blood vessels of the face. Any extreme passion takes away the appetite—as fear, anger, anxiety, hope. These effects are manifest and admitted, but when brought about by a slow, gradual process, the source is apt to escape observation. A sudden calamity, coming at an unexpected moment, may at once unhinge and distort the mind; the same effect may be as effectually induced by the silent touches of protracted care. As sudden fright may produce instant death, so continual fears and apprehensions will at length wear away a frame of adamant. A rock may be as completely dissolved by drops of rain, as by the inevitable blast of forked lightning.

DIET, &c.

I wish some man of wit would take the trouble to collate all the multifarious, absurd and contradictory opinions of dietetical writers. There is

scarce a single article of diet which has not been anathematised by some one of these authors. Like Sancho Panza's attendants in his island, they snatch away one dish after another from the table, under pretence that it is indigestible. The truth is that nothing agrees with the dyspeptic. "One man's food is another man's poison." It all depends on the idiosyncrasy. Some men are of difficult digestion, others are polyphagous. Some are herbivorous, some carnivorous, some omnivorous. Nothing is more absurd than the vulgar notion that all sorts of food are equally wholesome. And not only is one man's food another man's poison, but what is food at one time, may be poison at another to the same individual.

Medicine is an uncertain remedy, and at best a necessary evil. Temperance, exercise, cheerfulness—these are the best medicines for the nerves.

Cowper sought relief from the hypochondria in taming hares, and making bird cages, writing the *Task*, and translating Homer.

Athletic games and field sports strengthen the nerves; and the sequestered scenes of rural life soothe the mind. The society of a few agreeable persons, is preferable to gay promiscuous company. Those persons among whom the valetudinarian feels himself most entirely at home, ought to be his only associates. Nothing is more distressing to the nerves than any sort of constraint. Perhaps this is the cause why indigestion finds so many victims in the vain circles of formal, fashionable life. Every one can remember instances of his appetite being taken away by the stiff ceremony of a dining party, or the showy pomp of some public assembly. Nothing will tend more to cheer the drooping spirits and charm away the troop of real or imaginary troubles, that beset the hypochondriac, than the society of one or two agreeable females. The tones of the female voice, like the music of David's harp, will alleviate the deepest despondency.

Burton's farewell advice to the melancholy, is, "Be not solitary, be not idle." In indigestion the nervous system becomes disordered, and the nerves are the instruments of the mind, by which it acts; the action of the mind, therefore, becomes disordered; and it will be impossible for the mind to return to a regular sound action, as long as the instruments by which it operates are out of order, just as it is impossible to produce harmonious sounds on an instrument whose keys are out of tune. Where the imagination is disordered, the conceptions usurp the place of the perceptions—the fancy controls the reason. Argument will have little effect against these conceptions, as long as they spring from disordered nerves; for the hypochondriac as sincerely believes his false imaginations, as a man in health believes the most evident matters of fact; nay, I know not but that the belief of the hypochondriac is deeper and more

intense than that of a healthy man; because morbid sensations are more vivid and intense than healthy ones. And as objects, beheld through semi-vitrified glass, seem distorted and misshapen, so are objects seen through the fallacious medium of disordered nerves. The remedy, then, is to lessen the number of the conceptions as much as possible; to divert the current of the thoughts from the abstract to the actual—from the imaginary to the real; from things which may or may not be, to things that certainly are. From this consideration, we learn, that solitude in melancholy is mainly to be avoided, and occupation to be sought for.

BURTON.

To the hypochondria the world is indebted for Burton's *Anatomy of Melancholy*, which shows what melancholy is, with all the kinds, causes, symptoms, prognostics, and several causes of it, in three partitions, with their several sections, members, and sub-sections, philosophically, medically and historically opened and cut up.

We are informed by a summary of the author's life, prefixed to his work, that he undertook it for the relief of the hypochondria—that it occupied twenty years of literary leisure passed at the university—that he attained an advanced old age, but that he failed to rid himself of his malady—which continued to prey upon him to the end of his life.

The *Anatomy of Melancholy* is a mine of classic lore—an oriental bazaar, full of rich and costly goods, heaped together in miscellaneous magnificence. It is one of the two books which Dr. Johnson found so attractive as to make him rise in the morning two hours before his accustomed time.

From Burton's pages, "rich with the spoils of time," the wits of each succeeding age have condescended to borrow. Sterne drew hence many materials for his *Tristram Shandy* and "Sentimental Journey," and Swift for his "Tale of a Tub," and "Gulliver's Travels." And in a former reign Milton is said to have caught the hint of the "L'Allegro," and "Il Penseroso," from a poem of Burton's, prefixed to his *Anatomy of Melancholy*, in which he paints in alternate verses the cheerfulness and the gloom of a melancholy man; and indeed the great poet seems to have drawn his arrows more than once from the rich and abundant quiver of Burton.

DIFFERENCE IN DISPOSITION.

When Socrates heard the sentence of his banishment, he exclaimed, "The whole world is my country!" Ovid, in his exile, sighed for the scenes of his nativity. While Cardinal de Retz amused himself by writing the life of his gaoler, Tasso fretted himself to death in the solitude of his dungeon!

THE PILGRIM AMID THE RUINS OF ROME.

BY JOHN C. McCABE.

"Come and see

The cypress, hear the owl, and plod your way
O'er steps of broken thrones and temples, ye !
Whose agonies are evils of a day—
A world is at our feet, as fragile as our clay.

Childe Harold.

I am no longer now the artless child,
Plucking wild flowers, singing boyhood's lays ;
Roving the wood when summer's sunset mild,
Lights the rich foliage with its dying rays.
But lo ! 'mid monuments of eld I stand !
And gaze around on columns thickly strewn,
And touch time's reliques with my trembling hand,
As on them gleams, thro' clouds, the pale cold moon.

Land of departed greatness ! in thy fate
I read earth's history, and man's, and mine :
Lo ! the proud throne, where mighty Cæsar sat,
Is desolate ! and weeds with ivy twine
The broken ring where gladiators fought ;—
And where a thousand voices rent the air,
When the poor victor of an hour sought
His crown of leaves,—not e'en an echo's there !

And 'twas for *this* I left my happy home,
Where sunny smiles and pleasure-beaming eyes
Would meet me, o'er this gloomy waste to roam—
For *what* ? To boast of other lands and skies !
To tell, when years shall frost this head, that I
Have stood where mighty Cæsar stood ; have gazed
Upon the wreck of columns, where the sky
Once wildly glow'd when Rome's proud temples
blazed.

To say I've look'd upon the crumbling walls
Of the great Coliseum ; and have wept
At midnight 'midst its ruins, when there falls
Upon its cold grey stones the dew—and slept
Unharm'd where bloody, cruel Nero dwelt ;
And dream'd I heard the viol's thrilling string,
And felt, the cold and slimy serpent felt,
As gliding o'er he seemed to own no sting :

That I have seen the lightning banners waving,
And heard the wild artillery of the skies ;
And the rude tempest's tempest proudly braving ;
Have watched, 'till o'er the Vatican the dyes
Of Heaven's rainbow spann'd the visual line ;
And felt my bosom lighten'd of its load,
As God hung out his promised mercy's sign,
And 'round the ruined arch its colors glow'd,
Like hope descending on a broken heart,
Throwing its glories over desert sorrow,
'Till woe seems beautiful, and e'en the dart
That wounds, bears token of a blessed morrow :

That I have seen old Tiber's yellow waves,
And heard their mournful dash at midnight, while
The hooting owl shriek'd over heroes' graves,
And the pale stars would o'er the waters smile
In sadness ; and have caught the mournful sigh,
Of winds through ruined, desolated halls ;
And watched the meteor, with fear's upturn'd eye,
As on some blasted monument 'twould fall.

Perchance I may, when o'er my wrinkled brow,
Come the dim phantoms of my by-gone years ;
And these sad relics which I look on now,
Shall float along upon my aged tears—
Perchance I may my children's children tell,
That *I*, ambitious, sought to gain a name,
By *standing* where earth's greatest masters *fell*,
And found, as nothing worth, the breath of fame.

Oh human grandeur ! fleeting as the beam
That lights the vision of the poet's soul ;
Oh human glory ! passing like the stream
Whose courser-swiftness never brooks control.
A crumbling column, ivy overgrown—
A tottering arch, where mimic serpents twine—
A fallen temple and a ruined throne,
A broken altar with a shivered shrine !

This is Earth's history ! The hero's meed !
The warrior's triumph, and the end of fame !
The innovator's pride, the bigot's creed,
The light of science, and delusion's flame !
I feel rebuked—an humbled worm I turn,
Away from these memorials, and retrace
My steps, that while life's wasting lamp shall burn,
Its rays may light me to my resting place.

Richmond, 1839.

LETTER FROM MALTA.

Prince Puckler Muskaw ; his arrival at Malta ; brief sketch of
his life ; reception by the English ; notice of his *Tauf Frühl.*

A couple of years since we had the pleasure to meet
Prince Pucklar Muskaw, who was at that time the lion
of the day in our small city of Valetta. This German
nobleman, from one of his publications obtained the
same, I will not say enviable, celebrity with English-
men, which Capt. Hall did with us for his volumes on
America.

Happy were we when we heard of the arrival of this
prince in our quarantine, and anxiously did we await
the day, when he should be received to Pratigue. We
were desirous of observing his reception by the authori-
ties of our island—the representatives of that nation,
the manners, customs, and character of which he had
in his tour, not only so severely criticised, but so much
condemned. We had heard that the Americans were
by far too sensitive, and had oftentimes expressed too
much feeling for the statements of authors who derived
their only importance from the notice which they had
received from the American journals. In this assertion
there is no little truth, and gladly did we seize the op-
portunity to observe the operation of a pill on the Eng-
lish, which they had advised us so quietly to swallow.

The prince had arrived from Tunis, and was confined
in our Lazaretto fourteen days. On the morning of his
landing, no guard was sent to receive him, as was al-
ways customary for a man of his station in life and
rank in the army ; but at the moment of his coming on
shore, he was received by one or two blackguard cice-
rones, who importuned his highness to be permitted to
show him, through the winding streets, to his apartments

at the "Clarence Hotel." The prince was evidently mortified, his pride was touched, and the curl of the lip, which was covered with a thick, long and black mustachio, but too well told that if he should ever deign to speak of Malta, its rulers would surely come in for no small share of his aversion and contempt.

In the preface of the *Tutti Frutti* will be found a short and interesting biographical sketch of the author. We shall make a few extracts, before we continue our remarks, hoping the same may be interesting to the reader.

"Herman Prince Puckler Muskaw was born at the palace of Muskaw, in the province of Silesia, on the 30th October, 1785. He received the first rudiments of his education partly there and partly at Dresden. In the latter city, his father, Count Puckler, principally resided, being privy councillor to the king of Saxony. In 1800 he entered the university of Leipsic, where he remained two or three years, devoting himself to the acquisition of general knowledge, and the study of the law. He very soon exchanged this pursuit for a military life, and entered the service of the king of Saxony, as a member of the *Garde der Corps du Roi*. While at Dresden he distinguished himself as an equestrian. At the decease of his father, with whom he was continually at variance, he came into the possession of very considerable estates at Muskaw, together with a large accession of wealth. In the year 1813, the Russian army entered Berlin, in which he entered, receiving the rank of major and aid-de-camp to the Duke of Saxe Weimar. He distinguished himself afterwards in the Netherlands, and won the character of a brave and distinguished officer in the army at Antwerp, commanded by Bulow. About this time, he was engaged in a novel kind of a duel. A French colonel of Hussars, celebrated for his daring bravery, rode out considerably in advance of the lines, and challenged any officer in the army of his opponents to single combat. Prince Puckler accepted the challenge, and the contest took place in the centre between the two armies. Intense anxiety was pictured in the countenances of the spectators. It seemed as if the glories of the respective countries depended upon the issue. A death-like silence reigned throughout, which was only occasionally interrupted by the loud cheers of the deeply interested soldiery, as their favorite champion gained a temporary advantage or suffered a momentary defeat. At length the guardian angel of Germany triumphed—the brave Frenchman fell!"

It singularly happens, that the same volumes from which we have taken the above extract, were, during the time the prince was residing at Malta, in his possession, and in various places bear the impress of his hand, while correcting the numerous errors of his translator. The first note we have observed, was at the foot of the preceding anecdote, where the author has modestly written, "that the story is in truth not quite so brilliant." We are, however, inclined to believe it is, in the main, correct, and that the achievement is rendered still more glorious from the doubt which at first sight his own words would seem to convey. To continue our quotation:

"Various orders were conferred upon him as a reward for his numerous and brilliant services, together with the rank of colonel. At a later period, he raised a

regiment of Chasseurs, and commanded at Bruges as civil and military governor. Peace having now spread her halcyon wings over Europe, the prince returned to the enjoyments of a private life, and visited England—at that time the great focus of attraction to all the continental nations. On his return from England, he amused himself by occasionally visiting Dresden and Berlin; and still retaining his early attachment for spirited adventure, he availed himself of an opportunity afforded in 1817 of ascending from the latter city in a balloon with the aeronaut Reichard. This event imparted to him additional celebrity. He was created a prince in 1822. Public opinion has assigned Puckler Muskaw a high station in a domain of an entirely different description—namely, in the kingdom of literature. His name has been placed by the award of criticism among the most talented of his countrymen."

Such is the character of this prince, as given by the translator of his "*Tutti Frutti*." We have noticed the reception at this island, of a Grecian, French, Austrian, Bavarian, and Turkish prince: yet we found in every instance a guard of honor ready to receive them as they landed—brigade reviews at Florian, made for their amusement, and dinners and balls given at the palace by the governor, as a mark of distinction. Why, we are induced to ask, were all these ceremonies abolished in the solitary instance of Puckler Muskaw? Was it because he was the known author of "*A Tour of a German Prince*," in which he had written things which did not suit the palate of Englishmen? Was it because he had, while speaking of the honesty of a man, who, on the continent, had found his pocket-book containing all his money, and brought it to him unopened, remarked, "that in England he should hardly have had the good fortune to find his pocket-book again, even if a gentleman had found it—he would have probably let it be in peace, or kept it?" Was it because he had called his horses Englishmen, and spoke of driving them as he would his animals? Or, lastly, was it for the reason given by a spirited Englishman, a captain of a man-of-war, who being asked if he was going to invite the prince on board, remarked with an oath, that he would be shot before he would permit any man to come on board his ship who had said there was not a gentleman in England? The prince, during his residence of six weeks in Valetta, mingled but little in society, and was as eccentric in his conduct as singular in his daily customs: returning from the opera at midnight, he would call for his dinner; at six in the morning, his tea; after which he immediately retired and slept till one or two in the afternoon, and at five was seated with his secretary at what he termed his breakfast. His acts of charity were numerous, and hardly could he venture from his apartments in Strada Reale without being surrounded with beggars; this, which to most travellers would have been a great nuisance, was to him a chief source of amusement. Having formed a friendship for Madam G—, who is the Madam de Stael of Malta, he was doubtless given much information, which, if it should ever find light, would not a little amuse the public, and give a currency to his pages in Valetta. An anecdote was told me of the prince's conduct at Tunis, which evinced a most trifling feeling: coming from the best source, it must be credited.

For centuries the consuls in Barbary have been con-

sidered by the pashas as the lords of the land; and on a stranger's arriving in a regency, whether he be a prince or beggar, he is considered by the Turkish ruler as subject to him who has the flag of his country waving over his dwelling. It chanced that a consul gave a grand dinner to one of his friends, and the prince received an invitation to attend, which he accepted. After the party was assembled and dinner announced, the one for whom the entertainment was made was asked by the consul to hand his wife to dinner. This trifling circumstance so mortified his highness, that all the time he was at the table he spoke to no one, and answered the questions he was asked only in monosyllables: when the dinner was finished, he immediately retired. This slight, as he fancied it, the prince never forgave; and on his leaving Tunis, he observed he could not call to take leave of one who had intentionally shown him such an indignity. Perhaps his highness, had he gone from this to Barbary, would not have been so scrupulous as to the attentions which he had required on his first visit should be paid to his rank.

On his leaving Malta, the prince was accompanied to the Marina by his secretary, the porters who carried his baggage, a crowd of beggars to whom he was accustomed to give alms, and a few police sergeants, who, knowing he was a "principe," followed more as a matter of curiosity than in observance of their duty. It unfortunately happened that one of the trunks containing his notes was dropped overboard, at the moment of his embarkation, and lost. The prince engaged his passage in one of his majesty's steamers for the Ionian islands, and on his hearing of the accident, remarked, that he had not known, in all his travels for the last five and twenty years, of a similar instance of inattention and inexcusable carelessness;—turning to his secretary, he significantly observed, "though the originals are lost the duplicates are left."

Before we close, we will briefly notice Puekler Muskaw's "Tutti Frutti," a work which, on its first appearance in London, was much sought after, and rapidly passed through several editions. To translate a work into one's own language correctly, will at all times be found no easy task—but for an Englishman to translate from the German, with its numerous idioms, and to express, in his native tongue, the many beauties which may be conveyed in that language alone, is impossible. We will not condemn Mr. Spencer for his translation of the "Tutti Frutti," nor Mrs. Austin for her's, of "The Tour of a German Prince." The literary world is indebted to them for their labors, and for the amusement which their works have afforded; yet the prince, who is certainly the best judge of his own writing, was any thing but satisfied with the manner in which the same were performed, and, at the close of both translations, has written with his own hand—

"Select a tree—tear it out of its native soil—strip it of its leaves and blossoms, and then plant it again in a neighbor's garden: doing this you will have performed a translation quite similar to the one before you.

"The unfortunate author of the German Tutti Frutti."

But, to continue, the prince has written of the "Wanderer's Return," which occupies the first fifty pages of the first volume—"That it has become nonsense by wrong translation—as, unfortunately, a great part of the whole book." In poetry, also, it would appear, Mr.

Spencer was not more fortunate; for, on the same page where occur the following lines—

"Long time I've reigned o'er mice and rats;
For lawyers I've employed the cats,
Who never cease to snarl and bite
From night till morn, from morn till night.

One remedy alone I give,
Which, like all doctors draughts and pills,
Soon bid the small deer cease to live,
For poison quickly cures or kills."

the author has written "a horrible translation." In the second chapter, the subject of which is a visit to the establishment of Hernhutters, and which commences with the following quotation of Pope,

"For modes of faith, let graceless zealots fight;
His can't be wrong whose life is in the right;"

the corrections are most numerous, and the interpolations not at all unfrequent. In the narration of this visit, the author has made mention of his lady-love of England. Celebrated as the prince has long been for his amours, his description may afford some amusement; if for nothing else it will show his taste:

"Her person is pleasing, and she has entered into that peculiar age of conquest which commences there about the age of forty. We have been for many years the most attached friends; and she is, in my opinion, by her talented mind, and kind, benevolent disposition, independently of her external graces, superior to hundreds of her younger cotemporaries; but above all, she has always evinced towards me the most unchanging affection, which no wealth can purchase—in a word, it is my Julie. Notwithstanding her moral excellence, she has, fortunately for me, some amiable weaknesses, as nothing is more tiresome than perfection. There is, also, another being, besides myself, who possesses a large share of her affections—an *enfant gâté*, named Fancy—a being as whimsical as he is graceful, and who is occasionally somewhat formidable; at least when he is visited by a fit of ill humor. This young English gentleman, or, more correctly speaking, nobleman, is a true sprig of the noble Marlborough race at Blenheim, at the hall door of which palace I purchased him, as the slave trade in spaniels was then permitted, though it is impossible to say whether this will always be the case. I then little dreamed what a serpent I was nourishing in my bosom with the tenderness of a nurse. I reared the helpless baby to become, oh misery! in later days, my successful rival in the good graces of the fair Julie. What ingratitude, after I had carefully transported him over the broad seas, in a mixed society of Englishmen, apes, parrots and islanders, all of which I offered with deep reverence at the feet of the queen of my affections."

It will not appear surprising, after the perusal of the above extract, that the English should have felt themselves insulted at the sarcastic language of the author; possessing, as they do, no small share of self-esteem, they could not but doubly feel the sarcasms conveyed in the works of a foreign prince. "For him to have said that the gentlemen of England would retain a lost pocket-book, if they found the owner—to have him compare our nobility with spaniels—to nick-name his horses Englishmen, because they had short tails—to

class the travellers of our nation with apes and parrots, and to speak of them as coming from the land of fogs—are sufficiently good reasons,” in my opinion, observed captain D., “for the prince not only to be slighted, but even insulted by the high spirited Englishmen, in whatever country he may chance to find him.” This officer was not alone in his opinion, as I had an opportunity of witnessing some few evenings after, at the opera. One of the few who paid Puckler Muskaw any attention during his residence at Malta, was lady B****, whose daughter was engaged to the flag-captain of the fleet. On the prince’s entering the box, the captain would not recognise him, and remained seated for three quarters of an hour, until the act was finished, when he retired without a salutation, leaving his highness, who had been all the time standing with cap in hand, to take his empty seat. It was said that captain M***** was justified in his conduct by the manner in which his relatives had been mentioned in the noble author’s tour. Puckler Muskaw, it would appear, while at Valetta, had an aversion to the society around him: when in it he felt uneasy; when by any chance he could avoid it, he would.

But, to continue our notice of the Tutti Frutti—the next chapter which comes under our observation, is pleasingly entitled “The Album of an Active Mind,” well written, and containing many capital anecdotes. In this, as in others, the criticisms of the author, have been given with an unsparing hand; on every page will be found some such remark as the following: “A horrible translation;” “this is rendered unintelligible by the ignorance of the translator;” “in this place many lines are wanting,” &c. &c. It might, however, have been well for the prince, while criticising the work of Mr. Spencer, in such unmeasured terms, to have written his criticisms in his native language: the sentences which he has left on record are full of grammatical errors, and many of the words are so badly spelt, that the English reader will require no little study to decipher them, and be enabled to understand what ideas in writing the author would wish to convey. We take another extract, which is evidently intended as a hit against the English, and which these people might say was not inapplicable to their “transatlantic brethren.”

“During the time I was in England, I met with a little boy, the well known Thellusson, of whom I was informed, that he would one day be in the possession of from ten to twenty millions of pounds sterling. Happy mortal! what an enviable privilege to be the heir of such immense wealth. Nothing is more ludicrous or more evidences a contracted mind, than the exclamation I so frequently heard—how could I employ such an enormous fortune? Oh ye men of limited and confined intellect, if I had been destined by Heaven to be so highly favored, how quickly I should form and execute my plans for expending, aye, even the capital itself: it is only with such fortunes human nature can be benefitted.”

The author here sarcastically observes, he would not squander it in luxury, for that is a common, an everyday practise. He would not expend it in the erection of schools, as he should leave them to the state;—indulging in his tory creed, he continues, they are already too numerous, and those who go to them receive more nourishment than they can well digest. He would

not appropriate his wealth for the building of churches, as they are, in his opinion, sufficiently numerous, and the multiplication of them appeared to him about as useful to religion as the fourth gate built by the Schildaers for the purpose of augmenting their custom-house dues. He would not employ it in the conversion of the heathen, as he considered it an useless undertaking. The prince here has humorously given his readers to understand in what manner he would have expended this property, had it been his good fortune to have possessed it. In his own words, he says,—the first would be that he would cause to be carved a statue of Napoleon, out of one of the highest anguilles of Mont Blanc—an immortal monument to his gigantic mind. Further, he would despatch two expeditions, the first to Africa, to seek in every direction of the compass for the source of the Nile, and the gold mines in the mountains of the moon; to ascertain the existence of the fabulous unicorn, and also to procure for his aviary a specimen of the bird *Roc*. It is possible, he continues, that with this expedition he might send a company of missionaries, and a half a million of bibles; he would then make a conquest of Japan, if it were only to evince his contempt for those tasteless barbarians who will only permit the Dutch to visit them. The last few miserable millions, he would employ in digging a pit a mile deep, in the national sands of his country, and when the last dollar was expended, he would throw himself in—it would at least be so deep that the voice of the critic would be unheard.—In closing this notice of the “Tutti Frutti,” which has extended to a much greater length than we had originally intended, we would only mention the articles entitled the “Congress at Aix la Chapelle,” in which will be found a good description of Prince Metternich, the Talleyrand of Austria—and that of the “Bear Hunt;” at the close of which, the author has penned the following note: “The translation of this bear hunt is the only part of the book resembling the original; perhaps it is because it is the most insignificant.” We regret that the prince should have been so much displeased with the manner in which the translator performed his task—but, as they are, we can safely recommend these volumes to the attention of every reader.

Malta, July 2d, 1838.

A.

THE GRAVE.

FROM THE GERMAN OF SALIS.

The grave is deep and still,
And full of dread its strand;
It hides with veil of gloom,
An undiscovered land.

Songs of the nightingale
Ne’er in its bosom sound;
And friendship’s roses fall
But on the grassy mound.

Forsaken brides in vain
With wringing hands contend,
And tears of orphans flow—
The earth they cannot rend.

Yet rest for which we sigh
Dwells only in the tomb;
Through death's dark door alone
We reach our wished for home.

The sorrowing heart, below,
Of many a storm the seat;
Alone true peace can know,
When it hath ceased to beat.

J. L. M.

VELASCO—A TRAGEDY:

By Epes Sargent: New York; Harper & Brothers.

The peculiarities that have distinguished the poetry of the present century, have been eminently discernable in the drama. The poetry that found such favor with the public, as to induce a neglect of the early masters, by appealing exclusively to the passions, or rather the excitabilities of men, produced, for a time, an unnatural excitement, like that of highly seasoned dainties in the absence of plainer and more wholesome aliment. The consequence in one case, as in the other, must be something of a disgust at the luxuries so profusely served up. The decline of the popular taste for poetry in our day, sufficiently shows this effect. The drama exhibits the corruption more palpably; though, in fact, the English drama, since the days of Otway, can scarcely be said to have had any character—no writer having appeared, except Miss Baillie, with pretensions higher than those of a mere composer for the stage. The modern French school, which our writers have imitated, exhibits the features we have alluded to in their worst aspect. The vicious—we must call them vicious—productions of M. M. Victor Hugo, and A. Dumas, excite the imagination by extravagant and terrific incidents, and thereby attempt to soften the horror we should naturally feel at the moral atrocities they represent. They do not even paint deep passion; the distortion preserves no features of humanity. It belonged to the Germans, and to Schiller, whose name is in itself a host, to restore the drama to its legitimate and noble empire; to make it the interpreter of man to man. The development of *character* is aimed at in all his creations; the kingdom of thought was his own. It is true, that plays in which intellect is predominant, are less suited to the stage than the closet; for it belongs not to the actor's province to represent the phases of thought. But the passion, in depicting which his art lies, rude and palpable as it must be to be readily conveyed to the apprehension of an audience, can never appeal to the *heart*—can never create deep and lasting emotion in the spectator, unless individual character is unfolded—unless the creation is made kin to us by the touch of nature. Our modern poets of the stage have erred in forming themselves after the French school instead of the German—the best German school we mean. Startling incident, and bursts of declamation, striking and effective stage situations, and melo-dramatic scenes, have been liberally employed, to the total neglect of weightier matters, the revelation of human character, the nourishment of the understanding, the elevation of the heart. The great error is that they have aspired to the applause of a stage audience, rather than to the appro-

bation of the few whose taste can appreciate true dramatic excellence. This has been the fault of Knowles: we must not, however, omit to render him praise for several admirable touches of character, like that of St. Pierre in the Wife, and, though more common-place, of Julia in the Hunchback. They display ability, which, had his aim been higher, might have elevated Sheridan Knowles to no mean rank among dramatic poets.

We can hardly expect, so long as our country is made by law dependant upon Europe for its literature, that American authors will be prominent in the cultivation of a purer and more rational taste. But we hope the day is coming, when a free and fair field will be accorded to all; and then we do not despair of seeing a renovation in every department of poetry. The character of some of our recent dramatic productions justifies us in this expectation.

The author of "*Velasco*" has chosen an interesting period for his plot. We may remark, in passing, that the tragedy is dedicated to the distinguished southern senator, Mr. Preston. That gentleman, we doubt not, will reward this expression of high respect for his taste as well as his genius, by giving the support of his eloquence to the copy-right law:* it were a desirable triumph for the good deed of a single poet, to purchase so much good for all of his craft.—To proceed:

"*Velasco*" is a story of Castilian pride and Castilian revenge. The outline of the tale is familiar to the readers of history; but the author deserves the credit of originality, for the manner in which he has filled it up; for the skilful development of the incidents, and for the poetical embellishment with which he has softened the stern and rugged features of the time. The story is this:—*Velasco*, a noble knight of Castile, who has been banished a year, for some offence against court etiquette, yet has served his king and country incognito, attends a banquet given by the king, and there discovers himself, in presence of the court and nobles. All are astonished to find their countryman in the unknown knight, who has filled Spain with his fame. The monarch, in gratitude for his services, bestows upon *Velasco* the hand of Donna Izidora, to whom he was attached before his exile. The maiden's happiness is complete; for she not only receives the man of her heart, but escapes from a union with her kinsman Hernando. The present, in her own language,

"is so bright,
Memory can lend no radiance from the past—
Hope can reflect no glory from the future!"

But the course of true love is speedily interrupted. Hernando, the rejected lover, plans a terrible scheme of revenge. He poisons the mind of Gonzales, Izidora's father, against De Lerma, the father of *Velasco*: a feud has long prevailed between the nobles, and the flame of hatred is easily rekindled. An encounter takes place between them; De Lerma, old and infirm, is struck, disarmed and disgraced by his more vigorous foe, and in a paroxysm of rage and shame, appeals to his son to vindicate his honor, according to the old Castilian fashion. *Velasco* challenges Gonzales; the old man falls, but before he expires, exacts from his daughter an oath that she will pursue his slayer to the death.

* Mr. P. is already pledged to the copy right law, in the Senate.—Editor.

Izidora appeals to king Ferdinand; but the royal sentence acquits the knight, who has done no more than duty compelled him to do. Hernando, meanwhile, sends emissaries to murder Julio, the brother of the heroine, and takes possession of Gonzales' castle, as next male inheritor. Izidora is in his power—but she is rescued by Velasco, to whom Hernando's plot has been revealed by a page; and the guilty are arrested by the king's order. Ferdinand commands the union of Velasco and Izidora: the bridal festivities are interrupted by Julio, the lost brother, who, unable to prevail on his sister to renounce Velasco, and bound by an oath to the king not to thrust a quarrel on him, at the suggestion of Hernando, poisons the cup in which Velasco is to pledge him renewed friendship. Izidora sees the act, and snatches the goblet from the hand of her betrothed, as he raised it to his lips; but she only thereby precipitates his fate. Julio's steel is the next instant in his heart; the bride drains the poisoned cup, and expires at the feet of her relentless brother.

It will be seen that we have here the approved *material* of modern tragedy: an uncompromising villain, who does all the mischief of the piece—a valiant knight, who conquers his enemies and dies the victim of treachery, and a faultless heroine, persecuted by fate, and suffering for the indiscretions of her relatives. The scope of a tragedy, intended for the stage, admitted little more, and gave no room whatever for the delineations of character. "Velasco" displays sufficient ability on the part of Mr. Sargent, to make us regret that his plan was not more extended. He has succeeded in what he perhaps chiefly aimed at; his play is one capable of being rendered very effective upon the stage. It abounds in striking situations: witness the scene in which Velasco first claims his lady love; the interview between Izidora and Velasco after her father's death; her discovery of his guilt; the arrest of Hernando and Mendoza; and the closing scene. These situations, and the incidents, are in harmony with the manners of the period chosen for the plot.

The verse is easy and flowing; though it lacks that startling metaphorical beauty which gives such concentrated meaning to the language of passion; that burning vehemence of expression, which so strongly fascinates the attention in some of our best writers. Milman, among recent authors, is eminent for this excellence; it is this which gives such overpowering effect to his tragedy of "Fazio." "Velasco," however, has many poetical passages. The action of the piece, though rapid, permits us occasionally to linger over touches of beauty, which are evidently the offspring of a rich imagination and the feeling of a true poet. Instance, among other passages, the description of love, by Julio:

"A cloud steeped in the sunshine! An illusion
On which concentrate passion's fiercest rays;
Your lover's little better than a pagan;
On the heart's shrine he rears a human idol;
Imagination heightens every charm,
Brings down celestial attributes to clothe it,
And dupes the willing soul, until at length,
He kneels unto a creature of the brain—
A bright abstraction! But the cynic, Time,
Who holds the touchstone to immortal Truth,
Soon laughs him out of the prodigious folly!
Say—art thou one of these idolaters?"

Or Velasco's thought of his bride:—

"The peerless Izidora! how my thoughts,
Swept by the grateful memory of her love,
Still bend to her like flowers before the breeze!"

Or the mournful soliloquy of Izidora on her bridal eve:

"Brief is the time elapsed,
Since with the ashes of his great forefathers,
All that is mortal of my sire was blended.
And now—death's sable livery is changed
For bridal pomp; the wail of lamentation
For shouts of mirth—and nuptial harmonies!
And he I wed, is—reason cannot breathe it!
Yet, in that little space, that sand of time,
What weary lives of anguish have been crowded!
What maddening thoughts! What passions and what
terrors!
Revenge and love—and duty and despair!
The fury of the elements! the shock
Of adverse fleets on a tempestuous sea!
But over all, riding the top-most wave,
Love's bark still floats triumphant!"

The only remaining extract we have room for, is the soliloquy of Velasco, after the death of Gonzales—Act III., scene III.

A glen near the castle of Gonzales; a storm is raging—with thunder and lightning; enter Velasco from the rocks in the back ground.

VELASCO.

"I lay my brow against the marble rock;
I hold it throbbing to the dewy grass;
There is no coolness in the summer rain!
The elements have lost their attributes.
The oaks are shivered round me, in the blaze
Of the near lightning, as it bursts the folds
Of its black cerements, but no gracious bolt
Blasts me or scathes! A wilder storm is here!
The fiery quiver of the clouds will be
Exhausted soon,—the hurricane will sink;
And through the vista of the western clouds
The slant rays of the setting sun will stream—
And birds, on every glistening bough, will hail
The reflux brightness and the freshened air;
But when will pass away from this sad heart
The cloud of grief—the tempest of remorse?
When will the winged hopes, that glanced and sang
In joy's melodious atmosphere, return
To welcome back the gladness of the soul?
This spot! what fatal instinct led me here?
It is our trysting place; and—ha! what form
Breaks through the shadowy gloom? 'tis Izidora!
She sees me—she advances;—knows she yet
The fearful truth? Oh, were this trial spared me!"
February, 1839.

A COMPARISON.

As fire, water, and air, are the three great powers resorted to in mechanical operations—so, analagous to these, the three impelling powers, of moral machines are, love, money, and fear.

Anon.

TO VIRGINIA.

Farewell to the land where the patriots' fire,
Once burnt with the purest and loftiest flame;
The birth-place of one, who as Liberty's sire,
Has well earn'd the laurels entwined round his name!
'Tis the land where the flowers bloom soonest and
brightest—

For they spring from the dust where heroes are laid;
Where the maidens have hearts, the softest and lightest,
And eyes that mourn over the ruins they've made!

Farewell to Virginia!—oh! long may the rays
Of the pride that now lights her, beam over her yet!
And long may the spirit her history displays,
Be the beacon her children can never forget!
May it lure them to honor, to greatness and glory,
As radiant as that which illumines the past,
Till all the best annals and records of story,
Are fill'd with a fame which through ages shall last?

J. T. L.

THE DEATH OF SALADIN.

BY CHARLES M. F. DEEMS.

During his last illness he ordered his winding-sheet to be carried as a standard through every street in the city, while a crier went before the person who bore that ensign of mortality, and proclaimed with a loud voice, "This is all that remains to the mighty Saladin, the Conqueror of the East!" *Russell.*

I.

How gaily sweep apart the crowds
That throng the spacious streets;
How many a form of loveliness
The enchanted vision greets!
We see the bright and joyous eye,
The roseate flush of health;
And equipages roll along
The votaries of wealth.

II.

But lo! the standard-bearers bring
A broad ensign, unfurled!
Announces it the advent of
The conqueror of the world!
There is not on its drapery
The emblazonry of gold,—
It has no hostile motto wrought
Upon its ample fold!

III.

That spotless sheet has never been
Amid the battle's stroke,
Nor floated on foul slaughter's breath
'Mid wreaths of sulph'rous smoke!
It never wafted to the breeze
The last sigh of the dead,
Nor waved, as if in triumph, o'er
The haughty victor's head.

IV.

See how it stops the jostling crowds—
How hushed the busy hum,
As onward with that broad ensign
The standard-bearers come!

Hark! as across the thronged mart,
Their onward course they wend,
A single voice the silence breaks,
While all around attend:

V.

"Saladin dies! Saladin dies!
The mighty conqueror,
The dreaded terror of his foes,
The thunderbolt of war—
Whose valor and whose fame is spread
The eastern countries o'er,
Whose name the word of power hath been
Along Judea's shore!

VI.

"Though kings and mighty men have bowed
Beneath Saladin's power,
He too, at length, in weakness meets
The inevitable hour:
Of his great treasures, by the hand
Of death, he is bereft—
This sheet, this winding sheet, is all
To great Saladin left!"

VII.

If, then, a shroud be all we have
To wrap our cold clay in,
Why is the history of man
But one foul blot of sin?
Why should he through ambition make
A thousand hearts to groan,
Or wade through seas of blood, to sit
A moment on a throne?

I LOVE THEE STILL.

I love thee still—though doomed to drink
Of fell despair's most bitter rill—
Though sever'd be life's dearest link,
I love thee still.

I love thee still—and though I give
Myself to roam o'er dale and hill,
Thy image in my heart shall live—
I'll love thee still.

I love thee still—and though thy brow
Should wear the marks of death's last chill,
I'll not forget my sacred vow,
I'll love thee still.

I love thee still—and I will own,
When through my waning senses thrill
The last sad notes on trumpet blown,
I love thee still.

LYRICUS.

KNOWLEDGE.

Knowledge is a term of very extensive meaning, and, being such, it is exceedingly vague and indefinite. It may be the knowledge of good, or of evil; it may be true or false; it may be useful, or useless, or even injurious; and it may lead to wisdom or to folly.

FRAGMENTS OF A JOURNAL.

BY A VIRGINIAN LADY.

Early on the brightest morning we had seen for many, many days, we mounted our horses to cross the Brunig on our way to Lucerne, in the hope of meeting that evening with our fellow-travellers, who had pursued the more direct course from Berne. The air was fresh and pure, and the heavens without the slightest cloud. An involuntary sigh accompanied an expression of regret that we had not been favored with this splendid day for our excursion to Lauterbrunnen; but we consoled ourselves with the hope of obtaining an indemnification for our disappointment, by reaching the Righi while it remained clear. The weather in these wild regions is so uncertain, that we felt particularly anxious to reach this celebrated mountain, before another change should deprive us of the view from its summit.

"You cannot reach the Righi to-day," said one of our guides, while remarking the effect of the first rays of the rising sun upon the mountains and valleys below us, from the summit of the Brunig. "What a pity!" he added—"we have had so few such days as this during the summer!"

The remark increased our anxiety to proceed; but with the decided tone which those who happen to be "dressed in a little brief authority" are wont to assume, the guides told us we spoke of impossibilities, and we continued to walk our horses over the mountain, and to remark its beauties, which, though not extraordinary, are very pleasing. As we approached its summit, we were informed by our loquacious conductors that we were passing the line between Berne and Unterwalden. They continued to amuse us with their comparison of the respective merits of the two cantons, in which their opinions were exactly opposed, (one being a protestant and the other a catholic,) during the descent, where we found the road, though rugged and narrow, redeemed from its savage wildness by passing through a superb forest of beech trees, which sprung from the clefts of enormous masses of rocks, thickly covered with moss. We enjoyed this refreshing shade until we reached the auberge in the valley below. Here we stopped for a short time to procure a little *char à banc*, to carry us through the valley of Sarnen. This lovely spot, though perhaps less known to travellers than any other part of Switzerland, offers every charm that nature and fine cultivation can afford. Its verdant fields are rendered yet more fertile by the quiet little lake of Lungern, which occupies but a small portion of the valley, and whose dimpled surface was laughing in the light of the bright morning sun. Its placid beauties contrasted well with the Brunig we had just descended, shutting out on that side every object but the snowy and dazzling peaks of the mountains of the Oberlandt which peered above it. We paused for an instant at a turn in the road, to take a last view of this singular and beautiful feature, and then rapidly continued our route.

Our frolicsome coachman seemed inclined to favor our design of travelling quickly, for he seemed to be perfectly inspired by the fresh air and bright sun. He began first to whistle, and then to sing in a sort of bass voice, not unlike that of the cows he had doubtless been in the habit of attending before being exalted to his present station; accompanying each cadence with a motion of the head, well calculated to produce the impression that he had learned this gesture from the same noble source. From time to time he gave a shrewd glance from the corner of his eye to see how the jest was relished, when finding we were almost as merry as himself, he began a sort of wild chant peculiar to the mountains, and descended from his seat at every little hill, more for the pleasure of dancing to his music, than the charity of resting his horses. As we proceeded, his spirits rose higher and higher. He barked at the dogs, squeaked at the pigs, *baaed* at the goats, squinted at the girls, bowed with mock reverence to all the old men until his head touched the horses tails, and saluted all the old women with a peal of laughter. It is impossible to conceive any thing so ridiculous; especially when contrasted with the grave demeanor of a respectable old domestic we had brought with us from Berne, and who seated by his side on the coach box, or rather the front seat of the char, was quite scandalized at the attention he attracted, and the astonishment of all these various inhabitants of the valley, who remained rooted to the spot where they had been saluted by our Jehu, staring after him in mute wonder. It was impossible not to laugh—and we did laugh, as the French say, "*aux larmes*." His merriment was, however, interrupted by the appearance of a fine old church, of grand and imposing appearance; and as we passed through the lofty portico, supported by double rows of columns of fine black marble, we observed that he crossed himself with an expression of deep devotion. Our tour of observation was soon finished, and we departed quietly, without disturbing the devotions of the pretty peasant girls, who with uncovered heads, (probably left so for the innocent pleasure of showing to the best advantage their bright locks, secured by large silver bodkins ornamented with sparkling stones of different colors,) were kneeling near the altar. We soon accomplished the remainder of our journey to Alpnach, a little village on the banks of the lake of the same name, which properly is a part of the lake of Lucerne, or the four forest cantons.

Having arrived at this place so much sooner than we anticipated, we again indulged the hope of reaching the Righi before sunset, and lost no time in procuring a boat to continue our route. The promise of additional reward procured us additional oars-men, and our frail bark was soon flying over the blue waters of the lake. We had heard so much of the beauty of the lake of Lucerne, that this part of it entirely disappointed our expectations: on every side we saw nothing but high and barren mountains, and the scenery is entirely too rugged to be pleasing. But on emerging suddenly from

the Alpnach see into the wider part of the lake, as we turned the corner of a huge promontory of rock, we found ourselves in another region. The pretty little town of Kersiten was just before us; on the right stood the town of Stantz; on the left rose the peaked summits of Mont Pilatre; and on the opposite side of the broad lake we saw the glittering spires of the capital of the canton. The rugged mountains were all soon in the rear, and the shores of the lake on each side presented the highest cultivation and the richest verdure. The lake was tranquil as a mirror; and the beautiful scene looked even more lovely reflected from its peaceful bosom, because, as our old domestic said, "*there the picture was varnished.*" Even the hay-makers, in their gay costumes, lost none of their picturesque effect by being seen *renversé*.

We glided rapidly past this pleasing scene, and soon reached the town of Weggis, at the foot of the Righi. Notwithstanding the lateness of the hour, we determined to attempt the ascent, and our guides and horses were speedily in readiness. We found less difficulty and fatigue than we had anticipated, in the ascent; for the road is far better than that of the mountain passes we had recently encountered in the valley of Chamouni, and we yet hoped to reach the summit before sunset. High, and higher we climbed, until all the mountains and lakes of Switzerland seemed to be laid out below us: range after range of mountains of every shade of azure appeared, until the snowy heights of the mountains of the Oberlandt crowned the glorious scene. Then we paused; for, it was impossible to reach the summit before the sun went down, and we stopped to watch the beautiful effect of his last rays upon the snow-clad mountains. Their dazzling whiteness was changed by degrees to the purest and most brilliant rose color; then the roscate hue gave place to a ghost-like white, which brought forcibly to mind the end of all living, and this was succeeded by a bright and aerial blue, which faded with the approach of night into a sober gray. We were still half a league from the summit, and were yielding to the advice of our guides to dismount at the auberge they pointed out to us; but learning that there was another inn at the highest point, we resolved to proceed. We were encouraged in our determination by the appearance of the moon, which was rising in full splendor; and though the silver light was too faint to give us a perfect idea of the magnificent scene below, it yet added to its enchantment. Another half hour brought us to the inn on the summit, where we found a party of about fifty people, who were all merrily engaged at supper. The comforts of this establishment certainly would not have been a sufficient attraction to its numerous guests, for they were "few and far between." Not so, however, were the little chambers in which we were all penned up for the night; for, as they were separated only by thin board partitions, the conversation of those within them was only prevented from becoming general by the variety of languages spoken among them. It was a little *babel*. Just as the voices of two giggling girls, which were heard after the rest were silent, had died away, a tremendous wind arose, and blew with a fury that threatened to carry us all off together to the foot of the mountain; and the idea of being whirled like a "*feuille morte*," as the French naturalist said when in the same situation, "into one

of the lakes below, or among the rocks of the unfortunate Goldau," was certainly not the most agreeable in the world.

I believe there were but few persons in the auberge who closed their eyes that night; for, those who were not apprehensive for their safety, feared that the wind might bring a change of weather, which would deprive them of the view of the rising sun; and this idea, with the discomforts of mine host's beds, was sufficient to banish "nature's sweet restorer." It was with no little pleasure that we heard the mountain horn announce a clear morning—the signal that is always given to travellers on the Righi, when the sun promises to rise without clouds. After a hasty toilette, of which a cloak formed the most important part, we all hurried out to the highest point of the mountain, distant only about forty or fifty feet from the auberge. The sun was partially obscured by a few light clouds for some minutes, but the sky above was perfectly clear, and the view entirely unimpeded by mist, so that we might well felicitate ourselves upon our visit to this celebrated spot, whose charms can never be exaggerated nor even described. On the eastern and northern side appeared innumerable mountains; and the splendid chain of the Oberlandt, now of a dazzling white, rendered still more brilliant by the rays of the sun, rose in stately grandeur above the azure of those nearest in the picture. On the north and west the view appeared to extend to the ocean, or to infinity; for it seemed to have no limit. The black forest was pointed out to us on this side, and the course of the "dark rolling Danube" likewise indicated. As far as the eye can reach, the mountains are interspersed with lakes, of which we counted twelve, distinctly seen. Just at the foot of the mountain on the eastern side, we had a complete view of the unfortunate valley of Goldau, and the Rossberg, whose slide many years ago, buried three villages with four hundred inhabitants beneath an enormous mass of earth and rocks. It is affecting even at this lapse of time to view the fatal spot, and to behold this once beautiful and smiling valley converted into a rude monument of those who perished there. Even the lake, in its vicinity, is half filled up by the immense rocks that were tumbled from their lofty resting place. It has been supposed by some naturalists that the Righi is composed, like the Rossberg, of a succession of strata, between each of which there is a sort of slippery clay, liable to be acted on by long rains, as well as internal springs. As these strata are said to be upon an inclined plane, it is conjectured that a part, or indeed almost the whole mountain might slide off, and be precipitated into the lake of Lucerne below. You will, I doubt not, felicitate us that this agreeable little adventure did not occur during our visit to it, for we certainly had not much desire to add to the *splash*.

After regaling ourselves for several hours with this magnificent view, so often denied by the clouds to travellers, who sometimes wait many days on the mountain in vain, we felt that we had been particularly favored, and were completely indemnified for any former disappointments. We descended slowly on foot on the northern side, having ascended on the southern, keeping in view the most serene part of this beautiful picture, and in a few hours were reposing in the chapel of William Tell at the foot of the mountain. This little chapel has nothing remarkable about it, except the in-

terest it possesses in connexion with the celebrated personage whose name it bears. It is said that on this spot he killed the tyrant Gesler; and there are several other chapels dedicated to him in this part of Switzerland. However great our admiration of the heroic acts of the patriot, we did not care to visit each of his chapels, and contented ourselves with this one as a specimen. We were, indeed, well content to take a chaise at the little town of Küssnacht, in its vicinity, to continue our route to Lucerne; for, a walk from the top of the Righi to its base, is no ordinary promenade; and in the present instance, it had been somewhat lengthened by our visit to the chapel, and rendered more laborious by the warm rays of a vertical sun.

We had not proceeded more than a mile, when the chaise seemed to me to move slowly, and yet more slowly, and at length entirely stopped. The cause of our detention was explained by the coachman, who said that the narrow road was occupied by a calèche, which had been accidentally broken, and that we could not proceed until it was removed out of the way. We descended for a short time to facilitate this operation, and were surprised to find that the calèche had been occupied by two gentlemen, one of whom was an old friend and acquaintance. The other I remembered well having seen the evening before at the auberge on the Righi, and being struck with his air and manner, and the pensive sadness which clouded his brow. The most natural arrangement was that we should offer them the vacant seats of our chaise, as they were, as well as ourselves, journeying to Lucerne. Our friend immediately accepted the offer, but his companion, with graceful courtesy, declined it.

"You are less accustomed than I am to climbing these mountains," he said with a melancholy smile to his friend. "I prefer, at present, a solitary walk. Adieu!"—and striking into a pathway which led from the more frequented route, he disappeared.

We re-entered our chaise, accompanied by our friend.

"I am rather surprised," he said, "that I should have presented to you Lord —, with whom we have just parted, for the first time. You must have met with him before in the *haute société de Paris*, though he spends much less of his time there than he did in his more youthful days. He says that his career of folly and dissipation was arrested by a visit to these mountains, where he witnessed a scene that made an indelible impression on his mind, and essentially aided in changing him from the thoughtless being he then was, to the sober and rational man you now behold him. The excellence of his character is well known in his own country; and he occasionally visits the continent, not to renew the mad career in which he was once engaged, but for health and recreation; and, as he says, to revisit this spot, lest he should again become too much devoted to the world, and that he may be reminded by it of the instability of all things here below. He last evening gave me so beautiful and touching a picture, that I have made a sketch of it—not without his approbation, however, for that would be betraying confidence. He told me that he did not object to his experience being made a beacon for others; and that I had his permission to record the events of his early history, with the proviso that his real name should not appear."

Here our friend drew from his pocket a small manu-

script, which we entreated him to read for our entertainment during the ride. To this he assented.

"Some of the other dramatis personæ, with whom you will become acquainted, during the recital I am about to make," he said, "you will, I doubt not, see on your return to your far distant native land, though I have taken the same liberty with their names as with that of Lord —, whom you will recognize under the title of Lord de Vaux. Indeed I think it most probable that you are already acquainted with the charming family to whom I allude. Should you find a resemblance to them in my description, I hope you will inform me if my picture is accurately drawn."

Seeing the impatience with which we awaited the opening of the manuscript, our friend dispensed with farther preface, and thus began:

On a bright and lovely morning in the latter end of the month of June, 1806, a small *char à banc* was seen slowly wending its devious way through one of the romantic valleys at the base of those stupendous mountains, that rise in isolated majesty on the north-western side of the lake of the four forest cantons in Switzerland. As it was traversing the road that leads from the town of Schwitz to the Righi, it might well be imagined that its course was directed towards this *regina montium*, from whose summit the view at sunrise has well been said to "form an epoch in one's life that can never be forgotten." Whether this was the design, or whether, as the slackened motion of the little vehicle seemed to indicate, it was about to pause on the outskirts of one of the thriving villages that dotted the green and smiling valley, may perhaps be ascertained by some reference to its inmates. There were four persons; three ladies, one of whom was apparently rather in the wane of life, while the other two seemed to have numbered hardly eighteen summers; and a young man, who was evidently the guardian and escort of the party. It may be perhaps as well to mention another individual, who certainly thought himself the most important personage of the groupe, whatever consequence other people might be disposed to attach to his pretensions. This was an Italian grey-hound, the most beautiful and diminutive of his species; nestled in one corner of the little carriage, his head reposed in tranquil security on the lap of the younger of the ladies, while an occasional glance toward her face, seemed to invite the caress often bestowed by her delicate hand. Though this dainty favorite could not boast the "ears of jet, and emerald eyes" of the classic and "pensive Selima," yet the "velvet of his paws" might have almost rivalled her's; and some reason he had to be proud of his silken coat of silver gray, his snowy breast, and the soft dark lustre of his gazelle-like eyes. There seemed to be a sort of mysterious sympathy between this dumb companion and his lovely mistress, which, however, a few minutes observation satisfactorily explained: they were alike beautiful, and alike dependent on the kind care of friends; for they were alike—mute. It has often been observed that when several persons are travelling in company, they are either unusually communicative and gay, or particularly silent and contemplative. The latter mood seemed to possess our travellers; for, during the last half hour, not a word had been spoken, except an occasional exclamation of wonder or delight, as each turn

in the road gave them, in ever varying beauty, the bright bosom of the lake of Lucerne, or the soft aerial blue of the distant Alps, in contrast with the bold dark outlines of the nearer Righi or the Rossberg.

As the char approached the village to which its course was directed, the attention of the young ladies was attracted by a neat residence, in which the snug comforts of a Swiss cottage were singularly blended with the embellishments of English taste; and one of them exclaimed—

"There is a sweet rural looking place, Henry! I think that house would exactly suit our mother's taste."

"I am glad it meets with your approbation, Mary," replied the young man, "as it happens to be the one I have selected for your six weeks' sojourn; and if I have been equally fortunate in another quarter," he added, taking his mother's hand, "my frequent visits to this valley, during our stay in Lucerne, will not have been fruitless. As to poor little Olivia," said he, glancing toward their silent companion, "she cannot well be said to have a voice in the matter."

"I am sure you have done all to ensure my comfort that filial duty and affection could suggest, my son," said his mother, gently pressing the hand that held her's; "you know I am not very fastidious: all I wish is a quiet retreat during your tour through Scotland, which I hope will not be delayed beyond the appointed time. It was only for your gratification, my children, that I have consented to wander so far from my native land, whither we must soon retrace our steps. I believe I can hardly consent even to revisit England before our return."

"I know not exactly what the fashionable friends we met with in Florence last winter, will think of our choice," said the young lady. "They will, I dare say, wonder a little, that we should prefer this secluded valley to the shores of lake Lemane's crystal tide, or the rocks of Melleirie."

"It is true," replied her brother, "that Geneva or Lausanne might offer a gayer residence, yet this valley has many charms; and its vicinity to the Righi may perhaps render it at some future time as popular as other places of resort in Switzerland. It is certainly as pleasing as Interlachen, which is becoming so great a favorite; and besides," he added gaily, "when it is understood that Mrs. Leslie and her lovely daughter are here, it will need no other attractions."

"Thank you for my share of the compliment, brother," said Mary. "But you have not yet suspected the cause of our mother's fancy for this spot. Do you know," she added, looking at her mother with an arch smile, "that I begin to think her preference for the neighborhood of the lake of the forest cantons, may be found in its having once been the residence of William Tell. Have you never heard the tradition of one of her ancestors being descended from the Swiss patriot?"

"You have mistaken the cause of my preference, my daughter," said Mrs. Leslie, "though it is certain that it does exist. There is something sweetly soothing in the reminiscences of by-gone days, even when sad thoughts are awakened by them;" and as she spoke, a shade passed over her still lovely face. "I visited this spot many, many years ago, when I was blessed with youth, health, happiness, friends"—she paused, and the unbidden tears started to her eyes—"yet I would not

be so ungrateful as to complain," she continued meekly. "I am now blessed in my children, and I trust I can appreciate the beneficent tenderness of an all-wise providence."

At this instant the carriage stopped at the grille of the little court in front of their new home, and the travellers were saluted with much ceremony and more kindness by their host and hostess, who with their only daughter, a buxom and blooming lass, came forward to meet them. Mrs. Leslie was rather surprised when the hostess addressed her in very tolerable English, though with a marked accent—

"You are welcome to our humble roof, lady," she said; "and the more welcome, because you speak in a language most dear to me. Until I had attained the age of my daughter Annette there, I had heard no other. But will you please to glance at the rooms we have prepared for you?—though simple enough, they are the best we have."

The accommodation she now displayed was far better than her guests had anticipated; a neat parlor, with trelliced windows, from which the grand and beautiful scenery of the adjacent country was visible; a small *salle-a-manger* adjoining it, and two chambers above, separated only by a thin partition, were all she had to offer. This was sufficient for Mrs. Leslie and her two young companions; and her son declined putting the family of their host to farther inconvenience for his accommodation, as his stay was so short. He should remain with them only two days, and for that space of time his lodging might be in the neighboring auberge. The two days quickly passed away; and with a few silent tears, and the tender blessing of his kind mother and lovely sister, Henry departed, promising that his stay should not in any event exceed six weeks.

The hours of ennui that succeeded his departure, his fond friends endeavored to alleviate by arranging their little household in such a manner as to insure them a profitable, if not pleasing use of the time which would elapse during his absence. Books they had been careful to provide, and to these, with Olivia's port-folio, and Mary's harp, which at no small pains and cost had been transported to this retired spot, and now formed the chief ornament of their parlor, they looked for their principal sources of pleasure during their brief sojourn in the valley. The time they had recently passed in Italy, had been chiefly devoted to perfecting themselves in these accomplishments, for which they had both at an early period of their lives manifested a decided taste—and the graceful and spirited sketches of Olivia de Tracey, and the sweet voice and harp of Mary Leslie, were not unknown among connoisseurs even in that beautiful and classic land. It was not, however, a desire of distinction in fashionable society that induced Mary to devote several hours of each day to music: she was the most devoted of daughters; her mother's health was delicate; and often when her spirits were agitated or low, the soft stealing melody of her daughter's loved voice would soothe and calm her, and "witch the shade away." There was something indeed in that voice which touched less tender hearts than that of a fond mother; and few could have heard its soft, rich, thrilling tones, even in speaking, far less in song, without feeling convinced that its beautiful possessor added ineffable sweetness of character to her more brilliant

chisms. It was no wonder, then, that those accents should have been received with pleasure, or each graceful movement of her symmetrical form, and change of her expressive and lovely face, should have been watched with the deepest interest by one to whom she was almost the only earthly treasure.

Three weeks had glided away almost imperceptibly to our travellers in their quiet seclusion, when Mrs. Leslie was a little startled one morning by the rather precipitate entrance of her daughter into her apartment, her heightened color evidently manifesting the occurrence of something that had disturbed her usual gentle equanimity.

"What has happened, my love?" said she, laying her book down, and looking up anxiously: "have you any tidings of Henry?"

"I have, dearest mother," replied Mary; "but nothing is the matter—do not be alarmed."

"Then why did you enter in so brusque a manner; and where is his letter?"

"I have no letter, dear mother, and I am sorry I surprised you so much;—but when I inform you that the bearer of my brother's message is Charles Lennox, and that he is now under our roof, you will, I am sure, pardon my abrupt interruption of your morning occupation."

"I shall be happy to welcome him here, my dearest child," said Mrs. Leslie, rising from her seat, but exhibiting much less surprise at the intelligence of his arrival than Mary had anticipated. "I loved Charles tenderly when a child, for the sake of his mother, who was my dearest friend; and he had many pleasing and, indeed, winning qualities as a youth. Since he left us to return to his friends in England, you know I have seldom heard of him, except that he passes the greater part of his time in the French capital, the gayest of the gay."

"You will hardly recognize the hair-brained youth we loved so much, and so often quarrelled with at home," said Mary, "so much has our young kinsman improved in elegance and—assurance," she added in a lower voice, as her mother left the room, and she turned to a mirror that gave back her blushing cheek, to arrange the silken ringlets which had been a little disturbed by her meeting with her former friend and cousin.

When she descended to the parlor, she found her kinsman engaged in earnest conversation with her mother. He rose on her entrance, and gracefully offering her his seat on the sofa, continued the subject which she had apparently for a moment interrupted.

"I perceive," he said, "that beautiful and mysterious little being is still under your protection," glancing slightly toward Olivia, who was sitting in a recessed window. "May I inquire if she will return with you home?"

"I think not," said Mrs. Leslie, "if I may rely upon the letters I have recently received from her connexions in Paris. The cloud of mystery in which she was enveloped when you last saw her, has been partially dispersed. She is now no longer forlorn and friendless, as when she was first confided to my care. By the death of a near relative, she has become entitled to a considerable estate; and this circumstance, with the accounts they have received of her exceeding beauty, and singu-

lar talents, has determined her friends, as they now call themselves, to request her speedy return to them. She is devoted to her country, to the memory of her parents and her brother; and I believe it would give her more pleasure to wreath a garland of *immortelles* for them within the precincts of *Père la Chaise*, than the most delightful amusement could afford to one less sad. But she knows we are speaking of her."

And in truth, by that singular instinct, if it may be so called, by which those who have been visited with her misfortune, know when they are the objects of attention, Olivia had perceived that she occupied their thoughts and conversation. A slight blush tinged the almost marble hue of her cheek, as she rose and glided softly from the room. With the benevolence which characterized her every action, Mrs. Leslie rose and followed her, saying, as she departed,

"As Olivia has discovered that we were speaking of her, it is but fair to let her know the substance of our conversation."

"It is indeed singular," said Charles, drawing his chair nearer the sofa, doubtless for the purpose of conversing with more facility with his lovely cousin, "to see such rare beauty in a little moving statue. I have never seen so exquisite a model in miniature. There is something marvellously beautiful in the contrast of those bright dark eyes and exquisitely pencilled brows, with the alabaster hue, 'if hue that may be called which hue has none,' of her complexion. How radiantly lovely she appeared a few minutes ago, when that faint tinge of rose appeared on her cheek, like the beam of the setting sun on the Alpine snow. Is it possible there can be any feeling under that ordinarily quiet, cold exterior?"

"It is said that *Etna* is covered with snow as well as *Mont Blanc*," said Mary, smiling. "But to answer your question," she added, more gravely, "Olivia has feeling—she is affectionate and grateful, and any marked kindness is never forgotten by her. When she designates me, it is by placing her hand on her heart. She loves with the simplicity of a child, and with her whole soul; and I have often heard my mother express a fear that when she is withdrawn from the quiet circle in which she has hitherto moved, and is thrown more into the world, the professions of its heartless votaries may be misunderstood by her, and that she may form some hopeless attachment which will perhaps cost her her reason or life. I am, however, answering your question rather too much at length."

"Not at all," said Charles: "that may not be when you are the speaker and I the listener. But you cannot surely have any faith in the idea of a *broken heart*; trust me that is a chimera, fit only for love-sick youths to believe, until they are cured of their credulity by the sober realities of life. If you are so forgetful of our former friendship, and treat me with such coldness," he continued, as Mary withdrew the hand he had gently imprisoned in his own, "I shall be compelled to pay my devoirs at the shrine of another divinity; and as this little *Venus* approaches both in beauty and coloring the 'statue that enchants the world,' I think I shall dedicate myself to her."

Mary shook her head—

"Thoughtless as ever, Charles," she said. "But were I to say any thing on this subject, you might suppose me jealous of the admiration which you have expressed

to me of this beautiful statue ; and which she, with far more than the ordinary care with which such expressive glances are understood, read in those you bestowed on her—all, nay, perhaps, much more than you have said to me."

The re-entrance of Mrs. Leslie at this moment arrested the reply that Charles was about to make. Remarking the lateness of the hour, and apologizing for his interruption of their morning avocations, he took his leave, after receiving a kind invitation to repeat his visits to the cottage frequently during his sojourn in the valley.

It may be easily conjectured, that Charles availed himself of the permission thus frankly and kindly given. Notwithstanding the light and playful manner in which he conversed with his lovely cousin, a deeper feeling was awakened in his heart, in looking on this fair creature, whom a few years before he had loved with all the enthusiasm of youthful passion, and now beheld in the full bloom of beauty. With the confidence, that a very handsome and rather vain cavalier is apt to indulge, he had not for a moment permitted the idea to cross his mind, that she was not equally well pleased with the heightened grace of his manners, and improved elegance of his person ; and before he had traversed half the distance between the cottage and his lodgings in the village, he had formed a thousand plans for the future, over all which his charming cousin should preside. It was true that there was something rather too reserved in her manner, toward one who had formerly been her friend and playmate ; but that was perhaps occasioned by her instinctive perception of the depth of his attachment to her, or she might have been offended by the familiarity with which he met her after their long separation. He did not doubt, however, that a day would suffice for their reconciliation. In the words of Cardinal Mazarin, he said, "*Le temps et moi.*"

"This shall be my motto," said Charles, as he reached his door : "and if I remain in this dull region a month, I shall consider the time well spent that ensures my favor with a creature so gifted."

Many successive mornings found Charles a visitor at the cottage, improving well, as he thought, the opportunity thus allowed him of cultivating the acquaintance and good opinion of its interesting inmates. His gay and lively sallies amused Mrs. Leslie, while the careless playfulness of his manner concealed the depth of his passion for her beautiful daughter. To Olivia his attentions were unbounded : he soon learned to converse with her with perfect facility, and as an avenue to her favor, he neglected not to cultivate the good will of her graceful little favorite, who returned his caresses with interest. Mary, the ingenuous and guileless Mary, was the only one of the little groupe who harbored a suspicion of these pleasing arts. Her noble nature scorned the least approach to coquetry, and she wished sincerely for some suitable occasion, to dissipate the impression she could not doubt her kinsman had received, that he had only to ask, in order to receive her heart and hand. But how was this to be done ? He constantly alluded to their former childish intimacy, and as long as he placed their friendship on that ground, and alluded as he often did to his relationship with her, it would have been prudery to refuse him the pleasure of conversing

with her, of accompanying her in a morning ride, or an evening promenade in their host's neatly kept grounds, which were more extensive than so small an establishment seemed to warrant, and were laid out according to his ideas of English taste, in which he had been much aided by his good wife. She had occupied many days of her youth, in planting hedges on each side of gravel walks, all of which led, though in various directions, from the door of the cottage to a fine grove of linden trees, as fondly cherished as her blooming Annette, and to which the growth of forty years had given considerable stateliness. Near this grove a summer house had been constructed, rather rudely it is true, as old Rudolph himself was the architect, yet the framework of the building signified little, while it was tapestried within, and ornamented without by the dark green foliage and crimson blossoms of the woodbine, the delicate bloom of the clematis, and the silver stars and fragrant breath of the jasmine. It may be easily supposed that this spot was not without its attraction to the inmates of the cottage, and that they often sought in its refreshing shade a refuge from the rays even of the declining sun. Yet Charles found some difficulty in persuading his fair cousin to spend only a few minutes with him there, and observed, not without some apprehension, that Mary was always happier when their interviews were observed by Olivia or her mother.

"Do you not walk to-day, *chère cousine*," said he, as he made his appearance in the parlor one morning, with his usual graceful *entré*, and inwardly felicitating himself on finding Mary and her harp its only occupants. "The air is soft and balmy, and it is beautiful—beautiful as—"

"What ?" said Mary, coloring at the expression with which the words were uttered.

"Nay, do not blush so prettily, my sweet coz, or it will destroy my argument for tempting you to walk—namely, the fear that your roses would wither, without fresh air. I was only going to repeat the words of a witty friend, who, when at a loss for some expression to signify his admiration, always says, 'beautiful ! as the face of a woman !' But on farther reflection," he added, "I believe the sun is a little too warm, and this trelliced window affords a charming air." Drawing a chair near to her own—"à-propos of airs, your harp reminds me of the land of song. Did you visit Venice during your sojourn in Italy ?"

"Our visit there was very brief," said Mary—"we had hardly time to glance at its stately palaces, or to hear the song of the gondoliers, before we were hurried away. I had not even time to select a chain of the delicate workmanship for which its artisans are celebrated, and for which I had an especial fancy."

"A most fortunate circumstance for me," said Charles, "as it emboldens me to make an offering which, for several days past, I have been seeking an opportunity to present ;" producing at the same moment a small casket, which opened with a concealed spring, as he held it towards her. It contained two bracelets, of the rarest and most exquisite workmanship, one of them a singular assemblage of gems and finely wrought precious marbles, or *pierres dures*—the other formed of a number of small chains, so minute as almost to require the aid of a microscope to distinguish the links, the clasp being beneath a small but perfect miniature like-

ness of himself, to which the artist, with inimitable skill, had added many beauties, undiscernable even in the handsome original, without destroying the resemblance; the miniature was surrounded with the purest brilliants.

"I think," he said, "I cannot have forgotten the size of that fair and rounded arm," offering to clasp the bracelet which bore his likeness on it.

Mary blushed and hesitated. "Your offering is too costly, Charles. Why did you not bring me a rose? I should have preferred it greatly."

"Because roses will wither, fairest, and then the donor might be forgotten. Is it possible that you mean to refuse so small a gratification to your friend, your old playmate, your cousin?" He added, in a voice that showed his disappointment, as she still seemed to hesitate, "You will not, you cannot be so cruel!"

Mary was touched at the tone in which the last words were spoken. "I meant not to wound you by my refusal," she said; and as she spoke the fair arm was extended toward him.

"You will then wear this, for my sake," said Charles, "and when you look on it, think of one who offers it as a souvenir of the past; and," he added, in a lower, softer, and more earnest tone, "*a pledge of the future.*"

Mary withdrew her arm decidedly. "On those terms, Charles, I cannot accept your offering—and—indeed—I have wished for some days"—she paused and hesitated, in extreme embarrassment, for the noble ingenuousness of her nature strove with the bashful pride of a maiden's heart. The former would have had the victory, but for the entrance of Olivia, who returned at this critical moment. Charles concealed his extreme vexation beneath the tone of careless raillery he knew so well how to assume.

"Why this is prudery," he said, "downright prudery, *ma capricieuse*. I have made many inquiries of one of our mutual friends concerning you, and though I confess his replies were not very satisfactory, I should at least have supposed he would have given me some information respecting this new and unexpected trait in your character."

"Made inquiries concerning me?" said Mary, evidently at a loss for something better to say.

"Yes, of you, sweet, blushing rose; I inquired of our friend Edward Montague, with whom I lately met in Paris, and who had the felicity of spending some months in Florence during the past winter."

As he spoke, he looked with a penetrating glance at his fair cousin; but Mary at that moment stooped to raise a sheet of music that the air from the window had wafted from its place near her harp.

"I see," he continued, "you are determined, by your cruelty, to drive me to the shrine of the little Venus."

As he spoke, he approached Olivia, and returned the caress of her favorite by joining the costly bracelets together and clasping them around the white and slender throat of the little animal, at the same moment gently placing her hand on the clasp, to indicate that the offering was made to her. Again the beautiful rose tint which had attracted his admiration, gleamed brightly on her cheek—she bent over her little favorite, and unclasping the gemmed bracelets, examined them with fixed attention. Her proficiency in painting, showed her at a glance the exquisite finish of the miniature; and the gems by which it was surrounded were

unheeded. Could a deeper feeling lurk under the expression of unqualified admiration, which animated her beautiful features, as she gazed upon this marvellous work of art? Could it be that the young stranger who had almost abandoned his own country for the sunny land she loved so dearly, and who brought with him from the spot which she had been accustomed to regard as an earthly paradise, so many graces and accomplishments, had awakened a feeling in that youthful heart unknown, unfelt before? This idea certainly occurred to Mary, as she looked on the blushing cheek of Olivia; but Charles was too much absorbed in his recent vexation to think of any thing else at that moment. With his usual self-possession, however, he took his leave, and endeavored, by every means afforded him, to dissipate the unpleasant impressions he had received during his visit of the morning.

A stroll through the wild and romantic environs of the village, and the exhilarating freshness of the mountain air, soon restored his self-complacency. He looked on the affair of the bracelet only as a momentary caprice, which needed no farther explanation. The following morning found him again at the cottage, apparently in one of his gayest moods. Mary flattered herself that he perfectly understood the explanation she desired to make of her feelings toward him, and that a few hours had sufficed to reconcile him to the discovery. She therefore felt more at ease with him, and listened to his lively sallies with far more pleasure than she had hitherto done. The absence of Olivia, and her mother, who excused herself soon after his arrival, as she was making up her despatches for her absent son, Mary now regarded with indifference, and she offered to beguile an hour, which she feared might be otherwise rather dull, in playing for him some of the new music with which he had furnished her on his first arrival.

"How does it happen, Charles," said Mary, rising from her harp, after striking the last chords of a fashionable opera he had brought her, and resuming her silken tapestry on which the expanding flowers and buds and tendrils were beginning to rival the glories of a Flemish picture, "how does it happen that you find Paris so enchanting?"

"Enchanting!" echoed Charles, in a voice of surprise; "is it possible, my fair coz, that you, with all your exquisite tastes, can ask such a question? Methinks an answer might be found in the charms of that divine air, whose ravishing beauties still penetrate my soul through my ear, and which, though now as delightful as a harp and fairy touch can make it, loses nothing by being heard amid the splendors of accompanying scenery, and the rich and varied harmony of the finest *artistes*, vocal and instrumental, that Europe can afford."

"I can easily imagine, Charles," said Mary, "that you may find pleasure in listening to fine music, though I think your expressions are rather extravagant, and pardon me, almost profane. I do not like to hear the word 'divine' applied quite so often, to things which appear to me unworthy of the appellation; but you have not yet satisfactorily answered my question."

"I will answer it, sweet coz," replied Charles, "and as much at length as you will, provided you promise not

to interrupt me by a homily, if I should chance to bring a few divinities on the stage. I am glad, however, that our friend Montague is not here. I protest his solemn air is worse than any sermon you can preach, Mary; when I speak of the pleasure of a *garçon* at Paris, he looks as cold and stern as the Righi in the month of December. I fear he has infected you with some of his precious ideas."

Mary blushed. "You are unjust, Charles, very unjust, to one who really loves you, though he believes, that with all your boasted happiness, you are not happy in Paris. He thinks that the life you lead there, though it may amuse you for a time, will add neither to your stock of wisdom, virtue—or—or—any thing else that an honorable and upright man should endeavor to attain."

Mary paused; for at the conclusion of her speech, she encountered a keen and penetrating glance from Charles, whose brilliant eyes were fixed upon her with an expression she had never observed in them before. There was a sarcastic and haughty curl of the lip in his half smile, that gave her a feeling almost of dread. She blushed yet more deeply, and bending her eyes on her work, seemed silently absorbed in its progress. An unpleasant silence of a minute succeeded, when Charles, in a deep, and rather subdued voice, said—

"I am really vastly obliged to Montague for his affectionate solicitude; doubtless you concur with him in opinion?"

"I?" said Mary, "oh no, I know nothing about it; you have not even answered the simple question I asked you this morning."

"What was it?" said Charles, resuming his usual air of gaiety and thoughtlessness—"oh, I remember; you asked me why I found Paris enchanting? You have so often made this inquiry, or something very like it, that I believe I must answer it at length. Would you like a description of the life of a fashionable man,—like myself, *par exemple*—for a day, or a week?"

"I will hear it for a day," returned Mary, "and then, if it is sufficiently interesting, you may go on to the end of the week."

"As to that matter," said Charles, "I must confess there is not quite so great a variety as we generally boast of; but you shall judge for yourself. Where shall the curtain rise first?—suppose we begin the drama at the *café de Paris*. Imagine a few friends in petit comité—Sir Harry V., Lord L., Col. C., and your humble servant, taking possession of one of the choicest *apartemens* of this pleasantest *café* on the Boulevards, at six o'clock *precises*; and, according to our precise arrangement, meeting the soup and salmon at the door of our *salle-a-manger*. Then, with light hearts and good appetites, sitting down to a dinner, not ordinary and tavern-like, but wreathed with flowers and sparkling with lights, like a Grecian feast. Imagine us enjoying all the exquisite delicacies of the *cuisine Française* and the ambrosial streams of purest wine—not the vulgar productions of Oporto, Xeres, and Madeira, but the more ethereal charms of Burgundy, Chateau-Margeaux, Champagne, Johannisberg, vin de Paille, Hermitage"—

Mary interrupted him by laughing. "Really, Charles," said she, "one would suppose from the interest you manifest, that you were describing the fabled nectar in one or the other of these favorites. But as I cannot

appreciate their merits, I will, if you please, exchange them for a little of the conversation that seasons the entertainment."

"Conversation!" said Charles; "you cannot doubt that the 'feast of reason and flow of soul' could be wanting? The *attic salt* is the only sort of which a profusion is admissible at a French dinner. Let me see if I can give you a sample:"—

"Why were you not at Long Champs to-day, Lennox? I should have had an opportunity of showing you my divinity, the youthful and elegant Madame P.; I should have enjoyed the pleasure of proving to you the favor I am shown in that quarter; though I was near paying dear for it to-day, by the loss of life or limb, or perhaps both, in approaching too near her coupé. Centaur as I am, Wildfire actually prevented me from acknowledging the salute she gave me, by touching with her lips the tips of her rosy fingers. She is certainly a nice creature—a perfect amour—I would lay a wager of a hundred Napoleons to a centime, that she is a thousand times more lovely than your boasted and beautiful Mary"—

Mary started, and the eloquent blood mounted to her temples. She raised her eyes for an instant, and then again busied herself with her work. Charles continued silent for some minutes.

"Well!" said Mary.

"Well!" repeated Charles, "you do not seem to relish my description, *ma belle cousine*—what has given so brilliant a tinge to your delicate complexion?"

"Charles," said Mary, raising her eyes, with an expression of sweet ingenuousness, "there are doubtless many *Marys* to whom the epithet of 'beautiful,' would be more applicable than to me. Yet I cannot help supposing it probable that your friend alluded to me."

"Supposing that you have supposed rightly," said Charles, half doubtingly, half playfully.

"In that case," said Mary, "I confess I should not feel especially flattered by such a notice from such a quarter. I could not esteem it a very great compliment, to be so lightly named by one, who though he may be your friend, certainly from the specimen you have given of his conversation, has shown that he possesses not a few of the attributes of a coxcomb."

"Most gravely and sagely spoken! Montague himself could not have made a speech more solemn. I shall begin again to harbor the suspicions that first raised those mantling blushes on your transparent cheek: take care that I do not penetrate all your thoughts through this brilliant but slight veil."

Again he paused, and again the embarrassment of his fair auditors was manifest.

"You have not finished a day yet," she said, at length, "though you promised me a week in Paris, if I would listen. You have not even finished your feast, but I believe that has lasted long enough; let us suppose it over, and the cloth removed."

"It would be most uninteresting to pursue the process that far," said Charles, "for it has been many centuries since that antediluvian custom, as well as the barbarous antiquity of drinking toasts and healths has been exploded in Paris, even if it ever existed. The *bois d'allonges* would cut a sorry figure by the side of our polished old tables. No, no—we do not thus drain our cups of pleasure to the dregs; we leave the feast,

with all its decorations, its garlands, its lights, its *bronzes dorés, porcelaine de sévres, vermeil, cristaux, &c.*, only to exchange this for a scene still more delightful—for, we are never at a loss for occupation at this witching hour. The opera, the theatres, Frascati's, the salon, a bal à l'ambassade—or—or a thousand other equally attractive places, engage us for the next six or eight hours. These are the hours in which a man of fashion *lives*; in the rest of the twenty-four, he only exists. At three or four in the morning, behold me *au logis*, where, with the aid of *croisées bien fermées*, and protected yet more effectually from the intrusion of the light by the ample folds of Lyons satin, I enjoy the luxuries of a French couch, secure within its graceful canopy from all that may prevent the influences of that most welcome visitor Morpheus. I know not exactly whether I should acknowledge my hour of rising; it is indeed rather too soon for a fashionable man, but owing, I presume, to early habit, I have an inveterate practise of awaking precisely at eleven. In vain does Dupont don his softest pantouffles, and step with cat-like pace into my chamber; he finds me invariably striking my repeater, which gives me the hour of eleven. 'What is the hour, Dupont?' 'Onzes heures précises, Monsieur.' 'How is the weather this morning?' 'Un peu orageux, Monsieur.' 'Ah! I thought so; a man of fashion is a perfect barometer! Well, have you read the journals this morning—what news is there?' 'No sars; dat is to say yes sars; on a attrappé quatre voleurs dans la rue St. Dennis, et trois dans la rue St. Martin—la grande revue aura lieu demain, et le bal de l'opera au profit des indigens, le dimanche en huit, voila tout, Monsieur.' 'Why, Dupont, that is exactly what you told me yesterday, when I asked you the same question.' 'No sars; dat is to say yes sars; it is de nouvelles of dis morning—je vous assure, parole d'honneur—it is de most perfect true, de most exacte verité. Mais, Monsieur, le bain est prêt, et le déjeuner vill be ready in one petite demi heure.' The petite demi heure passed, and my tasteful *cabaret* of *sévres* and *vermeil* removed, I await my usual visitors in my robe de chambré brodée, and pantouffles de velours. 'Monsieur, voici, M. Le Coiffeur, M. Le Tailleur, M. Le Gantier, M. Le Bijoutier, M. Le——.' 'Bah! why did you let all these people in? Bid them wait in the anti-chamber, and send the jeweller to me.' Exit Dupont, and entré M. Le Bijoutier. It would be impossible to select a jewelled cane, and a *chaîne d'or* in less time than an hour and a half. This important matter accomplished, there is no leisure for the rest. I have a rendezvous aux Tuileries at two, and there is barely time for the toilette. 'Dismiss those people in the anti-chamber, Dupont, et defend la porte.' 'Yes sars—dat is to say no sars—dere is a gentilhomme who wish to speak wid you, Monsieur.' 'I am not in, Dupont—or rather I am not up. No, I believe I am au bois de Boulogne. That will be far enough to banish this intruder, I hope.' Soon after I overhear the following colloquy in the anti-chamber. 'Monsieur est sorti!—are you sure of it?' 'Oui, certainement, Monsieur,—depuis dix heures.' 'Oh! you must be mistaken—he never rises until eleven.' 'Mon dieu, Monsieur! I know, certainement—je suis son valet; il est sorti—il est au bois de Boulogne—depuis dix heures, parole d'honneur, je vous assure, it is de most perfect true, de most exacte verité!' My visitor departs, and

in an hour more I am ready for the Tuileries. A lounge there, a ride en verité au bois de Boulogne, and a visit or two, bring me again to six o'clock. Shall I give you another day?"

"Thank you—I believe this will do. But is this a fair sample? Are all your days spent in this manner?"

"It is a fair sample, most fair cox."

"And on Sunday?"

"Oh, that makes no difference in Paris, you know; except that the most delightful operas, and the most brilliant balls are reserved for that day."

"And so, in this agreeable division of time, there are no moments, far less hours, left for reading, reflection, correspondence, deeds of charity, devotion——"

"Stop! stop! lovely preacher; remember our compact. I cannot accept a sermon in return for all my confessions."

"Well, I will not give you one; but, Charles, are there no hours or moments, in which a suspicion crosses your mind that all is not right, and that this is not the sort of life a rational being would be content to lead?"

"An infringement on our compact again!—yet I will answer." As he spoke, a cloud passed over his brow—he pressed his hand an instant over his eyes, as if to shut out some fearful vision, as he continued in an altered tone—"I will acknowledge that impertinent thoughts sometimes intrude on my gayest hours; that I feel as if the sword of Damocles were suspended over my head; and that there have been moments when I would almost have exchanged my delirious pleasures, for the mortal repose of *Père la Chaise*." He said these words rapidly and earnestly, and an expression almost of despair usurped the place of his usually gay and careless smile. "Are you answered now, Mary?"

"I am, indeed; but I did not intend to give you pain. One more question, and my inquisition is finished. What becomes of these fashionable people, if they happen to be ill? I suppose they are not exempted from all human infirmities."

"No, that is very certain; indeed, I believe they are rather more liable to them than you sober people. But then they never permit their cares to mar the pleasures of others. In this they are truly philosophical."

"I agree with them heartily, so far," said Mary; "but there are moments when we have a right to expect the sympathy of our friends. I think I have heard that you were once ill at Paris."

"Not once only, but often. I was once attacked by the *grippe*, in its most ferocious style; and have twice narrowly escaped a *fièvre nerveuse*."

"And did not your friends manifest their concern?"

"Oh, yes, certainly. It is true, I never saw them; but their cards were sent, *pour demander*; and they all congratulated me on my recovery, which they had been assured was almost a miracle. They took it for granted that they would not be admitted, and feared to disturb me. I am not surprised at their repugnance to a sick chamber: pah! the remembrance of it is gall and wormwood. To see a gay youth, whom one is accustomed to admire *en grande costume*, stretched out like a *cadavre*; but it is enough. However, I am unjust. Sir Harry V—— did call one morning, and sent for Dupont. When he returned, I desired to know what he said. 'Did he ask after my health?' 'No sars—yes sars, dat is to say, he desire me to inform you dat he hope to see you au Champs de Mars to-morrow, as he learn dat de

chevaux sont arrivées ; de chevaux dat you import from Angleterre ; and dat he will parier one mille Napoleons contre une centime dat his Wildfire and Selima will beat Daredevil and Mary Leslie."

Mary started from her seat. "Oh, Charles, is it possible that you can have made such a use of my name?"

Charles threw himself on one knee, in an attitude that a *danseur de l'opera* might have envied.

"Beauteous Mary!" he exclaimed—detaining her by clasping her hand within both of his, with the most graceful air of supplication, while Mary, now really vexed, tried in vain to escape—"Fairest of saints! have I not made confession of all my sins—even of this last, which you seem to consider the most heinous? And am I to be repaid with scorn, instead of receiving absolution from those lips; or even a sign of the cross from this delicate hand!" kissing it as he spoke.

"Charles," said Mary, now overwhelmed with confusion, "why do you treat me so like a child? With all your professions, you have proved that you have no respect for me. Pray, let my hand go."

"I cannot, unless you promise me forgiveness, peace, absolution—Mary!"

"Any thing, any thing—there is Olivia's light step; and I confess I would rather even she should not see you thus feigning the gallant!"

"Feign!" repeated Charles—"but I obey. Adieu ma belle!" and after imprinting another kiss on the imprisoned hand, he released her, and the impatient girl flew to her chamber.

Charles retraced his steps slowly and thoughtfully. This last interview certainly was not very satisfactory; and to add to his disquietude, he found letters on his table urging his immediate return to Paris, on account of the illness of a near relative. It was true that the vexation he felt was not a little alleviated by the reflection, that the demise of his old uncle, whom he had hardly known, would leave him possession not only of a title, but a superb estate. Yet he felt an invincible repugnance to leaving the valley, until he should have ascertained, with perfect accuracy, the real state of his beautiful kinswoman's heart.

He waited only for the decline of the summer sun, and as his last rays tinged the snowy peaks of the distant Alps, he again returned to the cottage, in the hope of finding its inmates straying through the refreshing shade of the grove, or among the secluded walks; and thus affording him the opportunity, he now so ardently wished, for a perfect *eclaircissement*. As he had anticipated, he found the cottage untenanted, and passed quickly through one of the avenues to the grove. On emerging from the leafy canopy which shaded and bordered the walk, he found himself within a short distance of the fair object of his search; but to his infinite surprise and vexation, she was not, as he had fondly hoped, unattended; but was apparently listening with evident pleasure, though with downcast eyes and a heightened color, to the animated conversation of another cavalier! and that cavalier young, handsome, graceful, and as he knew but too well, in all more important matters, a most formidable rival. For an instant Charles lost his usual self-possession, and the anger and jealousy that gnawed his heart, were plainly manifest in his countenance; but immediately recovering himself, he advanced with a rapid step, and the exclamation of "Ha, Montague! my ancient friend and comrade!" In spite of the ap-

parent friendliness and careless gaiety of the salutation, there was too much of pique and mortification discernable in his air and manner, to escape the observing eye of him to whom it was addressed. His greeting was, however, reciprocated with perhaps less of *hauteur*, but with a dignified, yet frank and graceful courtesy, which made Charles almost ashamed of the heartiness with which he wished his rival—any where but in his present most enviable position. He was, however, too much a man of the world to permit his feelings to betray him into farther indiscretion; and by the time they had emerged from the grove, and joined the rest of the little party in the summer house, the conversation had become general and animated. As the twilight dews began to descend, Mrs. Leslie proposed their return to the cottage; and Charles, in bidding them adieu, remarked that this was probably his last visit, for he should leave the valley on the following day.

"To-morrow?" said Mary, with a smile. "You have then forgotten the promise you exacted from Olivia and myself, to make an excursion on the lake. Our good host will be quite heart-broken when he hears of your determination; for I think he felt a peculiar anxiety to present us to his brother's family on our way thither. I dare say he would have no objection to an additional oar," she added, glancing at Montague, who readily offered his services.

"Yes, it is true," replied Charles, who had secretly determined at all hazards to remain another day, but who only desired to see if no objection would be made to his departure, "I cannot forego so great a pleasure. I shall claim your promise."

Many revolving and unpleasant thoughts banished the sweet influences, that are wont to "knit up the ravelled sleeve of care," from the eyes of our young hero, after he had retired to rest. He tossed on his sleepless pillow until dawn, and then sunk into a heavy slumber. He was aroused by a tap at the door; and starting up, perceived with surprise, that it was near mid-day.

"You are late, my young gallant," said old Rudolph, putting his good humored face within the door. "Our party has been ready and waiting for the last hour."

Ashamed of his apparent want of gallantry, Charles speedily equipped himself for the expedition, and following the counsel of the host of the cottage, he arrayed himself in a light, thin garb, appropriate to the season, and peculiarly suitable for the severe exercise he was about to undertake. He found his handsome rival again in possession of the field, and inwardly upbraided himself for permitting him to have even this slight advantage.

The good host had provided them with horses and another guide beside himself, to traverse the distance between the valley and the far-famed lake of the forest cantons, in the prospect of whose charms they all anticipated so much pleasure. The morning was gloriously beautiful, and the pure azure of the sky was reflected in cloudless splendor from the mirror-like surface of the lake, as it broke on the view of the little party at a sudden turn in the road, or rather the broad pathway that led to the house of Rudolph's brother. This singularly constructed building, presented all the grotesque variety of architecture peculiar to the canton; yet its air of snugness and comfort, the goodly rows of beehives that found protection beneath its broad projecting eaves, the evidences of plenty revealing themselves on

every side, made ample amends for what might have been deemed bad taste; and its rude simplicity was soon forgotten in contemplating the romantic beauty of its situation. The house, or *châlet*, if it might be called by so humble a title, was placed about midway the descent of a gently sloping hill, which terminated at the water's edge; the hill, and the little fields that surrounded it, were adorned with the richest verdure. In front a range of snow-clad mountains melted away in the distance, and made a fine contrast with the tranquil loveliness of the broad lake; while, in the rear, rose an enormous rock, redeemed, however, from its savage wildness by innumerable tufts of the Alpine rose, the fir trees that crowned its summit, and the brilliancy of a dashing waterfall, that soothed the ear with its pleasing though monotonous sound, and was broken into a cloud of white mist as it fell into the stream, that was hurrying on with its tributary waters to the lake.

As soon as the approach of our little party was perceived, the inhabitants of the *châlet* came out, with the simple hospitality which has always distinguished their country, to welcome them. The family, old and young, were dressed in their gayest attire, the athletic young men and stout blooming girls in their holiday costume—the latter looking still taller, from their singular yet pretty head dress, resembling a huge butterfly with its wings erected, or the sails of the paper nautilus. The good old hostess regaled her guests with the most delicate of her cream cheese, the freshest honey, and white bread, which last was regarded as no small luxury in that wild region; and the family only permitted their guests to depart, on the condition of another call on their return from their excursion on the lake. The young men both offered their services as oars-men, but our cavaliers declined their aid: there could, surely, they all agreed, be no necessity for more than two oars, which, with one spare hand, could be easily managed.

"Fair laughs the morn, and soft the zephyr blows," said Mary, when they had skimmed lightly over the surface for nearly a league, and the fresh air and beautiful scenery had inspired them all with almost equal gaiety.

"Youth on the prow," continued Montague, looking towards old Rudolph, who had stationed himself there, "and pleasure at the helm," he added, with a smile, resigning his oar to Charles, whose turn it was to use it, and taking his place by Mary's side. "I trust our good old guide does not anticipate 'the sweeping whirlwind's sway,' for he appears rather puzzled by something that he is looking at with such intense interest."

In truth, the old man had laid down his oar, and was looking at some distant object with fixed attention.

"I like not that frown on the brow of old Pilatre," said he, looking towards that redoubtable mountain, which is still regarded with a sort of superstitious awe by the simple inhabitants of the country, on account of the ancient traditions connected with it. He pointed, as he spoke, toward the peaked summits of the mountain, behind which a small but very black cloud was discernable. "When he puts on his cap," he added, "it is like replacing the plumed hat of royalty—all humbler people must hasten their departure from his presence."

"I fear we shall find some difficulty in obeying the signal of his majesty," said Charles, "for I have been pulling with might and main for the last five minutes to little purpose. The wind has certainly changed,

or at least risen; for there was hardly a breath when we left the shore."

"It is too true," added their host, as he resumed his oar, and exerted himself resolutely to direct the course of their slight skiff to the place of their embarkation. "I fear much, if this head wind continues, we may get a shower bath, if nothing worse, ere yon rising cloud be past."

The breeze continued to freshen, and the sun began now to be obscured by the clouds which rose with a rapidity known only to those mountainous regions—long wreaths of thick mist floated down the sides of Mont Pilatre, and the glassy surface of the lake was broken into waves, which rose higher with every blast that swept over them, until they were crested with foam. Nearer and nearer the tempest came sweeping on, and at length the red lightning gleamed athwart the snowy billows, and a loud burst of heaven's artillery announced its presence. The dangerous situation of our little party was now manifest; and it seemed in vain, that with stout arms and willing hearts, the oars-men exerted their skill and strength. Their utmost efforts could only prevent the boat from being driven in a direction exactly contrary to their much desired haven. During this trying hour their fair companions were the chief objects of their anxiety; and never did the serene loveliness of Mary's character appear in a more perfect light. She neither shrieked, nor fainted; and it was only by the paleness of her cheek, and the compression of her beautiful lip, that her full apprehension of their peril could be discerned. She supported on her bosom the head of the shrinking and timid Olivia, who sought, by concealing her face, to hide at the same moment her terror, and the alarming scene before her. At length a change, which old Rudolph had anticipated, and of which he had already expressed his fears, took place. The wind, which had so powerfully obstructed their progress, suddenly veered, and a violent gust swept the boat with fearful velocity onward—then for a moment it died away.

"Now in heaven alone is our trust," said the old man, throwing down his oar in despair. "Another such blast and we are inevitably dashed on yon beetling rock."

"In heaven then be our trust," said Montague, who, with the energy that superior minds are wont to exercise under circumstances of difficulty and danger, had assumed the command; "we are within reach of assistance if we could make ourselves heard. It is not more than fifty yards to the shore. I can discern even the *châlet* through the mist." As he spoke, he raised his voice in its utmost power to call its inhabitants to their aid, but in vain; its tones rung like a silver-tongued trumpet to those around him, but was lost amid the roaring of the storm. "The mountain whistle, good Rudolph," he said hastily.

The old man replied only by placing his hand to his mouth, and sending forth a sharp shrill whistle, well understood by the hunters of the chamois amid the high Alps, and which reverberated from rock to rock on the shore. Almost instantaneously two men were seen bounding down the slope that led from the *châlet* to the lake.

"My resolution is now taken," said Montague; "we have only a moment left to rescue us from destruction. You were once a bold and dexterous swimmer, Lennox, and Rudolph has but now boasted to me of his skill. With his aid you can easily support the slight form of Olivia, until those hardy mountaineers come to our

assistance. I will myself be responsible for the safety of Miss Leslie."

"She shall not, she will not entrust herself to your guidance!" exclaimed Charles, in a voice that betrayed jealousy and passion, mingled with real apprehension for her safety in so hazardous an experiment.

"I have saved life under circumstances of almost equal peril," was the calm and laconic reply of Montague.

Charles felt an indescribable repugnance at being reminded at this moment, of the time when, in their more youthful days, he had been rescued from a watery grave by the strong arm and dauntless heart of Edward Montague; but the reminiscence awoke the better feelings of his nature. He permitted Mary to resign the sinking form of Olivia to his arms; while Montague, who waited only for this signal of her approbation of his design, and one glance of her eye, sprung with her into the foaming waves. The instant his movement was perceived by the mountaineers on the shore, they dashed without hesitation into the water and swam to his aid; his example was speedily followed by the rest, and a few minutes sufficed to bring them all in safety to the land. The event proved the wisdom of Montague's counsel; for the instant they had abandoned it, the frail bark was driven by a blast, yet more violent than the first, full against the projecting rock, and dashed into fragments.

Never was the hospitable kindness of the good inhabitants of the chalet more lavishly bestowed, or more gratefully appreciated, than by those who were now so dependent upon it. Fully two hours had elapsed, ere their good hostess was convinced that their comfort had been sufficiently secured. The buoyant spirits of youth, and their happiness in having been delivered from such imminent peril, soon restored their usual animation, and when they all again met, their singular costume excited no little merriment; as, habited in the peculiar dress of the canton, they resembled a party equipped for a masquerade. The earnest persuasions of their kind hosts, to delay their return to the cottage until the next day, was graciously though decidedly declined; for Mary knew too well the agonizing apprehensions that had agitated her fond mother's heart during their protracted stay, to add to it a farther pang. The storm had entirely ceased, and the dewy foliage sparkled in the light of the setting sun, as they again traversed the road that led to their temporary home.

Several times during their ride, Charles thought of seeking an explanation with his fair cousin, which he well knew she had often desired to make; but the formality attending a request to speak with her alone, and above all the very natural desire to be ignorant of that which he did not wish to know, kept him silent. He flattered himself in the belief that circumstances would soon occur, which would place his pretensions in a far more favorable light than at that moment; and before they had reached the valley, his decision was made.

"Here then we part," he said, as they reached the grille of the court. "It would be unkind as unmannerly in your knights to intrude farther, after the fatigues and discomforts of the day. Ere to-morrow's sun be risen, I shall be far, far away!"

Mary hastily returned the adieux of the cavaliers, and flew to the arms of her anxious parent, who clasped her adored child and her loved protégé to her heart with tears of pious joy and gratitude. And fervently did

they offer their united thanks to that Gracious Being, who had so mercifully interposed to save them during the perils of the past day.

Another and another week passed away, and our travellers still lingered in their quiet seclusion. Apparently, Montague had found less difficulty than his rival, in persuading the gentle Mary to permit him to accompany her in her evening visit to their favorite withdrawing room—the summer house; for, each successive evening found them there, often, it is true, accompanied by her mother and Olivia; but it appeared certain that the anxiety she had formerly manifested for their presence, during her interviews with her cousin, was far less with his envied friend, than it had been with him. Indeed, no ordinary impediment would have prevented Montague from availing himself of the permission thus given him; and it was with a degree of impatience, that made him almost overstep the bounds of civility, that he found himself one evening arrested by an acquaintance, who, a stranger as well as himself in the valley, seemed resolutely bent on depriving him of his accustomed visit, by relating all his own adventures. After many ineffectual efforts, on the part of Montague, to appear interested in this prosing conversation, and often "bustling up with unsuccessful speed," the traveller began to suspect that some more agreeable engagement might possibly have awaited his tantalized auditor, and he condescended to take his leave, after having inflicted himself for four mortal hours on his "friend." The instant he departed, Montague hastened rapidly to the cottage, but found, to his mortification, the doors were closed for the night; and to his surprise, his repeater sounded a quarter past eleven. It was too late to request admittance; yet he could not deny himself the gratification of a stroll through the grounds, by the light of the moon that was now riding high in silvery brightness through the heavens, though his entrance might be deemed somewhat lawless. Without much fear, however, of the consequences in case of the discovery of his trespass, he sprang over the slight barrier that obstructed his entrance, and wandered through the walks. He soon reached the summer house; and throwing himself on one of the rustic seats, was speedily lost in a pleasing reverie, in which it may be naturally supposed, that the occupant of his thoughts was the lovely being, who, in that hallowed spot, had renewed to him the vows of plighted love he had won from her many months ere they had met there. It cannot be a matter of surprise that, with such a subject of meditation, breathing the sweet balm of the dewy flowers, and gazing on the resplendent beauties of a cloudless summer sky, studded with countless stars, he should have been aroused from his sweet reflections only by the sound of the distant village bell, which tolled the hour of twelve. He rose, and was departing with a slow and lingering step, when his attention was attracted, and then enchained by the appearance of a figure, gliding through one of the avenues that led to the grove. It passed on so rapidly, that he had not time to form any resolution before it had disappeared among the trees. There was something so singular, so mysterious, so unearthly in the gliding motion of this strange apparition, and in the almost supernatural whiteness of its apparel, as it gleamed in the light of the moon, and was then lost in the leafy shade, that Montague felt an

irresistible curiosity to view it more nearly. His first impulse was to follow it into the grove; but the idea crossed his mind that it might be the stratagem of some robber, who, aware of his presence, desired to decoy him thither. While he hesitated, the apparition emerged from the grove, and was apparently approaching the spot where he stood. Ashamed of the feeling of superstitious awe that involuntarily crept over him, Montague determined to discover who, or what it was; but when within a few feet of the place where he stood, it turned with the same rapid, noiseless and gliding motion, and in an instant had disappeared. Montague followed in the same direction. He was certain that the avenue in which he had lost sight of this extraordinary apparition, terminated, after several serpentine windings, at the cottage door. He pursued the same path rapidly and anxiously, knowing from the thickly entwined shrubbery on each side, that the vision, if a real being, which in spite of his incredulity with regard to supernatural appearances he almost began to doubt, could only find refuge in the cottage itself, where the avenue terminated; but he was destined to disappointment—the door was closed and fastened, as when he had an hour before so much desired to enter it; and he had no other resource than to retrace his steps, and return to the village by the same route he had pursued in entering the grounds.

It may easily be presumed, that Montague felt but little inclination to sleep after this singular adventure. He vainly tried to account for it upon any reasonable supposition. In vain did he endeavor to trace any resemblance between the stout person of Rudolph's blooming daughter, on whom his suspicions had at one time fallen, and the slight form, the graceful, ethereal movements of the apparition he had beheld. If a real being, it must have re-entered the cottage; and it could have been none other than one of its inhabitants. Mary, his loved, his beautiful Mary! never once crossed his mind in connexion with so strange a mystery; but might it not have been Olivia? The face, as the vision glided by him, was partly averted, and so concealed by a long white veil, as to hide the features from him; yet he thought he recognised the stature, and the symmetrical form; and even the fair and delicate arm on which a gemmed bracelet glittered in the bright moonlight, had been near enough to him to challenge his attention. But then, why should a being so helpless, so delicate, expose herself to the night air at this unseasonable hour? What object could she have had in view? Why was she thus alone; and would her strange wanderings be permitted by her affectionate friends and guardians? All these improbabilities perplexed him greatly; but he resolved, if possible, to satisfy his doubts on the morrow.

As soon as a reasonable hour arrived—which, from his disappointment of the preceding evening, he began to think would never come, so slowly did the moments pass—he paid a visit to the cottage. He found the little parlor occupied by Mary and Olivia. It could not be imagination that pictured Olivia to him more delicate, and paler than he had ever observed her before. A playful hint at the want of gallantry, manifested in his unusual absence, drew from him not only an explanation of the circumstances that had caused it, but also of his moonlight adventure.

"It was indeed singular," said Mary, thoughtfully; "but with regard to Olivia, it is impossible that it could

have been herself. Her spirit, you would almost persuade me it must have been; for, if you will look narrowly, you will perceive beneath the folds of her muslin sleeve, the bracelet which shone with so pure a lustre in the moon beams."

Montague looked; and the shadowy outline of the arm, as well as the bracelet, corresponded exactly with that of the apparition of the grove.

"Why should we not ask her?" she continued. "She certainly knows best, and can easily resolve our doubts."

Montague was about to interpose, but Mary had already attracted Olivia's attention by a sign.

"Did you walk last evening—last night, Olivia?" was her first interrogatory. Olivia shook her head.

"I had a headache," was the reply.

"Where were you at midnight, last night?"

Olivia looked up with surprise; but not the slightest expression of confusion appeared in her countenance—not the least agitation—not even the slightest change of color betrayed any embarrassment. Apparently she fancied that she had mistaken her friend's question, for she indicated a wish to have it repeated. "Where were you last night, at midnight?" Mary said again.

With a sweet smile of the most innocent simplicity, Olivia laid her cheek on her hand, and closed her eyes.

"In bed—and asleep," said Mary, translating her gesture.

"It is impossible to doubt the perfect truth and ingenuousness of that lovely expression," said Montague musingly; "yet it is strange, passing strange!"

"It must have been a sort of hallucination," said Mary smiling. "Perhaps you were thinking at the moment of some fair lady; and this pretty ghost only appeared to show you that spirits might be called, if not from the 'vast deep,' from a leafy grove, that would obey your behest. Of one thing, however," she added, in a more serious tone, "we may be certain—that Olivia has answered us faithfully. I have known her intimately, as you are aware, for many years, and I have never known her to depart in the slightest degree from the truth."

The gallantry of the reply to the first part of this speech may well be imagined, but the latter part of it increased Montague's perplexity. Yet he began to think that he had permitted his imagination to dwell too much upon a matter of but little concern to him; and though he naturally felt much curiosity to solve this singular mystery, he resolved to banish the subject entirely from his mind, which, in the delightful society he was now favored with, was no very difficult matter.

"Alone and in tears!" said a well known voice, whose deep rich tones were modulated to the soft cadence in which a youthful lover is wont to speak, as they fall on the ear for which they are destined. "And may I not be permitted to participate in this sorrow?" continued Montague, with a mute but expressive acknowledgment to the fair hand that extended an open letter to him, which had evidently some connexion with the distress he perceived.

"You will not be surprised," was the reply, "at my unhappiness, when you know its cause; though it seems almost like insensibility to the gifts of divine providence to be absorbed in unpleasant meditations this lovely evening, in the sweet embowering shade of this our favorite retreat, and, and with so much to make me happy.

But—may do not interrupt me while I explain my griefs to you. That letter will tell you that my loved brother has been recently exposed to great peril during a tour through the highlands of Scotland. He would fain persuade us that the injury he sustained is very slight, and to relieve our anxiety, his account is corroborated by a friend of our acquaintance; yet he cannot disguise from us that the period of his return hither is thus rendered uncertain, and our mother's anxiety is almost beyond endurance. The declining health of our poor Olivia, too, is a source of the greatest alarm and perplexity to us. She has drooped like a broken lily ever since the departure of our young kinsman, and I cannot help fearing that she has given her unsuspecting heart in return for his thoughtless gallantries. She regards him as the preserver of her life, on the eventful evening of the storm on the lake. She wears the beautiful miniature, he so heedlessly presented her, day and night; and so entirely am I convinced of the delusion she indulges in the belief that he is equally attached to her, that I wish much to undeceive her. It is most probable, however, that she would persuade herself I am mistaken, even if I were to undertake so painful a task. We have therefore determined to leave the discovery to herself, in the hope that time and change of scene may banish her present impressions. My mother's prophetic fears," she continued mournfully, "may be realized; for I do not think my hapless friend would survive a knowledge of the truth. I may perhaps speak too freely, but I am betraying no confidence; and you will, I know, appreciate the motives that induce me to impart my thoughts to you."

It would be vain to attempt even a description of the passionate eloquence, poured forth in the reply to this explanation of our heroine. What a text for a chapter of persuasion to abridge the long, tedious interval, destined to separate him from his promised happiness! It may be perhaps anticipating, to reveal the effect of his oratory; but it is certain that the interview ended by his finding that the exaction of one little word, and even that one conditional, had made him the happiest of men. Speeches, explanations, and arrangements, sometimes occupy more time than those who are engaged in them are aware of; and the bright moon had poured her flood of silvery light around, before all were completed. The happy lover and his promised bride were leaving the summer house on their return to the cottage, when the aerial apparition of the preceding evening, emerged suddenly from the grove. With the same light, noiseless, gliding motion, it advanced rapidly toward the spot where they stood. The same gleaming whiteness distinguished its apparel: again were the features partly concealed by a long veil, that, as it floated on the summer breeze, added to the supernatural appearance. Again it advanced near enough for Montague to distinguish the sparkling gems that encircled the delicate arm. Determined, if possible, not to be baffled, as he had been when it had before crossed his path, he was springing forward to intercept it, but he was arrested by the suppleting voice of Mary—

"Stay! I entreat, I implore you stay!" she exclaimed in accents of terror, "there is far more danger than you imagine in"—A loud shriek from the shaded avenue, whither the apparition had directed its course, interrupted her farther explanation. "Seek not to know more now," she said hastily. "To-morrow I may per-

haps be able to explain what appears so mysterious;" and with a rapidity almost equal to that of the bright vision itself, she followed its course toward the cottage.

We must now, for a short time, leave these scenes of the valley, and pursue the footsteps of our young hero, who, in happy ignorance of what was passing there, found himself once more surrounded by the pleasures and luxuries of the French capital. He was one morning reclining in graceful indolence on the *canapé*, still in the "robe de chambre brodée, and pantoufles de velours," that he once mentioned to our heroine, when the re-entrance of his valet, who had apparently been charged with some commission of importance, drew his attention from the morning journal—whether a *journal des modes*, or something of more consequence, it might not be fair to say. Struck with the odd mixture of real pleasure and affected sorrow, that gave to his attendant the ludicrous expression of one of Hogarth's prints, he almost anticipated the answer to his questions.

"Have you delivered my note, Dupont?" he said. "Shall I be admitted this morning?"

"I bring de most triste nouvelles, mi-lord," replied the valet, bowing with unwonted reverence as he uttered the last word, "Monsieur, votre oncle, est—mort!"

The annunciation of this expected event did not elicit any very profound emotion: we will, however, do our hero the justice to say, that it was received with a feeling of solemnity, to which a heart entirely deadened by the vanities of the world, would have been a stranger. Insensibly, however, this feeling wore away; and, as he paced the apartment, brighter thoughts soon rose uppermost in his mind.

"Lord de Vaux,—twenty thousand a year," said he, musingly. "What female heart can gold despise? especially when"—and his eye rested involuntarily upon a splendid mirror which reflected his elegant person to the greatest advantage. "Mary! beauteous Mary! thou art mine! How unfortunate it is, that I shall be delayed here a week or perhaps longer! Something must be done in that tedious interval. Who can tell what may be the consequence of my apparent indifference?"

The next moment found him seated at his *scrutoire*, penning a rapid declaration of his passionate attachment to his lovely kinswoman, with an offer of his heart, his hand, and his brilliant fortune; his letter concluded with a thousand regrets at being compelled to delay for a week his return to the "*happy valley*." Determined not to trust a communication of such importance to the uncertainty of the post, he thought of some private and express conveyance, and his favorite valet was speedily summoned.

"I think you have been in Switzerland, Dupont?" he inquired.

"Yes, mi-lord," replied the valet, with a slight shudder; "I have been in dat terrible pays sauvage."

"Then, to oblige me, you cannot refuse to go again. Take this letter, and depart with it immediately; deliver it according to the direction. Be faithful, and your reward shall be rich."

"To oblige mi-lord, certainement oui, mi-lord," said the valet; the dismality of his countenance in the anticipation of so long a journey, and so tedious an absence from the place which he regarded as the only habitable spot in the world, being somewhat dispelled by his young lord's last words. "De suite, mi-lord," and

with another profound reverence and unusual alacrity he disappeared.

A few hours found him on the road to the place of his destination; for, having twice travelled the same route in the suite of an English nobleman, he was at no loss to find his way. Before the week had elapsed, the important letter was delivered, read and answered. The reply may be easily conjectured, without being literally cited. It contained a frank avowal of a previous attachment and engagement on the part of the fair writer—a sincere expression of regret that her sentiments toward her kinsman had not, as she had hoped and believed, been explained during his visit to the valley, with the kindest appreciation of his preference, and the hope that he would still retain for her the friendship which would ever be reciprocated on her part. All this was expressed in the most gracious and graceful manner, but without leaving a shadow of a doubt with regard to her sentiments. The letter was signed, sealed and delivered; and in an hour after his arrival, the valet of mi-lord was on his return to Paris.

But the little blind god, who seemed to take such a malicious pleasure in baffling our hero, had prepared another disappointment for him. In passing through Lucerne, the faithful Dupont, unhappily for his young lord, though as he deemed it happily for him, met with a pretty *soubrette*, who had been detained, as she said, amid these *malheureuses montaignes*, by the caprice of Madame la Comtesse, in whose service she was. It would have been cruel and ungallant to decline her invitation to spend a day in the town of Lucerne; and this day involved another and another, Dupont still relying upon the difficulties of the route, and an account of his "hair breath 'scapes," which he trusted that a "*parole d'honneur*" would confirm. Impatient at his unexpected delay, Charles resolved not to await his return; and as soon as the arrangements which had retarded his departure were accomplished, he set out for the valley. A few days rapid travelling brought him to Lucerne, where, it may be easily foreseen he did not meet with his attendant, that worthy personage having taken good care to set out in the direction by which his young lord came, as soon as he heard of his arrival. It was with great impatience that Charles watched the declining sun on the last evening of his journey, and with no small vexation that he found it entirely too late to attempt to pay a visit to the valley before the next day.

The succeeding morning arose in cloudless splendor. Our young hero, as soon as a reasonable hour arrived, procured a guide and horses to pursue his way to the valley. The buoyancy of his spirits was unchecked by even a shadow of doubt as to his success, and the brilliancy of the atmosphere corresponded well with the visions of bliss that flitted through his imagination. Once, and once only, as he looked on the bright bosom of the lake, he remembered that he had seen its placid loveliness succeeded by the awful frown of the tempest; but the painful idea was speedily banished, and all was again light and joy. He was aroused from his pleasing meditations by his guide, who, on reaching a pathway which diverged from the beaten track, had made a dead halt.

"There lies the route," said Charles, who remembered the spot well, indicating it by a motion of his hand; "why do you not proceed?"

"Because," answered the guide, in rather a dogged tone, "my good horse Wolff refuses to go farther."

Charles was about to make an impatient and rather angry expostulation, when his attention was attracted by the appearance of the animal, who had planted his feet in the rocky pathway in the attitude of a mule when urged over a dangerous precipice, as if with a determined resolution not to move an inch farther.

"You travellers are for the most part protestants, seigneur," said the guide, dismounting from his obstinate steed and leaning his arm over the saddle; "and if I tell you a piece of my mind, you will say I am a catholic, and that I am superstitious; but by the holy virgin I believe Wolff is right, and with your leave I shall follow his example."

"What is the meaning of all this?" said Charles, whose patience was ebbing fast.

"Why," continued the loquacious guide, "it means that neither I nor my wiser horse will go farther into this valley, both of us being convinced that some evil bodes it this day. Do you not see the very flocks gathering together, as they do before a storm? Do you not hear the cry of those ill-betiding ravens as they scream from the fir trees around us? Have I not twice seen the bats and owls flutter by me—creatures that would never have left their dark hiding places on this sunny day but for our warning? Do you not see the eagles with their young wheeling over our heads?—and shall I disregard all these friendly warnings? No! by the saints! no!"

"Then, in the name of the saints you worship," said Charles, whose patience was exhausted by this long harangue, "begone, and let me find my way alone. I have traversed this pathway often enough to know whither it will guide me."

He threw himself from his horse as he spoke, and flinging the bridle to his conductor, dropped a piece of gold into his open palm, and in another moment was lost to view amid the windings of the forest pathway. The guide remained stationary for an instant, looked after him, shook his head, and then taking his horses, which showed no farther symptoms of the contumacious spirit they had manifested, retraced his steps to Lucerne.

In the mean time, our young hero, with the light step of a chamois, was rapidly surmounting the difficulties of his route; and half an hour sufficed to bring him to the grille of the little court in front of the cottage, which he fondly thought contained his coveted treasure. Without waiting to request admittance, he passed the court, entered the open door, and stopped not until he found himself at the entrance of the little parlor. He paused a moment at the threshold, for all was silent within. A glance, however, sufficed to show him that it was not untenanted; for the slight form of Olivia was reclining on the sofa. She was apparently absorbed in deep meditation, and her downcast eyes were riveted on the beautiful miniature he had himself presented her, and which she held in one hand, while the other rested on the head of her faithful little favorite. A single step within the door-way changed the scene. The little animal, startled by its sound, raised his head from beneath the delicate hand which reposed on it, and turned to look at the intruder; but instead of manifesting the delight he had formerly shown at the appearance of his friend, he looked up with an expression of uneasiness and even terror, and buried his slender head beneath the rich folds of the cachemere which was

thrown around the lovely person of his mistress. This slight movement, however, was sufficient to arouse Olivia's attention; and a hectic flush rose with meteor-like brilliancy into her pale cheek, as on perceiving his entrance, she attempted to rise from the sofa. A supplicating gesture from the intruder, however, aided by her own agitation, prevented her intention.

"You have then been ill?" he said, in the graceful pantomime in which he had become so perfect an adept during his former visit.

Olivia took the porcelaine tablet which lay near her, and inscribed,

"Yes, but I am better now."

"And how is it, then," continued Charles, adopting her own mode of communication, by gently taking the tablet from her hand, "that I find you thus alone?"

"I am not alone," was the reply, "though I often wish much to be alone. My health has suffered sadly since I saw you last, though I think it would have been restored by rambling in the sweet shade of the grove where we used to walk. I have been debarred from this pleasure ever since you were here, by my feeble health, which they tell me was chiefly occasioned by wandering there twice in my sleep; and the second time thrown into a state of nervous terror, by being suddenly awakened by our hostess, whose daughter mistook me for a ghost." A faint smile illumined her beautiful features, as she presented the tablet again.

"But how then," continued Charles, who, in spite of his anxiety, found himself interested in these artless confessions, "is it that your friends are not with you? Has the friend you loved best forsaken you?"

"Forsaken me? Oh no! she is an angel of light!" raising her bright eyes to heaven, with an expression of devoted affection. "She left me only half an hour ago, and will return immediately. They have only gone to Lucerne."

"To Lucerne? Impossible! I have but just left it. Who has gone?"

"All—even the family of our host, whose places are temporarily supplied by other but faithful attendants;" continued Olivia. "I might have accompanied them—and they persuaded me much to do so; but I believe I was capricious, and did not just now care to witness their happiness."

There was a mystery in all this, which embarrassed Charles almost beyond endurance. How could he have failed to meet the lovely being who was his attraction to the valley, unless indeed, as might well have occurred, she had passed by the more frequented route, while he pursued the forest path? Another circumstance also greatly increased his anxiety. Their brief conversation had been carried on chiefly in pantomime, and Olivia had twice passed her hand over her forehead. Charles remembered well an explanation she had once made to him of this gesture. Struck by the singular beauty of Montague's noble brow, she had ever since her first acquaintance with him, indicated his name by touching her forehead. Perplexed and alarmed, he repeated his inquiries.

"They have gone to Lucerne," was the reply; and Olivia made a sign of the cross with an expression of deep reverence.

"To church?" said Charles, interpreting her gesture,—“but this is not Sunday, and your fair friend is not a catholic."

"There is a protestant church in Lucerne," was inscribed on the tablet in reply.

"Do you not yet understand?" raising her hand with a gesture that startled and appalled her attentive companion. Again he signed to her to repeat it. Olivia again made the reverential sign of the cross, touched her brow, then pressed her hand to her heart, clasped both hands together, and raised them towards heaven. Charles translated the gestures aloud—"at church,—Montague—Mary—united—forever!"—he cried, starting wildly from his seat—and forgetful that even the world, far less the narrow apartment contained aught but himself and his bitter disappointment, he paced it with gestures of almost frantic despair. He was flying from the room, when his eye was caught by the death-like paleness of Olivia, who had sunk back in a recumbent attitude on the sofa. The idea flashed across his mind that he beheld in her another victim of unrequited affection. He returned hastily, and throwing open the casement, knelt by the sofa and raised her drooping head from the pillow.

"Olivia! Olivia!" he cried, in tones of agonized distress, as if the hapless being he invoked could even in life have heard and answered him. Alas! his cares were vain! The rich masses of soft dark hair fell over his arm and shaded her marble cheek and brow—the silken fringed lids were closed, and no returning beam of consciousness met his anxious gaze—the throbbing heart was still—the grieved spirit had passed away forever!

"Is this then to be added to my cup of wo, just heaven?" he exclaimed, as the dread reality in all its awful truth burst on him, and as if endeavoring to fly even from himself, he rushed madly from the house.

Unconscious whither his steps were directed, he fled through the forest pathway that had brought him to the cottage, and continued in the same route, until utterly exhausted by fatigue and mental anguish, he sunk upon a moss-covered rock. "Would!" he exclaimed in the bitterness of his spirit, "would that yon dark and cragged mountain had fallen on me and buried me beneath its ruins, ere I had entered that once lovely, but now, oh how fatal spot!"

Could it be his disordered imagination which pictured to him that awful mountain "bowing its cloud capped head?" No! it was no illusion!—a loud crashing sound met his ear, more fearful than the thunder of a mighty avalanche!—the earth shook as if rocked by an earthquake. He looked again—the dark mountain had disappeared from his view, and the beautiful valley lay buried beneath a huge mass of chaotic ruins! The unhappy Charles heard—saw no more.

* * * * *

Nor did I, for at that instant the chaise stopped at the door of the principal hotel in Lucerne, and I lost sight of our friend as completely as the hero of his interesting tale did of the beautiful valley. When I inquired for him, I was gravely told that he had been seen by no one but myself, and it was even hinted that all that had passed during our ride had been conjured up by my own imagination, and might well be attributed to a visit from Morpheus after my sleepless night and fatiguing walk! Of this, however, it is vain to persuade me. I cannot believe it, and the next time I meet with this communicative friend, I am determined that he shall tell me the sequel of the story.

"HOME AS FOUND."

By the author of "Homeward Bound," "The Pioneers," &c. &c.
In two vols. Philadelphia: Lea & Blanchard, 1838.

In a late number of the *Messenger** we reviewed "Homeward Bound," a sequel to which we have in the work before us. The reader of the former article may perhaps remember a prediction which we ventured to make, at its close, in regard to the merits of this sequel, then already promised. We made it, feeling some doubt as to the issue—the doubt which every uninspired prophet must feel—and hoping, sincerely, that it might not be verified. Unfortunately for Mr. Cooper, and for the public at large, our prediction has been more signally fulfilled than we anticipated. Not only has he failed—failed totally of his proposed object, but—and we did not expect this—there is nothing in his last work to redeem any part of his reputation—a reputation not yet extinct, but certainly like to perish. "Home as Found," we should not think of noticing, but for the author's previously acquired fame, and the opportunity it affords of reviewing some other follies of which he has been guilty. The former reason, not very cogent even now, will soon, we fear, cease to be a reason at all.

By thus noticing the book, however, we deprive ourselves of the privilege of treating it as it deserves, and therefore feel bound to do something more than express merely this general opinion concerning it. The author himself seems to doubt the merits of his work, and, in the preface, offers a formal apology for its defects. This we shall give in his own words.

'We remember the despair with which that admirable observer of men, Mr. Mathews the comedian, confessed the hopelessness of success, in his endeavors to obtain a sufficiency of prominent and distinctive features to compose an entertainment founded on American character. The whole nation struck him as being destitute of salient points, and as characterized by a respectable mediocrity, that, however useful it might be in its way, was utterly without poetry, humor, or interest to the observer. For one who dealt principally with the more conspicuous absurdities of his fellow creatures, Mr. Mathews was certainly right; we also believe him to have been right in the main, in the general tenor of his opinion; for this country, in its ordinary aspects, probably presents as barren a field to the writer of fiction, and to the dramatist, as any other on earth; we are not certain that we might not say the most barren. We believe that no attempt to delineate ordinary American life, either on the stage, or in the pages of a novel, has been rewarded with success. Even those works in which the desire to illustrate a principle has been the aim, when the picture has been brought within this homely frame, have had to contend with disadvantages that have been commonly found insurmountable. The latter being the intention of this book, the task has been undertaken with a perfect consciousness of all its difficulties, and with scarcely a hope of success. It would be indeed a desperate undertaking, to think of making any thing interesting in the way of a *Roman de Société* in this country; still useful glances may possibly be made even in that direction, and we trust that

the fidelity of one or two of our portraits will be recognised by the looker-on, although they will very likely be denied by the sitters themselves.'

We shall not just here take into consideration the correctness of the statements on which this apology is founded. Supposing them entirely correct, a very few words will explain the fallacy of Mr. Cooper's excuse. The great majority of readers seek in a novel, as their principal and almost exclusive object, light and agreeable entertainment. Works of fiction that do not afford this, no matter what merit they may possess otherwise, are usually thrown aside as insipid and worthless. Such food is sought for, not as a means of nourishment, but for the piquancy of its flavor. Whatever, then, may be the favorite object with which a writer composes a novel, certainly his first and chief aim should be to make the story interesting—the plot and incident should receive primary attention. However correctly he may illustrate principles or delineate manners, he forms but a dull, lifeless body, unless a stirring soul of romance be breathed over the creation; and if he attempt to convey, under the garb of fiction, moral, political or other lessons, considering, that for the less serious aspect under which truth thus presented appears, its wider currency and the enlistment of feeling on its side, are more than an adequate compensation, he should remember that, in order to gain these advantages he must adhere strictly to the laws of this species of composition. Every end other than the gratification of the reader's taste should be made at least to appear secondary, and should be accomplished as if collaterally. The doctrines which the novelist would inculcate may find a more easy way to the attention of the community, and may be impressed more forcibly upon the mind, when blended skilfully in their development with the details of an interesting story, but can never, of themselves, impart essential interest to fiction. Mr. Cooper's favorite object being to exhibit the characteristics of American society, he has relinquished the peculiar advantages of presenting his views in a grave dress, for the superior ones which the novel offers, and then has wanted the capacity, or, at least, has neglected, to impart to his fiction that which alone could make it a fit vehicle for truth. Instead of endeavoring to throw the fascination of romance around his opinions, he has attempted to make the latter supply the interest which his story lacks. No *Roman de Société* ever written, however well it may have illustrated particular social manners and customs, has owed success chiefly, or in any great degree, to this excellence. Indeed, had Mr. Cooper made his original purpose collateral to that of producing a finished tale, however he had failed as to the former, he might nevertheless have given entire satisfaction to a reader contemplating only an agreeable recreation. So Bulwer, in his last novel, "Alice," which he professes to have written as a development of the "mysteries" of human nature, has produced a romance of intense interest, though he has not shed any new light upon the hidden recesses of the heart; but no one, excepting professed critics, quarrel with him because the object declared to be a primary one, appears, every where but in his preface, when it appears at all, quite secondary.

Considered as a mere literary composition, no regard being had to the pretended delineations of American

society which it contains, "Home as Found," is immeasurably inferior to any of the same author's former novels which we have read. "The Monikins," to be sure, has never fallen under our notice, nor have we been able to find any person who could give an intelligible account thereof. In point of style the present work is exceedingly loose and unfinished, and, in many parts, offends against even the plainest grammatical rules. In the dull, prosing discussions with which it abounds, there is often so much obscurity, that the reader obtains scarcely a single definite idea, but that of the author's spiteful, rancorous feelings towards his countrymen. The following passage will illustrate these remarks, especially the last :

'Eve Effingham had yet to learn that she had just entered into the most intolerant society, meaning purely as society, and in connexion with what are usually called liberal sentiments, in christendom. We do not mean by this that it would be less safe to utter a generous opinion in favor of human rights in America than in any other country, for the laws and the institutions become active in this respect, but simply, that the resistance of the more refined to the encroachments of the unrefined, has brought about a state of feeling—a feeling that is seldom just, and never philosophical—which has created a silent but almost unanimous bias against the effects of the institutions, in what is called the world. In Europe, one rarely utters a sentiment of this nature, under circumstances in which it is safe to do so at all, without finding a very general sympathy in the auditors ; but in the circle into which Eve had now fallen, it was almost considered a violation of the proprieties. We do not wish to be understood as saying more than we mean, however, for we have no manner of doubt that a large portion of the dissentients even, are so idly, and without reflection ; or for the very natural reasons already given by our heroine ; but we do wish to be understood as meaning that such is the outward appearance which American society presents to every stranger and to every native of the country too, on his return from a residence among other people.' Vol. I, p. 40.

If any person, after once perusing this paragraph, can give a clear explanation of its meaning, we envy his ready discernment, though not the acquisition of the grain of wheat winnowed from so much chaff. Between what the author means and does not mean, wishes to be understood as meaning, and wishes not to be understood as saying, we were at first greatly mystified. It is useless for him to wish 'not to be understood as saying more than he means,' if he says so much without any meaning, or if "by a multitude of words he so darkens his counsel."

In the following awkwardly constructed, diffuse and inflated sentences, we are told the important fact, that Mr. Effingham employed a housekeeper, in order that the cares 'of one of the largest establishments, in the largest American town,' might not burden his youthful daughter :

'—— Fortunately for her, however, her father was too just to consider a wife, or a daughter, a mere upper servant, and he rightly judged that a liberal portion of his income should be assigned to the procuring of that higher quality of domestic service, which can alone relieve the mistress of a household from a burden so heavy to be borne. Unlike so many of those around,

who would spend on a single pretending and comfortless entertainment, in which the ostentatious folly of one contended with the ostentatious folly of another, a sum that, properly directed, would introduce order and system into a family for a twelve month, by commanding the time and knowledge of those whose study they had been, and who would be willing to devote themselves to such objects, and then permit their wives and daughters to return to the drudgery to which the sex seems doomed in this country, he first bethought him of the wants of social life before he aspired to its parade. A man of the world, Mr. Effingham possessed the requisite knowledge, and a man of justice, the requisite fairness, to permit those who depended on him so much for their happiness, to share equitably in the good things that Providence had so liberally bestowed on himself. In other words, he made two people comfortable ; his daughter, in the first place, by releasing her from cares that, necessarily, formed no more a part of her duties than it would be a part of her duty to sweep the pavement before the door ; and, in the next place, a very respectable woman who was glad to obtain so good a home on so easy terms.'—Vol. I, pp. 7-8.

In our review of "Homeward Bound," we characterized the plot of that work as exceedingly meagre. This defect is still more glaring in the book before us. If the other appeared "like the few first chapters of a novel spun out to the size of two volumes," this, in comparison, is but a concluding chapter—and a conclusion so wire-drawn, that it has no force or beauty. And the plot is not only meagre, but also as badly conceived as that of any tale with which we have lately met, put forth by the most infantile magazine or newspaper contributor that the public forbearance has emboldened. The awkwardness of its construction we cannot more aptly illustrate, than by comparing it with the most inelegant of the author's own sentences above quoted. The foregoing part left the Effinghams just after they had landed at New York. They spend some months in that city, and thus afford Mr. Cooper an opportunity of introducing numerous illustrations of American town life. This portion of his subject being exhausted, he carries his whole company of actors to Templeton, Mr. Effingham's country seat—the Templeton of "The Pioneers." Here they find Mr. Powis, who, since his sudden disappearance, has crossed and recrossed the Atlantic, and, very opportunely for the further progress of the tale, meets the party on their arrival. The suspicion that has rested on his character is gradually cleared away, and from the disclosures made by Mr. Monday's papers, and various fortunate coincidences, he appears to be the son of Mr. John Effingham, who, having in early life married unhappily, without the knowledge of his family, deserted his wife before his son's birth, and afterwards passed as a bachelor. Paul Powis, or Paul Effingham, as he now proves to be, marries Eve ; Sir George Templemore is united to her cousin Grace Van Cortlandt, and, when the scene closes, the whole family purpose a return to Europe.

All the developments of the plot, as we have already said, are most awkwardly conducted. Mr. Cooper seems to imagine that one important art in novel-writing consists in the preparation of great surprises. In our former article we endeavored to show the mistake

of such a conception; and we think every one must admit, that, if Paul's paternity were, at first, intimated, or even fully disclosed to the reader, while still concealed from the Effinghams, the story would possess double interest. Our expectations should not be disappointed, but wound up to the highest pitch of excitement, to be, at last, realized. The disclosures in regard to Paul's parentage are also, in other respects, most unskillfully introduced. Means of proof are multiplied, as if the author were at a loss how to encompass the object proposed, until he seems perplexed amid the variety of indications, which are to be made clear and convergent towards a single point. And while he is thus apparently struggling to be delivered of the secret, scarcely at any juncture is the reader able to tell precisely how much has been disclosed. Throughout the whole story, instead of appearing to describe real life, detailing events as they might be supposed actually to have occurred, the author outrages probability, and seems continually torturing nature into outré shapes. It exhibits all the marks of clumsy invention, and all the awkward expedients for bringing out the desired conclusion which usually characterize the tyro writer of fiction. John Effingham marries, in early life, a woman whom he does not love and soon deserts. Shortly after the separation, news is brought to him of his release from the unhappy connection by his wife's death; but of the previous birth of a son, the fruit of the marriage, no tidings reach him. Supposing that her decease has severed every tie of wedlock, he forsakes the roving life, in which months of wretchedness have passed away, and returns to his relatives, among whom he still passes as a bachelor, having formed the alliance without their knowledge, and under a feigned name. His son Paul is adopted by a wealthy gentleman, of the name of Powis, who at his death leaves him heir of his name and large estate. Paul, in obedience to the injunction of his adopted parent, crosses the Atlantic and travels for some years in Europe. There he accidentally encounters his father, and Edward Effingham, the cousin of the latter, with his daughter Eve. Again, soon after, they all chance to meet on board a New York packet, bound to the United States, where they fall in, by another chance, with a certain Mr. Monday, who has in his possession papers furnishing a clue to the discovery of Paul's parentage, and fortunately dying, or rather being killed by the author for the purpose, leaves these important papers in the hands of the father and son, still unknown to each other as such. The captain too of the vessel in which they sail, as it afterwards turns out, is able to add another link to the chain of testimony. When at last the time has come for the final *dénouement*, partly by accident, and partly by the management of the novelist, Paul Powis and the Effinghams, Captain Truck, Mr. Monday's papers, with Captain Ducie, Paul's cousin on his mother's side, and one David Bright, who also can shed some light upon the mystery, are all collected for the proof. Were the facts in the case at issue before a tribunal of justice, the writ of *subpena* could not have compelled a more general attendance of the witnesses.

This leads us to remark, that the various characters of the novel are shifted from place to place and from scene to scene, just as Mr. Cooper needs their services,

in a very uncereemonious way; and that the most of them are held together throughout the entire narrative, as if destined to keep each other company for life. The Effinghams, as we have before said, spend some months in New York after landing in this country; and Sir George Templemore forgets his projected visit to Canada, Captain Truck his ship, and Steadfast Dodge, his home, Dodgeopolis, and the editor's chair of "The Active Enquirer," in the fascinations of their society. Then the family retire to their country seat, and in their train follow Sir George and Captain Truck as invited guests, and Steadfast Dodge without any invitation or any reason whatever. The latter personage seems gifted with ubiquity, and perhaps this is intended, that the author need not be continually troubled to explain his movements. Indeed, if the thing did not appear absurd, we should bespeak the reader's belief in the omnipresence of the Yankee editor's newspaper forms and printing press, as well as of his own corporeal existence; for how else to explain the fact, that, wherever he is found, he always seems actively employed in editorial labors, we know not. Another thing also we are at a loss to understand. Though the characters of Mr. Dodge, and his compeer Aristabulus Bragg, are depicted in such disagreeable colors; and though their company is so repulsive and disgusting to the refined and polished Effinghams, that the latter sometimes forget the rules of politeness so far as to ridicule and insult, at their own table, these objects of their dislike, who unfortunately are not of such noble descent, and have not enjoyed such advantages in point of education, as themselves, still Mr. Effingham invites them frequently to his own mansion, takes one or both to the houses of his friends, and tolerates their constant intercourse with himself and his family.

Every character introduced into the preceding part of the story, which appears also in this, and is capable of such a change, degenerates. Captain Truck, a plain, honest, open-hearted, manly old sailor, on board of the Montauk, becomes, on shore, little better than a buffoon—a mouth-piece for Mr. Cooper's small wit, and the instrument of his petty tricks. Though perfect master of the laws of etiquette which regulate the passengers' cabin and the quarter-deck of a New York packet, he is ignorant of the plainest rules of politeness which prevail on land. The author should never have ventured to carry him so far from his accustomed element—the ocean. A sailor at sea, and a sailor ashore, are such very different things, that perhaps a correct delineation of the latter would hardly support the interest felt in the character of the former. Paul Powis, too, the hero of the story, sinks into an exceedingly tame-spirited and common-place personage, amid the quiet scenes of ordinary life. Eve is, as before, a creature dressed in petticoats; by which circumstance, and a few other outward indications, alone, can the sex easily be discovered. This evidence, however, is sufficiently clear for us to set her down as a blue-stocking of the most watery cerulian; the other points of character which distinguish the genus, being all found in the girl's extemporaneous discussions of politics, morals, and religion. She seems to have been brought up with a copy of "Polite Learning," a little book, which we remember as the companion of our early childhood, in

one hand, and some "Girl's Own Book," or "Young Ladies' Friend," a popular treatise on good manners and decent behavior, in the other. Or, perhaps, we might suppose the first mentioned work to have given place, during her adolescence, to Mr. Cooper's "American Democrat." The Messrs. Effingham change character but little—"Cousin Jack" the more perceptibly of the two. His satiric vein assumes more broadly than before, the character of sheer ill-humor, and his so-called sarcasm degenerates, if possible, into more unpardonable and brutal rudeness, and a more undisguised violation of every rule of politeness and decorum. But of him and other personages introduced in the course of the narrative we may have occasion to speak hereafter.

In his delineations of character, unless where coarse, rugged peculiarities are to be depicted, Mr. Cooper is generally at fault. We have before expressed the same idea, and illustrated it by reference to his female characters. He cannot describe refined, delicate feelings and emotions. Where he attempts it, the failure is sometimes even ludicrous. In this work he has adopted a stereotype form of expression for certain feelings, which is repeated until every reader must be ready to smile at its recurrence. Whenever Eve or Grace is momentarily offended, or out of humor, or piqued, the indication is '*her little foot moves.*' Where a state of quiet, lady-like ease, and soft repose of mind are to be exhibited, we have them pictured thus:

'The dressing-room of Eve overlooked the lake, and about a week after her arrival, she was seated in it enjoying that peculiarly lady-like luxury, which is to be found in the process of having another gently disposing of the hair. Annette wielded the comb, as usual——.' Vol. I, p. 199.

The author attempts in vain to interest us in his *dramatis personae*. Even when he comes to the concluding chapter, and seeks to picture a scene which shall leave a good final impression on the reader's mind, we have little more than the affectionate childishness of an old nurse, professing her determination never to part from her young mistress Eve, and some dry moralities from the different speakers in the dialogue.

We have before remarked, that in description—the description of active stirring scenes—lies Mr. Cooper's forte. Yet in this point, as in various others, he falls very far below himself in the present work. Where could he have found a better subject for description than the great fire of New York? This he introduces and briefly depicts, but there is nothing grand or even vivid in the picture; and the apology that he has "alluded to, rather than described" the conflagration, does not alleviate the failure.

Mr. Cooper has been charged with attempting a portraiture of himself, in the character of Mr. Edward Effingham; and therefore with excessive vanity, in ascribing to that gentleman many uncommon excellencies of head and heart, and a superior style of gentility. There is scarcely any popular novelist who has not borne the same accusation, and perhaps there has been some ground for it wherever it has been made. Every one's notions of good and evil are tinged by his own peculiarities of thought and feeling, and this is the case especially in regard to notions of human character. There are many intellectual and moral traits, of which

we can scarcely form a distinct and vivid conception, but by viewing them as exhibited in ourselves, either in actual existence, or by contrast. When, therefore, we endeavor to personify such traits in a fictitious being, the creation will naturally bear some resemblance, greater or less, to the creator. A writer may, on this account, describe himself, or blend his own peculiarities with ideal existences, unwittingly. But Mr. Cooper has given stronger ground for the charge than this—stronger indeed than has any novelist with whom we are acquainted. He has introduced into the narrative well-known scenes in his own private history, and has embodied in his delineation of Mr. Effingham many of his before-expressed opinions on various subjects, and even his peculiar feelings and prejudices.

He lays the theatre of a great part of the events of his story in Cooperstown, his place of residence, to which he gives the name of Templeton. This village is situated on Otsego lake in the state of New York. It seems, that not many months ago, a dispute arose between Mr. Cooper and the inhabitants of Cooperstown, in regard to a point of land, belonging to his estate, commonly called, as we believe, the "Three Mile Point," which juts out into the lake. The inhabitants claimed to have used this point for pic-nics, and pleasure parties of every description, from time immemorial; but Mr. Cooper, irritated perhaps by something said or done in derogation of his proprietorship, published an advertisement forbidding them to set foot on the disputed territory, on pain of being treated as trespassers. The good people of the town, thinking themselves aggrieved, resorted to a very common measure for the redress of their supposed wrongs—a measure common in every country where it is practicable, notwithstanding what the novelist may say about American idiosyncrasies to the contrary—they called a public meeting, at which were passed sundry resolutions declaratory of their rights. How the matter terminated, we have not been exactly informed; we believe, however, that Mr. Cooper eventually made good his title. But the history of this occurrence, which was bandied about freely in the newspapers of the day, is related quite circumstantially in "Home as Found," Mr. Effingham, in the fictitious scene, holding the same place as in the real did Mr. Cooper. Now if a person may unwittingly describe his own character under the garb of fiction, it is not safe always to presume that he has intended to do so, merely because of the likeness. And even where a novelist has intentionally depicted traits peculiar to himself in an imaginary personage, we may, perhaps, suppose that he has done this for the sake of vividness in the picture, and without thinking to arrogate to himself all the features with which he has associated those traits, with more reason than that he has contemplated an exact self-delineation. And as most novels are partially founded on fact—as every writer of fiction gathers his materials from various sources, describing real events, without any regard to the persons actually connected with them, and real characters entirely separated from the transactions of their true history, we cannot see why Mr. Cooper may not embellish or illustrate his narrative, by describing scenes in his own life, and yet have no intention to bring himself before his readers. Still we must consider it imprudent to have given such occasion for sarcastic criticism upon

the author's intention, as he has in this work; at the same time that we think the sarcasm, though perhaps plausible, by no means ingenuous.

We now turn to those parts of the volumes before us which, in themselves considered, are perhaps the least worthy of serious notice—those descriptive of the state of society in the United States. The evidence which almost every page exhibits of their having been written in a spirit soured by disappointment and rebuke, into spite and malignancy, would of itself prove their worthlessness as a source of correct opinion. We have already quoted at least one passage indicative of this spirit, and here add a few others, in which it shows itself still more plainly. We might multiply them to a tiresome extent.

"—Least of all is the manliness you have named, likely to be valued among a people who have been put into men's clothes before they are out of leading-strings. * * * In most nations there is a high standard to which man at least affects to look; and acts are extolled and seemingly appreciated, for their naked merits. Little of this exists in America, where no man is much praised for himself, but for the purposes of party, or to feed national vanity. In the country in which, of all others, political opinion ought to be the freest, it is the most persecuted, and the community-character of the nation induces every man to think he has a right of property in all its fame." *Vol. II, p. 65.*

"—New York, that town of babbling misses, who prattle as water flows, without consciousness or effort, and of whiskered masters, who fancy Broadway the world, and the flirtations of miniature-drawing-rooms, human nature,—"*Ib. p. 159.*

"You have yet to learn, Miss Effingham, that men can get to be so saturated with liberty, that they become insensible to the nicer feelings. The grossest enormities are constantly committed in this good republic of ours, under the pretence of being done by the public, and for the public good. The public have got to bow to that bugbear. * * * Men will have idols, and the Americans have merely set up themselves." *Ib. p. 29.*

"—Thus, the private citizen, who should presume to discuss a political question, would be deemed fair game for all who thought differently from himself. He would be injured in his pocket, reputation, domestic happiness, if possible; for, in this respect, America is much the most intolerant nation I have ever visited. In all other countries, in which discussion is permitted at all, there is at least the appearance of fair play, whatever may be done covertly; but here, it seems to be sufficient to justify falsehood, frauds, nay, barefaced rascality, to establish that the injured party has had the audacity to meddle with public questions, not being what the public chooses to call a public man—" *Ib. p. 176.*

"Mademoiselle Vieffville was delighted; for, after trying the theatres, the churches, sundry balls, the opera, and all the admirable gaieties of New York, she had reluctantly come to the conclusion that America was a very good country *pour s'ennuyer*, and for very little else;—" *Ib. p. 103.*

We agree with Mr. Cooper in the opinion, that this country is comparatively a barren field, to him who attempts a *Roman de Société*, as regards the materials peculiar to this species of fiction. We Americans have

the common emotions, passions, virtues and vices of civilized men; and in human character, and that grade of character which we can best understand and appreciate, from the force of sympathy, are the richest mines whence imagination can draw its precious ores. We have already said, that no romance can be deeply interesting, by force merely of correct and vivid descriptions and illustrations of national or social manners and characteristics: they can form nothing more than the embellishment of the story, which must, after all, depend chiefly for its excellence on its delineations of human nature, and narrative of human actions. We have, then, abundant materials for fiction in this country, although it might "be indeed a desperate undertaking to think of making anything interesting in the way of a *Roman de Société*," considered merely as such. Most novels of this description, which have been successful, may be termed fashionable novels—tales of fashionable life. These have owed that share of success which they have met with, beyond what was due to them as merely entertaining stories, to the distinctions of political rank, and the usual concomitants of those distinctions, which prevail in the countries where this species of fiction has flourished. High rank and title wear, in the eyes of most men, a splendor, closely allied to that which true nobility of character exhibits. Even the glare of fashion is oftentimes mistaken for the lustre of real superiority of intellect. On this account vivid descriptions of scenes in high life possess a degree of the same attraction, which the well-drawn picture of deep human emotions, or brilliant actions possesses. The sight of a baronial castle, or a nobleman's villa at once bespeak the reader's courteous attention to all that can be said of such distinguished objects. There is too, in the countries of which we speak, a universal passion among the lower and middling classes in the community, for aping the manners of the higher classes, and this gives a wide currency to books descriptive of fashionable life. To a very great extent the same feelings pervade different classes of the people of this country; but among us they are best gratified by the perusal of English works of fiction; for we have no titled rank in the United States, and the mysteries of fashion have become too familiar to most orders of our countrymen, from the absence of exclusive political and social privileges, and the constant working-up of the materials of American society, for them to excite the same interest and curiosity here, which they do in England and other European states.

Mr. Cooper has taken at least a comprehensive view of the condition of society among us. He might have labelled the dose, "America, Religious, Political, Literary, Social, &c. &c." We certainly did not expect to meet with the polemic theology of a particular sect introduced into such a work and such company; though perhaps we shall find that our author is too liberal, to consider any place or company unfit for religion. We might indeed have expected a striking exhibition of pious feeling from one whose whole christian (?) creed acknowledges simply belief 'in the goodness and power of a Being whose nature and agencies exceed our comprehension.* The plea of great liberality, however, will not excuse sins of ignorance. Mr. Cooper should know, that, besides believing that it is improper for a

rational being ever to kneel, and that "God never intended an American to kneel,"* some religious sects in the United States entertain scruples against bending the knee, in the more formal exercises of public worship, founded on what they suppose apostolical institutions. For Madame Vieffville, when she comes to the conclusion, 'after trying the theatres, the churches, sundry balls, the opera, and all the admirable gaieties of New York,' that '*America is a very good country pour s'ennuyer*,'† we can find some apology in the laxity of religious education prevalent in France. But for Mr. Effingham, who intrusts his daughter's moral and religious training to such a governess, and for Mr. Cooper, who puts such words into her mouth, we can find none, though both may be supposed to have picked up some strange notions in foreign parts. We would advise the latter gentleman to exclude, hereafter, all religious discussion from his fictitious writings; or, at least, to remember that trifling levity is, in connection with such matters unseemly; that sarcasm and ridicule are not the most fit or effective weapons in ecclesiastical warfare. We make these remarks, not as sectarians; for as critics, in these pages, we have determined to know nothing of theological distinctions of sect.

Our author tells us that his work has been written with "the desire to illustrate a principle," as its chief aim. The principle intended is, that "the governing social evil of America is provincialism."‡ Our first impression on reading this announcement was, that by "provincialism" the author intended to convey the idea of a rude unpolished state of society, or, of a dependance on other countries, which might be regarded in this respect as holding a sway over us, for opinions, manners, arts and sciences; or both the one and the other, as effect and cause. But the following passages seem to exhibit a different intention, though the meanings which we attached to the word seem to have entered into Mr. Cooper's ultimate, if not his original conception.

'——Without a social capital, with twenty or more communities divided by distance and political barriers, her people, who are really more homogeneous than any other of the same numbers in the world perhaps, possess no standard for opinion, manners, social maxims, or even language. Every man, as a matter of course, refers to his own particular experience, and praises or condemns according to notions contracted in the circle of his own habits, however narrow, provincial, or erroneous they may happen to be——.' *Preface.*

'——But in a nation like this, without a capital, one that is all provinces, in which intelligence and tastes are scattered, this common mind wants the usual direction, and derives its impulses from the force of numbers, rather than from the force of knowledge——.' *Vol. II, p. 175.*

With the author's opinion that provincialism, thus explained, is one of the evils of American society, we partly agree, though not in his belief that it is a "governing evil." Indeed, however the term may be explained, we think it applicable to this country. We certainly have no fixed standard of manners among ourselves: we depend on other countries, England and France, for laws of social life. A court, an order of

nobility, and a social capital seem almost necessary to the existence of such a standard. The possibility of the two first is precluded by the peculiarity of our political constitution, and for the same reason, and because of the wide extent of our land, it is extremely improbable that we shall ever have the last: certainly we shall not for long years to come. Under these circumstances we are naturally dependant for the rules which mould the face of society, upon countries where a certain standard exists. When we throw off the political domination of Great Britain, the instant demands of our novel situation led us to think and act for ourselves in politics, and the consequence has been an unique form of government, though, indeed, even in the construction of this, we have not lost sight of the English model. In religious matters, too, we have achieved a complete independence, though without such radical changes as those effected in our civil polity. Theology has always been a favorite field for the spirit of innovation and real or supposed reform. But every tie which bound us to the mother country was not severed by our revolution. It would have been as impossible to destroy, at once, all dependance upon England, as to accustom our tongues to a new language. Under another form of government, our laws are, in a great measure, the same as before the separation; and for learned expositions of those laws we still look with the highest respect to the tribunals of our father-land. The state of public opinion in this country, as to many points, has always been determined by transatlantic influence, sometimes for good, sometimes for evil. In literary matters we have hitherto deferred much to British critics; though this kind of dependance, the source perhaps of frequent error, is daily diminishing. As regards every thing relating to manners, and the regulations of refined and elegant society, having, as we have already said, no standard among ourselves, and there being no necessity for the establishment of such a standard, were it possible, we have naturally looked to England for example, having perhaps borrowed from the French very little directly.

We believe there is no country upon earth, where the true principles of politeness and good manners are more universally diffused through all classes of the community, and more generally exemplified in practice, than they are in the United States. As an evidence of this we point to the condition of American females, asserting that their sex is no where treated with such marked respect and attention, among all ranks and conditions, as in our own country. This is the effect of the wide spread of knowledge, and religious teaching, and of our political equality. We speak now of natural principles of politeness, not of mere conventional rules. Perhaps Mr. Cooper may find greater submission and deference to rank among the common people of England, than among our own; he may find that English menials can doff their hats more humbly, and ask for a shilling with a lower bow, than American servants; and for the same reason that a regular soldier goes through the evolutions of his service more readily than a common citizen at a militia muster. But this does not prove that the lower classes in the United States are worse bred than the same classes in Great Britain. We hold, too, that there is as much real refinement and delicacy of feeling in our

* Vol. I, p. 211.

† Vol. II, p. 103.

‡ Preface.

higher grades of society, as in those of any European nation; but, at the same time, are free to admit that we are behind several other nations, in point of those conventional rules of good-breeding before alluded to, some of which are entirely arbitrary, though most of them are founded on true principles. These laws of etiquette are the offspring of a state of society much more artificial than our own; and where there is no court or order of nobility to enact them, they can result only from gradual legislation, under the auspices of great wealth and elegant luxury.

This leads us to observe, that, while Mr. Cooper admits that provincialism is 'a misfortune that is perhaps inseparable from our situation,'* and speaks of the nation as yet in leading-strings, thus implying that the evil is incurable, or is owing to the weakness of immature age, he loses no opportunity of casting ridicule upon this misfortune, and directing the most malignant shafts of satire against our puerile foibles. He will not give the nation the legitimate benefits even of the paltry excuse—that of non-age—which he pretends contemptuously to suggest. A child is not expected to utter the deep tones and rich modulations of the voice of manhood. Should a people yet in their infancy be ridiculed, because they have not carried the fine arts to that degree of perfection which the luxury, refinement and wealth of the nations most renowned for the length and splendor of their career have consummated? Should a rude, half-civilized race be treated with contempt, because the heavenly strains of music that float with every breeze over more favored lands, the ancient homes of song, are not theirs; because, in their humble dwellings, they have not rivalled the architectural taste of the most enlightened people?

Mr. Cooper illustrates the defects of American manners both by example and by contrast. We shall not encumber our pages with extracts from his broad caricatures of the state of society in this country. Like all caricatures they contain just enough truth to make their point manifest. One perfectly ignorant of what he pretends to describe, would find the strongest internal evidence of the infidelity of his sketches. Let such an one turn, for example, to the description of the literary *réunion* at Mrs. Legend's, in New York. If the author claimed for it no other merit than that of a humorous caricature, it might be thought too grossly exaggerated. When, to conclude the farce, Captain Truck, who has never been guilty of such a breach of decorum, as to smoke in the cabin of his packet-ship, thrusts a cigar into each corner of his mouth, and puffs away in a lady's parlor, surrounded by a well-dressed company of both sexes, and the greater number of that company mistake the outrage upon decency for an evidence of superior gentility and refinement, the reader must feel towards the author very much as he would at witnessing the performances of a clown at the circus, not able to restrain his laughter, but in his heart pitying the self-stultified buffoon.

The Effinghams are represented as models of refinement and good-breeding; yet John Effingham, despite his superior good sense, and the advantages of European travel, is the most unmannerly person which the story introduces. At his own table he ridicules and insults an invited guest, and introduces into a lady's

drawing-room more than one individual, under a false character, to throw contempt and derision upon both herself and her company. But we are heartily tired of exposing the inconsistencies and absurdities with which these volumes abound. We had intended to say much more, but both our limits and patience are well nigh exhausted. The motto which Mr. Cooper has prefixed to his work is, "Thou art perfect." If he applies this to either himself or his story, it is rather ill-natured in us to attempt any farther to destroy or lessen such harmless self-complacency.

Soon after this novel made its appearance, both the author and his book were very severely handled by the editor of a New York paper—"The Morning Courier and Enquirer." The attack upon Mr. Cooper's private character we must consider unjustifiable, and unworthy of a respectable journal. And the strictures upon the book itself, though by no means entirely devoid of legitimate force and truth, were, at least, not remarkable for their fairness. Certainly, Mr. Cooper should not have noticed this critique. Yet, on the very day that it appeared, an evening paper published a letter from him in reply. This letter and another that followed it soon after, have lessened their author in our estimation, even more than the novel which we have in hand. He actually so far forgets himself—stoops so low, as to deny his ever having solicited the place of Secretary of the Navy, in answer to an insinuation that he had hoped for that office! And he threatens the editor with a prosecution for libel. If Mr. Cooper, after giving just cause for exasperation to the whole corps of newspaper editors, throughout the country, by a gross, though not a legally tangible libel upon them, under the abominable fiction of Steadfast Dodge, for any sort of retaliation, less than personal violence, obtains satisfaction at the hands of justice, we shall regard his triumph as a signal proof of the supremacy of those laws, which the condition of society renders needful, though strict equity be sometimes violated in their bearing on particular cases.

Before we bid Mr. Cooper farewell—a farewell for months or years—it may be forever—we crave the reader's indulgence, while we review, in a few paragraphs, a character different from that of the novelist, in which he has lately presented himself at the bar of public criticism. In our notice of "Homeward Bound," already several times alluded to, we mentioned one indication of his bearing a personal grudge against Sir Walter Scott, though chiefly for the purpose of illustrating a part of the subject which we then had in hand. Since that was written, he has given the world a clearer exhibition of his feelings toward Scott, in the form of a critique upon the memoirs of his life, by Lockhart. This production we shall notice here, because it seems deserving of some notice, yet not worthy of a separate article; and it has an obvious connection with the subject already treated, if not as a work of fiction, at least by nearness in point of time, and likeness, as one of the author's literary follies. It was thrown in as a sort of interlude between the parts of his *Roman de Société*, appearing in the October number of "The Knickerbocker," and has attracted considerable attention in this country, and perhaps as much in England. It is really a curiosity, looking at either the article itself, or the time and circumstances of its concoction.

It is always in bad taste for an author to set about decrying the character and productions of a fellow-author, laboring in the same field of literature as himself. Especially where a writer has acquired a brilliant reputation; when his name "has gone out into all the earth," has been embalmed in perpetual remembrance; and when, after being the long acknowledged leader of an illustrious host, he has departed in the freshness of his glory, it is unseemly, for one who has humbly rivalled, while appearing but to follow him, to seek, as if determined that death should not have anticipated the chance of dishonor, to cast reproach upon his memory, and desecrate his fame. We cannot help suspecting that such an one is moved by feelings of envy, to whatever motives he may pretend. But there is still stronger ground for suspicion of unworthy motive in the case of Mr. Cooper. He has before manifested a malevolent spirit against Scott, nurtured by wounded pride; and, still more, is well known to have long felt a gnawing grudge against Mr. Lockhart, the author of Scott's memoirs, and editor of the London Quarterly Review, another object of his particular hatred. In "*Home as Found*" he has devoted page upon page to the demonstration of these latter kindly traits of disposition. And, besides, and more than all this, when we turn from these grounds of presumption, to the examination of the article in question itself—an article, be it remembered, written by Mr. Cooper under the galling consciousness of his own literary wane—we find internal evidence, palpable and strong, of malice, disguised but awkwardly under the pretence of a sacred regard to truth, and "those old and venerable principles which have been transmitted to us from God himself."

We do not intend to attempt here any defence of Mr. Lockhart: indeed we were never impressed with a high idea of his character for honesty and fairness, at least considering him as a critic. Nor yet do we purpose any systematic apology for Sir Walter Scott, our chief aim being to expose Mr. Cooper's motives and spirit in writing this review. But we may say in regard to the former individual, that the charge of his being a very improper person for the task of biographer to his father-in-law, is hardly sustained by the proof, that he has admitted into his work some things derogatory from the character of Scott, and the unfair inference drawn from this fact, that "he has been totally unconscious himself of the conclusions to which all right-thinking men must arrive" in regard to these admissions.

Our limits forbid us to go into a full examination of the review under notice, which extends through near twenty closely printed pages: a very general discussion of some of its most important topics must suffice. We do not pretend to say that it contains no truth. It certainly does; but truth so distorted by ill-feeling, and mixed up with so large a proportion of artful or heedless misrepresentations, as to be more likely to mislead than even falsehood itself. The author sets out with the extraordinary and sweeping assertions, which he makes in the sacred name of "truth and human rights," that Sir Walter Scott, whom all the world, before Mr. Cooper made these grand discoveries, had believed to be, in a moral point of view, though by no means perfect, or without stain, a rather good sort of man, one whose faults were owing more to the state of society in which he lived, than to any uncommon badness of heart;

that Sir Walter Scott was often influenced by 'motives that are never admitted by the upright, and never avowed by the sensitive;' that, 'in a moral sense, he owed his extraordinary exaltation to some of the most barefaced violations of the laws of rectitude, that ever distinguished the charlatanism of literature;' that his name should be 'involved in obloquy, in consequence of the offence against the plainest laws of morality and truth;' and that he was 'full of talents, worldly prudence, management, false principles, insincerity, mystification and moral fraud.'

Let us first compare these accusations, which, in the beginning, the writer promises to make good, with the ultimate conclusions at which he arrives, after the exhibition of all his evidence, and the endeavor to palm off upon his readers, numerous hints, and conjectures, and remote presumptions, and inferences, for proof. In summing up the matter, he says, "The personal character of Scott, as is only too often the case, strikes us as having been a union of good and bad qualities." *'As is only too often the case!'* Pray, is it ever not the case? Can Mr. Cooper's motto, "Thou art perfect," be applied, else than in irony, to any human being? Again, he remarks, "There are no apparent reasons to doubt Scott's courage, his liberality, his philanthropy, in the ordinary meaning of the term, his probity in every day transactions, or his neighborly propensities; while there is no proof, but phrases, to show that he possessed either quality in an unusual degree. * * * On the other hand, it is not easy to suppose, after the proof that has been here furnished, and much more that might be adduced, had we room, that Scott was a man of nice moral sensibilities; of lively perceptions of right and wrong, except as right and wrong are subjected to the comments of the world; of even common sincerity; of a proper degree of frankness; of true simplicity of character; of a just manliness in matters touching his own interests; or of due independence of thought, or conduct." The result of this comparison we need not formally state.

Two capital errors are visible throughout the review in hand, and it is better, in the outset, to place them in their proper light. First, Mr. Cooper appears to imagine that, if any stain upon Scott's moral character can be detected, it must appear doubly dark on account of his literary fame. Literary men, he seems to think—but how his opinion has been formed, the reader will be at a loss to divine—are usually so much superior to others, in point of moral worth and probity, that, like angels, if they slip, they must fall into the deepest hell of infamy. Perhaps the reader will feel the same difficulty that we do, in understanding why a literary man is more culpable than any other of equally good moral training, both having committed the same offence. The second mistake into which he falls is, that of making no allowance for the state of society in which Scott lived, but considering virtue and vice, probity and dishonesty, as abstract things. The reader will not understand us to mean, that there are not any fixed and universal principles of moral conduct; that there are no acts which would be morally wrong under all circumstances, or in any state of society. We contend only, that with changes in external relations, is often varied the guilt incurred in the commission of an act, in itself immoral; and that acts, under some circum-

stances immoral, become, under others, almost indifferent, or even praiseworthy. No one will pretend that theft, in a Spartan youth, was as criminal as it is under our institutions; or, to take a more familiar illustration, and one more apt to the subject in hand, no one will pretend, that to conclude a letter to a man whom the writer despises, or with whom he is at enmity, with the customary words of respect, "yours, &c.," or "your obedient servant," is as reprehensible, if reprehensible at all, as saying "not at home" to an unwelcome visitor, in a community where, from custom, this falsehood has acquired a sort of technical meaning, different from its real one; or that the latter is as criminal as any other equally inoffensive lie. But it would seem useless to seek for further illustration of this point: Mr. Cooper himself seems to take a proper view of it, though he does not give Scott's character the benefit of that view.

The chief, and almost the only well supported charges, which the reviewer brings against Sir Walter, are founded on his connection with the *London Quarterly Review*: and having, as he supposes, fixed a deep stain of guilt upon his character, by proofs in regard to this point, whenever he fails of establishing any other crime, by direct evidence, he has only to call to mind Scott's dishonesty as a reviewer, to feel perfectly satisfied, that he might have been, and, therefore, certainly was guilty of such other sin. We do not pretend to justify Scott's conduct, either as an original projector of the *Quarterly Review*, or subsequently as a contributor to its pages when established, or as a self-reviewer. We cannot well doubt that he was influenced by some unworthy motives, in advocating and assisting in its establishment, and that he advised a species of deception in its commencement; yet Mr. Cooper makes much more out of a few passages of a letter on this subject, than he can do with any fairness. The only point which they prove is, that Scott counselled Gifford, not to give his publication a professed political character at the outset, but to introduce politics afterwards, under cover of an established literary reputation. Such a concealment of the real object of the review was certainly a deceit, but a deceit, under all the circumstances, so slightly objectionable, so little different from proper worldly prudence, that Mr. Cooper saw that something more must be tortured out of the letter, in order to accumulate upon that offence, deeper marks of dishonesty. But, to accomplish his purpose, he is driven, in the end, to the palpable sophisms, that Scott must have been insincere in his approval of high Tory principles, because he did not think all of the royal family and nobility, immaculate; and that this insincerity proves his criminal intent, in advocating the establishment of the *Quarterly Review*, to defend those principles! From other evidence, however, we believe it may be shown, that Scott probably did consider strict impartiality, in reviewing, rather a matter of policy than of conscience. All that Mr. Cooper says, in regard to the letter to Ellis, which is without date, is so entirely conjectural, that it is not worthy of a serious remark. Indeed, the evidence that he adduces on that point, resolves itself at last into this assertion—that Scott probably did what he is charged with doing, because, after the other disclosures in regard to the *Review*, he cannot "now come before the world with any pretensions to be superior to suspicions of this nature!"

By far the most reprehensible action, on which Mr. Cooper comments, was Scott's reviewing himself. This species of reviewing is said to be, at present, very common in Great Britain. If so, Scott's example has, probably, done mischief; for we doubt whether the practice was as common, at the time when he committed the sin. As some extenuation, however, of this and his other *Quarterly* offences, the reader should remember the very lax notions prevalent among British literati, in regard to periodical criticism. And even if all that Mr. Cooper charges, in this respect, were made good, we do not think it would be sufficient to destroy utterly Sir Walter's general character for probity, much less to prove all the other specific accusations which he prefers.

The practice which Scott recommends to his brother Thomas, in regard to letters of introduction, is too severely criticised by the reviewer, though we agree with him in considering it an inexcusable deceit. So great, however, is the difficulty in regard to letters of introduction in a country, where such an artificial state of society, as that of England, exists, that there may be a much more plausible apology for a practice of this kind, than merely the fear of losing "a supporter."

As we before remarked, our main purpose is merely to place, in a true light, the spirit and feelings which have actuated Mr. Cooper, in the preparation of this review, not to defend the character of Scott. We shall not, therefore, enter into an examination of all the remaining allegations, most of which are founded on mere conjecture, or, if admitted, show no dishonesty or want of virtue; but, before concluding, shall advert to a few of them. We are at a loss to see any inconsistency in Scott's approving of an aristocracy, and advocating its claims, while he despised many of the individuals of which it was composed, for their vices; or, in his putting a low estimate on the personal character of George IV., and yet being ready to serve him, as *his sovereign*, "by word, and pen, and sword," as a loyal British subject, and to ask favors, which he alone, as king, could bestow. What a monstrous assumption against the novelist's character, is that grounded on Viscount Melville's being his patron, or "the architect of his little fortune!" Because that noble "has the reputation of having employed more corruption in discharging his trust, than any man of modern times," and because Scott says that his patronage was not due to his love of literature, but to "circumstances of personal regard merely," Mr. Cooper takes for granted that Scott was bought by lord Melville, and considers his explanation of the matter, an admission "confirmatory of an accusation of the Scottish Whigs, who charge him with having been, in secret, one of the most ruthless political writers of their country!" This alone is sufficient evidence of the writer's malicious spirit.

Here we must conclude: but before bidding Mr. Cooper adieu, must be permitted to say, that though we may have said some things harshly, we have never felt any but kindly feelings towards him personally, so far as we have been able to separate him from his works. None have ever felt more proud of him as an American author, than did we some years back; and still we feel proud of many of his works, as American productions. None would rejoice more heartily than ourselves, at the redemption of his fame—none to do him honor,

where honor was justly due. He has already announced a new work in preparation—A Naval History of the United States. No one with whom we are acquainted, would be fitter for such a task, than Mr. Cooper, had he a little more of that nationality of feeling, which seems essential to its proper accomplishment. Still, with highly favorable anticipations, we await impatiently the appearance of the work, hoping, nay, expecting, that, in hereafter doing it justice, we may be able to pronounce it the bright harbinger of its author's restoration to his country!

TO THE EDITOR OF THE SOUTHERN LIT. MESSENGER.

Sir,—While Dr. Franklin was in France, as minister of the United States, a poem was presented to him, a copy of which I send to you, taken from the original now before me. Perhaps you may consider it, under all circumstances, worthy of a place in the Messenger; and perhaps some one competent may favor you with a translation. The spirit, in which the article was conceived and expressed, was truly patriotic—I might say glorious. No one can wonder at the revolution of France, if many of her sons entertained such sentiments as those of Col. Vaublanc. There is but one alloy to our delight, when reading his effusions, that the reality does not correspond with the generous fancy of the poet. Blessings we have had, and have; but we seem not to be sensible of the precious nature of our inheritance. If man is capable of reaching the high degree of perfection, described in the poem, it must be confessed, that, although more than half a century has passed away since it was written, we are still in our political infancy, and sometimes, like children, sporting with things that should be hallowed.

W. J. D.

Philadelphia, 1839.

SUR LES ETATS UNIS D'AMERIQUE.

Par Mr. de Vaublanc, maréchal de camp, ancien lieutenant colonel du regiment de la Sarre.

Il est donc un lieu sur la terre
Exempt de vaine ambition,
Où le magistrat, vraiment père,
Est l'homme de la nation.

Où l'on obéit sans bassesse,
Où l'on commande sans fierté,
Détestant la perfide adresse,
Qui cimente un droit usurpé.

Sous une sauvegarde sûre,
La précieuse égalité,
Comme au printemps de la nature,
Y regne en sa simplicité.

Le poison de la flatterie
N'y corrompt pas l'autorité,
Et qui parle pour la patrie,
Est toujours sûr d'être écouté.

Nations qui sur la victoire
Fondez votre droit le plus beau,
Sachez qu'il est une autre gloire,
Contemplez ce peuple nouveau.

Le jour de son indépendance,
Par le sang ne fut point souillé,
Et sans passer par la licence
Il parvint à la liberté.

Il saura toujours se prescrire
Moyen honnête, honnête fin;
Il n'étendra pas son empire
Aux dépends d'un foible voisin.

Le dévouement à la patrie
Helas! oublié parmi nous,
Aux dépends même de la vie,
Lui paroît honorable et doux.

Plus sage que Sparte, qu'Athènes,
Il rend tous ses membres heureux,
A l'esclave il ôte ses chaînes,
A chacun il laisse ses Dieux.

D'un suffrage légal et libre
Le magistrat tient son pouvoir,
La loi par un juste équilibre
Contient chacun dans le devoir.

Le fils des titres de son père
Ne peut jouir qu'en l'imitant,
Mais aussitôt qu'il dégénère
Il est remis au dernier rang.

Une vigilance éclairée
Anime toutes les vertus,
Et la rigueur est tempérée
Contre le crime et les abus.

Sur l'autorité qu'il confie,
Veillant avec attention,
Le citoyen ni la patrie,
N'en craignent pas d'oppression.

Source du pouvoir légitime
Peuple! ailleurs à peine compté,
Peuple! que par tout on opprime,
Connais tes droits, ta dignité.

La force à l'artifice unie,
Veut en vain te les enlever,
Tu les reçois avec la vie,
La mort seule peut t'en priver.

Nation vraiment respectable
Conserve ces augustes droits,
Pour rendre ton bonheur durable,
Sois toujours fidèle à tes lois.

Consacre à jamais la mémoire
De tes généreux défenseurs,
Leurs noms sont gravés dans l'histoire,
Ils doivent l'être dans les cours.

Par son courage et sa prudence
L'un dompta tes fiers ennemis,
L'autre par sa douce éloquence
Partout se donne des amis.

La même main qui du tonnerre
Enchaîne le feu dévorant,
D'un roi terrible en sa colere,
Brisa le fer étincelant.

Un repentir pusillanime,
Te rendait un honteux repos,
Dans ton sein, peuple magnanime!
La liberté fit des héros.

Loin de toi fausse politique
Cabale, intérêt, faction,
Sois fort de la force publique,
Sois jaloux de ton Union.

Laisse à l'Europe corrompue,
L'art des êtres insidieux ;
La vertu n'est bien défendue,
Que par des moyens vertueux.

L'ambition insatiable
Veut vaincre, envahir, enchaîner ;
Toi peuple ne sois redoutable
Qu'à ceux qui voudront t'opprimer.

Tu recouvras par ton courage
L'inestimable liberté,
Fais en toujours un noble usage,
Sois l'honneur de l'humanité.

Enflamme nous par tes exemples—
Suffiroit-il de t'admirer ?
L'univers te devoit des temples—
S'il pouvoit un jour t'imiter !

Americains ! ce foible hommage,
Fut dicté par le sentiment,
Chez-vous sans les glaces de l'âge
J'irais en faire le serment !

CONFESSIONS OF A NOVEL READER.

Disappointed in my prospects, dissatisfied with myself, and soured with the world, I have resolved, at the age of sixty-five, to record the history, not so much of my adventures, as of my mind, and to trace, in the errors of my education, the causes of those disasters that have embittered my past life. I cannot hope, at this late period, to repair those errors, or to reform the defects of my mind and character ; yet I shall not have lived in vain, if, by recalling the accidents of an idle and unprofitable life, I may reclaim one human being from the indulgence of that fatal propensity, which has reduced me to the condition of a miserable drone, unfit for any steady occupation. Philosophy teaches by examples to be shunned, as well as to be imitated. In reviewing my career, I have not to reproach myself with any gross vices ; but time misspent, talents misapplied, opportunities neglected, have entailed on me the calamities, if not the guilt, of dissipation. At an early age I acquired a taste for novel reading, and indulged it to such an excess, that my mind was enervated, and its relish destroyed for higher and more solid attainments. I feel that I had a capacity for better things ; but, under the ascendancy of this idle habit, it sunk into a fatal lethargy, from which neither shame nor ambition could awaken it. The drunkard, in the intervals of sobriety, feels most keenly the evils of intoxication, and, if self love allowed him to be candid, could a tale unfold of disease, of mental and bodily suffering, that would do more for the cause of temperance than all the societies in the world have ever accomplished. The excitement of novel reading is akin to intoxication. When it subsides, it leaves the mind collapsed and im-

becile, without the capacity or the inclination for active exertion. I question, whether the confessions of an opium-eater exhibit more striking evidences of the pernicious influence of that stimulating drug on the physical system, than the experience of an habitual novel reader can furnish of the injurious effects, produced on his mental organization by the constant perusal of works of fiction. By the results of my own experience, I desire to warn my young cotemporaries of the danger of yielding too much to the fascination of these seductive works. In this age, when the press groans under the multitude of these productions, when every department of literature is stuffed and spiced with the effusions of fancy, that it may cater to the prevailing taste, it might be a profitable speculation to inquire, whether we are not feeding the imagination at the expense of the other faculties,—whether this stimulating regimen has not produced a kind of intellectual dyspepsia, whose diseased appetite relishes only the exaggerations of fable, while it rejects and loathes the wholesome nourishment supplied by works of practical usefulness. But let me not be understood as advising entire abstinence from this kind of reading, though that is the favorite panacea in all those gratifications which have a proneness to excess ; a proclivity proper to all pleasurable emotions. Religion and philosophy have not disdained to invoke the aid of fiction, and to employ its allurements in the dissemination of truth ; and it must be confessed, that many of our cotemporary novels evince talents of a high order, taste, imagination, fertility of invention, and a deep knowledge of human nature. Such works, if read with a critical eye, and as a relaxation from severer studies, must conduce to the cultivation of the taste, and to the formation of sober views of life. Yet I question, whether even these are not read by most people, rather for the interest of the narrative, than for the beauty of style, the ingenuity of plot, or the lessons of moral wisdom, which they exhibit. But I have been insensibly led from my purpose by this disquisition. I hate long preambles, and have always thought the introductions, prefixed by Scott to his novels, the greatest blemishes in those delightful fictions. I like a writer or speaker who enters at once in *medias res* without the formality of an exordium.

To proceed then with my tale ; I was born of respectable parentage, in a part of Virginia not necessary to be mentioned. Neither do I think it essential to the purposes of my story to impart my name, more especially as I have some private reasons for withholding that piece of information. This departure from established rules will, doubtless, expose me to the censure of those who are curious in such matters, and who hold it indispensable, in the construction of a tale, to assign the hero a "local habitation and a name." But, as I acknowledge no allegiance to their canons of criticism, I conceive myself entitled, in revealing the private transactions of my life, to limit the extent of the disclosure. The circumstances of my family, though moderate, were sufficient to supply the means of giving me a liberal education. My father, with very limited opportunities, had qualified himself for the practice of the law, and, by his success in that profession, had amassed an honorable independence. He designed to prepare me for the same calling, and hoped, by affording me every facility of improvement, to remove from my path the impedi-

ments which retarded his own progress in early life. The imperfect education, which he possessed, had been acquired, for the most part, by his own unaided exertions; and those efforts, the fruit of necessity, had imparted to his mind habits of application and self-reliance, the certain passports to distinction in every pursuit. It is this constant struggle with difficulties, this training as it were in an intellectual gymnasium, this confidence in his own powers derived from the sense of obstacles subdued, that give to the self-taught man a vigor and an energy, seldom displayed by those who have enjoyed greater advantages. My father was no exception to this remark; but, conscious how much he had benefited by his own slight opportunities of education, he resolved that I should want no means of mental cultivation within the reach of his resources. He fondly expected, that with a mind thus stored with information and disciplined by study, I should be fitted for any station to which my ambition might aspire. How far his hopes were verified will be seen in the sequel.

I was naturally imaginative. From my earliest childhood I was addicted to that visionary propensity of the mind called castle-building. Though not averse to the usual pastimes of my age, I delighted to withdraw from my companions, to repose under some tree in a dreamy abstracted state of mind, lulled by the hum of insects and the song of birds, while bright scenes and forms of loveliness, dim and shadowy like the recollections of a by-gone existence, flitted before my imagination. I would sometimes remain for hours, entranced in these fantasies, and peopling the surrounding solitudes with beings of my own creation. Near my father's house meandered a small rivulet, whose banks were embowered with copsewood. This was my favorite haunt, and there would I linger, listening to the ripple of the water, and watching the small fishes that played under the banks, till the fears of the family recalled me from my seclusion. In that chosen retreat I could ruminate at pleasure, and without interruption, upon the visions with which my fancy was teeming. Seldom could I be seduced from the enjoyment of these fantastic day-dreams even by the amusements so fascinating to the elastic spirit of childhood. I had then no knowledge of books, and shrunk with repugnance from any occupation which might debar me from these delicious reveries. The idea of going to school, of being imprisoned for hours in a noisy school room, compelled to pore over books which offered nothing to engage my imagination, was most distasteful to me. Against a bondage so irksome, my spirit revolted, and with wayward pertinacity, I resisted every effort to instruct my infant mind. Books and pedagogues became my utter aversion. I acquired the character of an idle, perverse boy, and my parents almost despaired of overcoming my obstinacy. Still, with a natural partiality, they clung to the belief, that I did not want capacity, and that, if my love of knowledge were once kindled, I would realize their most sanguine hopes. By dint of perseverance, I was instructed in the art and mystery of reading, and, to confirm me in the practise of it, I was supplied with story books, garnished with cuts, according to the most approved plan of modern education. These works were miserable catchpennies, compiled, rather than composed, by that numerous class of writers, whom benevolence, or the itch of scribbling, or

more probably the desire of profit, has prompted to contribute to the instruction of children. These authors displayed no deep knowledge of the metaphysics of education, and proceeded upon the hypothesis, that the only aim was to arrest the attention, without regarding the objects to which it should be directed. For this purpose, they relied upon their pictures, and on fictions, that set all nature and probability at defiance. Crude, however, as these works were, and barren of invention, they vanquished my abhorrence of books, and, falling in with my original turn for romance, furnished new materials for my solitary ruminations. In my holidays, I was often observed with some of these tales, rambling through the fields, or resorting to my favorite retreat. My parents were charmed with this apparent fondness for reading. Little did they think, that, while my eyes seemingly wandered over the pages before me, I was chewing the cud of my own fancy, and conjuring up shadows far more enchanting to my mind, than the meagre incidents which they recorded.

The natural bias of my mind to these visionary contemplations, scarcely suspended by the discipline of school, now returned with renovated vigor. My father had in his library many of the old-fashioned novels, tales of love-sick damsels, whose fortune or imprudence involved them in situations, from which no female in real life could escape without a cracked reputation, and whose beauty, while it exposed them, on one side, to the violence of unbridled desire, on the other, raised them up protectors in some highborn and accomplished nobleman, ready to sacrifice the dignity of his rank to the ardor of his love. Some, in the style of the *Castle of Otranto*, harrowed the soul with supernatural appearances, with bravoes, banditti, trap-doors, sliding-panels, and all the apparatus of horror and crime. My father, though a man of business and with little leisure for such amusements, had a predilection for books of this description; and, like most ladies of her time, my mother was passionately fond of them. On some occasion, I accidentally glanced at one of these novels. My attention was at once arrested. I devoured it with an eagerness and assiduity, which was thought surprising in a child, and a proof of the precocity of my genius. Such was my anxiety to reach the denouement, that I could scarcely be persuaded to eat or sleep. The abstraction of Hogarth's newsmonger, whose hat is unconsciously consumed by the candle, while he is absorbed in the pages of some public journal, was surpassed by mine. To confirm my new-born taste for reading, my parents made my uncommon fondness for books the constant theme of remark and commendation. Once formed, they vainly imagined it would render the acquisition of knowledge easy and delightful; not reflecting, that the intoxication of the fancy differs from the vigorous exercise of the higher faculties of intellect, as much as the sports of childhood from the labors of regular industry. I read, in succession and with increased avidity, every novel in my father's library, and all that I could procure elsewhere. When I had exhausted the whole stock, my only resource was to read them again, till my memory became a vast storehouse of fiction. My mind was so replete with these fables, that I could not refrain from recounting them, in my childish dialect, to my school-companions and the servants, who regarded me as a second

Scherazade. I question whether that accomplished story-teller excited greater admiration and astonishment in her imperial consort. My vanity was tickled, and I fancied myself a miracle of knowledge. My faith in these extravagant narratives, was as implicit as that of Don Quixotte in the romances of chivalry. Their most incredible adventures, I supposed to be ordinary occurrences in real life. These false notions of human nature and of the course of human transactions sunk deep in my mind, and became incorporated, as it were, into its very frame and nature. My subsequent intercourse with the world, though it has weakened, has never completely obliterated the impressions which I then imbibed. But there was another effect, not less durable or pernicious, which these books produced on my mind. I have mentioned my propensity to solitary musing in early childhood. My reveries were then untinged with gloom, and were replete with soft and pleasing illusions. After having "supped full of the horrors" with which these books abounded, a sombre hue was diffused over my meditation. My imagination was haunted with hideous forms, which chilled the blood, and chased sleep from my pillow. In the stillness of the night, the slightest noises are audible, and I have often laid awake for hours, conceiving the stir of a mouse to be the creak of a trap-door or the jar of a sliding-pannel, and awaiting, with trembling apprehension, the approach of some bandit, or bravo, or spectre, which these sounds announced to my startled fancy. I thought each copse and dingle the haunt of robbers and assassins, and, in terror, I abandoned my accustomed rambles, and my favorite brook. Such was the state of my mind, and such my acquirements at the age of ten years.

My father was too shrewd an observer not to perceive, in some degree, the complexion imparted to my mind and character by the perusal of these books, and supposed, it might be counteracted by diverting my studies into a different channel. For that purpose he engaged me in a course of historical reading, but it appeared to me tame and insipid. The wild creations of fable had so perverted my taste, that I felt no interest in realities. I have seen the story of a lady who applied to David Hume for the loan of a novel. The philosopher furnished her with Plutarch, which interested her greatly as a fiction, till the names of Cæsar and Alexander dispelled the illusion, whereupon she returned the book in disgust. My feelings were akin to those of this learned lady. His credulity and marvellous stories rendered the old Grecian more tolerable to me, than the graver and more authentic historians; yet even his romantic account of the primitive ages of Greece and Rome was tedious, compared to the incredible and unnatural tales, which had so captivated my fancy. The perusal of one was a labor of love, while the other was a task, irksome and disagreeable. From compulsion, I waded through the ordinary routine of historical reading, but the events and characters described left no abiding impression on my mind. The memory, I found, is only tenacious of those things which rivet the attention and excite the feelings. My acquirements were estimated by the number of books I had read, and I was supposed to be deeply versed in historical lore when I scarcely re-

tained its most conspicuous features. In after life I have found this no uncommon mistake, having encountered many, who enjoyed the reputation of learning, more from the extent of their reading, than from their capacity to apply it to any practical use.

Though I had been at school for several years, I had always resided beneath the parental roof. The time had now arrived, when it was thought expedient to send me to a boarding school to be instructed in the ancient classics. Behold me then, at the age of eleven years, placed, for the first time, among strangers; persons devoid of all sympathy with my previous tastes and pursuits, and by no means disposed to tolerate the lofty ideas of my own knowledge and importance, in which I had been nursed. I shall never forget the anguish and sense of utter desolation I experienced for the first three weeks. I felt like a retired student, suddenly transplanted from solitude and meditation, from scenes endeared by long habitude, from tranquil occupations and amusements, to the bustle of a city hotel. The abrupt suspension of old habits and pursuits, the transition from calmness and quiet to clamor and confusion, the rude gaze and intrusive curiosity of the throng, the undisguised derision of many, are whips and scorpions to a sensitive spirit. But, fortunately, the distresses of childhood are evanescent. The tempest of my feelings gradually subsided, and I became partially reconciled to my new situation and associates. The collision with tempers so uncongenial, their unsparing ridicule of every peculiarity of conduct and opinion, their intense selfishness, which compelled me to rely on myself, infused a new energy into my character, and tended, I doubt not, to correct the original bias of my mind. But the fire was smothered, not extinguished. It smouldered in secret, till at a subsequent period, it kindled into a flame, that blasted my prospects. But I will not anticipate.

My comrades, though rude and selfish, were not unkind. So soon as I adopted their manners and customs, their derision ceased, and they admitted me to their amusements. The master was a stern pedagogue of the old school, who like Dr. Parr, regarded the rod as the only efficient teacher. His compendious system of education consisted only in the judicious application of fear, as an incentive to diligence; but, like the celebrated man I have mentioned, he had not the cruelty to make innate stupidity the subject of his experiments. It was only when he saw, or thought he saw, capacity, united with indolence, that he put on all his terrors. And then, indeed, his port and aspect were alarming. When he scowled beneath the penthouse of his heavy brows upon the unhappy culprit, when he propounded his questions in the voice of a hungry lion, when his extended hand threatened punishment, which was always inevitable, truly the head of Medusa could not have produced more consternation among his pupils. Had he lived in these days, he might, perhaps, have received some valuable hints from the numerous writers on education; but I doubt, whether the progress of his scholars would have been accelerated by their patent recipes. He was an excellent linguist, and, with professional partiality, considered the classics the most important branch of human knowledge.

I am indebted to this inflexible disciplinarian, for four years of diligent application, and for a respectable

proficiency in the ancient languages. Luckily for my improvement, he suspected me of capacity on my first arrival, and was not slow in putting it to the proof. The imaginary terrors, which harassed me at home, vanished before the real terrors of his brow and voice. He gave me no leisure for reverie or castle-building, nor would he have permitted me to desecrate that abode of classical learning by the presence of a novel. Such frivolous productions and their writers he held in utter contempt; nor did he think any composition of sufficient dignity to attract his notice, which did not contribute to the illustration and advancement of classical knowledge. Those writers only, who lighted their midnight lamps at the shrine of ancient literature, commanded his reverence. "The rest were only leather and prunella." Under the auspices of this able pedagogue, I advanced with a sure and steady step in the career of improvement, and, at the end of four years, was restored to my family, with the reputation of a diligent boy and a good classical scholar. I am now satisfied, that nothing but this rigid discipline could have produced such a result, or suppressed so long the visionary and romantic propensities so deeply rooted in my character. My disgust with the study of the dead languages was at first so vehement, that but for the fear of punishment, I am sure I should never have been induced to apply myself to them, nor was that disgust ever completely extinguished.

After my return from school, I remained at home a year, before I was sent to college; fatal interval of idleness, in which the fruits of bitterness, that poisoned my future existence, had time to ripen! Having no regular occupation, I resumed, at once, my old habits. The novels, which in the lapse of four years had insensibly faded from my recollection, were again perused with undiminished zest and eagerness, and my romantic propensities, suppressed for a season, not destroyed, received a new and powerful impulse.

I was at an age when the unfledged youth begins to feel the earliest emotions of manhood. The first symptom of that change, so pregnant with good or evil to the future man, is the admiration of the other sex, hitherto viewed with shyness and indifference. I now felt my pulse quickened by the approach of beauty, and began to have some conception of that passion, whose influence on the happiness of mankind formed the chief subject of my favorite romances. With a mind so strongly imbued with the spirit of these extravagant fictions, it was not surprising that I should invest some ordinary girl with the attractions of a heroine, and make her the goddess of my idolatry. I found a subject for my imagination to act upon in the daughter of my father's overseer, a pretty girl just budding into womanhood, but withal vulgar and illiterate. Heated to enthusiasm by visions of ideal loveliness, beauty was inseparably associated in my mind with every female perfection and accomplishment. The disparity of our situations presented no impediment; for I had always read, that the highborn hero bestowed his affections on a maiden of low degree, but of superlative merit and beauty. "King Cophetua loved a beggar maid," and, on the authority of this royal precedent, the very circumstance, which, to the eye of common sense, formed an insuperable bar to such a connexion, was the strongest reason for my selecting this girl as

the peculiar object of my love. The heroes of fiction are impassive to the dictates of reason and prudence. Having decided that I was desperately enamored, I commenced my operations. In the true novel style, all my proceedings were clandestine; for it is the fate of true love always to be thwarted by the cruel opposition of parents and friends. I plied the girl with billets and serenades, with sighs and tears, with extravagant compliments and vows of everlasting attachment—in short with all the artillery so successfully employed, on such occasions, by the heroes that I imitated. I hovered round her father's dwelling like a perturbed spirit, and accosted her at every turn with the most inflated expressions of admiration. The girl saw things in their natural proportions, not magnified and distorted through the medium of fancy, and thought, at first, I was laughing at her. At length the earnestness of my protestations subdued her incredulity. Touched by so many evidences of my sincerity, her tenderness was awakened, and she could not refuse to my importunity a confession of reciprocal sentiments. What rapture! she promised to be mine, as soon as I had completed my education. This she understood; but when I talked of the happiness of congenial souls, the bliss of living alone for each other, the delight of participating in kindred tastes, of enjoying the beauties of nature and the refinements of intellect, I spoke a jargon she could not comprehend. Our correspondence had advanced to that point, that I was in a fair way of making myself a fool, or seducing an innocent girl, when it was suddenly and unpleasantly interrupted; another proof, that "the course of true love never does run smooth." The overseer was a respectable man in his calling, and, I believe, had no suspicion of the state of matters between his daughter and myself. My father, however, had, by some means, got an inkling of the affair, and, either for the purpose of separating us, or because he suspected the overseer of countenancing my assiduities, abruptly dismissed him from his employment. To disconcert effectually any scheme of future intercourse, I was soon after dispatched to college. I parted from my mistress with vows of eternal constancy, which, I hope and believe, she did not confide in. I remembered, that in similar situations the lovers of romance displayed a cureless misery that refused consolation, and, imitating their example, I acted all the extravagancies of melancholy and despair. But alas! I was not moulded of the stuff, of which these heroes were made. "In one little month, or ere those shoes were old," in which I had declared my love to be eternal, the whole delusion vanished, "like the baseless fabric of a vision," and I awoke to the consciousness of the folly into which my treacherous fancy had betrayed me.

At college I was not subjected to very rigid restraint, either in my amusements or in the ordinary exercises of the institution. So that I appeared regularly in the class-room and at chapel, and acquitted myself with tolerable facility in my recitations, no inquiry was made what books employed my hours of recreation. I was not devoid of ambition, and, therefore, made sufficient efforts to maintain a respectable standing in my class. But, incited to these exertions rather by the fear of disgrace, than a just estimate of the value of knowledge, my application was languid and desultory. The

dry abstractions of science had no charms for my imagination, nor was I inspired with that enthusiasm, that *divinus afflatus*, which sustains the fainting student up the rugged steep of philosophy. I never felt, and could not conceive, that ardent love for truth, which animated the toils of those "who have travelled nature up to the sharp peak of her sublimest height," and conducted them to those discoveries, that have shed a light, steady and brilliant, on the path of human reason. I recoiled from labor, and was content to skim the surface of science. I had no dervise to touch my mental eye with his magic ointment, revealing to my astonished vision the countless riches, that slumber in its unexplored recesses. To me it was "a toad, ugly and venomous," and I dreamt not that it carried "a precious jewel in its head." I preferred to revel among the flowers and fruits of elegant literature, whose sweets could be extracted by an easier process, or to gaze, in indolent repose, on the gorgeous scenery of fiction. I was sensible, that the gratification of these tastes weakened, as it were, the muscular powers of the mind, impaired its vigor and its capacity to wrestle with the abstract investigations of science. Yet such was my craving for this sort of excitement, that I became more enamored than ever of its illusions. I had access to libraries, that abounded in poetry and romance, and I drank deep at those intoxicating fountains. But such was my aversion to the exercise of thought, so effeminate had my mind become from the repetition of these excesses, that even in the realms of fancy, I preferred the region of romance. Poetry, when it did not minister to my prevailing inclination, was tedious to me "as a twice told tale." The graces of language, the beauties of thought and sentiment, were not sufficiently piquant to provoke my jaded appetite. I must have men and women, and scenes, and adventures to rouse my imagination. Shakspeare I could tolerate; but Milton, and Dryden, and Pope, and Goldsmith, wearied and disgusted me.

This course of reading exercised a baneful influence, not only on the habits of my mind, but threatened, at this time, to produce an effect not less fatally injurious to my moral character. I have never had a taste for the pleasures of dissipation and debauchery. The cold selfishness and brutal sensuality of such pursuits are, usually, offensive and disgusting to ardent and imaginative characters. Persons, of that temperament, have a native delicacy and refinement, which recoil from a participation in those low and degrading scenes, in which the habitual libertine delights to revel. But habit reconciles us to every thing; and evil example, operating on hearts governed by impulse rather than principle, has often perverted the best dispositions. I had now reached a time of life when the passions are peculiarly inflammable, and when the blandishments of vice too often find a responsive chord in the youthful bosom. At this critical period, accident threw in my way the works of Smollet and Fielding. Their inimitable humor, their deep knowledge of human weaknesses, their acute discrimination of character, their consummate art in the development of their stories, their infinite fertility of invention, and their vigorous powers of description, though indications of a high order of genius, afford but a feeble compensation for the immoral tendency of their writings. I was so charmed with their

amusing qualities, that I was unconscious of the poison that lurked beneath them. The apologists of these writers allege, that they drew their pictures from real life; but surely the pencil of genius might find more fit employment, than in transferring to the canvass every loathsome object in nature, or in weakening our abhorrence of things intrinsically hideous and detestable. In the works of Smollet and Fielding, virtues and gross vices are so intermingled in the delineation of the best characters, that we are led to believe their association inseparable, and are betrayed into the dangerous error of supposing the possession of brilliant or estimable qualities a sufficient atonement for the most flagrant enormities. Success in intrigue, the seduction of innocence, and habits of debauchery, so far from being blemishes in the character of a young man, are, according to them, conclusive proofs of his spirit and capacity. They enforce this dissolute and pernicious doctrine by the most glowing and meretricious descriptions of vicious delight. An idea so flattering to the depravity of human nature, was readily adopted by a young man like myself, whose passions were just budding with all the vigor and luxuriance of the spring-time of life. The practise and conversation of the dissipated youth, by whom our public schools are always infested, confirmed me in these sentiments. To palliate their own irregularities, they willingly inculcated the belief, that all who had been distinguished by genius, had been equally remarkable for their wild and reckless dissipation. It was, therefore, the height of my ambition to become a gay Lothario, and, to earn that infamous distinction, I selected the daughter of my landlady, as the first victim of my gallantry.

With the permission of the faculty, some of the students were allowed to board in the adjoining village, and this permission was accorded to me. The old lady with whom I boarded, was of a genteel and respectable family, and had once enjoyed an independent fortune. By the imprudence of a profligate and improvident husband, her fortune was squandered, and at his death she was left, with a family of several children, in very indigent circumstances. Her only resource against impending want was to open a small boarding-house, which she was enabled to furnish by the liberality of her friends, and, as she was universally respected, the compassion of the public rewarded her exertions by a generous patronage. She was a most amiable and affectionate creature, and exercised towards her boarders a kindness truly maternal. Her youngest daughter, a giddy, thoughtless, and pretty girl, was the only child that resided with her. Propinquity is said to be a great provocative to love, and I found it no less calculated to awaken viler passions. I had the baseness to meditate the destruction of this girl, and to pursue my purpose with an art and contrivance scarcely to be expected from such a novice in intrigue. But passion has an intuitive perception of the means of securing its object, and requires no teacher. I made my approaches with insidious caution at first, seeking, by respectful and assiduous politeness, to make an impression on her heart, and resolving to push my adventurous gallantry in proportion as I gained on her affections. The girl was flattered, and her mother won so entirely by my civilities to her daughter, that I became her acknowledged favorite. The intimacy and familiarity arising

from the old lady's partiality for me, favored my views, and availing myself of the unsuspecting confidence with which I was received, my attentions to the girl became more passionate and ardent. She was evidently solicitous to secure such an admirer, and, to ensure her conquest, permitted, in the absence of her mother, a freedom and liberty in my deportment, totally inconsistent with that maidenly and dignified reserve which is the best protection of female virtue. To what consequences this imprudent intercourse might have led, I cannot now conjecture. It has been remarked, that a woman "who deliberates is lost," and I am sure she has every thing to fear from the treachery of her own passions, when she throws aside the safe-guard of that modesty which shrinks from the touch of rude familiarity.

Fortunately for the peace and reputation of this family, and for my own honor, I was arrested in this selfish and unprincipled scheme, before I had an opportunity of accomplishing my purpose. I was seized with a severe illness, which confined me for three weeks, and brought me to the brink of the grave. I was indebted for my recovery more to the strength of my own constitution and to the care and attention of my landlady and her daughter, than to the skill of the physicians. Those kind creatures had watched by my couch, sympathized with my sufferings, anticipated my wants, and strained their slender means to the utmost for my accommodation. I should have been a monster, had I not felt the warmest gratitude for their disinterested kindness. In the retirement of a sick chamber and the weakness of convalescence, all the passions are hushed, and the mind, insensible to pleasure and unbiased by temptation, readily yields to calm and salutary reflection. It was then that I reviewed my past conduct. Was it possible that I had harbored the purpose of injuring those benevolent beings, who hovered round my bed like ministering angels? who had nursed me with so much tenderness? whose soft hearts had melted at the spectacle of my sufferings? whose unwearied attentions had probably saved my life? It was monstrous and detestable. The base design I had formed became utterly abhorrent to my imagination. The recollection filled me with shame and remorse, and I resolved, if my act had wounded the happiness of the girl, to make her ample reparation. A professed libertine, selfish, ungenerous, and restrained from the indulgence of his passions by no moral obligation, would have reasoned differently. But I was not yet so hackneyed in vice, as to be callous to the claims of gratitude. Had I engaged the girl's affections, it was my fixed purpose to marry her at every hazard, as the only adequate atonement. But a more thorough knowledge of her character relieved me from this painful alternative. She was kind-hearted and amiable, but essentially a coquette. Her vanity was more concerned than her heart, in her flirtation with me, and though had I made the proposal, I make no doubt she would have married me, such a step, I became satisfied, was not necessary to her happiness. A young man in the village, of respectable condition, made her about this time the most honorable proposals, and as I perceived that his overtures were acceptable, I did every thing in my power to promote so suitable a connection. I had the satisfaction, soon after, of witnessing her marriage, and

of believing that no act of mine had injured her feelings or her prospects. The victory which I achieved over my passions in this affair, has, I believe, given stability to my moral principles, and preserved me from the slightest taint of libertinism. Had I given way to the temptation, the whole color and complexion of my character would have been changed. In the rake's progress, when the first act of vice and folly has been committed, the crimes, the infamy, and the calamities, which darken his subsequent career, are its legitimate and inevitable consequences. I should then have added the still keener stings of remorse to the bitter consciousness of wasting my time and talents in idle and unprofitable pursuits.

My passion for fictitious narrative had now gained such an ascendancy, that no consideration of duty or ambition could induce me to forego its indulgence. It was my practise to read in bed, and I have often spent the greater part of the night, thoughtless of every thing but the tale of love or horror, which engrossed my attention. Numberless were the mortifications to which I was subjected by this headlong propensity. Often has it exposed me to public rebuke for my irregular attendance in the class-room and at chapel. Often have I entered the class-room almost wholly unprepared, having devoted the appropriate hours of study to this favorite recreation, and trusting to escape disgrace only by ascertaining, in the progress of the recitation, what portion of the lesson would fall to my lot. But I was frequently deceived in my expectations, and compelled, at the expense of my pride, to expose my idleness and ignorance. But it was destined to inflict upon me a still greater disappointment.

The termination of the course was now approaching. The candidates for honors and degrees were released from attendance on the ordinary exercises of the college for the space of three weeks, that they might prepare, without interruption, for the final examination. I determined to atone for past truancy by redoubled diligence, and to secure, if possible, some of the distinctions. I persisted in that laudable purpose for a fortnight; but, at the end of that time, my ill-fortune threw in my way the temptation of a new batch of novels, fresh from the press. Manfully did I resist my inclination, but I thought I might safely glance at the few first pages. Fatal indiscretion! My curiosity became ungovernable, and I was hurried along by the interest of the story, till the most important week of my preparation was nearly consumed. I awoke to the conviction, that my hopes of distinction had been sacrificed to an idle gratification, and that I could scarcely expect to make a decent appearance at the examination. With the preparation I had already made and a little contrivance, I managed to pass muster without making my deficiency conspicuous, and returned home, chagrined by my failure, and resolved to exercise greater self-command for the future.

My father had not forgotten, that the want of employment had entangled me in the affair with his overseer's daughter, and to guard against the recurrence of a similar adventure, insisted that I should immediately commence the study of the law. No study could be more foreign to the habits of my mind, or more ungenial with my prevailing tastes. The hard, severe style of law-writers, employed in the discussion of dry precedents and technical distinctions, their subtle refine-

ments and endless reference to authorities, running back into the obscure ages of black letter, and their barbarous confusion of tongues, struck me with dismay. To relinquish my favorite pursuits for one so barren and repulsive, was like leaving the soft and luxuriant climate of Madeira for the deserts of Africa. The elegant Commentaries of Blackstone were, indeed, an oasis in this desert, yet only tolerable, to one of my tastes, from contrast with surrounding desolation. I penetrated, however, into this uninviting waste with the resolution of a second Denham, determined never to look back till I had traversed its arid plains. I had the firmness to adhere to this resolution for more than a year. The novels, my old companions, slumbered untouched upon the shelf, and habit every day rendered the style and reasoning of my new acquaintances less disagreeable. But a fatality I could not resist, or rather my own want of self-control, doomed me to a relapse into my old infatuation.

I was endeavoring one day to recruit my languid attention by a little repose, after being exhausted by a four hours' perusal of Coke, when the lettered backs of my old tempters obtruded themselves on my eye. My mind required some refreshment, and I felt an irresistible inclination to regale myself by a few moments dalliance with one of these Delilahs. To beguile the tedium of the moment by so innocent an amusement, seemed to me not only a harmless but a necessary recreation. When we once parley with temptation we lose insensibly the power of self-denial. I was soon absorbed in a story, whose thrilling interest had often fascinated me in the days of my childhood. The ice once broken, I was like some drunkards, who, the instant they touch the forbidden liquid, madly rush into intoxication. From this time romances were my constant resource in the intervals of rest made necessary by the abstruseness of my studies, and I found this recreation so delightful, that it gradually encroached on my hours of serious application. But aware how essential an accurate knowledge of my profession was to my success in life, I struggled vigorously with my inclination, and, with laudable forbearance, devoted a portion of the day to my law-books. But I must confess I read them with very little profit. My thoughts were constantly straying in quest of more agreeable objects. My mind, clouded by the delusions of fiction, became incapable of grappling with the subtle reasonings and nice distinctions of legal science. Themis is a jealous goddess, and will not tolerate a divided worship. My father was too much immersed in business to observe my devotion to the dragons of fable. Being constantly in his office and exhibiting every external mark of diligence, he supposed, without further inquiry, that I must be occupied with the ponderous tomes of jurisprudence. But I doubt whether even his authority could have reclaimed me from habits so incorrigible and rivetted by such long indulgence.

After having spent three years in these desultory efforts to qualify myself for my profession, I became a candidate for admission to the bar. The examination of candidates is committed by our laws to the judges, who are required to license such as have sufficient knowledge and acquirements, to engage in the practise of the law. This examination, contrived originally to exclude incompetent persons from a profession of so

much consequence to the body politic, had long since degenerated into an empty form. As to myself, I was more indebted to the lenity of the judges, than to my own merits, for the success of my application. I was now, at the age of twenty-two, admitted into an honorable profession, where my fame and emoluments would depend exclusively on public patronage and opinion. It was indispensable, therefore, to my future success at the bar, to make a favorable impression at the outset. The estimate now made by the public, of my capacity as a speaker and man of business, must have a decisive influence on my prospects. Once believed to be deficient in these essential qualities, the young lawyer finds it difficult, by the most strenuous subsequent efforts, to recover the public confidence. In the debates of the literary societies at college, I had acquired considerable fluency of elocution; but I felt myself wanting in the more solid endowments of a public speaker, in information, in power of reasoning, and illustration. My mind, enervated by the luxuries of light and amusing literature, was untrained to those habits of patient thought and laborious inquiry so necessary in legal investigation. From the same temperament, the accuracy, the punctuality, the minute details of business, were, to me, worse than Egyptian bondage. And to crown all, I was totally uninstructed in those hidden springs of human action, which the able advocate touches with so much skill and artifice in the argument and management of causes. It was with no sanguine hopes of success, then, that I entered upon my profession, and this very want of confidence operated as a constant clog upon my exertions. Boldness and impudence often supply the want of capacity, and I am now persuaded, that in every pursuit a strong belief in our ability to surmount difficulties inspires an ardor and a perseverance, which most commonly effect our purpose. Destitute, unhappily, of this powerful incentive, I was prepared to succumb under the first discouragement.

I know no position, in every view more critical, than that of a young lawyer loitering in the courts, without business, without any thing to interest his mind or feelings. If he does not slide into habits of dissipation, a too frequent result, he becomes idle and indolent, and his mind, sinking into a lethargy, moulders away for want of exercise. How many young men of liberal education and promising abilities, before their five years quarantine has expired, have fallen victims to profligacy or sloth, and been lost forever to themselves and society. To pass through such an ordeal, unscathed either in mind or morals, demands a prudence, an energy, and a self-command, rarely manifested at that early period of life. Such a situation was peculiarly perilous to a person of my previous propensities. "Time," said Rosalind, "stands still with lawyers in vacation, for they sleep from term to term." I found it equally stationary at all seasons; and, though its leaden pinions did not lull me to bodily repose, they shed a sleepy influence on my mind, which gradually sunk into that dreamy state so admirably described in the Castle of Indolence. Had I plunged at once into the turmoil of business, pressed by the demands of duty, and stimulated by the hope of profit, I might have lashed my lazy faculties into action, and effaced forever the traces of old and inveterate habits. But to remain a dangler at

the bar, a listless spectator of scenes in which I took no interest; deprived me of the only motive that could goad me into activity, and left my mind open to the invasion of those propensities, whose dominion, though sometimes weakened, had never been overthrown.

These evil prognostics were too soon fulfilled. Instead of observing the course of practise in the courts, of remarking the skill and dexterity exhibited in the management of a cause, of treasuring in my memory the questions discussed and the arguments advanced, of examining the authorities referred to, in my own office, exercises by which I should have been improved in my profession, my time was occupied either in frivolous conversation with my young companions at the bar, or in the perusal of that innumerable brood of romances which have issued from the modern press. I delighted to catch them at their first transit into the world, before they had lost their freshness and flavor by exposure to the gaze of vulgar curiosity. I became the critic of coteries, the oracle of the shallow throng who flutter round bookstores and public libraries. It was only in these public repositories of books, that my cormorant appetite could be glutted. In the circles which idle curiosity assembled at these places, the characters and incidents of the last novel were discussed with as much earnestness as would have been displayed in analyzing the motives of real persons and the circumstances of actual events. This idle gossip, betraying a total ignorance of the principles of literary criticism, afforded me infinite amusement; on the same principle, that the description of a good dinner is a gratification to the gourmand, second only to the pleasure of eating one. The time and ingenuity I have spent in such disquisitions would have resolved the knottiest point of jurisprudence.

This course of reading exacted no effort from the mind, and the more I indulged in it the more averse I became to the drudgery of business, and the more incapable of that accurate thinking and careful analysis required in the practise of the law. I have said, that when once absorbed in a novel, I was hurried to the conclusion with an eagerness of curiosity that admitted neither pause nor reflection. Severely as I had already smarted under the consequences of this habit, it was destined to work me still more serious mischief. I cannot remember how often it has occasioned my absence from court, the breach of my appointments, and neglect of important business. These are unpardonable faults in a lawyer, and, whatever his talents or acquirements, must ultimately strip him of employment.

My first cause, I remember, was in chancery, and as it was to be argued the next day, I promised my client to devote the night to the examination of the papers. But my evil genius deposited a new novel on my table, and thinking I had ample time for the task I had undertaken, I could not forbear the gratification of glancing over the introductory chapters. I forgot my client and his papers, until the flickering of my candle in the socket compelled me to relinquish the book; and the next morning I endeavored, by a hasty and superficial examination, to prepare for the argument before the session of the court. When it was my turn to speak, I discovered such an imperfect knowledge of the facts and of the questions involved in the case, and was so far eclipsed by a plodding industrious young fellow on

the other side, in accuracy and acquaintance with the legal authorities, that I sat down overwhelmed with shame and mortification. Men, however ignorant, are quicksighted where their interests are concerned, in discerning to whom they can be safely entrusted. This failure lost me the confidence of my client, and I believe made an impression on the bystanders very much to my disadvantage.

My fondness for romance, now become my ruling passion, not only impaired my powers of reasoning and investigation, but destroyed the balance of my mind by giving an undue preponderance to the imagination. The unnatural activity of that faculty, by presenting false and exaggerated views of persons and events, was frequently a serious disadvantage to me in my profession. Often when I was wrought into a fever of excitement by an ideal state of facts, the reality has so differed from my preconceived hypothesis, as to produce a sudden syncope of all my faculties. I remember being engaged in a case of breach of marriage promise, on which I had built the most extravagant expectations. The vagaries of my own imagination and the representation of my client's friends, had misled me as to the true character of the evidence, and when these illusions were dissipated at the trial, the revulsion of my feelings left me incapable of sustaining my part in the argument. Relying on my instructions, I had figured to myself a case of great aggravation. A young female, of considerable beauty, of unimpeachable purity, of the most delicate sentiments, and of the most respectable connexions, had engaged herself to a man of suitable condition, and from the intimacy warranted by such an engagement and the confidence she reposed in his honor, had been involved in indiscretions fatal to her reputation. I supposed that this man, after thus betraying the confidence and tainting the innocence of his betrothed wife, had basely trifled with her affections by refusing to fulfil his engagement, and had abandoned her to misery and shame. A story, so similar to tales of seduction, with which my memory was stored, at once inflamed my imagination. I pictured to myself in the most glowing colors the whole train of artifice and treachery by which this arch-seducer had succeeded in the ruin of innocence, the misery of the parents, the disgrace of the connexion, and the shame of the poor girl, consigned to infamy and wretchedness. Here was a tale of real life, marked by darker shades of villainy and deeper wounds of anguish, than my own imaginings or the wildest fiction had ever depicted. I entered into the case with a zeal and ardor proportioned to my sense of the magnitude of the injury. My indignation was at the highest pitch, and I was prepared to overwhelm the wicked defendant with a tempest of invective. But at the trial many circumstances conspired to damp my enthusiasm. I had the most exalted conceptions of the delicate sensibility, the keen sense of disgrace belonging to the female character, and it was the belief that he had wounded these admirable qualities in the person of my client, which inspired me with such deep abhorrence of the conduct of the defendant. When I saw her, adorned with the most tawdry finery, exhibiting, with an unblushing front, her person, day after day, to the rude gaze of the crowd that thronged the court-house, instead of shrinking from public observation, I felt the most inef-

fable disgust. I discovered too, in the conferences I held with her, that she was not much concerned at the public exposure of her disgrace, and was chiefly solicitous to increase the amount of damages. Such a greedy desire of money, in an affair that touched her reputation so deeply, was most repugnant to my feelings, and I could well believe that a woman of such coarse and grovelling sentiments would barter her fame and her innocence for a pecuniary equivalent. In the investigation that followed, proof was offered that her character was suspicious before she was acquainted with the defendant, and that during her engagement with him she had courted familiarities which no modest woman would have permitted. What I had myself witnessed, prepared me to place implicit faith in this evidence. I was so much disconcerted by the discovery, that my feelings had been enlisted by an ideal picture of guilt and injury, that, though the evidence on the part of the defendant was liable to be assailed, and there was clear proof of the promise, of the breach, and the seduction, I could not utter a word on these topics. My associate counsel argued the case with ability, and obtained a verdict for considerable damages.

My reputation at the bar, such as it was, had long been on the wane, and this failure gave the *coup de grace* to my prospects. It was said that I loved pleasure more than business, that I neglected the most important affairs, that I made no preparation for my causes, and that when my adversary surprised me with unexpected evidence or argument, I was unable to rally. Such assertions, publicly circulated, soon left me utterly caseless, and I began to think of seeking a livelihood in some other calling.

I became acquainted, about this time, with a young lady of amiable disposition and engaging manners, whose beauty and accomplishments made a deep impression on my heart. She possessed all those showy and brilliant endowments so captivating to the fancy, and my imagination readily invested her with every perfection that enters into the composition of a consummate female character. Smitten with this ideal phantom, which I mistook for her, I became her professed admirer; and it was only when a more intimate acquaintance unfolded those hidden graces, which shrink from the glare of notoriety, that I was sensible of her real worth and excellent qualities. I found her encompassed with suitors, and the object of general admiration; but these obstacles to my success only augmented my eagerness and assiduity. In romantic tempers, when the prospect is smiling and propitious, the tender passion languishes and expires, but burns with the more intensity when it encounters rivalry or opposition. I was unremitting in my attentions, and my reception emboldened me to cherish the most sanguine hopes. My parents were anxious that I should marry, and as the family and circumstances of the lady made the connexion desirable, they encouraged me to prosecute my addresser. I pressed my suit with ardor, and having at length obtained a favorable opportunity to declare my attachment, was rewarded by the confession that my overtures were not unacceptable. That charming confusion, the offspring of innate delicacy, with which this precious acknowledgement was uttered, heightened my admiration. Superior to

disguise or coquetry, she no longer kept me in suspense but with the native frankness of her character, at once consented to be mine. Whether it is that they are unwilling to relinquish the last remnant of their power, or that maiden modesty shrinks from the idea of matrimony, ladies are, generally, reluctant to appoint the day of their marriage. I found it so on the present occasion, and could not, by any importunity, prevail on my mistress to ascertain the epoch of my happiness.

Being now an accepted lover, I was received by her on the most intimate and confidential footing, and spent much of my time in her society. She displayed in her conversation a strong vein of good sense and a native purity of taste, cultivated by reading and extensive intercourse with the best society. She had no pleasure in that censorious gossiping, which delights in the dissection of characters, that it may detect the minute faults and weaknesses that dim the surface of the finest dispositions. She put a liberal construction on the conduct of her acquaintance, and was content to balance their virtues against their defects. She had none of that mawkish fantastic sentimentality, which weeps only over the recital of fictitious distresses, and is deaf as an adder to the groans of real misery. Her benevolence was practical and unostentatious, springing from a heart open to every impression of pity, to every impulse of generosity. Without a spark of that romance, which is the fruit of a diseased imagination, she was capable of the noblest self-sacrifice, of the most ardent and enduring attachment. But her innocent and unaffected tenderness endeared her to me still more than the new charms and virtues which her character revealed upon a closer acquaintance. There was one foible, however, in her disposition which I did not detect, and which, co-operating with my own egregious folly, produced all the mischief that followed. She was punctiliously tenacious of respect, and could not brook the idea of indifference in those to whom she was attached.

Hitherto, while the event was doubtful, and with the fear of rivalry before my eyes, I had been a most assiduous and attentive lover. Relinquishing every occupation, whether of business or amusement, I bent my undivided energies to the prosecution of an affair in which my heart was so deeply interested. But when the prize was gained, when her affections were secured, my anxiety subsided, and my usual propensities, which had sunk under the ascendancy of a master passion, revived. The lady resided in a town where there were several bookstores. My morbid appetite for new romances made me a frequent visitor at these establishments. When I got possession of a novel, I would remain, like Doctor Ockbourne, for hours in the same spot, wrapt in the interest of the tale, heeding neither the lapse of time nor the want of sustenance. My mistress, not having the same taste, could not comprehend the nature of this inordinate passion, and thought it very remarkable that I should prefer such frivolous amusements to her society. She was offended at my frequent absences and the unsatisfactory reasons I gave for them. Though she did not reproach me, she conceived that the ardor of my affection was subsiding into indifference. When this idea had once taken possession of her mind, "trifles, light as air, were confirmations strong" of her pre-existing suspicions. I cannot

enumerate the various instances in which my infatuation betrayed me into conduct that a jealous temper might construe into slight. I never dreamt of the misconstruction to which I was exposing myself, and thoughtlessly repeated the offence so often, that at length her displeasure was manifested in her deportment. Alarmed at these appearances, I eagerly inquired wherein I had offended. She replied, that my conduct discovered such entire coldness and indifference, as to impress her with a belief that I was weary of our engagement, and that if I wished it, it might be cancelled. I protested that I never designed to exhibit coldness and indifference, that my attachment to her was as ardent as ever, and that, so far from desiring a dissolution of our engagement, there was nothing I so earnestly coveted as its speedy fulfilment. I reiterated, again and again, the sentiments of respect and love which I had never ceased to feel towards her, until appeased by my apparent contrition and sincerity, she dropped the subject, and resumed her former frank and affectionate demeanor.

She had promised to spend the day with a lady who resided about a mile from town, and with whom I was unacquainted. She designed to accompany this lady, who was then in town, on her return home; and to show me that she cherished no resentment she proposed that I should walk with her back in the evening, to which I joyfully assented. Having nothing to engage me after I left her, I strolled to the bookstore, my usual resort, to while away the time, and there, unluckily, met with a new novel by a celebrated name, which extended to several volumes. Having no engagement until the evening, I thought I might innocently appropriate the interval to the perusal of a work of such reputation. But I became so much entranced with the interest of the tale that I totally forgot my appointment, until I was admonished by the approach of darkness that the time had passed. I hastened to make my apologies, and found my mistress in an agony of distress and agitation. It seemed that she set out alone in the hope of meeting me, and was assailed by a drunken man, who would have insulted her grossly but for the interference of a chance passenger. As soon as she became composed, and had heard my explanation, she told me, with a countenance "more in sorrow than in anger," that it was useless to disguise it; that my indifference to her safety that evening, evinced by my wanton breach of promise, revealed, more strongly than words, the extinction of my love, and that a regard for her own dignity constrained her to annul our engagement and to dismiss me at once and forever. Saying this, she retired from the room, leaving me overwhelmed with a complication of feelings, astonishment, dismay, grief, and despair. From this time she refused to see me, and, though I frequently wrote to solicit an interview, returned me my letters unopened. Satisfied that she was inflexible, I fled from the village in unspeakable anguish, and never saw her more. Such was the inconsiderate folly by which I lost the possession of an amiable and beautiful woman, and made shipwreck of my own happiness.

I was now thirty years of age, and my father, finding that I had utterly failed in the profession of the law, put me in possession of a farm, hoping that in the honorable pursuit of agriculture, I might at last

earn an independence. I became passionately devoted to my new calling, and read with indefatigable diligence all the books and publications I could find on the subject of tillage. I aspired to the character of an improver. My honest neighbors, who belonged to the family of the good-enoughs, called me, in derision, a book farmer. They warned me of the ruin that must ensue from my innovations on the old modes of farming in that neighborhood, which had been transmitted from father to son, without addition or diminution, from the first settlement of the colony. I was deaf to their prophecies. With my usual proclivity to castle building, I imagined that my system of tillage would in a few years convert my farm into a garden. I had counted and appropriated the great profits which the completion of my plans must certainly produce. I would become a great land proprietor, and when I had purchased all the land I chose to cultivate, I would vest my surplus resources in works of public improvement. But while I was so busy with my projected reforms in agriculture, I did not forget to provide a fund of entertainment for my idle hours by the purchase of an abundant stock of novels. These companions were not calculated to increase my attention to the operations of my farm. I was seen more frequently seated by the fireside, poring over one of my favorite romances, than in the fields, superintending the cultivation of my land. While I was thus dissipating my time in unprofitable amusements, or indulging in extravagant expectations, my overseer and negroes were consuming my substance. My stock dwindled and disappeared, my crops mouldered and wasted away, until, by midsummer, I found myself in want of all the necessaries of life. To put the copestone to my disasters, I had one night been reading a novel in bed, according to my frequent custom, and fell asleep without extinguishing the candle. I was awakened by a suffocating smoke, and found the whole room wrapt in flames. I saved my life with difficulty by jumping from the window in my shirt, while my house and all its contents became the prey of the devouring element. Thus, in one night, was I bereft of clothes, house, and furniture, and left to the charity of my neighbors, who generously afforded me all the assistance in their power. By their friendly exertions, a temporary hut was erected for my accommodation, and having now a shelter for my head, I had leisure to inquire into the origin of the fire. I was soon satisfied that I had left the candle burning, and that that act of negligence was the cause of the whole mischief.

By a series of disasters, for which I could only reproach my own folly and infatuation, I was reduced to very narrow circumstances. I could trace the principal calamities of my life to that overweening fondness for novel-reading which had destroyed the vigor and activity of my mind, and disabled it alike for the pursuits of business and the toils of study. To the same fruitful source of misfortune were attributable my severest disappointments both in love and ambition. In the despondency produced by reflections such as these, the idea suddenly occurred to me that the very cause of all my difficulties might be made subservient to the restoration of my shattered fortunes. Archimedes, when he shouted *eureka*, felt no greater rapture, though from a worthier cause, than I did when I hit upon this

brilliant expedient. I resolved forthwith to write a novel, and embody all the dreams and fantasies of my past life. The habits of my mind, and my intimate acquaintance with the whole region of romance, I conceived, qualified me in a peculiar manner for such a task. I could now give the visions of my distempered fancy "a local habitation and a name." The stories of fiction which I had been amassing for so many years would no longer be useless lumber, but would furnish inexhaustible materials for the execution of my work. I set about the undertaking with an ardor and application which promised its speedy accomplishment.

My scheme of romance consisted in unexpected incidents and sudden surprises, in grouping together circumstances of terror and distress, and in the history of tender and constant lovers sundered by the pride or avarice of their families. "To catch the manners living as they rise," to describe national peculiarities, to distinguish the moral features of the different classes of society, to paint the natural evolutions of passion and the effect of circumstances on the characters of men, to inculcate the great principles of ethics by examples of human depravity or virtue, belonged to a different province. I had always disliked those novels that terminated in a tragic catastrophe, and I determined, therefore, to bring mine to a fortunate conclusion. My own country furnished neither castles nor ruins, nor robbers, nor monks, nor nobility—things essential, in my estimation, to the constitution of a romance. I laid my scene, therefore, in Italy, the land of monks, inquisitions, ruined castles, bravoos, and banditti. I will not exhaust my reader's patience by sketching the outline of a story that extended to seven mortal volumes. Let it suffice that there was a combination of all that is pathetic and horrible, and that the heroine was conducted through a succession of the most surprising and incredible adventures—from obscurity to the possession of rank, wealth, and unalloyed happiness.

I finished my novel in eighteen months, and the next inquiry was how I could make it profitable. The art of printing was at so low an ebb in my own state, and there was so little disposition to patronise native literature, that I could not hope to dispose of the copy-right, and to publish by subscription, was, with my slender finances, too hazardous an experiment. I resolved, therefore, to repair to the northern cities, those great marts of commerce and genius. I procured letters of introduction to several persons in Philadelphia and New York, and with my precious manuscript set out on my journey filled with the most buoyant hopes of fame and fortune.

As I am writing a history of my mind, not a journal of my travels, I shall not pause to record my observations on men and things during the journey. Suffice it that I reached Philadelphia without any remarkable adventure, and was installed in a comfortable apartment at one of the principal hotels. The impressions of a stranger for the first few hours after his arrival in a large city, are always melancholy. His mind has not yet been diverted from its solitary musings, by the various objects of curiosity which offer themselves to his researches. He is incapable of analyzing the confused assemblage of things that press upon his observation, and the vastness of the prospect oppresses him with a sense of his own insignificance. In the busy multi-

tudes that throng the streets, he sees no familiar face, recognises no friend, and is struck with a feeling of loneliness the more painful because the scenes around him perpetually excite his natural yearnings for society. It was in a mood like this that I first entered the city of William Penn—and to shake off these disagreeable sensations, I set out as soon as I could obtain the necessary directions, in quest of a gentleman to whom I bore a letter of introduction. This gentleman belonged to the society of Friends. He was a merchant of extensive connexions, and a shrewd and intelligent man of business. Though the pressure of his affairs did not leave him much leisure for the exercise of hospitality, he received me with the plain unpretending civility peculiar to his sect, promised me all the assistance he could render in an affair so foreign to his pursuits, and assured me, that while my engagements detained me in Philadelphia, he should always take pleasure in entertaining me at his house. This was no empty profession. I availed myself frequently of his friendly invitation, and was uniformly received by him and his family with an engaging simplicity and unaffected kindness far more congenial to my taste than the most magnificent hospitality. On my return to Virginia I was indebted to this excellent man for a most essential service—a service which I shall never forget. Through his intervention I had an opportunity of submitting my work to the inspection of all the leading publishers in the city. It was not then the fashion to patronise the efforts of native genius. Books were prized in proportion to the distance they had travelled, and were supposed, like wine, to be improved by a voyage across the Atlantic. We imported our literature as well as our woollens from Great Britain, and never dreamed of fostering the domestic manufacture. It is now the American system to build up a native literature by praise and puffing. Criticism is divested of its terrors, and "roars you as gently as any sucking dove." It is the very paradise of mediocrity, and many an insect author is now brought into a transient existence by the warm breath of applause, who, but for that genial influence, would have slept forever in his shell. Had I offered my work for publication thirty years later, its destiny would have been far more fortunate than that which was now prepared for it. I could prevail on no publisher to bid for the copy-right. Some objected to its length, some to the style, some to the story, and all agreed that it would not suit the prevailing taste. Indignant at their frivolous criticisms, I thrust the manuscript into my trunk, and posted off to New York, with the hope of finding greater discernment in the publishers of that city. But the same fate awaited me there. I could never persuade any one of the merits of my book, or of the immense gains which its publication must produce. After being tantalized with some faint prospect of success for several weeks, I at length abandoned my project in despair, convinced that the stupidity of the publishers had robbed me of immortality. I had a strong disposition to try my fortune in England, but the slenderness of my resources compelled me to relinquish that idea.

While I was thus dancing attendance upon the printers of New York and Philadelphia, I did not fail to find abundant entertainment for my predominant taste in the bookstores and public libraries. At those places I met with some aspirants to literary distinction,

who, like me, had been paying court to the despots of the press. Similar pursuits soon cemented an intimacy between us, and we became constant companions in our pleasures and amusements. These gentlemen introduced me to the theatres, which boasted at this period of some celebrated actors. This was the first time I had witnessed a theatrical representation, and I beheld it with the deepest and most engrossing interest. The scenery, the dresses, the artifices of exhibition, the action and emphasis of the performers, gave me such a vivid impression of reality, that I felt as if the dreams and fantasies, which had haunted my imagination for so many years, had received actual life and being. My companions were diverted at the rapt attention with which I listened, and ridiculed my rawness and inexperience. But in the excited state of my mind, their pleasantry was entirely lost upon me, and did not for a moment damp the fervor of my enthusiasm. I became passionately devoted to spectacles so congenial to the temper of my mind, and even when they had lost the gloss of novelty still continued to frequent them with undiminished avidity.

One memorable evening I saw on the theatre at New York the most beautiful woman I have ever known. This lovely creature, whom I shall call Rosalie, united with the most perfect face and figure, a gracefulness of action and a melody of voice which would have secured the plaudits of an audience to the most indifferent acting. But she required not the support of these adventitious endowments. Her performance displayed the most consummate art and the profoundest knowledge of the passions. The emotions, proper to the character she was representing, flitted across her varying and expansive countenance like ripples over the surface of a lake, while her impassioned gesture and melting tones carried them to the bosom of the spectator. Never have I been so enchanted, so transported with admiration. Feelings so deep disdained the ordinary expressions of applause, and I hung in breathless silence on her accents.

I was accompanied on that occasion by a man with whom, from the unguarded impulse of an ardent temper, I had formed a great intimacy. The fascination of his address and the apparent similarity of our tastes, had won my entire confidence. When Rosalie appeared on the stage, he observed my agitation. With his penetration he had not failed to discover my ignorance of the world, and how much my opinions of men and things depended upon the phasis which they presented to my imagination. He was aware that the nicety of my notions with regard to female delicacy, amounted almost to squeamishness, and that I deemed all public exhibition repugnant to the modesty of the sex. Apprehensive that these sentiments might abate my admiration of Rosalie, he undertook to relate her history. He described her as the most talented and amiable creature in the world, of irreproachable character, and of the most delicate sentiments. Her father was once a wealthy merchant, and in his prosperity had bestowed on this, his only child, all the advantages of education. Her progress amply repaid his parental care. Before her sixteenth year, she had, with an aptitude almost intuitive, acquired a fund of knowledge and a variety of accomplishments most uncommon in females of any age. The development of her personal charms kept pace with

the precocity of her mind, and at the age of sixteen she appeared a prodigy of beauty and talent. An English merchant of great wealth, with whom her father had long had commercial transactions, happened to visit New York about this time, and saw her in the full maturity of loveliness. Smitten with her charms, he made her proposals of marriage, and was rejected. The accidents of commerce had given this man unlimited control over the fortunes of her father. Enraged at his disappointment, he had the vindictive baseness to use that power for the accomplishment of the parent's ruin, that he might avenge the disdain of the child. After this wanton destruction of her prospects, he had the impudence to insult her with the promise of re-establishing her father in business, if she would yield to overtures now no longer honorable. She indignantly spurned the proposition. Urged by her friends, and still more by the cruel distresses of her parents, whose age and indigence appealed to her for aid, she had reluctantly made a theatrical engagement, with the pious hope of acquiring by that means a competence for her family. She avowed the utmost repugnance to this public exposure of her person, and was resolved to abandon her profession as soon as the demands of filial duty were fulfilled.

A story like this was calculated to take a strong hold on my imagination, already inflamed by the view of her uncommon beauty and accomplishments. Her conduct and adventures bore so strong a resemblance to the incidents of romance, that they enlisted my warmest sympathies. Fiction frequently described females of the purest character and most finished education, stifling their delicate sensibilities from a sense of duty, and publicly exercising their accomplishments to gain an honest subsistence. A woman, who could so act, was a heroine, and I honored her character. I desired to become acquainted with Rosalie, and my companion promised to introduce me. We visited her lodgings the next day, and I had no reason to distrust his account of her from any thing I observed in her conversation or demeanor. She was evidently a woman of brilliant talents, and there was no trace of indelicate boldness in her manners. I was so much delighted with her society that I became a frequent visitor at the house where she boarded. Southern gentlemen were then well received every where at the north, and were generally supposed to be opulent. I discovered that my visits were acceptable, and my daily observations confirmed my original impressions of the purity and tenderness of her manners and character. She spoke often of her parents in the most affectionate language, and expressed her anxiety to quit her disreputable occupation, that she might enjoy their society in the humble cottage where they resided. The deep tenderness of her accents convinced me of her sincerity. The dignity, the modest reserve of her deportment, the brilliancy of her conversation, the splendor of her beauty, her filial piety, and, above all, the flattering attention which she paid me, gradually so won upon my affections, that I felt an irresistible inclination to rescue this gifted being from so hateful a lot, and to restore her to the society she was formed to adorn. In a delirium of admiration, I one day avowed my attachment and made a direct proposal of marriage. She expressed the greatest surprise, acknowledged her sense of my generosity in

contemning the prejudices of the world by tendering my hand to an actress, and declared, that the connexion would be every way agreeable but for her unwillingness to be separated from her parents. This token of filial affection endeared her to me the more, and to remove that impediment to my wishes, I proposed that her parents should reside with us, not reflecting on the total inadequacy of my means. This was a burthen, she said, which she could not think of imposing on me, but that after such a distinguished mark of my regard, she could no longer withhold the confession, that she had conceived an attachment for me at our first interview, and would joyfully dedicate the remainder of her life to the promotion of my happiness. My finances were now at a very low ebb, and we agreed to be married as soon as I could make the necessary pecuniary arrangements.

I had frequently met the gentleman (I call him so by courtesy,) who had introduced me to Rosalie, at her lodgings, and had sometimes seen them walking together in the streets. This did not exceed the ordinary civilities exchanged between the sexes in polite society, nor had I ever detected any symptoms of peculiar intimacy between them. Being wholly unsuspecting and relying implicitly on the account already given me, I had never inquired of any other person into the particulars of her previous history. I was returning to my lodgings one day, in the dusk of the evening, when I saw this man and Rosalie enter together one of those infamous houses resorted to in large cities by the dissolute of both sexes for the indulgence of their vicious passions. I well knew the character of the house, and could scarcely believe the evidence of my senses. To ascertain beyond doubt the truth of my suspicions I resolved to watch their exit from the opposite side of the street. Was it possible? could this fair form enshrine an unclean spirit? was she a whited sepulchre, shining without, and full within of rottenness and corruption? could a common wanton counterfeit so successfully the modesty of virtue? While these reflections were passing through my mind, they reappeared at the door, and I could no longer doubt her identity. I rushed towards them in a phrenzy of passion, but they fled at my approach, and disappeared in the obscurity of the adjoining alleys. I returned to my lodgings in a state bordering on insanity. A gentleman of my acquaintance happened to call, while I was in this paroxysm of rage and anguish. In the fulness of my heart I told him what had passed, and he assured me I had escaped most fortunately from the meshes of an artful courtesan. The story which I had heard was almost entirely false. It was true that Rosalie was of respectable parentage and had been well educated, but she had been seduced about a year since, while at a boarding-school in the city, by the very man who had given me this false information, and had fled from the protection of her friends upon the discovery of her disgrace. My eyes were now opened to the infamous plot by which they had nearly entrapped me. A thousand circumstances recurred to my recollection, that should have put me on my guard; but dupe, dolt, idiot that I was, I could not see through the thin veil of deception with which they covered their designs.

I vowed the direst revenge against my treacherous friend and his frail mistress. I spent several days in

their pursuit, but they eluded my search. Before I could discover their retreat, a letter from my mother, announcing the severe illness of my father, summoned me to receive his last breath. My father had been always kind and generous to me, and I had the strongest affection for him. The tidings of his illness afflicted me with the deepest distress, and I determined to return home with the utmost despatch. My finances were so nearly exhausted, that I had scarcely the means of reaching Philadelphia, and I should have been totally unable to return to Virginia, but for the liberality of my old friend the Quaker, who generously advanced a sum sufficient to defray my expenses. I parted from him with the warmest acknowledgements, and with the promise to remit the sum he had loaned, on my arrival in Virginia; a promise which I faithfully fulfilled.

Though I travelled with the utmost expedition, my father had expired before I reached his house. I had yet the melancholy satisfaction of performing the last sad offices to his remains, and of mingling my tears with my mother's. My affliction was redoubled when I understood, that during his whole illness his greatest concern was to see me. Parental affection, strong in death, still yearned to pour its last admonitions into the ear of the prodigal son, who had wasted his substance, not in riotous living, but in idle dreams and worthless pursuits. When he felt the approach of dissolution, and found that I had not arrived, he sent me his blessing, and calmly gave his parting injunctions to his weeping family. With tranquil fortitude and pious hope, he took his departure to a better world, and closed his useful and well-spent life, displaying, in its last scene, the same benevolent regard for others, which had always distinguished his character. What keen remorse did I feel at the remembrance, that while he was languishing on a sick bed, I was lavishing my time and affections on a worthless woman, unmindful of filial duty, and thoughtless of every thing but my own selfish enjoyment. Would that I could have received his last breath! could have listened to his last words! could have seen his last looks, expressing his undiminished tenderness for the living! would that I had profited more by his precepts and example! but it has been my fate through life

To see the right, and to approve it too,
Abhor the wrong, and yet the wrong pursue.

The small accession of fortune which I inherited at the death of my father, enabled me to re-stock my farm and improve its appearance and condition. During my absence it had been reduced to a most miserable state, and I found it destitute of almost every necessary supply. I had not yet relinquished my projects of improvement; but, profiting by experience, I did not attempt to execute them with such imprudent haste. I determined to accomplish them gradually, as time and opportunity permitted, without interfering with the regular cultivation of the farm; and as my profits increased, I thought I should be better able to support the expense of such a system. Sensible of the injury I had sustained by the negligence of my managers and the carelessness and dishonesty of my slaves, I resolved to appropriate a larger portion of my time to the personal superintendence of my estate. For the first year I bestowed the most diligent attention upon the operations

of my farm ; but I did not perceive that I derived much advantage from my care. Though very learned in the theory of agriculture, I was ignorant of its details, and I found that my best digested plans uniformly deceived my expectations in practise. I had no talent for the management of men, and was kept in a constant state of irritation by the disobedience and inattention of my slaves and overseer. I became disgusted with an occupation so repugnant to all my previous habits and feelings, and gradually relapsed into my old pursuits. At length I left the whole management to my overseer and negroes, and devoted my time more agreeably to my favorite amusements. Under their administration the profits of my farm constantly diminished, and I was constrained, to relieve myself from debt, to encroach upon the principal of my estate. By the annual sale of a portion of my property, I was enabled to support for some years my accustomed style of living, but it was plain that such a system must ultimately strip me of the small remnant of my fortune. I was acting like the sloth, who gorges his voracious appetite until he has consumed the last leaf upon the tree, and then drops to the earth, bloated, helpless, and incapable of exertion.

I was popular with my honest neighbors, and though they thought me a visionary farmer, they conceived from my fluency of speech that I might succeed as a politician. After several years solicitation, I consented to become a candidate for the county, more to gratify them, than from the promptings of my own ambition. In this country, where public affairs are the topic of discussion in all circles, every man conceives himself a statesman and a legislator. A knowledge of newspaper along, a facility in public speaking, and a blind devotion to party, are the only qualifications deemed necessary in the management of public affairs. I had very little acquaintance with the general principles of politics ; but having known some of the little-great men who had thrust themselves into favor and distinction by party subserviency, and a noisy repetition of the second-hand arguments of their leaders, I had the presumption to think that I might play a respectable if not a conspicuous part on the public theatre. It did not occur to me that craft, impudence, insensibility to censure, and an unscrupulous conscience, were qualities essential to success in such a career. In these I was deficient, and found too late, that ignorant as I was of the theory, I had still less genius for the practise of politics. A distinguished man has said, that the skin of a politician should be as thick as that of a rhinoceros, that he may be callous to the small shot of defamation. I found mine as tender and sensitive as a new-born infant's. The morbid excitability of my imagination, nourished and increased by those romantic visions on which it delighted to dwell, exaggerated every petty misrepresentation into a serious wound to my character. "I was whipp'd and scourg'd with rods, nettled and stung with pismires," at each repetition of these assaults on my reputation. I was kept in torture during the whole canvass by the host of falsehoods launched against me by my political enemies. On such occasions the people are prone to credit imputations on the candidate, when the same charges against the man would have been scouted and disbelieved. My vindications were generally unheeded, or if I succeeded in the refutation of one lie, it only served to make room

for the circulation of a thousand. I was like the fox in the fable, and every swarm of these insect enemies that I drove off was succeeded by another more numerous and envenomed. My every word and action was watched and noted ; the whole tenor of my life exposed to the severest scrutiny. The slightest ambiguity of expression, the most venial errors, were fastened upon, magnified, and distorted into the most serious offences. Unconscious of having ever injured one man in the county by word or deed, I had thought myself secure from the assaults of personal enmity, and I felt the injustice under which I suffered the more keenly because it was unprovoked. My adversary was a practised electioneerer, skilful in touching the springs of popular prejudice. Shrewd and artful, he was versed in all the stratagems and manoeuvres of this kind of warfare, and knew how to spring the mine of misrepresentation upon his opponent by the agency of others, while he stood by an indifferent spectator. He was equally expert in courting the favor of the people by an imperturbable smoothness and suavity of manner, and by a coarse and familiar jocularity peculiarly acceptable to the bulk of the voters. He was made of the willow and not of the oak, and could accommodate himself with ready suppleness to the tastes and opinions of every circle with which he came in contact. My habits and pursuits had not instructed me in the knowledge of mankind, and though I had been trained to treat all men with politeness, my feelings revolted at the coarseness and familiarity which, with an ill grace, I was compelled to practise. Those rude liberties which many people think themselves authorised to take with a candidate, were equally offensive to me, and it was with difficulty, on some occasions, that I could restrain the resentment which they kindled. My friends had warned me not to be moved by such things, and I had heretofore borne numberless scoffs and insults with the fortitude of an Indian at the stake. One day when I had been striving in vain to stem the torrent of defamation, and was wrought to a high pitch of nervous excitement by the sense of injustice, my patience was suddenly exhausted by the offensive rudeness of a double-fisted ruffian, and in the first impulse of passion I struck him. The consequence was that I was beaten black and blue, and had to appear, on the day of the election, with a face which exhibited all the colors of the rainbow. The result was what might have been expected. I was defeated, and cured forever of all political aspirations.

Under the mismanagement of my overseers and from my own inattention, my property continued to dwindle, till, at the age of forty-five, I found myself on the brink of ruin. How could I ward off the approach of poverty ? I had tried every thing and succeeded in nothing. My situation was desperate, and required desperate measures.

Nothing is more certain, than that those who acquire a taste for pleasures beyond the reach of their income, whatever their original character, must ultimately become calculating and mercenary. He who lives within his means is as independent as the nabob, and much less avaricious. Improvidence and cupidity have been invariable companions since the time of Catiline ; and the lust of gain, engendered by profusion, is infinitely more rapacious and perhaps more debasing than the

niggard parsimony of the miser, whose whole happiness consists in counting his hoards. Want, too, has a marvellous tendency to dispel the illusions of romance. It brings forcibly to our view the animal necessities of our nature, and "feelingly reminds us" how much more bitter are the squalid distresses of poverty, than the fantastic woes of the child of opulence and indulgence. It divests the world and its concerns of the delusive drapery of the imagination, and exposes them in the cold nakedness of reality. "When poverty (says the old adage) enters the door, love flies out at the window." I repeat again then, that those who have been nursed in habits unauthorised by their means, and who, therefore, are unfit to struggle with the privations of indigence, must look sharply to the main chance, especially in matrimony. It is because the present generation are nourished in such extravagance, that sordid views and calculations of interest enter, even in the ardent season of youth, into the formation of a connection whose happiness depends on the cultivation of our best and tenderest affections. How many beautiful young girls do we daily see, in defiance of nature and their own better feelings, wedding age, ugliness and vice, for the sake of wealth! How many promising young men are willing to barter their affections for money, and shamelessly avow that they are fortune-hunters! Marriage is no longer an affair of the heart, but of money! and the chances of such an event may be computed by the plainest rules of arithmetic. How much time and trouble, I have often thought, might be saved in these negotiations, by the intervention of the auctioneer. If such things are thought venial in the young and beautiful, surely those whose age naturally betokens the reign of avarice, may be excused for yielding to such considerations.

Such reflections as these began to effect a change in my character. I saw ruin staring me in the face, and remembering past disappointments, despaired of earning a subsistence by my own exertions. In the extremity of my distress I bethought myself of matrimony, as a means of repairing my broken fortunes. I had no time to lose, and cast my eyes on an old maid in the neighborhood, of a considerable estate, and whose love of celibacy was not supposed to be inflexible. Had I searched the world I could not have pitched on one more unlike the beau ideal of female perfection with which my youthful fancy was enamored. She was ugly, ungainly, ignorant, cross-tempered, and parsimonious—but she had the one thing needful for me, and that reflection reconciled me to all her infirmities of body and mind. I made my proposals, and was accepted; but though she was prodigal of her person, which I did not value, she was unwilling to surrender the control of her property, the real object of my pursuit. The idea of the dissipation of her wealth by an improvident husband, was gall and wormwood, and she insisted upon a marriage contract, reserving to herself the management and disposition of her property. I was obliged to consent, and, to do it with the best grace possible, expressed the utmost indifference to her fortune, protesting that it was her person only that I coveted. Upon this flattering assurance she became extremely gracious, and very much to my discomfiture, was so fond and tender that I could scarcely suppress my disgust at these unwelcome tokens of her love. After obtaining her

consent to a speedy celebration of our nuptials, I withdrew. The contract was duly executed—the marriage duly solemnized—and I became the unenvied spouse of the homeliest woman in the county. Like the valiant captain Lismahago, under similar circumstances, I wore my bonds with a gallantry befitting the occasion.

Having exhausted my own estate, I now lived a pensioner on her bounty, and as she doled out her liberalities with a sparing hand, interest compelled me to play the tender and complaisant husband. I now comprehend what constitutes the philosophy of a stoic and the spirit of a martyr, having endured so long the acerbity of her temper and her cutting reproaches of my extravagance. It was the fear of her displeasure that induced me to suppress my name in this narrative. As she never reads, and I am not known as the author to any body, I hope to escape detection. If she were to know of my description of her person and character, I would sooner go on a forlorn hope than face the artillery of her wrath. I still live in constant fear and trembling, lest her own suspicions or the suggestions of others might lead to a discovery.

It might be supposed that the caustic of twenty years conversation with a woman of this character, would have extirpated every root and fibre of romance from my nature. But though my old propensities are sobered, they have never been vanquished. I still amuse myself with the best romances of the day, and find that they sweeten, in some degree, the unpleasant circumstances of my lot. The rational and moderate enjoyment of the best works in that walk of literature, no one I think can condemn. I have presented the results of my own bitter experience in this slight sketch, as a warning against an intemperate and indiscriminate indulgence in this sort of reading, especially in early life. Had I power, like the curate in *Don Quixotte*, to sentence all the productions of romance to the flames, I should exercise, like him, a just discrimination, and rescue many from the conflagration. I exhort my young readers to peruse only the best works of this kind, and to abstain altogether from them while their education is in progress. Whether any will be influenced by this advice, I know not, but I pray that all

"May better rack the rede,
Than e'er did the adviser."

D.

"I HAVE NOT LIVED IN VAIN."*

BY THE AUTHOR OF "THE AMREETA."

I.

'Twas the holy hour of night,
For rest to mortals given,
And the stars with their mild and pensive light,
Illumed the face of heaven.

II.

To the echo of the surge,
The low night-breezes sung,
As they struggled along the calm lake's verge,
The willow-boughs among.

* Last words of Tyho Brahé.

III.

The moonlight, soft and pale,
Like a guardian spirit lay
On the mountain top and lowly vale,
With its gentle, silv'ry ray.

IV.

While happy, dreamy rest,
Woo'd the world to repose,
The angel of death shook a noble breast,
With its strong, convulsive throes.

V.

A sage, almost divine,
In the evening of a life
Spent in devotion at nature's shrine,
Engaged in the fatal strife.

VI.

The tide of his life was low,
The sands were well nigh told,
And there settled upon his lofty brow
The death-damps thick and cold.

VII.

They threw the casement high,—
His heart beat quick again,
And he cried, as he gazed on the starry sky,
"I have not lived in vain!"

Dickinson College, March, 1839.

THE POET.

CHAPTER I.

'Tis a fearful thing for the gifted one
To turn from his dreams of light,
And see the woes and wants of earth
Come crowding o'er his sight!

The pale rays of a solitary lamp, dimly illuminated the small and scantily furnished apartment that formed the poet's studio. The bare walls, the uncarpeted floor, the want of comfort around, told the too common tale of genius struggling with misfortune and poverty. At a table, on which lay a few books of classical poetry, sat the young author, one hand holding a pen, while the other was pressed to his forehead, as if to still the throbbings of his busy thoughts. His eyes were fixed in melancholy abstraction on the paper before him. It was blank; not a word was written there, yet the lines to be traced on that page, were to buy him food for the morrow. He had been engaged by the publisher of a fashionable periodical, to write for a sum that would scarcely procure him the necessities of life for a single week; but it was all he could depend on—all that was to give his sister and his aged mother their daily bread. Before noon, the next day, he must present the fruit of his long, sleepless hours, to be decided on by a careless stranger, who would judge them as calmly as if the work of the mind required no loftier standard than the work of the hands. O! these are the dark realities that take the lustre from talent, and steal the glory from genius! When the outpourings of long treasured ideas, and the soft memories, hoarded up for years, are paid for like the labor of the artisan; when the mind is not aroused by its own soaring ambition, but awakened by the want of raiment and shelter—these are the circumstances that make intellect a fearful gift, a doom, and a

curse!—It was late, after midnight, and still the poet sat silent and motionless—his heart and his dreams alike far from all that lay before him. A gentle touch startled him from the deep vision that had come over him without slumber, and his mother stood beside him.

"It is late, my child," she said, in the sweet, quiet tone of anxious love, "leave your writing till to-morrow, and try to rest now."

He smiled sadly as he looked on the worn, haggard face that bent over him, as he replied, "I will go to bed presently, my mother; I am not tired now."

"But you will wear your strength out by this kind of life; you can write to-morrow, Walter."

He shook his head as he answered, "I must finish my writing now, mother: leave me for a little while—I will not sit up much longer."

His mother did not contradict him; and, kissing his pale forehead, retired to a couch but rarely visited by the softness of quiet sleep. The calm repose of the happy had long been a stranger to the poor widow, and when her eyes closed, it was more from the weight of tears than from a sense of slumber.

It is a dark era in life, when neither wish nor weariness can summon back to the pillow the gentle rest that once came as unbidden as the starlight. Even to the blest and contented, the sleepless hours of night bring to the mind all its deepest thoughts, while the saddest visions of many and long years, seem recalled by the still gloom of darkness and silence. But to the unhappy, who have no bright hours to anticipate; to whom the morning promises no gladness; whose very thoughts have dwelt so long on sorrow, that they have almost forgotten the name of joy, and whose lives have been passed in hoping so vainly, that hope is become the saddest kind of despair; to such as these, it is, that the wearisome season of others' rest, is a time of double wretchedness!

His mother had recalled the young author's thoughts to the task appointed him, and awakened him from the contemplation which had made him forget for awhile the necessity for action. He rose and opened the window which fronted on the street. The air blew feebly on his feverish temples, and waved the careless curls of his black hair; but it was laden with the vapors of a crowded city, and brought no coolness or freshness to the brow it bathed. His room was in the fourth story of the house, and the noise of the carriages, which even at that hour still occasionally rolled beneath him, sounded faint from the distance. A party of late revellers passed at the moment, and their harsh unnatural laugh grated on the ear that had been long a stranger to merriment. The scene had no attractions for him; the very stars of Heaven looked dim when seen through the heavy air; and the moon, as it broke faintly through the foggy atmosphere, served only to make the lamps in the streets look more gloomy and distant.

With a slow step—and nothing like the languid movement in youth, which bespeaks the languor of the feelings—the poet returned to his seat. But as he took up his pen, his faculties were recalled, as if they felt their master's need, and the power of composition was less a necessity than a passion. He remembered not that he must write or starve! He thought only of the lines which fell in music from his pen, and of the bright object who was the inspirer of his genius. He dwelt not on want

or poverty; he recollected, in their place, *that* beauty which it was *his* part to celebrate in the tender strains of undying verse. It is a sweet thought to a writer—and a thought which often comes over him in time of care—that he has, in his own gifted spirit, the spell which can give interest and immortality to the one being who has made the sunshine of his life; that long after both shall have passed away, future ages will read the songs that told the loved one's name, and strive to imagine the wondrous beauty of her who had been the poet's love!

Hour after hour, Walter wrote rapidly on, heedless of time. The straggling beams of day had paled the rays of his lamp, and the sun had risen with a dismal and murky light on the comfortless room, when he finished his writing; and, without undressing, threw himself on a bed, in an adjoining closet, to snatch a few moments repose. He soon slept soundly: for years must have given their seal to care, before the deep rest of the young will fly away forever; and the lassitude which follows high excitement, contributed to deepen a slumber unbroken even by a poet's dreams.

CHAPTER II.

Pleasures were scattered round her,
Pride was upon her brow,
And every charm that wealth could lend,
Increased her beauty's glow!

In a room, whose splendid and harmonious decorations bespoke at once wealth and taste, was a lady, whose proud and lofty air announced her of noble birth. The rose-colored curtains of the chamber, cast a delicate hue on her soft rounded cheek, and the velvet couch of the same color, on which she reclined, made the faultless and jewelled arm look fairer and purer. On the little mosaic table before her, lay the last fashionable novel, and the eyes that gazed listlessly on its pages, seemed scarcely conscious where they rested.

Married early in life, and wholly from ambition, to the old and wealthy earl of Lysle, lady Alice's hopes had been fulfilled by the death of her husband, and finding herself sole heiress of his princely fortune. Naturally indolent in her disposition, and with a strange mixture of pride and vanity, the young widow had now nothing to interfere with her wishes or caprices. The earl had, at the time of my history, been dead about six months, and his countess had laid aside the odious and unbecoming weeds which custom had forced her to wear for awhile. Receiving with haughty carelessness, the open admiration of numberless suitors, the lady Alice had lost the kindness and amiability which had graced her earlier years; and it would be difficult to imagine a character more completely artificial and selfish than her's had become. Wealth she regarded as the most important thing in existence, and, except her beauty, it was the only thing she took the trouble to think about at all. She was indeed very beautiful, and heightened, as her attractions were, by every advantage of dress, she stood unrivalled. By none was the countess more admired than by herself, and a glance in her mirror often put her in a good humor when nothing else could.

She was roused from her dreamy reverie, by the entrance of a servant, who presented her with an embossed card, on a golden waiter. She glanced carelessly at the name, and, without altering her position, said, "Show Sir Clarence up!" The servant withdrew, and Sir Clarence Wayland entered the boudoir.

Past the spring time, and even the summer of life, the baronet yet retained the manners of his youth, and strove, by his gaiety, to impress on the world the belief that he had not outlived the graces or the season of a juvenile gallant. His whole existence was a continued effort to appear young, and though he but rarely succeeded, he was so decidedly fashionable, as to be esteemed a welcome visitor even by the youthful.

As he approached the countess, his salutation was animated, and on the sparkling hand she extended to him, he imprinted a courtier's kiss.

"It is, indeed, an honor," he said, glancing around him, "to be allowed an entrance here; and I cannot tell you how gladly I accepted the invitation. It is like being permitted to enter the secret palace of a fairy queen, to be admitted in the boudoir of the countess of Lysle!"

"Pray, cease with your compliments, Sir Clarence!" said Alice languidly; "you really do not know how tired I am of flattery, I hear so much of it!"

"Flattery!" exclaimed the baronet; "to flatter you were impossible; for the highest praise that language can express, falls far beneath what you deserve! When I can add to the rainbow another hue, then, lady Alice, you may deem my words flattery!"

"I have not told Sir Clarence," said Alice abruptly, and as if she had heard his compliment, "of my new plan for driving away *ennui*. I have it so much in my power to gratify all my whims, that I am really charmed when I can find something to wish for; and I have determined to engage, as a sort of companion, some well educated, but not affluent person, who will amuse me by talking when I am in the mood, and being silent when I choose it; in short, a *demoiselle de compagnie*: what do you think of the scheme?"

"As I *must* think of all you do; it is an excellent one, but I fear you will have some difficulty in finding such a person."

"Nay, that is nothing," replied Alice; "there are many poor girls who would accept such a situation thankfully, as I offer a liberal salary. I consulted Dr. Lester, who knows every body, and he has promised to present a person who will suit me; indeed, he promised to bring her this morning."

"I congratulate you," said Sir Clarence; "pray, what are you reading?" and he took up the book which lay on the table.

"Somebody's last novel," she answered; "but I don't know whose. I can't trouble myself to remember authors' names. It is not worth reading, however; all about love and such nonsense!" She had not read half a page!

"And do you, who inspire it so often and so deeply, consider love only nonsense?" and the baronet tried his best to look loving.

"I can't say I ever thought of the matter at all, for it never interested me. I was too obedient to marry except from policy, and lord Lysle was too old for a lover."

Alice was aware that age was a disagreeable subject with the baronet, and she intended him to see the satire of her last sentence; but he thought it wisest not to notice it. As is usually the case, when people are without delicate feelings themselves, Alice did not hesitate to wound the feelings of others. Unrestrained sarcasm is a bad sign in a woman!

"Dr. Lester is below, my lady," said a servant.

"Ask him here, of course," said Alice, with more animation than she had yet shown.

A few minutes elapsed and Dr. Lester entered, introducing the young lady with him, as Miss Vere.

The countess received her with more graciousness than was her wont, and gazed in undisguised admiration on the slight figure before her, unnoticing the visible embarrassment her inspection occasioned. They formed a strong contrast, Alice and the stranger. The countess with her light brown and curled hair, and brilliant color; the other with dark braided tresses, full hazel eyes, and clear brunette complexion, where the color wandered, but did not linger. The expression of the two faces made their greatest difference—the one calm, bright and youthful; the other sad with the beauty, but not the gladness of the young. And what was it which had thus shaded that placid brow, and stolen the joy from those unsmiling lips? The thing which had thus clouded that face, and shadowed her yet fairer hopes, was poverty!

The countess was without a line of thought impressed on her countenance, and careless, except of the present, for she was rich! The stranger's soft gaze was full of care, and she dwelt fearfully on the future: she was poor! Alice looked on her companion eagerly and openly: she did not fear rebuke, for she was rich! Lucy submitted to the look, mildly and timidly: she dreaded criticism, for she was poor! The countess, adorned by every attraction that wealth could give to beauty, received admiration as her due. Lucy was dressed simply, and thought of her appearance only as it would affect the lady's decision: she did not expect to be admired—she was so poor!

Dr. Lester observed his young protégée's uneasiness at the prolonged examination, and wishing to relieve her, he said kindly,

"I had to use all my eloquence, lady Alice, to induce Mrs. Vere to part with her daughter; but I am sure she will never have cause to regret having relinquished her to your ladyship."

"Certainly not," replied the countess, withdrawing her eyes for the first time from her companion—"of course Miss Vere will be liberally paid for her services."

Tears came to Lucy's eyes, but she struggled to suppress them; and Alice continued:

"I do not expect any arduous duty; I merely want some one to answer my notes, read aloud to me, and converse with me when I do not care to talk to any one better."

Alice did not notice the rising color in Lucy's cheek, for she did not know she had said any thing to occasion it; but Dr. Lester was more considerate, and as he rose to take leave, he said,

"Miss Vere, I do not doubt, will give your ladyship satisfaction; and I shall take pleasure in telling her mother the advantages of her new home."

He extended his hand kindly, and the poor girl

pressed it affectionately. He was the only friend Lucy had as yet found in London, and his goodness had done much for her family. His manners were gentle and conciliatory, and alike to all; for though moving in the first circles, Dr. Lester had seen the rich too near to despise the poor. The door closed after him, and Lucy fancied the day was darkened. She was alone among strangers.

"Ring the bell, Sir Clarence," said Alice; and the baronet, who had silently observed the interview, eagerly rose to obey the command.

"The servant will shew you your apartment, Miss Vere," she continued, "and you can give what orders you please as to your arrangements. I shall be engaged with visitors all this morning, and shall not need your services till this afternoon."

Lucy quitted the room in silence, not daring to trust her voice in speaking, and followed the domestic to the handsome chamber she was for the future to consider her own. The attendant looked at her with suspicious impertinence; her want of confidence told she was poor, and servants, like masters, have great respect for riches. When left alone, Lucy could control her feelings no longer. She felt wretched and desolate, and throwing herself on the bed, wept long and bitterly. 'Tis a sad thing to look on misery, but saddest of all to see it in the young! But Lucy's tears were as the dew-drops, and they refreshed as they fell.

CHAPTER III.

That name! it was the sweetest sound,
That ever he had heard,
And all the hopes of many years,
Came o'er him at that word!

It was near twelve o'clock, and the poet left his room to carry his verses to his employer. It was a beautiful morning, and the sun seemed bright, even in London, as it penetrated the dark alleys and winding streets, scattering health and beauty over their crowded dwellings. Walter's feelings, too, were happier than usual. The weather has generally a great effect on the sensitive and enthusiastic, and with the superstition that forms part of a poet's character, he hailed the gladness around him as a happy omen. On the gay equipages and richly dressed passers-by, he looked calmly, not in envy. He knew that he saw those powerful in rank and riches, but he felt no inferiority. They were welcome to such advantages: he only wished enough for independence; and he was proudly conscious that he was superior to the many in the might of intellect and the magic of mind.

I can imagine no sensation more delightful than the knowledge that we possess genius: that we have in our own spirits the power to make our own path. It is a consciousness that enables us to look without ill feeling on the superior worldly prospects of the prosperous. And it is a thought which will uphold and sustain us when the wealth and power of earth have passed away. Yet, in spite of his former confidence, it was almost with trembling that Walter presented his verses to the publisher.

We are no judges of our own compositions: the page on which we have expended most time and care, may

be passed lightly over by the reader, while the one for whose fate we feared, is lauded as the best. The young author knew this, and he awaited, with that feeling of impatience that makes us hasten even what we dread, for the critic's decision. He saw him turn over the last leaf, read the last line, and he almost doubted his senses as the publisher grasped his hand, and warmly congratulated him on the beauty of his verses.

"I cannot tell you, Mr. Vere," he said, "how much I admire this writing; it surpasses even your usual poetry, and will do you honor. As to the promised compensation, you must allow me to double it; and remember, I must always be the first to publish your works. I may gain credit one of these days," he added with a smile, "as having been the means of introducing to the world one so capable of adorning it."

Walter's thanks were as brief as they were sincere, and as he returned to his lodgings, his heart and his step were lighter than they had been for many a long day. He entered his mother's room, and telling in a few words the occurrence of the past hour, gave her the result of his labors.

"This has been a happy day for us, Walter," she said, "and one we shall have cause to remember with gratitude. Dr. Lester has been here, and offered Lucy a situation as companion to a lady of wealth and rank. It will be an honorable home for her—the salary is a liberal one, and the duties he says are merely such in name. We ought indeed to be thankful."

"Did Lucy wish to go?" asked Walter: "for I would rather write night and day than send her unwillingly from us!"

"Nay, my son," said the mother, "she desired it even more than I did; and though she wept at leaving me, she saw all the advantages of the plan."

"And the lady?" asked Walter.

"Is the countess of Lysle," was the reply.

The mother suspected nothing, and she did not notice the burning color that flushed her child's cheek, as he hastily left the room and entered his own. Locking the door, he threw himself on a chair, and clasped his hands across his brow.

"The countess of Lysle!" he said slowly, as if he doubted the correctness of the name; "my sister a companion of the countess of Lysle!"

The veins in his temples grew deeper in their purple, and his hands moved convulsively, as if that name had awakened a long train of intense and stirring thought. But, after a moment's pause, he mastered his emotion; and though in the passionate paleness of his cheek, might be traced the record of excitement, there was nothing else to tell the tale. Strange that a name, a mere empty sound, can thus, by arousing recollection, become a spell, causing the proud to bend, and the high heart to tremble! There are times to us all, when a single word, a tone of music, or the sight of some long forgotten thing, will move us more than the power and might of eloquence and grandeur! Trifles are the most important things in human life, and a wheel that the strength of many could not move, will turn on a pivot.

During that day, Walter wrote little, and his abstraction was even deeper than usual. The necessity for immediate exertion had gone by, and his past excitement made idleness requisite for repose. In the evening, the beauty which had characterised the day, still

lingered, and the moon rose full and clear. The young author left his room, to seek in the open air the freshness denied him in his close and confined apartment. All without was bright and happy: even the occasional passing of the heavy carriages, and the gay laugh of their inmates, no longer jarred on the ear of the listener. It is strange how differently we look on the same things at different times! The night before, Walter had turned in disgust from the very sights and sounds he now regarded so calmly. The feelings have often more effect upon our decisions than the judgment.

Leaving the more crowded streets, Walter directed his steps to a square formed by the handsome residences of the rich, and not thronged by the compact dwellings that composed most of the city. Here were only marble pillars, stately columns, and that tranquil magnificence that distinguishes the mansions of the high born and wealthy. Before one, and the handsomest of all, Walter paused; it might be to admire the Parian marble of which it was built.

It was the same palace, for such it might be called, where the scene of our last chapter occurred. As Walter looked, a hand, sparkling with jewels and shining fair in the moonlight, lifted aside the gorgeous curtain, and revealed a richly dressed lady. She glanced around for an instant, and then the heavy drapery again fell over the window. Walter had only a moment's gaze; but he could not mistake the radiant beauty whose lines he had celebrated so often, and which had long been the awakener of his sweetest thoughts. He turned away silently, and returned to his humble home; but the poet's dreams that night, were the brighter for the vision that had blessed him.

CHAPTER IV.

Her words of careless coldness,
In bitter accents fell,
On a heart that long had lov'd her,
Too fondly and too well!

Light as were Lucy's duties in her new situation, they occupied every hour of the day. The countess would send for her early in the morning to read to her before she rose, and afterwards she would find a thousand different things to employ her submissive companion. The sweet, unobtrusive manners of the young girl, made her a very agreeable associate to a being so full of caprice, so spoiled by admiration, as the lady Alice. She took delight in displaying her consequence, even to an humble spectator; and in her ostentatious generosity, she loaded Lucy with presents of dresses and ornaments. The gentle companion in vain endeavored to decline the offerings; the countess always insisted on her receiving them, and the thanks poured forth by the object of her bounty, made a new and grateful tribute at the shrine of her power. Lucy ascribed her gifts to a purer motive than they sprung from in reality; and long unused to kindness from strangers, she felt for lady Alice a gratitude she could only express by the most devoted attention. Yet the countess, by her thoughtless and inconsiderate speeches, frequently wounded the feelings of the poor girl, whose naturally delicate sensibility had been rendered more acute by poverty and misfortune. Often, when some

rude remark had brought the color to Lucy's cheek or the tears to her eyes, Alice would heap gifts upon her, and the tear, called forth by injured pride, would flow in grateful affection. On such occasions, Lucy would retire to her own room, and weep, she scarcely knew why.

"She gives me riches," she would say passionately, "but she denies me love, and *that* is all I ask!"

The lady Alice did not know that there are some hearts, to which a soft smile and tender word are worth more than the costly gifts of pompous pride. Lucy's was one of these; and though thankful for the countess' favors, she would gladly have relinquished them all for the gentleness of friendship. Lucy knew not that Alice had so loved herself, she could give no affection to another; that she had so long looked on tenderness as a mockery, she had forgotten it was a reality. Talk as we will of misfortune's deadening the feelings, there is nothing refines them so much. Those who are accustomed to suffer, can best pity the sufferings of others: it is an uninterrupted course of prosperity that hardens the heart and makes it insensible to the emotions of those around us. We are apt to forget, while we are blessed with light, that many are in darkness; and the clime, where the sun shines brightest, is sometimes a barren desert.

"You can remain in here this morning, Lucy," said the countess—"I expect visitors; but I wish you to be within call, if I should want you. You can get your embroidery to amuse yourself with."

Lucy obeyed, and taking her seat near the curtained window, proceeded silently with her work. Alice, in the mean time, half sat, half reclined on the low velvet couch, and languidly opened, one after another, the notes and invitations which had just arrived, and been placed on the centre table for her inspection. Letter after letter, written on fancy colored paper, and sealed with perfumed wax of every shade and hue, Alice cast carelessly by, after glancing at the signatures. One, the last of all, was a note of fine satin paper, with the motto, "we have met before." The countess changed color as she looked at the name signed at the conclusion, and without throwing it aside like the others, she read every word the page contained. The lines were these:

"I have returned, Alice—though when last we parted, it was with the expectation we should not meet again. Since I saw you, many changes have passed over us both. I left you wedded for wealth and ambition to an old and doting man. Do not be offended, Alice; you know you did not, you could not love the earl of Lysle! I quitted England with every hope blighted, and every vision of happiness gone. I am here now to find you a widow, more beautiful, report says, than even in your girlish days; may I then be pardoned if some of the glad dreams of past years come over me, when I remember you are no longer bound by ties that must sever you from me? I am altered, Alice, much and sadly, more perhaps in feeling than in appearance; but the passionate ordeal through which I have struggled, could not go by without leaving a trace on the brow as well as the heart. You will find me a changed being from the enthusiastic boy, whose ardor was ever highest when with you. The last few months have seen me a wanderer over Europe, tossed as a weed on the

ocean, where'er the billows might sweep me. Without a tie left to bind me at home, I recked not where destiny carried me; and though in Greece and Italy, I could sometimes wean my thoughts from the wreck of earlier links, the shadows of the past were over me still. Among men, I was deemed cold and haughty; but the crowd look at effects, not at causes. You know, Alice, that my feelings were not *once* branded as chill and senseless. The disappointments that have clouded, one after another, a pathway knowing little but sadness, left me few tokens of my natural spirit, and *they* were crushed to the very dust by the loss of the treasure dearest of all! I shall come and see you, Alice, if you will not refuse admittance to one, who, though rejected as a lover, may still be regarded as the warmest of your friends.

ERNEST GORDON."

As Alice finished the note, she placed it in the secret recess of the port-folio near her, and a tear, that seldom glittered in the eye of the woman of fashion, trembled on her lashes. An instant after, and the emotion had passed away, as streams in the desert flow for awhile and then are lost in the burning sands.

A woman never likes to give up the admiration of an old lover, and as she approached a mirror, she never felt more perfectly satisfied with the image it reflected. The bright curls were arranged more gracefully round the girlish brow, and her eyes shone more brilliantly from their previous dimness, as the violet is loveliest after being bathed in dew.

"Come and read to me, Lucy—I feel sentimental this morning; and here is some poetry which will suit me very well."

Lucy took a pamphlet from the table, and in a low, sweet voice, that set the poetry to music, she read unknowingly her brother's verses. As line after line of impassioned feeling fell on her ear, the countess became insensibly interested in the description of a passion she could admire, though she did not understand. For more than an hour Lucy continued uninterrupted till she had finished the verses, when the announcement of visitors prevented any remark from the listener.

Among the first who entered, were Sir Clarence Wayland and lord Derwood, a young and dissipated nobleman, whose naturally fine mind had "run to waste and watered but the desert." When they came in, Lucy was still seated on the low ottoman where she had been reading, and as she rose, Derwood's eyes followed her with a gaze of open admiration. She quietly took her position by the window, and was soon absorbed in the mysteries of embroidery. No one addressed her; and though the looks of the young peer were frequently attracted towards her, he gave his words, at least, to the lady Alice. The countess was in one of her most animated moods; for the transient depression occasioned by the note, had caused her to affect a gaiety, which the effort at last made her really feel.

The polished compliment, the honied flattery, the ready repartee, flew quickly round; and the countess was laughing one of those gay, happy laughs, that make the listener smile from sympathy, when Ernest Gordon entered the apartment. He seemed surprised at a merriment he had not expected, but as the countess became suddenly grave on seeing him, he endeavored to dispel her embarrassment by imitating her animation. However he might have succeeded, for once in

her life the lady failed ; and the witty allusions of Sir Clarence won him no reward but a forced smile. Lord Derwood saw the constraint of the parties ; and leaving his station near the countess, sauntered, with the coolness of rank and fashion, to the window where Lucy sat. He saw, by her not being introduced, that she was not considered exactly an equal ; and Sir Clarence had told him of lady Alice's plan of employing a poor companion. Accustomed as he was to win his way by a mixture of politeness and effrontery, the calm composure of Lucy's manner puzzled him ; and he was about relinquishing the attempt at acquaintance, when one of the balls of worsted she was using, dropt on the floor. He took it up and gracefully presented it to the owner, whose simple "thank you," was uttered in too sweet a voice to alter his determination to gain her smiles.

"Is not this light too dim for your work ? Shall I raise the curtain higher ?" he asked.

"I can see very well, I thank you," was the calm reply, without even a word, or a look of encouragement.

Derwood was at a loss ; the impudence of the gay peer was completely put aside by the unaffected dignity of the poor protégée. But though repulsed, he was not discouraged ; and the difficulty of obtaining her notice, only made the prize seem greater.

"Are you a relation of lady Alice's ?" he asked.

"I am not," returned Lucy ; for ignorant of the rank of her questioner, she could not address him by any title.

"Have you been long a visitor here ?"

"I have been three weeks with the countess."

"I have called several times during that period : strange I never saw you before !"

Lucy made no answer to this remark, and lord Derwood, completely baffled, resolved to try some other time to make a more favorable impression. He now returned to the side of the countess, and finding his attempts at conversation as illy received as those of Sir Clarence, both gentlemen took a speedy leave.

"I will not detain you here any longer, Lucy," said the countess, when all the visitors had left, except Ernest Gordon ; "you can go to your own room if you wish."

She spoke in a softer tone than usual, and Lucy retired. How considerate people are for others' feelings, when they want to get rid of them !

Ernest first broke the silence which followed Lucy's departure.

"I did not think we should meet so soon, lady Alice, when last we parted ; but I find we can trust no more to the future than we can to ourselves."

"I hope your tour has been a pleasant one, Mr. Gordon," said the countess, in the calm tone of politeness ; and though the calmness might have been forced, Ernest thought it unassumed.

"A pleasant one !" he repeated bitterly ; his eye flashing, his lip curving with earnestness—"yes, as pleasant as the pilgrimage of an exile, who, in leaving home, has left hope also ! To find pleasure in new scenes, we must have experienced no recent sorrow ; but for me, I did not look for happiness—I knew I was parting from it."

"I had imagined," said Alice, in the same tone of composure, "that to one so full of romance and enthusiasm, Italy would have been a fairy land."

"Alice !" said Ernest, passionately, almost wildly, "do not speak in that calm manner to me, to one who knew you before you had lost every ray of nature in the blaze of fashion. You were not always thus ; I can remember the time when a softer smile was accorded to me, and when your gentlest words welcomed me warmly. Be as you once were, and do not make me curse the day that brought me again to England ! I love you, Alice, better than any have ever done ; cast not from you a tenderness you may never find again !" He took her jewelled hand, and for an instant it trembled in his ; but Alice withdrew it—and as if he read her looks, Ernest continued, "Beware how you trifle with me, Alice ! I offer you now, for the last time, a heart that has known no other divinity ; if you value it not, say so now—I will listen calmly !"

"Mr. Gordon," said the countess, "I had hoped time would have cured a passion that reason has so long declared hopeless."

"Hopeless !" interrupted Ernest. "You do not, you cannot love another ?"

"I do not," replied Alice, as calmly as if she gave no pain : "I never intend to marry again, and I cannot hear such words as your's. I am sorry you persist in declarations that can have no effect on me ; for we were friends in early life, and I would not we were enemies now. I am not so changed as to forget old ties ; and though we can never be more to each other than we now are, let us not be less, Ernest !"

With a struggle, Ernest subdued his emotion ; and though the tones he had heard, shut him from happiness, he said,

"Be it so, lady Alice ; you are right—we will be only friends !"

Alice did not notice his smile of bitterness ; and when he departed, she bade him good morning with the composed air of languid politeness. All traces of excitement had passed away, and the woman of fashion was herself again.

CHAPTER V.

'Twas the one soft secret, fondly kept,
The one sweet memory, that never slept !

The shadows had gone, and twilight was over the earth. Ernest Gordon was alone in his room, at one of the most splendid hotels in the city. He paced the apartment with the hurried, irregular step, that is a sure indication of excited feeling ; and at last, as if to cool the burning torrent of his meditations, he left the house and walked rapidly along the street. As he approached the shop of a bookseller, the rays of the lamps in the store shone full on his face ; he was passing on, when a young man emerged from the door, and pronounced his name.

"Ernest Gordon !" "Walter Vere !" and the friends in pleasure at their unforeseen meeting, forgot for a while their separate schemes of love and ambition.

"I did not know you were in England, Ernest," said Walter ; "and I have wished for you so often lately. I have needed sadly the counsel of a friend."

"Mine is your's, Walter, whenever you desire it : I have been in town only since yesterday, and I did not know where to find you, or I should have called to renew the friendship of past years."

"I am living here now," replied Walter, "and my mother and sister are with me. You have never seen Lucy, Ernest: she is very beautiful!"

"I know her through her brother's poetry," returned Ernest smiling. "Will you not introduce me more particularly?"

"Lucy is now living as a companion to the countess of Lysle; but I am sure she would gladly know one, whose interest in her brother claims her warmest thanks."

"You place too much value on the little services I have been able to render you, Walter: I have done nothing to claim such gratitude. The wealth that Heaven has given me, could not be better employed than in assisting those less gifted with the world's riches, but highly endowed with intellect and genius. Have you published yet, Walter? When I left you, your thoughts were all bent on literary fame."

"I have given many verses to the public," answered the poet; "but my dreams of fame are still *only* dreams. It is the rich and powerful whose talents are thus rewarded: to the poor and the lowly, the page of celebrity is a sealed book."

"You speak bitterly, Walter: you should not thus humble yourself. My aid, in every way, you can claim; and you should not let pride reject assistance from a friend, to whom years of affection have given a right to assist you."

Ernest spoke kindly, and Walter answered in the same spirit.

"I do not, at present, need aid," he said; "the price of my late labors will suffice for some time to procure us the common necessities of life: with its luxuries the poor have nothing to do. It was with a view to the world's opinion that I spoke, and it is only when I think of *that* I repine. It is a hard lot, Ernest, the destiny of one who feels he was made for loftier things than the common herd; who pines for distinction; whose intellect is wasted in vain to gain it; and whose soul is consumed with the fire of ambition, that burns brighter because kindled in darkness,—it is a difficult thing for such an one to bend calmly to poverty, and find all his aspirations crushed in the dust! All this I have felt deeply, bitterly; and the pen has fallen powerless from my hand, when the next instant it had to be resumed to save my mother from starvation. These are the cold realities of life, Ernest; and they fall with double heaviness on those who descend to them from the bright realm of an ideal world."

Walter paused, and Ernest said,

"I shall call and see you to-morrow, and you must show me your late compositions. Though no poet myself, I can admire and appreciate the poetry of others. I often wished for you in Italy, Walter; and I never saw a glorious sunset, or wandered by moonlight over the fallen columns that speak so sadly of desolation, without thinking with how much enthusiasm you would have looked on them!"

"I should indeed," said the young author: "it would have made me forget the gloom of the present, to ponder over the glory of the past; and to have wandered over the land of Petrarch and Dante, might have given me a portion of the fire that gained them immortality. Did you meet any friends at Rome, Ernest?"

"Not one," answered Gordon. "I did not mingle in

society: you know I left England in bad health and spirits, and I felt no desire to join the happy in their gaiety. I was as solitary as the most ardent lover of solitude could wish; my rambles were always made alone, and my soliloquies, if not as eloquent as your's sometimes are, were at least as enthusiastic." I have a great deal of poetry of feeling, though denied the power of expressing it in numbers; it is fortunate for you, Walter, that I cannot rhyme, or I might prove a dangerous rival."

The conversation now took a lighter turn, and when the friends separated each felt happier in the love of the other. There is nothing so soothing as the sympathy of a gentle spirit, to those who have little in common with the world around them. Although living in a sphere of imagination that had no communion with the sterner truths of life, Walter found in the firm and more worldly disposition of Ernest Gordon, at once a support and a guide. The kind encouragement, which is the greatest incentive to exertion, had a stronger effect on the poet, because it was the sole sympathy he had ever known. To Ernest, the friendship of boyhood gave deeper interest to his tenderness for his young companion. Accident had thrown them together early in life, and constant intercourse had produced one of those violent attachments, which, though often formed without judgment, are still the brightest features in the picture of youth. Unlike such ties generally, their's had grown stronger with following years, and Ernest's superior wealth and position in society, had enabled him to aid his less fortunate friend. Walter's efforts as a poet, Ernest encouraged, without exaggerating their merit, and Walter always showed him his compositions with a certainty that the criticism they might meet, though severe, would be kind. But though great confidence subsisted between them, each had a secret from the other. Even in their days of boyish intimacy, Ernest had never revealed his love for the lady Alice, and Walter had never said the theme of his eloquent verses was more than a fancied divinity. Neither told the one subject on which the thoughts of both were so often dwelling; and Ernest did not dream that the beauty he adored was the same that lent a softer inspiration to the genius of the poet. It was from no want of candour that each concealed this passion from the other: it arose from that indescribable feeling of delicacy that makes us dislike to speak of our own most violent yet most sacred emotions. Had the friends been separated for a long period, their letters might have told the secret—for we can write so many things we cannot say with the eyes of our listener fixed upon us. These feelings form the mystery of the spirit, the under-currents of life's stream—and there are times when such currents are most powerful, and when "trifles light as air" will overbalance the weightiest of our deeds.

"And now let me see your poetry," said Ernest, when the next morning found him in Walter's apartment. The author handed him the pamphlet containing the verses, and they were attentively read by his friend.

"It is very beautiful, Walter," said Ernest. "You have improved astonishingly in the melody of your numbers, and you have done what few English poets have done before you, written of love without losing dignity. There are few writers of poetry in our language,

who have described the passion ardently, without being love-sick or parting from common sense."

"I have often thought so," said Walter; "hackneyed as the theme now is, it can only borrow originality from the talents of the writer. But you must not flatter me, Ernest, by placing these feeble productions above those which will last when my name shall be a forgotten sound."

"I am very anxious to see your sister, Walter," said Gordon: "I have had but a passing glimpse of her, and I wish you to go with me to the countess of Lysle's."

"Do you know the countess?" asked Walter eagerly.

"I am one of her earliest friends," said Ernest, a shade of sadness passing over his brow as he spoke. "Her ladyship," he continued, "sees visitors this evening, and I have the privilege of old acquaintanceship to introduce my favorite companion. You must go, Walter—I will not let you hide your light any longer; you ought indeed to mingle in the society for which your education and talents fit you so well."

Walter hesitated, but the repeated entreaties of his friend at length forced him to consent. When Ernest left him, Walter almost repented his engagement: delightful as it would be even to look unchecked on the loveliness of his idol, he felt that repugnance to entering a strange circle, common to those who feel the superior advantages of the persons they meet. Although qualified by appearance and acquirements to adorn any society, the poet could not shake off his disagreeable feelings; and he thought of the coming evening till the whole affair seemed the deception of a dream. But Ernest had taken the precaution to prepare the countess for receiving him graciously, and as she knew he was the fashion, she expressed her anxiety to see him.

This was one of the countess' most amiable days, as it had been marked by a conquest of more than usual worth. Alice had received proposals from one of the handsomest men in London, and the offering, though declined, proved her attraction and put her in a good humor. Alice did not remember that her wealth was among her greatest charms, for when did a woman ever believe she was courted for her money?

To Lucy, the changes in her lady's feelings were often subjects of real anxiety, dependent as she was on her caprices. But on this day her conduct to her companion was kinder than common, and as Lucy finished the notes of invitation she had been answering, Alice said, "you must look your prettiest this evening, Lucy, for I expect a large party, and Mr. Gordon has asked permission to introduce your brother."

"Walter coming here!" exclaimed Lucy, her cheek crimsoning with pleasure.

"I thought it would surprise you," returned Alice; "but Mr. Gordon seemed so anxious, I could not refuse; besides, his poetry has made him the fashion just now, and I suppose will introduce him into society."

"Is Mr. Gordon a relation of your ladyship's?" asked Lucy.

"No," replied Alice, "but a very old friend;" and she looked at Lucy as if she feared to trace some suspicion of the truth, but she saw only the calm look of unsuspecting innocence. Alice was conscious she had played a heartless part towards Ernest, and she did not like to have it known, even by Lucy. Still the theme was an agreeable one on which her companion

had touched, and impelled by a vague feeling of curiosity, Alice continued: "I knew Ernest Gordon before I was married, and he has been on the continent ever since; do you think him handsome?"

"The handsomest man I ever saw!" said Lucy warmly; "I never saw a more intellectual face, and its melancholy expression only makes his smile the brighter."

Alice felt pleased, she scarcely knew why; this very person that the world admired so much, she had discarded, and his praise sounded sweetly in her ear, for it ministered to her vanity.

There are some persons who have no thought or feeling beyond themselves, who care for companions only as contributors to their own pleasure, who are linked to the world by ties of selfishness, and who even when appearing most amiable, act from unworthy motives. Alice was one of these. She looked on Ernest Gordon, not as the high spirited and intellectual man, but as her admirer; for wealth she cared only as it contributed to her enjoyment, while the refined and gentle Lucy she regarded solely as the tool which was to work out the fabric of her own caprice.

Let the situation of such persons be what it may, even when surrounded by pride and luxury, they are to be pitied; they are apart from their kind in the solitude of self, exiles from all the sweet commune of kindred thought, and alone in that weary desert of the heart that knows no end. The light of worldly advantages cannot atone for the soul's darkness, and the purple mantle of rank and pride is valueless compared to the white robe of kind and tender feeling.

CHAPTER VI.

He sought a glory that could not save;
He toiled for fame, and gained—the grave!

The evening approached, and Alice was dressed in the rich, brilliant style that became her so well. Lucy too spent more time at her toilette than usual, and she had never valued the splendid dresses given her by the countess so much as now. One after another was tried and discarded before a choice could be made, and Lucy was arrayed for the evening. The guests arrived at the fashionable hour, and the rooms were thronged by the wit, the beauty, and the talent of the day. Ernest and Walter were among the latest who entered, and the graceful affability of the hostess' reception soon relieved the poet from his embarrassment.

Introduced by his friend to the most conspicuous among the visitors, Walter speedily lost his slight *emprossement*, and the kind encouragement which true nobility of mind always gives to youthful genius, was amply awarded to the poet.

"Who is that gentleman with dark eyes, who appears so great an admirer of beauty? I have noticed him looking at lady Alice for the last half hour."

"I will introduce you," was Ernest's reply, and advancing, Walter was presented to Sir Godfrey Kneller.

"I should perhaps apologise," said Walter, "for forcing you to withdraw your attention from a face that is beautiful to all, but must be doubly so to one who has made loveliness the study of his life."

"I should rather thank you," replied the painter with

a smile, "for interrupting a reverie so dangerous, and I assure you it could not have been more agreeably broken."

Walter was charmed with the natural yet polished manner of his new acquaintance, and the long conversation which followed mutually produced favorable impressions. When they parted, Sir Godfrey said,

"I see you are an admirer of the fine arts, and as we are worshippers of sister deities, I hope we shall often meet. If you will come to my room to-morrow morning I think I can promise you a circle of agreeable friends."

Walter accepted eagerly an invitation given with so much kindness, and from that night the star of his destiny shone brighter.

In the meantime Lucy had excited no little admiration among the fashionable young men, who always give preference to a new face. Lord Derwood was of the number, and now that he saw Lucy in society, he resolved to win from her the favor his rank and manners generally claimed.

"I scarcely know how to address you, Miss Vere," were his first words, uttered with an air of graceful embarrassment, "after my rudeness in venturing to offer you my assistance when not authorized to do so by a formal introduction. May I hope that Miss Vere will pardon an act which a look in her mirror will amply justify?"

Lucy blushed, she knew not why, at the open flattery so unfamiliar to her ear, and not knowing what to say, merely bowed to the compliment, while his lordship continued:

"I really cannot believe we are such new acquaintances, for I have thought of you so constantly since my transgression of that morning, that I feel more as an old friend than the worshipper of an hour."

Wishing to rouse her from her silence, Lord Derwood asked if the talented poet, Walter Vere, was a relation of her's.

"He is my brother," replied Lucy, while the pride of affection colored her cheek; "does your lordship know him?"

"Only through his poetry," said lord Derwood, who had never read a line of it; "but I intend this evening to solicit the honor of his acquaintance; you will not, I hope, by relating my offence to you, prejudice him against me!"

"I never pretend, Lord Derwood, to influence my brother's judgment; and the offence of which you speak I really never thought of until you mentioned it."

Lord Derwood bit his lip; it was certainly very mortifying to be entirely forgotten by a girl he had tried to fascinate; he had much rather she should have been seriously angry.

"I find I was not mistaken," he said, as these thoughts passed over him, "in attributing to Miss Vere, a kindness equalled only by her beauty; I trust our friendship, commenced so unpropitiously, will in 'the future contradict the past,' as those days are often brightest whose mornings rose in clouds."

The approach of Ernest Gordon terminated a conversation which Lucy disliked, because she did not know how to receive it, and the more agreeable society of Gordon was a happy relief. From the time of his first acquaintance with Lucy, Ernest had treated her

with a cordiality which his intimacy with her brother authorized, and his easy, intelligent style of addressing her made him a welcome companion. He now came from the countess to demand Lucy's attendance, and offered his arm to escort her to the other apartment. Alice was surrounded by her guests, Walter among them, and as Ernest and Lucy approached, she said,

"I sent for you, Lucy, to scold you for not telling me of your talents as a musician, which I have now accidentally learned from your brother. At the request of all this circle you will atone for your long silence by a song."

Lucy in vain endeavored to escape—the countess would not be denied.

"Let me add my entreaties, Miss Vere," whispered lord Derwood; but Lucy pretended not to hear him—and Alice, observing her protégée's unwillingness, laughingly said,

"Lead her to the harp—we will not be denied!"

Lord Derwood eagerly offered his arm, but Ernest had proffered his, and Lucy took it. From a heap of the fashionable music of the day, she selected the following song:

THE DISCARDED.

Nay, spare those words of haughtiness,
They cannot move again;
I will not offer now the love,
I offered once in vain!
Thy scornful tones inflict no pain,
Unheeded they shall fall;
They only serve to erase the vow
That acknowledg'd thee dearest of all!

That very scorn has blotted out
The worship I had felt,
For it shows so well the vanity
Of the altar where I knelt.
Then calm the proud and lofty look,
Upon that peerless brow;
Thy coldness can inflict no pang,
I do not love thee now!

The gentlemen applauded warmly, and the unaffected admiration of Ernest atoned to the songstress for the unpleasantness of singing before a crowd. Alice was delighted, yet at the same time half angry at Lucy's having concealed an accomplishment which might have amused some of her moments of ennui. Thus it ever was with the countess; every thought ended in those words of selfishness, "mine" and "myself." Alice was in the highest spirits, and her laugh rang as merrily as if she had not crushed hope in a heart that had loved her, "not wisely, but too well!"

Ernest had in some measure learned to look calmly on the idol of the past as the friend of the present. There is rarely a medium between passion and dislike, where love has been violent—and it requires a strong mind to pass from adoration to indifference. To indifference, Ernest had not yet schooled his feelings; he still felt that a word from Alice could rule him more than he liked to acknowledge, but the fire and fervor of devotion were gone. If the remembrance of that vision was ever with him, it served not to revive the dream, but to guard him from a similar one. He knew he could never cherish for another the sentiments he had nourished for Alice, and on the gay beauties around him he scarcely threw a glance—most certainly never gave a

thought. Towards Lucy his manner was kind as a brother's, and he conversed with a freedom to her, which he did not use to any one else but Walter. Her gentle, confiding manners, sweet beauty and dependent situation, claimed at once his admiration as a man, and his kindness as a friend. His long acquaintance with her brother, and the services rendered him, gave him a right to her friendship, and while she gave that, he did not dream of any other sentiment.

Friendship between a handsome, talented man, and a beautiful girl, is a miracle which never yet has been: on one side or the other, there will be a warmer feeling, and in this case that feeling was with Lucy. Without a suspicion of Lucy's interest in him, his manner served to heighten it, and ignorant of his love for Alice, she might perhaps be pardoned for attributing his solicitude to warmer motives than those of kindness.

The next morning, Walter repaired to Sir Godfrey Kneller's. He was shown into a room where the painter was seated at his easel: near him was a young man who was also painting.

"I am glad you have come," said Sir Godfrey, offering his hand, "I shall have an opportunity of improving our acquaintance before the arrival of other visitors; but first I must present you to my young friend, a pupil who bids fair to rival his master. Ludovic, this is Mr. Vere!" The painter started as if roused from a dream, and the calm, sad smile that greeted his new acquaintance, faded rapidly away, as he returned to the task before him.

"If you are an admirer of painting," said Sir Godfrey, "you may perhaps find some entertainment among those pictures, the heroines of Shakspeare."

Walter approached the portraits which were enclosed in rich frames, and gazed on them in mute admiration. There was Cordelia, with her mild, affectionate eyes, and lips parted as if uttering words of gentleness; lady Macbeth, with her look of stern and haughty pride, and there too was Juliet, the child of the south, whose soft, graceful and voluptuous beauty, realized the bard's ideal.

"There is nothing," said Walter at last, after looking long on the loveliness before him—"there is nothing that makes us so intimately acquainted with a writer, as to see in reality the faces he has pictured in his dreams. While I look on those features, I can fancy the feelings of Shakspeare, as in the visions of his genius those same lines of beauty flitted before him."

"And yet," said the painter, "those may be very different faces from the imaginary ones of the poet, though they realize in a faint degree my conceptions of the characters. Many who have seen those pictures, say the portraits they had fancied of the same heroines were very different. But as we have no regular description of the beauties, and therefore can have no certain standard, we must each have our own peculiar ideas concerning them; mine are embodied, but not perfected in the features before you."

"Not perfected!" repeated Walter; "surely nothing can be more beautiful."

"Have you yet to learn, my young friend," asked the artist smiling, "that in painting as well as poetry, the reality ever falls below the ideal? There are times when I am tempted to destroy the works which are so far from fulfilling the conception, while at another

period, I regard them with the admiration of a stranger, and almost wonder at the inspiration which enabled me to perform them so well!"

The entrance of visitors prevented their further conversation.

During his frequent visits to Sir Godfrey, Walter saw the best society of the metropolis, and the kind patronage of his friend was of the greatest service to him. Sir Godfrey advised him when he needed the counsel of experience, and through Ernest Gordon and the artist, Walter soon acquired both independence and celebrity by his writings. With the young pupil of Sir Godfrey the poet could never sustain any conversation; he was always silent, except when addressed, and always after such an interruption would return with redoubled ardor to his task. As he seemed to dislike being taken from his painting even for an instant, Walter forbore, after a few attempts, to force an acquaintance who greeted him so reluctantly. He noticed one day for the first time the young artist was missing from his accustomed place, and as he was alone with Sir Godfrey, he ventured to ask the history of the silent pupil.

"Poor Ludovic!" said the painter, "he is prevented by illness from being here to-day, and I fear it will never be his lot to finish the work he has commenced. He is an Italian by birth and his circumstances are independent. He came to England for the purpose of receiving my instruction, as I was once intimately acquainted with his father. He has been with me several months, and the progress he has made in his art, is really astonishing; but his health is so delicate, he is often forced by illness to leave his easel. This climate is too severe for his southern constitution, and I fear he will soon fall a victim to his ambition."

"Has he no friends in his own country?" asked Walter, who was deeply interested in the tale; "none to love him at home?"

"Not one!" replied the painter; "he is bound to Italy by no ties but those which link the exile to his childhood's home. He sometimes talks of returning there when he has gained celebrity—but I do not think he is aware of the dangerous state of his health, and his unwearying devotion to his art is hastening his disease."

"What is he painting now?" asked Walter.

"His first original piece," answered the artist, "and its correctness amazes me in one so young."

He removed the covering which protected the picture and displayed the still unfinished outlines of a group from Italian history.

"Poor Ludovic!" said Sir Godfrey with a sigh, as he replaced the veil, "so young, so gifted, and so early doomed!"

The next day, and the next, Ludovic was still absent from his picture; on the third he sent to ask Sir Godfrey to have his painting brought to his room. His request was complied with, and whenever his strength would permit, Ludovic labored at his work. About a week after, Sir Godfrey went to see his poor pupil. The curtains were all closed but one, and the light which that admitted streamed full on the finished picture of the dying artist. It was hung in a splendid frame, where the eyes of its creator first fell when he waked, and the last thing he saw at night was the idol

he had made. The artist was asleep when Sir Godfrey entered, but on awaking he warmly thanked his friend for his visit.

"I long to show you my picture," he said, "for it is finished at last!"

"I have been looking at it while you were sleeping, Ludovic," said Sir Godfrey; "it does you honor."

The cheek of the young artist brightened at the praise, though he expected it, and a tear shone on his lashes.

"I shall do better even than that," he said, "when I am well; and you shall have cause, my best friend, to glory in your pupil. There is but one thing on earth I value more than that picture—it is this miniature of my mother." He handed Sir Godfrey a miniature set in diamonds: the face was a sweet and mild one, with the dark hair and lustrous eyes of an Italian.

"That face," he continued, "was the first to shine on me in love, and it was the last. I have looked at it a great deal lately, and its sweet beauty has brought me hope. When I am better I intend to copy it. Remember, my dear friend," he said, pressing Sir Godfrey's hand as he spoke—"remember, that if any thing should happen to me in future years, that picture and this miniature are your's. They are dearer to me than anything else on earth, and while I live they shall be with me, but when I am gone, they will serve to remind you of one who owes much to your kindness."

A few days after, the picture hung in Sir Godfrey's room, and the miniature was enshrined among his dearest treasures. Poor Ludovic!

CHAPTER VII.

Youth's sweetest hopes may not come again,
To one who has loved, but to find it in vain!

Walter was now a frequent visitor at many noble houses, and among them at the countess of Lysle's. He called one morning and found the countess alone, apparently reading. She looked beautiful, and Walter might almost have been pardoned his idolatry for so much loveliness.

"I am glad to see you, Mr. Vere," said Alice, as he entered, "for Lucy has gone to see her mother, and I long for somebody to talk to. Can't you tell me something amusing? Come, relate a few of your own adventures!"

"I fear your ladyship would find little amusing in them," said Walter, smiling. "I don't think I ever met with a real adventure in my life!"

"Impossible!" cried Alice, "and a poet too! Now I am sure you have saved some body's life, or attempted the release of some imprisoned beauty!"

"Neither, on my honor!" replied Walter: "you know such deeds belonged only to the days of chivalry, and they are past."

"Well at least," persisted the countess, "you have been in love; pray was it with some fair and lowly maiden, or, like Tasso, with a beautiful princess?"

Walter's cheek became deadly pale and then flushed like crimson.

"I have been in love, lady Alice!" he said, "if that hackneyed phrase can express the madness of a passion

scarcely less presumptuous than Tasso's. From the first moment I saw her who is the starlight of my life, she has been with me in my dreams as a light from Heaven. I have looked on her when she knew it not, and I have cared for wealth, for rank, for fame, only to merit her; she has been the inspirer of my sweetest thoughts, the idol of every hour!"

"You are enthusiastic," said Alice, half smiling, "and the lady of your love is—"

"Yourself!" and Walter knelt before her as he spoke.

Amazed beyond the power of utterance, Alice answered not, and Walter continued: "I have loved you, lady Alice, as you may never be loved again by the heartless beings around you; oh! let me hope, that when my name shall be a proud one, when the poet's wreath shall win me greatness, let me then hope I may not have loved vainly."

"Mr. Vere!" said Alice, and she rose from her seat in lofty pride—"Mr. Vere, you have strangely forgotten to whom you speak."

"I know but too well," interrupted Walter, "the rank and the loftiness of her I address; but that knowledge only shows me more plainly the value of what I would gain. Lady Alice, you compared an instant since, my love to Tasso's; will you not, like the princess Leonora, look kindly on the one who has dared to love you?"

Alice proudly drew her figure to its full height, as she said, "I could almost smile, Mr. Vere, at your madness, were it not too insulting to be passed thus lightly over; your own mind should have told you that a poor and lowly poet, is no lover for the countess of Lysle!"

With a look proud as her own, Walter gazed on the eyes that sunk beneath his.

"It is well," he said calmly and bitterly, "I do see, though too late, that we have nothing in common. Had I known this a little sooner, I should not have intruded so often on the countess of Lysle. We shall meet no more!" and his voice faltered. "May the peace you have taken from me forever, be with you still. Farewell!" And before Alice could answer, Walter was gone.

While Walter was with the lady Alice, Ernest Gordon entered the poet's room. He found Walter absent, and Lucy alone. She said she expected her brother in a few moments, and Ernest seated himself to wait for his return.

"I believe you are not often absent from lady Alice," he said.

"No," said Lucy, "I can rarely find a moment even to come here. I have been looking over Walter's late writings," she continued; "one would really think from their style that he is desperately in love;" and she placed one of the sonnets before Ernest.

"I expect," said the latter, with a smile, "that this is merely for the rhyme's sake. I believe many people are cradled into poetry by love; but as Walter has never mentioned his *amour* to me, I fancy his heroine is an imaginary one. I do not know either, whose beauty could merit such enthusiastic admiration. I never met such loveliness but in one."

He spoke without looking at Lucy, or he would have seen by her deep blush, that she had appropriated to herself a compliment intended for another. How often does woman's vanity make her misery!

"Was it in Italy, you saw such beauty?" asked

Lucy, though she fancied she could foretell his answer.

"No," replied Ernest, "I never found abroad the loveliness of the one at home; and I believe it would be impossible now, for even the dark eyes of Spain or Italy to win a share of my admiration."

As he spoke Ernest looked at Lucy; her cheek flushed the hue of the ruby, and that blush told Ernest the secret of her feelings. After a few moments light conversation he took leave, saying he would call again on Walter. He left Lucy in a vision of happiness. Ernest she imagined had alluded to no beauty but her's; and she fancied so warm an admiration might soon be changed to as warm a love. Poor Lucy! her dream was a brief one!

Ernest was startled at the knowledge acquired so accidentally, and without a shade of the vanity so many would have felt, he regretted it sincerely. His own disappointments taught him sympathy for a passion that must be hopeless. To offer to another the heart filled by Alice, he could not, and he determined on a course which he thought would break, before too late, the tissue of Lucy's affection.

When Lucy returned to the countess, her lady received her coldly. Incensed at Walter's boldness, and with her usual selfishness, making no allowance for his feelings, Alice's anger was still unabated, and she harshly told Lucy to go to her room. When alone, Alice vented her wrath in broken exclamations, and at last, as if a bright idea had come over her, she wrote a few lines on a card, and ringing for a servant, sent the note to Miss Vere. Lucy had been surprised at the countess' manner, but thinking it arose from caprice, she thought no more of it, and was quietly reading when she received the note. It was as follows:

"The countess of Lysle presents her compliments to Miss Vere, and informs her that her future attendance will be dispensed with."

Astonished beyond measure at this message, Lucy could scarcely realize the change. The certainty came but too soon, and tears of mortified pride and wounded feeling sprung to her eyes.

"And all ends in this!" she exclaimed passionately; "I am dismissed with this haughty coldness; I, who have devoted every moment to her pleasure—who have even dreamed she loved me!"

When she became calm, Lucy made her preparations to return to her mother. The articles given her by the countess she selected and put aside, and with her simpler wardrobe, she left her splendid home. The amazement of Mrs. Vere equalled that of Lucy; and though Walter could have explained away their astonishment, he did not do it. Soon after her return, a servant from the countess brought the dresses Lucy had left, and a note. It contained these words, with a sum of money:

"The enclosed is the amount due Miss Vere for attendance on the countess of Lysle."

"You must not keep it, Lucy!" said Walter; and with the returning of the dresses and the money, ended all communication with the countess. The next day Walter announced his intended departure from London.

"There is nothing to detain us here now," he said, sadly. "Lucy is released from her engagement, and I

have made arrangements which will enable me to send my writings to my publisher. Ernest Gordon, too, is going again to the continent, and he told me to bid you both his affectionate farewell."

"Is he not coming to see us?" asked Mrs. Vere.

"He will not have time," answered Walter; and glancing at Lucy, who though silent, was cold and pale as marble, he added, "perhaps it is better thus."

The mother had outlived her days of intenser feeling, and while thinking of the change in their prospects she did not observe Lucy's emotion. Walter knew her sensations by his own, and approaching her, he imprinted a kiss on her forehead, and whispered,

"You must not be sad, Lucy, for there are many still to love you!"

Lucy pressed his hand in silence, and without a word of explanation: Walter knew all.

The poet left London with his mother and sister. Sir Godfrey wrote to him, kindly inviting him to return, but he declined, though with many thanks for the painter's interest.

Lord Derwood was very much disappointed, when, on his next visit to the countess, he learned Lucy's dismissal; but the new face of a pretty actress consoled him for her loss.

Surrounded by other admirers, Alice soon forgot both Walter and his love, and among his many friends, Sir Godfrey Kneller was the only one who remembered the existence of the once flattered poet.

J. T. L.

TO THE ROSE.

Child of the morning! I love thy uprearing,

Gemm'd with the pearls of the dew that surround thee,
When bright o'er the burnished horizon appearing
The sun casts his glorious effulgence around thee.

Child of the sunbeam! I love to behold thee

Wet with the kisses impress'd by that dew,
When soft thou art seen 'mid the leaves that enfold thee,
Blooming and blushing with loveliest hue.

Raise up thy bosom, fair daughter of morning,

Spread forth thy breast to the amorous breeze;
See how it speeds through the mists of the morning,
Whistling regardless o'er spice laden trees.

Where must I look for thy rival, fair flow'ret?

Where the home of the Peri its sweet garden rears!
When they weave a rich zone of their locks to embower it,
Watered with nectar and nursed by their tears?

Or shall I look in the depths of the waters,

When forests of coral a shelter outspreads?
Shall I search in the bowers of ocean's dark daughters,
When clusters of pearls are encircling their heads?

Sweetest of flowers! I need not endeavor

To find out another a rival for thee;
Relic of Eden, I love thee! and never
Can I wish one more blooming or od'rous to see.

Live on, and bask like the child of a day dream ;
Feed on the rays and the smiles of the sun ;
Pout forth thy lips to the kiss of the May beam ;
Smile on—for sweet is the course thou shalt run.

Nursling of Heaven! though thou perish to-morrow,
Heed not the short span of life that's assigned thee ;
Thou livest in beauty—thou know'st not of sorrow—
When thou diest thou leavest thine odors behind thee.

H. M. S.

NOTES OF A TOUR

FROM VIRGINIA TO TENNESSEE, IN THE MONTHS
OF JULY AND AUGUST, 1833.

By Rev. H. Ruffner, D.D., President of Washington College, Va.

CHAPTER III.

From Louisville to West Tennessee.

The Galt house in Louisville furnishes the traveller with excellent accommodations, administered too with a promptitude in the servants and a kindness of manner in the landlord, that make one's abode there doubly agreeable. Southern gentlemen on their way, up and down, often tarry some days in the Galt house for their pleasure alone. In a shop on the opposite side of the street, I drank of the "Blue Lick water;" brought from the Blue Licks in the upper part of the state. It is sulphureous, but mainly distinguished for a strong mixture of salt, of which the muriate of soda, or common salts, is distinctly *tasteable*. It is reputed to have very salutary effects; but it is certainly not as agreeable to the palate as our sulphur waters in Virginia.

From Louisville, the traveller to Nashville has generally the choice of a conveyance by steamboat or by stage. The low state of the waters now, made the success of a voyage up the Cumberland rather problematical; so I took passage in a stage coach, on the third day after my arrival at Louisville.

Our way down, for twenty miles, lay through the broad level tract on which Louisville stands. The soil is exceedingly rich, but cursed with ponds full of rank and rotting vegetation—the potent nurseries of mosquitoes and fevers. The country is aptly named "The Pond Settlement." We stopped in the midst of it at a whiskey tavern to change horses. Here we saw some of the *pale faces* of the settlement. They told us that the annual visitation of fevers and agues had already begun. When we asked one of them, whether the ponds could not be easily drained, he answered, "yes, very easily; but a good many of the settlers are opposed to draining them." "What!" said I, "opposed to draining these festering ponds! Do they wish to be sick every year?" "It seems so," said the pale face—but he spoke with an indifference of manner, which showed that he felt little concern on the subject. "How use doth breed a habit in a man!" These people have grown so accustomed to ponds, mosquitoes and fevers, that they take them quietly, as things in the due course of nature.

The next stage brought us to the bank of the Ohio

at the mouth of Salt river, which, though gentle as a lamb where it meets with the superior Ohio, is said to be as violent as a brawling bully at a distance from its mouth, and consequently to require a navigator with strong arms and a stout heart to stem its current. This has furnished the Kentucky bruisers with a striking figure of speech: when they would terrify an adversary with a lively apprehension of rough usage, they threaten to "row him up Salt river." We descended the steep muddy banks to a boat, and were rowed not up Salt river, but over it—an operation that would have been pleasant enough, had not the festering ooze of the banks saluted our nostrils with a compound of villainous smells, drawn forth steaming hot by the cloudless sun of July. After this nasal treat, I was not surprised to hear that the hamlet on the southern bank, where we dined, is a sickly place. In fact, no place on the Ohio, below Louisville, can be called positively healthy; though some situations are comparatively so. All will become less sickly, when the lands shall be drained and cleared of the overshadowing forests. Were the settlers to spare the valuable trees, and destroy the others, and to cut ditches through their low wet lands, they might generally enjoy the blessing of health, while they reaped the exuberant harvests of their teeming soil.

Below Salt river, we soon began to ascend the hills which here border the Ohio; and after mounting some five or six hundred feet, above our former level, we found ourselves in a broken limestone country of indifferent soil, which became more sandy as we advanced into the less broken parts of the interior; while the trees dwindled to a new growth of saplings, or if not this, an elder generation of black-jacks—till, what with the yellowish white sand and the scattered dwarfish trees, and the peculiar character of the annual plants growing among them, the country assumed the genuine aspect of *The Barrens*, as the early settlers descriptively named this wide region. But the soil, unlike most men, performs more than it promises; flourishing fields of corn surprise the traveller with its vigorous growth and healthy green, on a soil which in its natural state would seem to be scarcely worth cultivation.

As we advanced, the ravines made by streams flowing into the Ohio on our right, gradually disappeared; and the country spread out into a great plain, somewhat variegated by hills and vales; but again showing only some hills at a distance, with slight undulations near the road, without streams of water, but with frequent ponds of dirty water—an ugly sight to one accustomed to vallies and clear brooks. For the space of more than one hundred miles across the country we met with only two brooks. We crossed the Green and Barren rivers, which seemed to be fed by subterraneous streams; for the flat region of ponds about them, leaves the rain water no choice but to go up into the clouds again, or to sink down into the earth. The country is full of caverns and sinkholes. In some of the latter, as before remarked of Greenbrier, streams of water issue at one side and flow into a cavern at the other; seeming to have made for themselves these holes, through which they could take a peep at the upper world as they pursued their under-ground way. Where a natural breach occurred in the limestone, and left only earth above these streams, the loose matter would gradually fall in and be carried away.

Near Bowling Green, the road passes directly over a mill in a cavern, out of which a stream flows and then enters another cavern a few yards distant. In this country, too, is one of the largest caverns in the world, if reports be true, as I heard them on the way: it is said to have been explored nine miles, and yet no end discovered! But it appears not to be remarkable for any thing but its vast extent.

We arrived at Elizabethtown to supper, the first day; but we were not permitted to take lodging there. We had to go on, and to sleep in the coach as we best could. Happily there were but three of us, one to a seat. Mine was the fore seat, broad but short; whereupon I spread the breadth of my back, with a fellow-traveller's portmanteau under my head, and my lower members doubled and erected to a perpendicular, with the knees up. Thus I slept, and the better, after a hot day, for being fanned with the night breezes. About once an hour, I had to rise and unfold my cramped limbs; which being presently restored to their wonted animation, I folded them up again to their perpendicular attitude, and was soon rocked and fanned away to the silent realms of Morpheus. I note this incident of my journey, that I may commend this mode of sleeping to stage passengers, who can have a whole seat for their bed. It is far preferable to the more common custom of going to bed in a tavern at eleven o'clock, and of being called up at one—just as a body begins to enjoy a sound sleep after a fatiguing day.

But, N. B. (that is, *noty beny*, as I have seen it written,) If you measure six feet or more in length, choose rather the middle seat for your bed; as my next neighbor, who was very long, found the length of that seat an advantage. At first indeed, he tried the doubling process as I did, but the seat being narrow and round backed, and open on both sides, he was frequently jolted off; until he put his head upon the coach window on the one side, and his feet through the opposite one: thus he could maintain his position, without being cramped. He only complained a little of the hardness of the wood used in making the coach-frame: but the interposition of a cloak made it somewhat softer.

The second night we reached Bowling Green, in the midland region of the Barrens. The soil rather improved in appearance, but owing, I suspect, to its thinness upon the surface of the rock, the crops in many places, were of inferior quality. Dry hot weather soon exhausts the moisture of these thin layers of soil, especially where the rock lies in horizontal strata, as it does in this country. Vegetables are then precluded from striking deep root, as they may in the crevices of inclined or broken strata.

The horizontal stratification of the rocks in this country, was most strikingly apparent in a range of hills on the right, which seemed to constitute the western boundary of the Barrens. As the road gradually approached them, I was struck with the regular formation of a hill, which swelled out on the side of the adjoining ridge, in the perfect shape of a half cone; the base curving round in a semicircle more than half a mile in extent, in the manner of a natural wall of limestone; then after a gradual slope of soil, a second wall of rock with a smaller curve; then another slope of ground contracted the hill; and so in succession, a wall and a slope, like a terraced garden, till the lessening

semicircles terminated in a small round top, higher than the ridge out of which this regular half cone projected. The hill had been cleared of trees, except such as grew about the walls. It made an appearance at once beautiful and grand. Should some wealthy proprietor, one hundred years hence, build his mansion on the top, he might by some additional planting and by trimming and cultivating the smooth slopes, convert this hill into the most splendidly elegant residence in the world. Its height I would suppose to be about three hundred feet, and the view from the top must be of great extent.

Bowling Green, is a small but neat village. All the villages which we saw on this route are small; but the country is of late becoming populous.

When the wave of emigration first reached the Barrens, it suddenly stopped before a wide treeless waste of apparently barren soil. When the vicinity of settlements, checked the custom of yearly burning the dried grass of the Barrens, a crop of young trees sprang up, and in ten or twelve years settlements began to be made. The unexpected productiveness of the soil, and the extension of the young forest, caused a rapid succession of new settlements. The whole country is now peopled, though not as densely as it may and will be. But for me this country has no attractions. Without mountains, without valleys, without brooks, without large trees—but a great plain with deep sink holes and shallow basins of dirty pond water, and puny woods of the black-jack pattern—it has no charms for my eyes, nor has it any invisible qualities to make compensation.

On the third day we entered the state of Tennessee, at a point near which the waters of Green river part from those which flow into the Cumberland. The character of the country changed immediately; streams of water flowed through vales, and the soil assumed a reddish cast, except the alluvian of the vallies, which was darker. The color of the soil, I suppose, occasioned the name of Red river to be given to the stream, of which we crossed the head waters. Then ascending a ridge, we dined at the Tyree springs, a small watering place, whose water has a muddy sulphureous taste, but, I suspect, very little medicinal virtue. Here, however, we found forty or fifty visitors, who seemed to be trying to enjoy themselves. We then descended into a valley of limestone with a soil black and rich, but in many places too thinly laid over the rock to be very productive in a dry season. This valley conducted us to the Cumberland, a little above Nashville. We crossed the river on a good bridge at the city, and ascending the bluff to the public square, we were put down at the city hotel.

I may as well here, as elsewhere, notice a certain custom of boarders at public houses—a custom which I observed at almost every place in my tour, but more particularly in Tennessee. It may be thus described in general:

You arrive, a stranger at a public house; you wish to see men and things, so you keep yourself a good deal about the bar-room and door. Near meal-time, you observe the company increase; young men and middle aged men come in; and as the minutes wear away, they become restless, pacing the room near the door that leads to the dining hall, and seeming frequently to listen, as if they watched for tokens of a coming

person or event. If ignorant of this custom, your curiosity is excited to learn the cause of their movements and gestures. Wait a little, and you will see them simultaneously rush through the door, and hurry into the dining room, almost before you hear the dinner bell. You and other strangers begin to follow. Before you have time to enter the dining room, you hear a thundering of chairs, succeeded instantly by a sharp confused clatter of plates, dishes, knives and forks. When you enter the room, you find all the most convenient seats at the table, occupied by a set of men, with heads down and mouths open; and pieces rapidly disappearing from their plates by the quick three-fold operation of a cut—a gape—and a swallow. You may take your seat where you can, and eat as you list—what is it to them? They see you not, their eyes are on their plates—they hear you not, their ears are filled with the music of the knives, forks, and glasses. By the time you are fairly under way with your meal, you again hear the frequent grating of chairs on the floor as they rise and depart.

Now I have but two remarks to make on this custom:

1st. It is *unmannerly*, thus to push in before strangers to the table, to take all the first places, and to snatch all the choice dishes: and, 2nd, It is *bestly*, to rush, seize, gulp down a meal; like a pack of famished hounds. I turn to a more pleasant theme.

Nashville has a commanding situation on a rocky hill, against which the river has run, by means of a horse shoe bend, until it has worn and torn off the point, so as to form a precipitous bluff, perhaps one hundred and fifty feet high. The top is broad and level enough for a large public square containing the court house and market house. Around this and on the sides of the hill, most of the town is built, or rather was built; for the late additions have been made principally on the hill further from the river, where the ground—or rather the rocks—rise still higher and form, half a mile from the square, a lofty round top, where groves of stunted cedars draw a scanty nourishment from crevices in the limestone.

The buildings are generally neat, but not remarkable for size or elegance. Three or four churches, all apparently new, are constructed in a chaste style of architecture, unless we except an unfinished Baptist church, which is deformed, externally, with a superfluity of corrupt Gothic appendages.

The hill which lifts the town to the air, also exposes it to the summer sun, which in a dry hot season like this, makes the bare rocks and walls glow with a heat that issues nightly without being exhausted, and increases daily until rains or long nights bring relief.

I was struck most agreeably with the open benevolent countenances of the people about the streets. None of your care-worn, shy, suspicious-looking faces, so frequent in northern towns. I felt at once that I might freely address any and every man, on any matter that interested me, and be sure of his polite, and even kind attention. Nor did my few days' acquaintance belie these first impressions. They are a sociable, hospitable, orderly and moral population. I never saw more quiet streets, and more uniform good behavior. A population of this character cannot be idle, though I observed less signs of a painful and bustling industry,

than is usual in northern towns. There are no large manufactories, except a rolling-mill.

Here are a number of flourishing schools for both sexes: and in the vicinity is the Nashville University, the chief literary institution of the state. It is, however, as yet, merely a college, with eighty or one hundred students. It was once richly endowed with lands; but the legislature so managed this valuable fund, that the institution has enjoyed but a small portion of what the lands might have yielded. Popular legislatures are often very unfit trustees for seminaries of learning.

Just below the town there is a saline sulphur spring, the water of which is very similar to the Blue Lick water that I drank at Louisville. I found it a very salutary drink in hot weather, and not unpalatable, though persons unaccustomed to mineral waters, would be apt to loathe such a strong compound of salts and sulphureous gas. Warm baths are also made of it, and these are both pleasant and medicinal. The spring was known of old to the French settlers of Louisiana. Their hunters made salt of it: hence it came to be called the French Lick.

In addition to a navigable river, the commerce of Nashville will soon be facilitated by four or five Macadamised roads diverging from it. These are now in a process of construction. The one by which I travelled southwards is finished, eighteen miles, to Franklin, and will soon be extended twenty-three miles further to Columbia.

The aspect of the country on this route is pleasant. Low winding hills, crowned with woods of a dark green foliage, part the vallies of the different rivers and brooks. The borders of the Cumberland are diversified with rich low grounds, and high rocky bluffs. The vale of the Harpeth about Franklin, is of a tamer character, but is broad and very rich. Duck river again, on which Columbia stands, exhibits, on a smaller scale, the bold scenery of the Cumberland. This town, like Nashville, is built on a rocky hill; and so is Shelbyville, thirty-eight miles eastwardly, also on Duck river.

All the towns of West Tennessee are laid out after the same model: a public square in the centre containing the court house, and streets crossing at right angles. Nashville, the oldest and largest, seems to have been the prototype.

From Shelbyville I directed my course towards McMinnville, in the Barrens, north-east, about forty miles. Here the Cumberland mountains are in full view, not more than five miles off. This is a village of four hundred inhabitants. Hence to Sparta, in a line somewhat more northward, the distance is twenty-six miles. This village, about as large as McMinnville, is also in the Barrens, and within two miles of the mountain, where the road by the Crab Orchard passes over to East Tennessee.

Having thus indicated my route, I will now make some general observations on West Tennessee. Of the "Western District," between the Tennessee and Mississippi rivers, I saw nothing, and have therefore little to say. It is represented to be a plain, with small differences of level; the higher parts are generally dry and in part healthy; the lower, flat, marshy, subject to general inundation in wet seasons, and of course infested with mosquitoes and fevers. The soil is mostly rich,

and human industry may do much to alleviate the natural evils of the country.

Middle Tennessee, between the river and the Cumberland mountains, is crossed, north and south, by a belt of rich dark loamy soil, on a deposit of recent limestone, full of shells, beginning in the valley of the Cumberland, and extending into Alabama. This belt is about forty miles, more or less, in width, and the richest line of it is marked by the position of Nashville, Franklin, Columbia, and Pulaski. Westward of this tract, the sand-stone appears, where the descending waters have cut deep ravines in their course to the Tennessee. Here the country is comparatively rugged and poor. On the eastern side, the soil gradually becomes more sandy and less dark, but continues to be for the most part rich and productive, till you approach the Barrens, which is a plateau of level country, elevated about four hundred feet above the rich country below. Here a bed of gravel and sand covers the limestone, except where the waters have washed out vales and exposed it again. The high flat surface of this table land is too poor for cultivation. These Barrens may extend some twenty miles from the base of the Cumberland mountains.

The rich lands are not generally of first rate productiveness. The staple crop is maize; and fifty bushels to the acre is above the average product. Wheat does tolerably well; but twenty bushels to the acre are esteemed a good crop. Cotton often fails, and must be abandoned. Grass does not flourish well in so dry a soil, where meadows cannot be watered. The country is not well watered; the streams do not purl with twinkling surface over beds of gravel: they are evaporated by the scorching sun of July, and the farmers (as one of them told me) have to go sometimes twenty miles to mill.

I do not like the climate. The country slopes north-westwardly from the mountains; it is exposed, therefore to the unmitigated blasts of the coldest wintry winds: therein the summer time, the tropical winds of the gulph, meeting and struggling with the northern current on the parched expanse of the great prairie, is turned upon this country with its hot breath; or falling short, leaves the inhabitants becalmed under a burning sun, to snuff the hot steam of their limestone rocks. Hence the climate is often, in winter, as cold as New England, and in summer, as warm as the West Indies. The spring season is exceedingly variable; one while opening the buds with genial heat, then suddenly destroying the embryo fruit and tender plants with a wintry blast from the northwest. These are faults of climate, common to the middle and southern states; but I suspect, that the position of west Tennessee gives them here a sensible aggravation. The suspicion is confirmed by the fact, that while the spring naturally begins two or three weeks earlier than in middle Virginia, the frosts continue to occur to as late a period.

Yet, notwithstanding these objections, he would look in vain, who desired to find a country, where nature has upon the whole, offered much higher rewards to human industry, than in the belt of fine lands under consideration. The esteem in which it is held by its densely settled occupants, is evinced by the high prices of farms, and many other tokens of ease and plenty among the inhabitants. He must feel like a prosperous

farmer, who can be induced to change his location only by the offer of forty or fifty dollars an acre, even where no very expensive improvements have been made; when a steamboat would in a few days, carry him to regions where every acre sold, would purchase him eight or ten acres of the richest virgin soil.

To me, a mountaineer, there is another objection to this fine country as a residence. Though its surface is varied by low hills, not a mountain is to be seen, even in the distant horizon. I would not choose my abode, where the rising and the setting sun shoots his rays along the surface of the plain. I prefer to see him rise over the mountain top, and to send down his rays through tall pines upon the dewy herbage of the valley, and in the summer evenings to sit in the shadow of the western mountain, while his golden light steals up the side of another in the east. The advantages of such a locality extend beyond the pleasures of the imagination. Here are the abodes of rosy health; and here the farmer's cattle, range through the herbage of unbought pastures. The rich counties of Tennessee are not very healthy; the finest situations on the rivers are too generally infested with *malaria*, which makes the occupants pay dearly for their advantages. Sallow complexions are common; but still there are many exceptions.

In a moral view, Tennessee exceeded my expectations, although two of her lately enacted laws gave me favorable impressions of what I might expect. These were the law against those fashionable instruments of murder, pistols, daggers, and bowie knives, and the law to prohibit the selling of spirituous liquors by retail.

During a ride of more than four hundred miles, through the most populous parts of the state, with frequent stops and sojourns in the most public places, I saw but one drunken man, (and he was from Virginia, and had been in the army.) I rarely heard profane language; I saw no riotous or disorderly parties; and no quarrelling or fighting, except a sudden affray between two students at a dancing school in Nashville. Even these fiery boys only boxed each other a little, to the great terror of the girls, rather than to their own hurt.

But while the population generally seem to be characterized by mildness, sobriety, and good order, I observed a marked distinction between the inhabitants of the rich lands, and those who live in the Barrens and in the sandy tracts adjacent to them. The former seem to be a compound of Virginians and Kentuckians. The mixture appears to have invigorated the one and mitigated the other, in this climate. A good result. But no sooner had I entered the sandy soils, and especially the Barrens, than I seemed to have discovered a people a century old, not in respect to their individual longevity, but in their ideas and habits. Their "speech bewrayed" their origin; I soon recognized old *Noth-Caklinur*, in their nasal mushy pronunciation. Among these ancient denizens of the sands, Arkwright's machinery had not invaded the prescriptive rights of the spinning wheel and loom; nor had a Windsor chair yet showed his rounded form among the old *split-bottoms*, with low seats and tall perpendicular backs. Here the honest countrywomen still enjoy the summer luxury of bare feet, and make no extravagant use of soap and water. Yet among them all, I saw a manifest spirit

of kindness and good nature. If not as wise as serpents, they are, however, as harmless as doves.

The cause of education is making rapid progress in Tennessee, particularly the education of daughters. To prove this, I will mention a few facts. Besides the numerous schools at Nashville, I found at Franklin, eighteen miles distant, an academy for males, and three seminaries for females, with more than two hundred scholars: at Columbia, twenty-three miles further, a flourishing academy for young men, in the neighborhood, and in the town, two large edifices, nearly finished; the one a college for youth, the other a seminary for young ladies: at Shelbyville, in the next county, besides a male and a female academy in being, they had just filled a subscription of twenty-five thousand dollars for a college. Even at the small town of McMinnville, in the Barrens, they had an academy for each sex. In east Tennessee, there are also many seminaries of various ranks and merits, the chief of which is a college at Knoxville. The legislature has also provided a fund for common schools by means of a new bank, with branches diffused over the state. This banking scheme seems to have been ill devised; but perhaps good as well as evil may result from it.

As to the quality of the education given in all these schools, I can say nothing, except to express a suspicion that it is generally too superficial; but this fault is not confined to Tennessee; and where a good thing is so widely diffused, the effect in the aggregate must be highly beneficial. Superficial education will also lead to a more thorough system.

Yet Tennessee contains a numerous population, especially in the sandy and barren regions, who are very ignorant, and who, as might be expected, are opposed to the patronage of literary institutions by the state. The mental condition of this class may be illustrated by two anecdotes. I breakfasted one morning at the tavern of a late senator of Tennessee, when his son, a youth of eighteen, was setting out to join his school-fellows in turning the master out of doors, until he should treat them to a barrel of cider! I was also told of a case, a few years ago, on the Cumberland. The boys tied their teacher to a board and ducked him in the river, till he promised to treat!

SONNET.

Think not, oh gentle lady, that I grieve

That we should ever in this world have met,

For of the past Fate never can bereave,

And Memory culls unfaded roses yet

From the sweet garden where affection grew.

Time never can restore our Eden hours,

Nor the lost happiness of love renew;

For me a sword waves o'er those happy bowers,

And a stern angel beckons me away;

Yet where, deserted and alone, I stray,

On the rough paths of life, afar from thee,

Some fragrant airs come wafted from the skies,

Some pleasant glimpses of that land I see,

Which to my trusting heart appeared a paradise!

New York, February 22.

HERMION.

A MOTHER'S EVENING THOUGHTS.

BY MRS. L. H. SIGOURNEY.

O homefelt joys,—so dear and sweet,

My clear, wood fire beside,—

My baby creeping at my feet,

Who oft with glance of pride,

Looks back, elate, and pleas'd to show

How fast his tiny limbs can go.

And closely seated by my side,

My little daughter fair,—

Whose doll upon her knee doth ride,

Essays a matron's care,—

While many a lesson, half severe,

With kisses mix'd, must dolly hear.

There lie my volumes clos'd and still,—

Those chosen friends of old,—

My pen, regardless of my will,

Lurks in its bronzed hold,—

High joys they gave,—but not so dear,

As those that gild my fireside here.

Where harp and viol carol sweet,

'Mid youth's unfolding hours,

And gladness wings the dancer's feet

That seem to tread on flowers,

I've shar'd the cup,—it sparkled clear,—

'Twas foam,—the precious draught is here.

I've trod the lofty halls,—where dwell

The noblest of our land,—

And met,—tho' humble was my cell,—

Warm smile, and greeting hand,—

Yet she doth feel a thrill more blest,

Who lulls her infant on her breast.

Strong words of praise,—such words as gird

To high ambition's deed,

The impulse of my mind have stirr'd,—

Though still unearn'd, their meed,—

But what of these?—they fleet away,

Like mist, before affection's ray.

Tho' many a priceless gem of bliss,

Hath made my pathway fair,—

Yet have I known no joy like this,

A mother's nursing care,

To mark, when stars of midnight shine,

My infant's bright eye fix'd on mine.

Might woman win earth's richest rose,—

Yet miss that wild-flower zest,

Which by the lowliest cradle grows,

'Twere but a loss at best;—

Pass on, O world, in all thy pride,

I've made my choice,—and here abide.

Even she, who shines with beauty's ray,—

By fashion's throng carest,—

If from that pomp she turn away,

And build her shelter'd nest,—

And hoard the jewels of the heart,

Like Mary finds the "better part."

Hartford, March, 1839.

THE BRIDGEWATER TREATISES.

On the Power, Wisdom, and Goodness of God, as manifested in the creation of animals, and in their history, habits and instincts; by the Rev. William Kirby, M. A., F. R. S., Rector of Barham. Philadelphia: Carey, Lea & Blanchard; 1836.

Perhaps for many years, no works have come from the press, which have received more consideration from educated men, than the Bridgewater Treatises. The nobleman whose name they bear, a clergyman of the established church of England, left by will a sum amounting almost to forty thousand dollars, which, with the dividends accruing thereon, he directed to be paid to certain persons, nominated, to publish a thousand copies of a work, "On the power, wisdom, and goodness of God, as manifested in the creation; illustrating such work by all reasonable arguments; as for instance, the variety and formation of God's creatures in the animal, vegetable and mineral kingdoms; the effect of digestion and thereby of conversion; the construction of the hand of man, and an infinite variety of other arguments; as, also, by discoveries, ancient and modern, in arts, sciences and the whole extent of literature." He desired, moreover, that the profits arising from the sale of the works so published, should be paid to their authors. The president of the Royal Society, the archbishop of Canterbury, the bishop of London, and the friends of the deceased nobleman, appointed eight individuals to the charge of writing treatises, agreeable to the will of the testator.

Works ushered into the world under such unusual auspices, might be supposed to be the production of the most talented men in the British empire—the representatives of modern science. We should expect to find in them no fault, but rather the very *beau idéal* of perfection. All the incentives to book-making were here—ample remuneration and the prospect of a distinguished reputation. To be selected to the high honor of pointing out to the religious and educated world, the extraordinary support which the word and works of God mutually afford each other—to be brought forward as the champions of the faith of christendom—was, surely, no common task. We are, therefore, warranted in expecting to find these works spotless, their scientific reputation unquestionable, and their religious doctrines sound. There should be no lack of argument, where the subject is so boundless—no sophistry, where the object is truth—truth of the highest caste; nor should the writer stand in danger of being convicted either of illogical reasoning, or of inharmonious language.

Some of these treatises we have perused with pleasure, fulfilling as they have, our idea of what a Bridgewater treatise should be; a commendation which, however, we cannot bestow upon all. Whilst some of them,—as Roget's treatise on animal and vegetable physiology—will rank high as scientific productions, others of them,—as Kirby on the history, habits, and instincts of animals—can only be viewed as deplorable abortions in point of science, and as theological treatises, extremely pernicious.

The extensive circulation which these books enjoy, renders them productive of much good or much evil: in this respect, to the eye of the critic they possess interest. Finding from the circumstances of their origin a ready admission every where, among the scien-

tific, the religious and the worldly, and quoted on all occasions as undoubted standards of reference, any errors which they may contain, either of matters of knowledge or of faith, may be the cause of incalculable mischief.

To write a treatise, setting forth the power, wisdom and goodness of God, is indeed no common task; to draw from the works of God, proofs corroborative of his written word, demands an intellect of the highest order. It is true, that all men from the most casual and rude examination of natural things around them, deduce the existence of some powerful and beneficent being; and there is also something in the human breast which tells us that we are not solitary in the world, but that there is a kind hand that guides us. The scenes of the day and the silence of the night, bring with them the evidence of an overruling Providence—the returns of seed time and harvest, of storm and of calm, and even the vicissitudes of human life, continually place the same thing before us. We do not, however, gather from these any thing more than vague impressions; they teach us the existence of a Creator of the universe, but they leave us in the dark as to who or what he is; they lead us to hope, that we are the objects of his goodness and care, but they tell us nothing definite; the prospect that they give us, of all that is beyond the tomb, is desolate and dark, and we recoil from it as "a land of deepest shade."

The true object of scripture, is to give us full information of these important topics; information which we cannot gather from any other source. It is not designed to teach us any thing, that our own reason could discover, but only those things that are above reason, and which it is proper we should know; but the same being who gave us a written word, placed around us those objects we find in the exterior world, and he was their author: he made them according to certain laws, and confined himself to the operation of certain rules. Throughout all the range of creation, whether in the heavens above us, or the earth beneath us, we have abundant proofs that there was an unity in his design and an identity of action. In those remote worlds, of which we can barely catch a glimpse without the aid of powerful instruments, whose distance is untold and utterly inconceivable, we know that the same laws obtain that have dominion over us and all that is near us, and hence we infer that all is the production of one intelligent mind. From the first dawn of science, its followers have been impressed with these truths; and, with a very few exceptions, all have come to the same conclusion. The old Chaldeans—Plato, Socrates and the wise men of Greece—Galileo, and the revivers of true knowledge of the fifteenth and sixteenth centuries—Newton, and the philosophers of his school, and the leading men of science of our own day, all declare it to be the result of their researches and studies, that there is one governing mind—the architect of this universe. On the other hand, those whose profession it is, to have the scriptures in their immediate keeping, tell us that there is to be found in them, incontrovertible and abundant proof, that they are the work of an omnipotent and omniscient being, conveying his will to us as respects ourselves. It is the exalted object of the Bridgewater treatises to show, that the God of the man of science, and the God of the divine, are ONE.

A more noble object for the human intellect to accomplish cannot be well conceived. The opinion of mankind has already given a decision on the matter, but only on a very superficial view of the general mass of evidence. Some, indeed, and those of very gifted and highly cultivated minds, have professed doubts as to the correctness of the main conclusion: LAPLACE, the ablest of the philosophers of this century, and LAMARK, a distinguished natural historian, may both be mentioned as examples in point. The great influence which the opinion of men of this stamp carries with it, called loudly for some attention from those who know the value of the christian faith. It was high time that the question should be brought to a decision; the testament of the Earl of Bridgewater afforded a splendid opportunity of settling it, by drawing general attention to the subject, and furnishing the means of procuring men of unquestioned talent to devote themselves to it.

The Rev. Mr. Kirby's treatise professes to be a history of the habits and instincts of animals, and also *their creation*; as giving proofs, enabling us to decide affirmatively in this argument, and controverting the opinions of Laplace, Lamark, and other philosophers of the French school. In respect of the creation of animals, it admits without reserve the modern doctrines of unity of design, and progressive development,—doctrines which are of deep importance in the decision of the question, and which are carried out in other works of the Bridgewater series, as in Dr. Buckland's geology, to conclusions of interest; showing us that the same reason which actuated the Creator in the production of animals co-existing with us, actuated him, untold ages ago, in the production of a race of creatures now extinct, and only found entombed in the bowels of the earth; nay more, if any thing were required to prove to us the identity of that intelligent mind, whose pleasure it was to give life to all creatures, whether recent or fossil, whether alive or extinct, there is an unity of mechanism which can but be imputed to the reasoning of ONE only. If, for example, a certain motion is to be produced, the very same muscular contrivance is resorted to; if an organ of vision is required, the same optical laws are had recourse to, both in the fossil and in the recent creation. Descending to the minutest particulars, the same observance of certain rules is recognised, in those remote geological periods, which exhibit the first appearance of living things on our globe. The shell-fish of the transition rocks, were formed according to the same laws, which obtain in the structure of the shell-fish of modern seas, and the contrivances they display for the accomplishment of certain ends, are identical, in point of mechanism, with those of their modern analogies. And who shall say how many ages have elapsed since these creatures had life? If, as some of the Bridgewater writers tell us, millions of ages have gone by, do not these things place before us the unchangeable nature of the Creator? Do not they tell us that his actions proceed upon fixed and invariable rules? Do they not give us an irrefragable proof of his omniscience? The works of man are subject to successive improvement—his steam engine, and all other machinery, receive continual modifications; but in the natural world, the first creation is as perfect as the last,—the experience of years adds nothing to former knowledge. Again, many of these extinct beings belong to the series of existing

orders; they are links of one chain, and are parts of one plan. No matter how long it may have been since they existed, whether a thousand or a million of years, they are a part of the present creation, the continuity of which would be destroyed without their existence; they prove to us, that in the eye of their Maker, the future and the present were equally known; and, in the long lapse of ages, the vicissitudes of animal life, and the complex interworking of natural laws and agents, nothing new has been suggested to HIM: unlike the most exalted of creation, experience adds nothing to prior knowledge.

In the remarks which we shall make on Mr. Kirby's treatise, we shall confine ourselves strictly to his philosophical facts and opinions, without venturing at all on his religious creed or theological speculations. These, however, we would commend to the perusal of some of our professional friends, who are more conversant with their nature and bearing. If, as we shall abundantly show, the scientific part of the work is crowded with errors, there is *prima facie* evidence that the theological will not be free from heresies. A man, who, with incompetent information, presumes to grapple with the task of reconciling all apparent discordances in the natural world, and squaring creation and revelation together, is not blindly to be taken as a guide, either in faith or in science: if his ignorance is made apparent in the one, his knowledge of the other may well be doubted.

Let us turn to the book itself: we find it prefaced with a very long introduction—a considerable fraction of the total amount of the volume. It sets out with stating the pernicious heresies of some of the continental European philosophers, who, in moments of mental aberration, like some of their ancient prototypes, had concluded that they could account for the production of the world and all animated nature by the fortuitous concourse of atoms. Perhaps, with us, some of our readers might suppose that the most suitable mode of treating such absurdities, would be to let them pass unnoticed. What could induce a clergyman to draw the obnoxious doctrines of Laplace from behind the inscrutable barrier of mathematical symbols which conceals them from the common gaze? Why should he divulge the follies of the author of the "*Genera Conchyliorum*," and insert them in broad English in a work that was certain to go wherever the English language is spoken? He might have spared us a description of the way in which attraction and repulsion, and heat, and electricity, operate on a material spherule,—how appetencies are formed, how organs arise, how, finally, "a monad becomes a man." If the weaknesses of those gifted men, led them into such a tissue of glaring absurdities, our author should have known, that the deliberately expressed opinions of the first astronomer and the first zoologist of the age, were not to be put down by a sneer. He who would controvert them, must stand prepared to dispute the grounds on which they rest; must be ready to grapple with his giant antagonists, and, before "he goeth to war, sit down first and count the cost."

The work is professedly a treatise on the history, habits, instincts, and creation of ANIMALS. The philosopher is staggered, and the pious man shocked, to find (*Intro. page 44,*) the cherubim and seraphim first

on the list—the Jewish tabernacles, the golden candlestick, the table, and the shew-bread; then follows a disquisition (page 46,) on the flaming sword that kept our first parents out of the garden of Eden!! Is it a Talmudical Rabbi that speaks, or a christian minister, on animated nature?

We feel that we are here almost upon forbidden ground; but we must protest against such an utter perversion of these mysteries. Are we to identify these unknown intelligences with the physical agents of the world? Is the light of the sun, the falling of a stone, or the complex organization of an animal, to shadow forth to us the ruling powers of another world? One step more would bring us to the verge of the old Chaldean philosophy, which looked upon each star as the residence of an angelic being, and named the planets after the gods that dwelt in them; every plant and herb was under the dominion of their controlling agency, and gold was sacred to the Sun, and iron to Mars, and silver to the planet Venus; but we forbear. And how is this train of reasoning supported—these astounding conclusions verified? By a tissue of physical absurdities which have no parallel save in the ranting gibberish of a lunatic retreat. Our scientific readers will for the first time learn, (page 34,) that heat and cold are synonymous with positive and negative electricity—that LIFE (page 34,) is a radiant principle like heat—that man is a microcosm, (page 59,) the blood going to his heart in a negative state, and coming from it in a positive—the lungs also inspiring it in one of these states, and expiring it in the other; that the terms, heavens and cherubim, are synonymous, (page 56,)—that they signify the firmament. But let us quote him, (page 60:)

“The terms expansion, then, and firmament, express the matter of the heavens in a state of action, going from or returning to its central fountain; for every system, as well as its own sun and planets, has doubtless its own heavens, probably never stagnant, but incessantly issuing from a centre of irradiation, as the blood from the heart in a positive state, and returning in a negative state to that centre, where it is as it were again oxygenated, and circulates to the *flamantia mœnia mundi*, and so,

‘*Labitur et labetur in omne volubilis ævum.*’”

That is a sample. On the very next page, not a dozen lines farther, we find evidence of an absolute ignorance of the commonest principles of mechanical philosophy; the comets are represented as wandering from one system to another, having two aphelions, and two perihelions. Our author is utterly unacquainted with the conditions necessary to ensure the path of a mobile body in a conic section.

Not content with stating his deliberate conviction, (page 65,) that the air or wind is a cherub, he gives us a silly quotation from Philo Judæus, who wrote a treatise upon the two that were placed at the gate of the garden of Eden, (page 67.) But what will our theological readers say, when they find on the seventieth page of a Bridgewater treatise, “This they (*the cherubim*) do, as the physical powers under God, upholding the universe, especially as fire, light, and air, all of which in passages of the scripture above noticed, appear to represent the Three persons of the Holy Trinity.” Our comprehension of this passage may be

incorrect; but if it is as we understand it, it would be hard to find in the works of Condorcet, Diderot, or D’Alembert, or even in the far famed *Encyclopédie* itself, any thing that can exceed it.

Thus much for the introduction. We blame the author for going out of his way, to treat of subjects not connected with the matter in hand, and for introducing topics pernicious in themselves, and quite uncalled for. The doctrine of a superintending intelligence is too firmly rooted in the breasts of all men; it asks no aid from far fetched hypothesis, and might almost be regarded as a physical axiom. For where is the man to be found that denies it? We should search in vain over the expanse of the earth: the Buddhist in the remote east, and the worshipper of Brahm on the banks of the Ganges, the wild man of the western forest, and the inhabitants of the borders of the arctic circle, or the colored races beneath the equator. It matters not, whether a perpetual winter or a burning sun is upon him; whether he lives in the remote islands of the sea, or in the central regions of a continent; whether he is the founder of ancient cities, or pitches his tent beneath the palm tree—all over the world, men of all colors and castes and climes, recognize one supreme and overruling power.

Nor is this all,—the tokens that are given us by animate and inanimate nature point out the same thing in characters too plain to be mistaken: they bear with them, as it were, a voice that speaks to us, and finds an echo within us. The sea and the earth, the day and the night, the calm and the storm, the sunbeam and the lightning—

“Far along

From peak to peak the rattling crags among
Leaps the *live thunder*. Not from one lone cloud—
But every mountain now hath found a tongue,
And Jura answers from her misty shroud,
Back to the joyous Alps, that call on her aloud.”

Let us now pass to the examination of the main body of Mr. Kirby’s work. The first chapter we find entitled, “Creation of Animals;” and here we might suppose that we should certainly meet with something tangible. After a short synopsis of the order and course of creation, paraphrased from the first part of Genesis, we suddenly skip from the leading subject, to the discussion of a question which opens as follows, (page 7:)

“Besides those insects of a disreputable name, which under more than one form inhabit his person (the human) externally, and those that burying themselves in his flesh, annoy him and produce cutaneous diseases, a whole host of others attack him internally and sometimes fatally. Can we believe, that man in his pristine state of glory and beauty and dignity, could be the receptacle and prey of these unclean and disgusting creatures? This is surely incredible, and I had almost said impossible. And we must either believe with Le Clerc and Bonnet, that all those worms now infesting our intestines, existed in Adam before his fall, only under the form of eggs which did not hatch until after that sad event,” &c.

But he concludes: “It is scarcely to be supposed, that any single individual, from that time to this, was subject to the annoyance of every one of these animals, and it seems incredible that Adam and Eve had experience of them all.”

Let us turn over another leaf, and we find the doctrine of a subterranean world boldly broached. Nay more, not only does he show how the springs and rivers of our upper world, are derived from that beneath, but he also determines the nature and character of its inhabitants, which it appears are varieties of the genus *saurus*. But the whole of this is too ludicrous for further examination.

Page 81—gives a very good example of perspicacity in writing. In speaking of the infusorials, he says, "The fact that they almost all have a mouth and a digestive system—many of them eyes, and some rudiments of a nervous one—implies a degree more or less of sensation in them all." This would no doubt be intelligence to Professor Ehrenberg, who has detected the polygastric arrangement of these animalcules: we should doubt whether his powerful microscopes would show "some rudiments of a nervous eye."

Page 107—"We may observe, that though the whale devours myriads of millions, yet the quantum of suffering is less than if he were enabled to make his meal off larger animals, and his jaws, like the shark's, were fitted with laniary teeth. In fact the gelatines are incapable of suffering pain, having no digested nervous system; and when cast upon the shore they dissolve into a fluid, exactly resembling sea water." We should like to know how the author measures the quantum of suffering of large and little animals? how he comes to know that death by laniary teeth is more painful than death in any other way? Elsewhere we have read, that

—"Every insect feels a pang, as great
As when a giant dies."

The perception of pleasure and pain is the true characteristic of animal life; yet here we are told that the gelatinous animals are incapable of these perceptions. What! and are the labors of the immortal Cuvier so soon forgotten? the intricate and complex structure of the radiant class of animals dissolved into a fluid resembling *sea water*! We have doubted Mr. Kirby's knowledge of mechanics, now we begin to doubt his acquaintance with chemical philosophy. Page 134 will aid us in our conclusion: speaking of a bivalve mollusk, under the name of *saxicave*, which excavates crypts in the rocks, he states, that it is not improbable that it does this by means of a phosphoric acid transuding from its body. "It is surely possible that the acid may be so mixed and tempered, as to act upon the rock and not upon the shell." A remark that would not have been made by any one, with more than a very superficial knowledge of chemistry.

Page 155, affords a good specimen of our author's style of writing—alluding to the hybernation of the garden snail—"But at a destined period, often when the range of the thermometer is high, not stimulated by a cold atmosphere, except perhaps by the increasing length of the night, at the bidding of some secret power, it sets about erecting its winter dwelling, and employing its foot both as a shovel to make mortar, as a hod to transport it, and a trowel to spread it evenly, and duly at length finishes and covers in its snug and warm retreat; and then, still further to secure itself from the action of the atmosphere, with the slimy secretion with which its maker has gifted it, fixes partition after partition, and fills each cell formed by it with air, till it has retreated

as far as it can from every closed orifice of its shell, and thus barricades itself against a frozen death. Again, in the spring, when the word is spoken, *awake thou that sleepest*, it begins immediately to act with energy," &c.

The practice of frequent quotations from the sacred writings, though very prevalent, is not the less reprehensible. The dignity of the subject they communicate, ought to secure even the phrases and modes of speech from perpetual and inapplicable repetition. It is true, there is a peculiar terseness in them, that is very inviting both to the public writer and public speaker; and men generally in early life being accustomed to hear arguments on the most important subjects, backed in the pulpit by some scriptural quotation, insensibly acquire the habit of regarding an introduction of this sort with pleasure—as a kind of climax to the proof. Hence the temptation of writers to indulge in this fault; no matter how inappropriate or inapplicable the passage may be, nor even how inaccurate the chain of reasoning, they are often induced, as the merry Scotch poet has it,

"A rousing whild at times to vend—
An' naill't wi' scripture."

Here we have a case in point—the beautiful and affecting appeal of the sacred writer to the man slumbering on the point of everlasting destruction: "*Awake! thou that sleepest*," transferred to the garden snail.

As the Rev. Mr. Kirby has undertaken to write a book on the creation of animals, we may charitably suppose he has duly investigated his subject, and must know, if anybody knows, something of the reasons which induced the Creator to do *this* thing and leave undone *that*. The world has, of late years, been full of world-builders;—astronomers have built it in their way,—chemists in their way, and geologists in a good many ways. The "student of nature" may perhaps like to know what would be Mr. Kirby's way; and if he looks "with inquiring eye," as our author hath it on page 158, he will see the process of reasoning that is to be followed:

"As the Creator willed, that the waters, whether salt or fresh, should have their peculiar inhabitants, it was requisite that each of them should have its appropriate food. Did all feed upon the same substance, there would be an universal struggle, (!) unless indeed the entire variety of the submarine botanical world was done away, and one homogeneous article provided, in such a quantity as to be a sufficient supply for all. But further, doubtless different organizations and forms could not be maintained upon the same pabulum, and therefore different creatures required different articles of food, or different parts of the same article. Here was a mutual office,—the numberless vegetable productions require to be kept within due limits, and therefore the functions of the aquatic animals is to maintain them in due relative proportions. Was the ocean and all its streams planted as now, and there were no animals of any description, to keep in check its vegetable productions, they would all in time grow up and choke the rivers and gradually raise the bed of the ocean till there would be *no more sea*."

Astonishing! and be it remarked that it is not we who have italicised the last three words, but our author,—the conclusion seems to have come upon him like the blast of a trumpet. *Awake! ye geologists, awake!*

and gird on your armor. No more sea!! Did you not tell us that once the whole face of the earth was covered with gigantic plants, ferns, and so forth, before animals were made? Be ready for the battle—a Bridgewater treatise is upon you! a Bridgewater treatise is upon you! and its watchword is “no more sea!” Be steady—quit you like men,—be strong.

Let us try our author's philosophy again, (page 480.) After observing that the word “hair” is generally used as a symbol for strength or power, and referring to the case of Samson, whose superhuman strength departed from him when his locks were cut off, he proceeds: “It is well known, that the hair is affected by the electric fluid, and it may conduct it to the brain and other organs. Whatever be its function, however, its force will depend on its quantity, and the quantity on the number of conductors, and this God regulates in the case of individuals, according to circumstances, so that some receive more and some less: ‘*he that receives much has nothing over, and he that receives nothing has no lack.*’”

Shade of Benjamin Franklin where art thou? And does the uncombed pate of every bristly headed urchin, expose a thousand of thy lightning rods to the clouds? “The force depends on the quantity, and the quantity on the number of conductors,” quotha? Then let us burn our books on electricity, for they lie; and break our torsion balances, for they have deceived us. And let us use bear's grease that we become not bald; and those of us who are enduring that infirmity, let us not go out uncovered, lest we tempt Heaven.

Nor is Mr. Kirby's grammar much better than his philosophy. His construction of sentences a college sophomore might well be ashamed of. Thus, speaking of a celebrated English comparative anatomist, (page 166,) he gives his reader to understand that Mr. Owen is led by the nervous system of the foot of a snail. Perhaps the author himself is occasionally led by the same system in some of his opinions. Again: (page 166,) “In fact the oral apparatus, for the full description of which I must refer the reader to Mr. Owen's excellent tract, except the mandibles and upper lip, is formed,” &c.—the mandibles and upper lip of Mr. Owen's tract! In other places we find a certain variety of mouth described as a “suctorious organ,”—window glass as a “lubricous surface.” Sometimes, too, we are treated with a touch of the sublime,—here is an example, (page 381:) “But of all the beetle tribes, the timber devourers are the most numerous: one of the most splendid and brilliant of the whole order, the buprestidans, belongs to this department; and the still more numerous and varied capricorn beetles, though less refulgent with metallic splendor, add a vast momentum to the interminable forests of tropical regions, and must be of the greatest use in gradually reducing trees that have been uprooted by tornadoes, or any other cause, to a state of putridity and finally to dust.”

Natural historians are often charged with credulity by other philosophers;—our author may give them new reasons, (page 181:) “Mr. Madox states he has seen on the banks of the Nile, a bird about the size of a dove, or rather larger, of handsome plumage, and making a twittering noise when on the wing. It had a peculiar motion of the head, as if nodding to some one near it, and at the same time turning itself to the right and left, as if making its congé, twice

or thrice before its departure. This bird he was told was called *sucksaque*, and that tradition had assigned to it the habit of entering into the mouth of the crocodile when basking in the sun on a sand bank, for the purpose of picking what might be adhering to its teeth, which being done, upon a hint from the bird, the reptile opens its mouth and permits it to fly away.” “Whether the animal really attends upon the crocodile, has not been ascertained, but it would be singular that such a tradition should have maintained its ground so long without any foundation.” Again, (page 368:) “The last hymenopterous tribe, includes the *ants*,—their great function seems to be to remove every thing that appears to be out of its place, and cannot go about its own business. I have seen several of them dragging a half dead snake, about the size of a goosequill.” Now the insects thus praiseworthily employed, may certainly be regarded as enabling the aforesaid snake to go about the business that he had in hand; but the “great function” that the Rev. Mr. Kirby assigns them, would have been much more nearly fulfilled, if they had been engaged in removing his work from among the Bridgewater treatises.

We had marked many other passages, in the course of our perusal of this work, for comment, but we find that we have already exceeded the limits to which we are necessarily prescribed. A further examination, though it might add to the amusement of our readers, would not tend much to their edification. And indeed the dignity of criticism requires, that where no redeeming feature can be found, when justice is satisfied and the truth vindicated, that mercy should be shown in silence. The ephemeral novelist and the lovesick poet, chanting his amorous ditties to the moon, have many a time been stricken down from their fair imaginations and crushed into the common walk of an ordinary routine of life, by the stern blow of the relentless critic, who spares not even these “butterflies,” but “breaks them upon his wheel.” Yet, they have not poisoned the fountains of truth—they have not crowded heresies in science with heresies in faith; the strictness of investigation and the severity of judgment should always be proportioned to the magnitude of the crime, and a double punishment awarded to him who seeks to hide an inveterate ignorance under high sounding pretensions and a pomp of words.

“I have been like a child, playing on the seashore, picking up a pretty pebble here and there, and the great ocean of truth lay undiscovered before me,” said the immortal Newton at the close of his brilliant life. And this was the man who had weighed worlds in a balance—who had foretold events that were to happen a thousand years after he had returned to the dust—whose almost omniscient eye had penetrated into the remote recesses of the universe. “I have been as a child,” said this monarch of astronomers; a lesson that deserves to be handed down to the remotest posterity—a lasting rebuke to presumption and ignorance.

It is only within the present century, that the study of the laws of life has been begun by philosophers. Abandoning metaphysical researches, which never present any thing tangible to the mind, they may be said in this respect to have forsaken the shadow to seek after the substance. For more than two thousand years the ancient philosophy had been handed down from gene-

ration to generation, becoming more dark and more obscure in proportion as it was older. From this undistinguishable mass of truth and error, the researches of the naturalist can alone deliver us. When we glance over animated nature, what amazing diversities we behold, yet how many connections we perceive. Some races people the land, some reside in the sea, some live as it were in the air,—each climate and country has its own inhabitants: the lion in the torrid zone, the bear in the frigid; man, with the animals he has taken under his charge, lives in them all; yet no matter how different these races may be, in point of size or disposition, or habit, there are extraordinary bonds of connexion between them. Why are the beasts of New Holland marsupials, when no animal of that type is an inhabitant of the old world? Can climate account for this? for, through the extensive range of North and South America, the occasional occurrence of creatures of this order, proves that there are wide regions of country suitable to their modes of life. Descending even to minuter peculiarities, we may observe that all animals of the class mammalia, have seven cervical vertebrae—whether it be the cameleopard, whose neck is excessively long, or the mole, which in vulgar parlance, has no neck at all,—whether they live in the air, on the earth, or in the water. This, among many such peculiarities, has induced naturalists to adopt the theory of *UNITY OF DESIGN*—by which they mean, that in the case of the creation of all living creatures, one general plan was adopted, which was only departed from in particular instances to meet particular ends; and then only in obedience to certain laws. Thus the whale, which, though an aquatic animal, suckles its young, and is therefore of the class of mammalians, in common with all the members of that class, has teeth—yet it never cuts those teeth, and they remain in the jaw in an undeveloped condition. Here, whilst the type is observed, development is checked, in order to meet peculiar habits of life.

Again, in the serpent tribe, the bones of the feet exist in an undeveloped condition beneath the skin, and never fulfil their office as organs of progressive motion. The ribs, which in most other animals, perform an important part in the process of breathing, and afford protection to the organs of respiration, are here employed in lieu of feet. So, whilst the general type is kept up, non-development takes place, and the discharge of the required function, often falls upon one of the most unlikely organs.

It is not our object here, either to admit or to disallow these doctrines, or to examine the somewhat extensive mass of evidence on which they rest. It should have been the business of the work we have reviewed, to have discussed the theories of unity of design and progressive development, and those other important doctrines, which are so rapidly making converts in the philosophical world.

Δ.

A GOOD RESOLVE.

"I resolve," said a pious English bishop, "never to speak of a man's virtues before his face, nor of his faults behind his back." If every one would not only adopt such a resolution but carry it into effect, the dawn of millennial glory would soon illumine the "whole broad earth."

CURRENTE-CALAMOSITIES

TO THE EDITOR.

FROM THE AUTHOR OF "THE TREE ARTICLES."

NO. III.

"*Bardolph*. Pardon me, sir, a soldier is better accommodated than—

"*Justice Shallow*. It is well said, in faith, sir! And it is well said, indeed, too! Better accommodated! It is good! Yea, indeed, it is! Good phrases are, surely, and ever were, very commendable! Accommodated! It comes from *accommodo*; very good! a good phrase!

"*Bardolph*. Sir, pardon! I have heard the word. *Phrase* call you it? By this good day, I know not your *phrase*; but I will maintain the *word* with my sword, to be a soldier-like word, and a word of exceeding good command. Accommodated: that is, when a man is, as they say—accommodated! or, when a man is,—being,—whereby, he may be thought to be—accommodated! *which is an excellent thing!*

"*Shallow*. It is very just!"

Henry IV.

"What's in a name? That which we call a rose,
By any other name would smell as sweet."

Romeo and Juliet.

My friend Fisher of that well conducted Pittsburgh 'weekly,' the name of which I, at this present writing, do not remember, (as clever a fellow, by the bye, as you and I know, my dear W., as any who graces the ranks of the corps editorial,) takes exception to the title of these papers, and calls it "ridiculously far-fetched." This is a matter of taste with my friend, as with myself, and, as long as "'Tis but my name, that is his enemy," (once more to quote Shakspeare,) I shall not quarrel with mine ancient crony on this theme. But, instead of such misdoing, will assay to vindicate, in some degree, the fabrication of the very expressive compound word, which stands at the head of these familiar monthly scribblings to you.

In the first place, a father has a right to christen his bantlings by just such names as he, in his paternal discretion, may see fit, without advice or consent of any one. When Mr. Preserved Fish's father chose that prefix for his son to his own piscatory cognomen, was he not exercising a natural and civil right, which was as inalienable as the right to breathe? What though the parson who officiated at the font might have laughed in the father's face,—did that flout him of his humor? By no means; the boy grew up apace, and is now one of the first merchants of the first city of the land. There is a man in Congress yclept "Virgil Delphini:" look in the catalogue of those worthies who sit in that noble hall, else, and see if I am romancing. And will any body say that a man has not a right to name his son after the back of a school-book? Why, my friend Fisher bears the christian name of Edmund Burke, if I do not err: and how "far-fetched" is that prefix? Some thousands of ocean-miles at least! A bell-ringer, proctor, servitor, or something of the sort, at St. Edmund's College in Lisbon, had a desire to signalise his respect for the English, out of regard to a friend at the University from that country, and resolved to have his first-born son denominated after some distinguished English personage. Looking over the list of those from that nation who were celebrated at St. Edmund's, he met with the name of "the venerable Bede," and to the much surprise of the priest, and the no less amusement of the congregation, handed up that christian name for the prefix to his infant son's cognomen! And the child was always called "the venerable Bede," till the faithful chronicler of the anecdote lost sight of

him. The fact is, people generally baptise their bantlings to suit themselves; unless some rich old nabob neighbor expresses a desire to perpetuate his appellation by handing it down to another generation, having no children of his own;—and such a suggestion is generally sufficient, I freely admit, to alter the case entirely.

But we have to deal, in this inquiry, not with the names of persons, but with the titles of literary works. The 'Tatler,' the 'Spectator,' the 'Idler,' the 'Rambler,' the 'Lounger,' the 'Connoisseur,' were all thought strange titles when they first appeared; and many were the droll mistakes, to which the application of them to those admirable essays gave rise. A French translation of Johnson's "Rambler" ran thus: "Le Chevalier Errant,"—and a literary gentleman of that country actually proposed the health of the illustrious author, in downright earnest good faith, as the Monsieur Vagabonde! We learn from the indefatigable D'Israeli, that affected titles to literary productions were quite common among both the Greeks and the Romans: who gave to them such appellations as 'Cornucopia,' or the Horn of Abundance; 'Limone,' or the Meadow; 'Pinakidion,' or the Tablet; 'Pancarpe,' or All-fruits; &c. The same author also cites the quaint titles of some of the religious writers of modern times, to show that all ages have indulged in these freaks, with equal ingenuity of invention. Among these are mentioned "Matches, lighted at the divine fire;" "the Gun of Penitence;" the "Spiritual Apothecary, his shop;" "Some fine Baskets, (?) baked in the Oven of Charity, carefully conserved for the Chickens of the Church, the Sparrows of the Spirit, and the sweet Swallows of Salvation;" "A Fan to drive away flies," &c. &c.

But to come down to our own time. The Gentleman's Magazine has been published to the present day from a very early date, by the impersonal "Sylvanus Urban,"—a name selected, of course, for the purpose of conveying, at a glance, an idea of the true purpose of the publication, as at the same time devoted to the detail of town and country matters. Blackwood's Magazine, in like manner, rejoices in the editorial control of "Christopher North,"—whom may Heaven long spare to the literary world! In our own country, that admirable miscellany, Dennie's Port-Folio, was edited by "Oliver Oldschool;" and that rare hebdomadal, so brief yet so brilliant in its career, Irving's "Salmagundi," (a title which, perhaps, the critics of that day might have called "ridiculously far-fetched,") was under the editorial management of "Launcelot Langstaff, Esquire." The admirable Pickwick papers, and other works of the same inimitable writer, purport to emanate from the pen of "Boz,"—but I have never yet heard them much depreciated on that score.

I look upon all this kind of neology, in the matter of titles and signatures to books, pamphlets, periodicals, and papers in magazines, Mr. Editor, as nothing more nor less than an ingenious device to attract the attention of the reader to the subjects of them; an innocent conceit of the author, for the indulgence of which he is not to be too harshly criticised. For my own case, I certainly cannot admit that it was so very "ridiculously far-fetched" to denominate a series of off-hand, desultory papers for a monthly magazine, upon any and every topic that might present itself to the mind of the writer, as he wrote, as I have denominated these articles addressed, my dear Editor, to you. As D'Israeli, the Elder, in his most valuable "Curiosities," well says:

"there is no government of words; and it is no statutable offence to invent a felicitous or daring expression, unauthorized by Mr. Todd!"

I derive "Currente-calamosities" from the two Latin words, "currente calamo," with a running pen,—(solely for the purpose of indicating the character of these papers,) just as "Johnsoniana," was derived for a similar purpose, in the English magazines, from Johnson, soon after he died: and just as our own newspapers derive the heading of a column of good things from the Louisville Journal, "Prenticeana," from the surname of their witty author. I do not expect Time will ever stamp the word with his authority, nor, to adopt the felicitous allusion of an author already cited, do I flatter myself that it will secure the public adoption; nor that, even after I am laid in my grave, I shall ever "enter the dictionary," with my new phrase! Still, for my present purpose, the designation of a monthly article in the Southern Literary Messenger, during the current year, I will uphold it to be "a good phrase, and very commendable."

Some of the allusions contained in the above defence of my title, have called to mind some more of those "Readings with my pencil," a number of numbers of which have already appeared in your pages. Those which now recur to me are some short epigrams, jeux d'esprit, epitaphs, &c., &c., chiefly gathered from those pyramids of embalmed literature, the magazines of years gone by. Some of these are worth exhuming, and to this task I will, with your permission, devote some portion of this paper.—This is quaint, though somewhat late in the day:

"Art thou, my friend, so near the brink
Of matrimony? Stop, and think!"

The following is an epitaph in St. Alban's Church Yard, in London. Tom must have been an odd-fellow, dead or alive.

"Hic jacet, Tom Shorthose, sine tombe, sine sheets, sine riches,
Jus vixit, sine gowne, sine cloake, sine shirt, sine breeches."

Here is another, to be found in the same burial place. The challenge conveyed in the last four lines is inimitable, in its way.

"Johnny Bell lyeth underneath this stane,
Five of my sinners laid it on my waine:
I lived a' my days withouten sturt or strife,
I had meet in my house, and was master o' my wife.
If, reader, ye ha' done mair in your time,
Than I ha' done in mine,—
Ye may tak this stane from my weame,
And lay it atop o' thine!"

The following contains a touching truth, conveyed in a figure of singular quaintness. It is inscribed on a stone at Frith in Denbighshire, and was written on the death of a youth.

"Our life is but a winter's day,
Some only breakfast, and away!
Others to dinner stay, and are full fed,—
The oldest man but sups, and goes to bed!
Large is his debt, who lingers out the day,—
Who gives the soonest, has the least to pay!"

The following was written during the Revolutionary war, and was published in the Craftsman; a periodical then printed in London. It certainly contains a good deal of sense, as well as no small epigrammatic point.

"We've fought some years to gain taxation,—
But lost our men, and reputation.
No longer, Britons! be such silly elves,
Is it not madness thus to tax yourselves?"

And here is another to the same point :

"America must be subdued,—
The common cry of men
The wise in office point out *how*,—
But who can point out *when*?"

An epitaph on a lawyer :

"Beneath this smooth stone,
By the bone of his bone,
Lies Master John Gill.
By lies while alive
This attorney did thrive,
And now, he lies, still.

Another, on a fiddler :

"Steven and Time are now both even :
Steven beat Timo, and Time beat Steven!"

Bating the profanity, this Scotch epitaph has some point :

"Here lie I, Martin Elderbrod,
Have mercy on my soul, Lord God!
As I would do, were I but you,
And you were Martin Elderbrod!"

The following, on the tomb-stone of a bustling little busy-body, is very neat :

"Hic quiescit, qui nunquam quievit."

Here is one, which is certainly anything but a flattering tribute to the departed :

"Here he lies, besides a witch,
Hated both by poor and rich.
Where he is, and how he fares,
Nobody knows, and nobody cares!"

In one of the oldest towns in the good old "bay-state," is an ancient church-yard, enclosed contemporarily with the earliest settlement of the place: and in that enclosure is the following pathetic tribute to the memory of a celebrated deacon of those parts.

"Oh Rowley, Rowley! thou has sinned sore!
Thou'st lost thy Deacon Jewet, and never'll see him more!"

But I must bring these extracts to a close; and, as the foregoing have been chiefly tributes to the memory of the departed, by *death*, I will conclude with one written to the memory of one whose departure was suggested by *debt*. It is full of point, and far more witty than such things usually are. I find it in the London Chronicle, November 29, 1778.

"A copy of verses on Mr. Day,
Who from his landlord ran away!"

"Here Day and night conspired a sudden flight,—
For Day, they say, is run away, by night!
Day's passed and gone,—why, landlord, where's your rent?
Did you not see that Day was almost spent?
Day pawned and sold, and put off what he might,
Though it be near so dark, Day will be light!
You had, one Day, a tenant, and would fain
Your eyes could see that Day, but once again.
No, landlord, no! now you may truly say,
And to your cost, too, you have lost the Day!
Day is departed, in a mist, I fear,—
For, Day is broke, and, yet, doth not appear!
From time to time, he promised still to pay,
You should have rose, before the break of Day!
But, if you had, you'd have got nothing by't,
For Day was cunning, and broke over night!
Day, like a candle, is gone out, but where
None knows, unless to Pother hemisphere.
Then to the tavern let us haste away,—
Come, cheer up! hang it! 'tis but a broken Day!
And he that trusted Day for any sum,
Will get his money, when that Day shall come!"

Adieu, for another month!

Truly yours, dear Editor, J. F. O.
WASHINGTON, March 1, 1839.

RECOLLECTIONS OF A RETIRED LAWYER.

RECOLLECTION II.

LYNCH'S LAW.

Forty years ago, the practice of wreaking private vengeance, or of inflicting summary and illegal punishment for crimes, actual or pretended, which has been glossed over by the name of *Lynch's Law*, was hardly known except in sparse, frontier settlements, beyond the reach of courts and legal proceedings. The first example of it in my part of the country, was almost unanimously approved. It was exercised upon a man, accustomed, in frequent fits of inebriation, to beat his wife. Her three brothers, disguised as women, with faces blackened, one dark night, took him from his own door just after one of his outrages; carried him gagged and blindfold, to a neighboring wood; stripped him, tied him to a tree, and gave him a hundred lashes.

All, save one, who heard of the deed, were loud in their praises—and I, with the rest. It operated like a charm, upon the brute of a husband. For some time, he was merely crest-fallen and sullen: but finding that he could fix only suspicion upon his mysterious executioners, and knowing that public opinion allowed him no hope of a successful suit or prosecution, he yielded to the assuaging influence of time and reflection. The discreet gentleness of his wife softened and re-won his heart: he became a pattern of sobriety and kindness. Still, there was one man, who would not approve. This was a sagacious old farmer and magistrate, who deserved to be, but was not, an oracle in the county. From the very first, he shook his head at this infraction of the laws; and declared that it would lead to much evil in the long run.

I essayed to reason him out of his 'error.' I told him, there were offences the law could not reach: sot-tishness, for instance, accompanied by such behavior as might break a wife's or daughter's heart, without any open act, to justify legal process. So it was, with certain forms of licentiousness: so it was with gambling, and receiving stolen goods. In many such cases, either the law afforded no remedy, or it was unavailing for want of proof, while the nuisance was intolerable.

The old gentleman heard me patiently, and replied—'Offences, the law cannot reach? Then amend the law, so that it will reach them. It has no defect, that may not be supplied by good, common-sense. Treat the sot like a lunatic, as he is. Put his property, and if need be his person, under a guardian: admit his wife's testimony for that purpose, as you do already when he does or threatens violence to her. Enact more effectual penalties, and better means of enforcing them, for transgression in all its forms. Provide sober, and more intelligent juries. Organize the courts, so that they may know their duties better, and perform them more steadily. Until all this be done, let us bear nuisances, which are the just penalty of our own supineness. Let us, every man, employ all the influence we possess, to get the needful amendments made: and meantime, countenance no outrage on the laws—no taking of the law into private hands, to redress particu-

lar griefs. Tolerate this in one case, and you authorize it in a thousand: and that is anarchy at once. Every man, though he may disapprove such violence in general, will single out some one or two offences which, he thinks, justify it; until this extraordinary and usurping jurisdiction, shoving aside the regular penal code, will embrace the whole circle of transgression. Mark me—you will see the rankest injustice done, under pretence of summary justice. You will see lawless men using it, to satiate their private enmities. Mark me, if you do not.' (These were his thoughts: and very nearly, his words.)

He left me unconvinced. I thought him timid, and overscrupulous.

The practice of 'Lynch's Law' went on. For a while, it was deemed by our chivalry, appropriate only to drunken husbands, who maltreated their wives. Then, it was held justly applicable to some gross indecencies of life, which shocked the moral feelings of society, but were not effectually grasped by the laws. Next, it was employed against receivers of stolen goods, and petty thieves, whose rogueries, it was said, could not be *proved*, though every body knew them—they were *notorious*. In all these cases I justified the practice; though I confess, misgivings began to flit athwart my mind when I saw its frequency and violence increase, and when I heard various persons, respectable and influential, talk of applying it also to misdeeds of many other descriptions. Nobody was for it in all cases: on the contrary, every man condemned it, except as to a very few offences—seldom above two—which he considered as peculiarly flagrant. One worthy citizen thought strolling gamblers ought to be thus dealt with; another, suspicious vagabonds of all sorts; another, horse thieves; a fourth, all thieves;—a fifth, drunkards who had wives; a sixth, common drunkards, whether they had wives or not; a seventh, inhuman masters; an eighth, persons who traded clandestinely with servants, encouraging them to steal. All these opinions were severely acted upon, in the course of three or four years: and from avowals made, it was evident that men were ready to do the like with respect to any misdemeanor, real or supposed, which the sharpened optics of excited feeling might discern, or magnify into crime.

I was not so bigoted as to doubt any longer, that my sagacious old farmer friend had been more than half right in his warning. Each successive, novel application of usurped authority, startled me; but by two instances, which occurred in my own county, and where, almost beyond question, the usurpers had made innocent men suffer to gratify personal malice,—I was thoroughly roused. In those two cases, they had taken their measures so cunningly, that no sufficient clew was found to convict them. It did not occur to the counsel consulted, that they might be compelled to bear witness against each other: and some of them were honorable enough to speak the truth, if they had been sworn.

At length an outrage took place, which excited general indignation for many miles around. A free negro, sixty years old, whose life had been upright, decorous, and useful, was taken from his bed one night by five men, who broke open his door for the purpose. He was put into a large bag, which was tied over his head: thus confined, he was carried to a retired place hard by;

and there mangled with innumerable stripes and bruises. His oppressors ended by telling him, that he should receive the like treatment again, unless he quitted the neighborhood in two weeks; and that then it would be repeated once a week, so long as he remained.

Such was the respect which the old man's uniform propriety of deportment had inspired, that the vicinage was at once in a flame, as the news of this barbarity spread. His neighbors were eager to trace out its authors: and circumstances were not wanting, which produced a decided belief, and seemed to promise a judicial conviction, of their identity, and guilt. Their victim, in the few words they uttered, recognized the voices of three. He had offended one of them—a contiguous landholder—by steadily refusing to sell him his little tenement, which ran in, awkwardly, upon that neighbor's ampler tract. Another was an idler, who subsisted by hunting, fishing, and other, more doubtful means; and who, having seduced the old man's only son into profligate habits that ended in his fleeing the country,—had become, according to a very old rule, the injured father's implacable enemy. The third was a son of the first. This hopeful youth and exemplary parent, by addressing each other as 'Father,' and 'Tom' at the scene of violence, confirmed the sufferer's assurance of their identity. His impressions were reinforced by those of a little boy, his orphan grandchild, who slept in the same, only apartment, of his lowly mansion: and who was quite sure of the voices, and persons, of the pair—for a few coals flickered in the fire-place, diffusing a dim light.

But of what use was the old, or the young negro's knowledge? The stern, though indispensable rule of our law, arising from a state of things not chargeable to us, sealed *their* lips, as witnesses against white men. This circumstance heightened to intensity the general eagerness of the surrounding country, to ferret out and bring to justice the perpetrators of the outrage. It gave to their guilt a deeper shade of cowardice and cruelty, which swelled public indignation to a pitch absolutely sublime. Every eye, ear, and mind, were on the alert for evidence: and there was a cool discretion, unusual in such excitements, which was highly favorable to success in this vigilance.

I (the nearest lawyer) was consulted in the old man's behalf, by two of his respectable neighbors; who told me what he and his grandson had seen and heard. I asked if Dickson (the idler) could be depended on, to speak the truth, if examined as a witness against Smith and his son? 'No—and, besides, he'd quit the country at a word. He has nothing to keep him here—property nor character.' 'Would Thomas Smith tell the truth, on oath, against his father and Dickson?' 'Yes. There's good in that youngster. He's a wild, out-breaking fellow, and no doubt he thought he was acting quite right, with his father standing by to help him. But he would not swear to a lie.'

I therefore counselled at once a suit for damages, and a criminal prosecution, against the father (Smith), and Dickson: provided any material testimony could be obtained in addition to that of young Smith—upon whom, alone, it did not appear quite safe to rely. I urged the importance of trying to find out the two unknown assailants—and of strict secrecy as to our views and plans.

The unknown were soon discovered. They had dropped hints of their intending, before long, to 'regulate old Jerry Jackson,' who, they said, had been stealing corn from Mr. Smith. And, about an hour before the violence, they had been seen going that way, by one of the neighbors, whom they told, that they were going to help Mr. Smith find some stolen goods. Amid the hubbub which shook the vicinage, they were singularly unconcerned; showed no surprise on hearing the particulars; and cast furtive, knowing glances at each other, when the wonder went round,—'who could have done it?'—They were a couple of low bucks, named Rakewell; intimate at Mr. Smith's, and fond of any thing like a frolick, or an adventure. They would not (I verily believe) have engaged in this cowardly assault, but for their confidence in what Mr. Smith said—that he lost 100 bushels of grain every year, by that old rogue, and harborer of rogues, Jerry Jackson. This notable speech he had been heard to make in their presence, very soon after Jackson's refusal to sell his piece of ground. Various persons recollected also, that Smith had shown deep exasperation at that refusal; and had sworn, that if he did not get the place, the old rascal should find it too hot for himself. All his complaints of stolen grain were after this.

These facts appearing sufficient, the suit was instituted; an action of *trespass, assault and battery*—laying the damages at 5000 dollars; in the then 'District Court,'—nearly corresponding to the present *Circuit Court*.—At the next term of the same court, indictments were found by the grand jury against Smith, his son, and Dickson, upon the foregoing evidence. Writs were awarded to arrest the three indicted parties, and compel them, either by confinement in prison, or by finding sureties [*bail*], to appear, answer the indictments, and abide the final decision. The witnesses also, for the commonwealth, were recognized to attend and testify.—As to the civil action, we could only subpoena them.

I spare the reader a detail of the preparations for trial. By some odd casualty, such as often happens in our courts, to delay and disarrange their business, the civil suit came on to be tried before the indictments.

It was against the elder Smith, and Dickson; Tom not being sued, because we designed to use him as a witness in the civil action.

The jury being sworn, I opened the case for the negro, with a rapid and warm recital of the facts by which he had been aggrieved. An eminent counsel on the other side, followed, with a statement of the points relied upon for defence. Then, the witnesses were called.

To the evidence of Thomas Smith and the two Rakewells, the defending counsel objected; on the ground that they, being accomplices in the assault (if any had been committed), were inadmissible as witnesses for the plaintiff. Here too, I forbear a detail of the points we made in discussing this important question, though I recollect them more distinctly than events of yesterday, and my spirit is roused by them, as that of an old war-horse by a trumpet-call.—The court overruled the objection; deciding that joint-trespassers, at least when not sued jointly, might be witnesses against each other.

The proof was full and conclusive—of the outrage, in all its particulars; of the previous threats of Smith; of the real incentive to his displeasure; and of his ca-

lumnious pretext for it, and for the outrage. In cross-examining our witnesses, and by some evidence on his own side, his counsel endeavored to elicit proof of the thefts, and encouragements to theft, which he had imputed to the plaintiff. The court interfered, to stop any such testimony; saying, that be the plaintiff ever so guilty, there were LAWS which Smith should have invoked, and not have taken justice into his own hands: that therefore, such guilt was no justification for him, and no evidence of it could be heard. But we waived all objection to such proof, if it existed; and set the door of inquiry wide open,—daring the other party to enter, and prove whatever they could. All their siftings, however, produced not the slightest ground of suspicion against the negro.

The argument came next. My associate, a young man of seven and twenty, opened it in a style of uncommon eloquence and power. He was answered by the two defending counsel.—I closed.

It is not difficult to imagine the topics of argument, on both sides.

We portrayed the old man's life—humble, peaceful, honest, respected: the leading astray and ruin of his only son, by one of the defendants: the attempt to blast his character, by the other: the midnight irruption into his cottage home, and the laceration of his person, by both! All, aggravated tenfold, by his condition—inferior, solitary, aged, every way defenceless! We exhibited the lengths to which illegal violences of the kind had gradually gone, from small and even good beginnings: the danger lest, if tolerated in cases of the plainest guilt, they should be abusively employed where there was no guilt: the necessity, therefore, of arresting them by signal penalties, even when they seemed warranted by crime in the sufferers—much more, where innocence had been oppressed, under a most foul and false pretence of guilt, to gratify personal hatred and cupidity. We did not omit to urge the sacred, imperious duty, of spreading the shield of public justice peculiarly over the class to which our client belonged: a class debarred, by the necessary strictness of our laws, from one of the most important means of self-protection against outrage, and therefore entitled, when trampled upon, to have all the energies of the whole community animated and eager for redress.

The adversary counsel made the best of their cause. They could no longer deny the outrage: they could only palliate it, and attempt to mitigate the damages. The suspicions of Smith, naturally excited by his loss of corn—the irritation of Dickson, at having been contumeliously termed by the old man an unfit associate for his son, a negro—the necessity, if there was theft, of its being punished in this way, for want of judicial proof—these, and similar topics were pressed with such boldness, eloquence, and plausibility, that some of the jury really seemed for a while staggered. A little time, however, and counter discussion, showed their fallacy, and converted them into additional causes of indignation.

The verdict was for 2000 dollars damages: the jury intending, as one of them said, to give half of Smith's estate to Jackson and the commonwealth.

When the indictments were tried, juries fined S. 300, his son 50, and Dickson 50 dollars. The court sentenced each of them to three months' imprisonment.

This severe rebuke, and the attendant circumstances, repealed 'Lynch's Law' in that part of the country. The immense throng who witnessed the trials, and the far greater numbers who heard of the facts, seemed to perceive, as if written with sun beams, the liability of that dreadful code to insufferable abuse. Its origin, growth, and natural consummation, were obvious to every startled mind: all saw, and wondered they had not seen before, that if allowed in any case, however apparently flagrant, it would at length be used where nothing but weakness was on one side, and bad passions on the other.

It was near the time of my retirement from the Bar, before any renewal of such violences met my knowledge. They then began, very much as before: they have multiplied by like degrees: and no doubt they will grow more frequent and more atrocious, until either the Legislature and the courts do their duty, or till some deed, too high-handed and shocking to be winked at, shall once more rouse a feeling, which may again suspend (not abolish) the perpetually reviving mischief. The efforts of counsel, supported by facts more eloquent than any tongue, may cure for a time, and through a certain district: but it is the LAW-GIVER, alone, who can eradicate the disease, utterly and forever, from the whole body politic. Let HIM, (as my early adviser, the sagacious farmer, said) enact more effective penalties for transgression, and provide better means of enforcing them: have juries more sober, intelligent, and respectable: so constitute the inferior tribunals, that they may know and perform their duties better: and (I add), as a measure of prevention perhaps equal to all other measures,—send the schoolmaster more widely and thoroughly abroad among the people; so that ONE FOURTH of them may no longer be qualified by ignorance to be nothing but brutes and law-breakers.

TO A LADY, WITH A BOUQUET.

I send thee flowers, fresh flowers, to breath
An incense on thy lovely shrine;
Oh, take them while they bloom, and wreath
A chaplet for that brow of thine!
Better than gems from Indian mine,
They will become thy raven hair;
For, like those gems thy bright eyes shine,
And other rays thou need'st not wear.

If I could lure some minstrel-bird
From his dear summer home away,
My pen should trace no idle word
Nor frame this unregarded lay:—
For more than I can dare to say
That captive bird should sweetly sing—
And thou, perchance, would'st bid him stay!
And fold with thee his weary wing!

P. B.

New York, February 22, 1839.

JAMES McDOWELL, ESQ.

OF ROCKBRIDGE COUNTY, VIRGINIA.

We have been favored by the publisher, John Bogart, Esq. of Princeton, with a copy of the "Address delivered before the Alumni Association of the college of New-Jersey, Sept. 26, 1838," by the distinguished individual whose name is prefixed to these lines. Mr. McDowell is well known in Virginia, as a gentleman of literary attainments and an eloquent speaker; and the address before us will not have the effect of diminishing his high reputation. It is true, that we do not consider his style in composition as perfect, or altogether a safe model for imitation by younger men; but its very faults are occasioned by the exuberance of his genius and the splendor of his imagination. If some might complain of the superabundant foliage which is spread before us, none could be dissatisfied with the rich and precious fruit which always accompanies it.

We regret, that our limits will not permit us to present a critical analysis of the address, or to make copious selections from its pages. It is not easy to commend particular passages, where there is so much equality of beauty throughout, and so rapid a succession of brilliant thoughts and wholesome precepts, clothed in eloquent language. We cannot forbear extracting, however, the following forcible and beautiful appeal to those of his hearers, who were about to receive the "spur and belt of college knighthood," and to go forth upon the labors of life:

"To you who have just received the ceremonial seal, which closes your connection with the college, and which accredits you with honorable testimony to the world, this hour, glad as it is in the exulting sense of independence which it inspires, is the beginning one of more anxious and solemn consequence than any other that has opened upon you. It is an hour which advances you to undertakings and duties which, whether considered in reference to mind or character, outmeasure by far, in complication and importance, any other to which you have yet been called. The gown, with all the responsibilities and obligations of manhood, is taken to day. The rubicon of youth is passed, and is now behind you: the battle of life stands ready before. The quiet harbor, where you have been ministered to for years in gentleness and peace, is now quit, and you are launched upon the wave of the wide sea, where your pilotage and success must be such as heaven and your own good heart shall supply. At this moment, which is always one of rejoicing, follow what may, when the restraints of impatient pupilage are taken away, and the heart leaps forward to busy life as to a revel and a feast; at this moment, to read you over the lessons of a grey and care-worn experience is, in some sort you may think, to exhibit anew the mystic hands and the mystic words upon the wall, the skeleton finger and the boding motto, calling up only images of gloom unseasonably to dim the ruby of your cup, unkindly to check the joy of your banquet. Rather imagine that as you are no Belshazzars to tremble at prophetic revealings, and I no sage or seer to announce them, that some words not of gloom, but of soberness and truth, may even now be spoken which may benefit and aid you when this festal hour shall have gone. So presuming, let it be said, that if you would acquire firmness, elevation and weight of character at the very outset in life, if you would impart to the mind the whole of that consistency and vigor of which it is susceptible, and would crown all these virtues by reputation and by profit, then choose at once the profession or pursuit to which you intend to be attached, and embody all your energies in preparation for it. Choose candidly, upon thorough examination of yourself, but choose promptly. Decline to do so, loiter away a year or two of the most precious period of your lives in the vain and voluntary self-delusion that you are wisely exercising your judgment with observation and reading and facts, that you may decide at

last with the better discretion; do this, as thousands have done to their sorrow, and not only will the tone and courage of your mind abate, and all of its faculties gradually give way under the abandonment of its accustomed discipline, but innumerable conjectures of hypothetical evil will fill it, and visionary reasons for further and further delay will spring up in afflicting abundance on every side of you, to postpone and perplex your decision. Every moment not imperatively demanded by the necessities of self-examination and an intelligent survey of the general operations of society, every one beyond this, which is spent under the deceptive pretence of deliberation and inquiry, only aggravates your perplexity and distress, and will ultimately fasten upon your mind the disordered and incurable habit of haling and indecision. You may search and search and be no more profited withal, than the inquiring and eccentric hermit who roamed through the world, looking in all its paths with a candle in his hand for an honest man, but retired at last, wearied, disappointed and disheartened to his cell, where, as the fable reads, he renounced his hopes, extinguished his torch, and died in despair. Let all waywardness and caprice be dismissed from your choice, and your plan of life be definitely settled, and it is amazing to see how instantaneous is that firmness and energy which result to the mind from this single act of concentrating its purposes and powers. But delay and delay, and as no system of life is adopted, or adopted in time, your self-control, your sense of personal value, your efficiency and your promptitude of decision are all lost: your struggles to live, to act, to play your part in society as might become you, insensibly but inevitably dwindle down into a petty and contemptible shuffle of daily expedients; and repentance, mortification, disappointment, to say nothing of positive and resulting vices, oftentimes follow after to bring up in mournful array the procession of life."

Indeed, the whole of that part of the address which is intended for the *Alumni*, when they shall have engaged in the active duties of social, professional and political life, abounds so much in fervid morality and glowing patriotism—that we could sincerely wish it in the hands of every intelligent reader in the country. The following passage particularly ought to be read by every politician of every party in the Union, and is of more value as coming from a gentleman known to be a warm admirer and supporter of the last and present administrations of the federal government. As we are not politicians ourselves, we leave the application to others:

"Public offices are trusts, pure trusts; conferred in faith for the general weal, and opposed throughout the whole range of their intentions, to all the purposes of individual advantage. To pursue them, therefore, as being in any respect whatsoever the proper subjects of traffic or private emolument—to clutch at and seize upon and apply them as the just acquisition of personal booty, is in reality to perpetrate a robbery; a robbery more wicked and worse than that which classic fable has punished with the naked rock and the gnawing vulture; nay, it is to commit simony against the state, only less criminal and less accursed in itself than that simony against heaven, which would have purchased its gifts and its powers to dishonor, defile and destroy them."

The concluding remarks of the address we cannot omit. They relate to that gloomy subject which we never approach without shuddering. If such appeals are lost upon those misguided spirits who, in the name of peace, are lighting up the fires of discord, and would, for the sake of religion, plunge society into crime and darkness, we shall despair ever reaching them through the influence of reason, and must calmly await that hour of trial which an overruling Providence may have in reserve for our country:

"I shall be pardoned, I trust, by this audience, already taxed too long, for introducing, in connection with this view of a patriot's duty, and as an appropriate appendage to it, a closing remark upon an all-engrossing and all-pervading subject, which deeply, intensely, and sternly involves it—a subject which, though it takes hold more immediately and more totally of the

peculiar interests and structure of southern population, yet, in its final issues, interweaves itself indissolubly with the peace and the hopes and the destinies of us all. If it is ever important to consider it with admonitory reference to its inevitable and its dread results, it is at this moment, above all others the most important, whilst the public mind is ruminating upon it, and before any violent or any irrevocable act has thrust it out from the forum of reason, to be discussed and decided upon the field of battle. It is now, if ever, when a threatening frown scowls and lowers upon its front, that evidence should be heard, lest an unwary judgment should let loose the sword to "slay the man that is thy fellow." Who here that asks—who here that needs to be told, that abolition is the subject meant; that subject of monstrous omen, though perchance of pious birth—which fostered and forwarded with a wild and explosive energy, has been made to tower above every interest of party, and above every measure of policy, by putting into contest the very body and being of the state. Passing by the questions of theology and morals and constitutional power and private right which have been embodied with this subject, I have this only to say which my southern position, and, therefore, my keener apprehension, both as witness and victim of all its results, will enable me to say—that if it be pushed onward by those who are locally foreign to its interests and its dangers, until it becomes the efficient and admitted cause of some insurgent ebullition, it will be the parent, not only of unutterable calamities to us, but of certain, irretrievable and bloody undoing to themselves and to all. Let those amongst you who choose, bewail the existence of slavery as a maelstrom in the bosom of southern society; if they but touch it with pragmatical, with forbidden and infatuated hand, they render it a maelstrom to engulf the Union. Be adjured, therefore, by the weal of this and of coming ages; by our own and our children's good—by all that we have and all that we hope for in the glories of our land, to leave this subject of slavery, with every accountability it may impose, every remedy it may require, every accumulation of difficulty or of pressure it may reach—leave it all to the interest and the wisdom and the conscience of those upon whom the providence of God and the constitution of your country have cast it. Leave it to them *now and forever*, and stop, before stop is impossible, the furious headway of that destructive and mad philanthropy which is lighting up for the nation itself the fires of the stake: which is rushing on, stride after stride, to a strife and a woe that may bury us all under a harder and wickeder slavery than any it would extinguish. Nothing but bitterness—nothing but aggravation of heart and of lot has been brought upon that unfortunate man whom rash and pernicious attempts—the promptings of this blinded and baleful spirit—have been put forth to benefit. They have broken down the footing he had reached, crushed the sympathies he had won, embarrassed and accursed the fortunes they were interposed to control. The generous and elevating influence of our free institutions was relaxing his bondage, bettering his condition, lifting up his character, turning upon him the public anxieties and the public councils as a great object of provident and public provision—was changing at all points the aspects of his fate, when a spirit, sent of heaven as it insanely imagined, came from abroad, to scourge him with demon visitation; to wrench him from the arms of his only true and only capable benefactors—to throw him back again upon the earth a thousand fold more suspected and more separated than before; rivetting upon him every fetter it would loosen—poisoning every blessing it would bestow, and filling his whole case with elements of hopelessness, explosion and evil, which the heart sorrows whilst it shudders to think upon. Why, then, persist? Why abet the growth or the daring or the power of a spirit, which wisdom and mercy plead to you, with all their tongues, to silence and to stop? Will any daughter in this assembly, the cherished and defended of a parent's love; blessed to the uttermost with the holy peace of perfect security; sheltered to the uttermost from the apprehension and the approach of every wrong; with no enemy to dread, no hand to injure, no terror to affright; safe in her repose, safe in her innocence at every hour and in every place; will she do that, which, all-valueless for its objects, will yet be all-powerful to send wakefulness and watching and danger and anguish, perchance, to the days and the nights; to the summer shade as well as to the barred and bolted chamber of her southern sister? Will any mother here, as she soothes her infant to its rest, and looks upon its balmy sleep, and pressing it to her heart, bows in gratitude to God for his mercies to her child, thanking him that

its life is safe, safe from harm, from the hand of violence and revenge, and that all its slumbers are guarded by a nation's power: will she—oh, can she, as the consequence of *Aer* acts, bear to behold the southern mother startling and shuddering, at every foot fall, and at every noise which breaks upon the silence of the night, and flying from her pillow of wakefulness and wretchedness to kneel and crouch upon the cradle, weeping and sobbing in the agony of her soul over the murder and the horror that surround it? Will the father and the citizen hail us and greet us and press us to their bosom, as better brethren and better men, when we shall come up with our hands all red and reeking with the blood they have made us shed? But if not, then abjure the cause which involves the crime, and the disciples who support it! Friends of the slave! they are stripping him of the wretched remnant of liberty he has left. Friends of humanity! they are cruelly and recklessly staking it upon means of massacre and convulsion. Friends of the country! they are rapidly becoming its iron homicides—cleaving down its institutions with murderous hand, and tearing it limb from limb. If you would see the practical working of the spirit that is spoken of—the woe and the ruin it can occasion—go to the quiet and the passive slave of the south, pour your insurrectionary sentiments into his ear, parade the worst of his condition in artful and in pictured horror before his eye, then trace the progress of the poison—trace it through his murmurs, his resentment, his resistance; his passions growing deeper and darker at every step, under the discipline he provokes, until anger and ulceration and agony of spirit have done their work, and revenge and murder have become the companions of his bosom: then see him leagued and banded with others as fell and as furious as himself, the vulture at his heart, the dagger and the torch in his hand, stealing into the silent and midnight chamber, and standing, with horrid and uplifted weapon, over the parent and the child as they slumber for the blow: see him—let the shriek, the gasping struggle, the gory blade, the blazing dwelling, tell out the deed that is done. For one moment—one palsied moment—a shivering and convulsive horror seizes upon the hearts of millions of our people—in the next, a dreadful wrath drives on to a dreadful retribution. But if the blood of our people is ever thus to stream in our dwellings, and ooze from the very bosom of the soil that feeds us, it will cry from the ground like that of Abel for vengeance, vengeance against the brother hand that shed it, and vengeance would be had, though every drop that was left should be poured out in one anguished and dying effort to obtain it. Nothing—no nothing but heaven could prevent a people, so lashed up to frenzy by rage and suffering and wrong, from pouring back, upon the fields and firesides of the guilty, that visitation of calamity and death which had been sent to desolate their own. Spare us—oh, spare us the curse of a ruptured brotherhood, of a ruined, ruined country. Give up your happy and united country; give it up to the madness of some factious hour, to the frenzy of some fanatic spirit; let it sink overwhelmed in some horrible struggle of brother with brother, and you will recover its liberties and its blessings again, when the sun shall “slumber in the cloud, forgetful of the voice of the morning;”

“When earth's cities have no sound nor tread,
And ships are drifting with the dead,
To shores where all is dumb.”

Here upon your northern fields it was, at some dark and dismayed period of our revolution, when army after army had been lost, when wretched and dispirited and beaten, the boldest quailed, the faithfulest despaired, and all, for an instant, seemed to be conquered except the unconquerable will of our glorious chief: here it was, that rising above all the auguries and the terrors around him, he exclaimed to the despairing of his followers as if inspired of Heaven for his work, “Strip me of the wretched and the suffering remnant of my soldiers—take from me all I have left—leave me but a standard—give me but the means of planting it upon the mountains of West Augusta, and I will yet draw around me the men who will lift up their bleeding country from the dust and set her free.” That “West Augusta” stands here to-day pleading through me, who am a son, for the individual and unbroken heritage of Washington and his comrades. Loyal to the result as to the struggle of the revolution—devoted, as when her devotion was counted upon as equivalent to fate—true, as when you were grasped and bound to the bosom of each other in the hour of distress, it is her hope and her wish to finish with you the destinies of the nation—arm

In arm to share with you in a common glory, and perish, when perish she must, only upon a common field:—thus testifying, through all time, to a fidelity which there was nothing in life that could shock, and nothing in death that could destroy. Turning her eye and her heart upon no other banner than the proud one which floats from the capitol of the republic, she prays as she looks upon it with its “stars and stripes,” that the glad shout which centuries hence may hail it in the land of the pilgrims, may be echoed back from the waves of the Pacific seas. Heaven grant that generations and ages hence, some future son of the south, honored and welcomed and greeted as I have been to-day, may stand upon this consecrated spot, praising and thanking God, as I do, that he also can say, “these are my brethren, and this, this too is my country.”

THE IDIOT BOY.

BY MISS E. H. STOCKTON.

Strangers would pause, with admiration gazing
Upon the features in their perfect mould;—
The soft, dark eyes, their lids so meekly raising—
The ivory brow beneath its curls of gold.
The face was of a child—though bud and blossom,
For fifteen summers had enwreathed his home,
Still leaned his head upon his mother's bosom,
Still with his hand in her's he loved to roam.

Slight was his form, yet graceful in its motion,
And sweet the voice that breathed one word alone;
And *that*—oh who that feels a child's devotion,
But knows his mother's was that dearest one?
And she—her soul was full to overflowing,
Of wild and passionate tenderness for him,
But on his image every thought bestowing
From early morning to the twilight dim.

He held a silent sympathy with nature,
And with a strange, sweet smile would gaze around,
And joy, like light, would brighten every feature,
When in some mossy cleft a flower he found.
The wild-bird in the shady forest singing—
The dream-like music of the southern breeze—
The butterfly its sunny pathway winging,—
Each had a charm the gentle boy to please.

He had no memory of days departed,
His thoughts like rosy shadows came and went—
He was not one of those, the weary-hearted—
Who gaze with sorrow on a life misspent.
Each time when winter came with sombre vesture,
And he beheld the feathery flakes of snow,
He hailed them with the same astonished gesture,
Nor knew that he had seen it long ago.

And still, with every little new-found treasure,
His hasty footsteps to his mother led;
Clasped in her arms he knew a sweeter pleasure,
Than he who feels a crown upon his head.
Poor and a widow was that lonely mother,
And by her daily labor fed her child;
Yet there was no one ‘knew her but to love her;’
She was so gentle and to all so mild.

At last the messenger of death appearing,
Gave warning that the mother's hour was nigh,

When on life's scenes, however sad or cheering,
The mortal form must close the glazing eye.
She had no fear—But oh the speechless sorrow,
That swelled her heart, and seemed to press her brain,
As, picturing to herself the dreary morrow,
She knew her boy would call on her in vain.

But wherefore dwell upon the scene of parting ?
God gave sweet rapture to the saint at last,
As on its plumes of glory upward darting,
The joyous spirit knew all grief was past.
Morn came—and the pure sunlight brightly beaming,
Gave to that solemn brow a radiant grace,—
So calm she looked, you might have tho't her dreaming,
But for the coldness of the placid face.

"Mother!"—how like a bird's the note came sounding,
From the red, parted lips that smiled with joy ;
As, with his wonted step of airy bounding,
He came—the orphan child—the Idiot boy !
The shroud—the bier—the face of marble whiteness,
Seemed to inspire with wonder, not with dread,
As he stood gazing in his youthful brightness,
The thoughtless living on the unconscious dead.

Mother—alas, that word so often filling
Her soul with joy no language might impart,
Gives to the air a music soft and thrilling,
But wakes no echo in that silent heart.
Ah this it is that aye forbids our deeming,
When by the form of death we sit and weep,
That after all it may be only seeming,
And the dear eyes are closed in slumber deep !

'Tis not the pallid brow, or purple tinging
Of the once rosy lip that proves the most ;—
Nor the dim orbs just seen through lashes fringing,
That tell of life and hope forever lost.
But oh when tears and cries, our grief revealing,
Fail to excite a soothing look or tone,
Then how intense becomes the bitter feeling
That even with the *loved* we are *alone* !

Poor boy ! when by each little fond endeavor
His thought could prompt he had essayed in vain,
To win one look from eyes now closed forever,
One word from lips that ne'er should speak again,—
With a sweet patience, he who knew not sorrow,
Close by the bier sat down, of hope possest,
Nor left her side till on the weary morrow
Exhausted nature claimed and found her rest.

Then to the home of one who loved his mother,
Even from her youth, the lonely one was borne ;
They deemed he'd lose all memory of another,
And of the lovely tie so rudely torn.
So on that lowly grave the rose of summer,
Blossomed and drooped, and autumn hastened by,
Bearing rich blessings like an angel-comer,—
Giving new glory to the earth and sky.

And there were strangers in that sacred dwelling,
Where Love had wept and Innocence reposed ;
Gay, happy faces of contentment telling,
And shouts of laughter when their labors closed.
And often to the cottage-windows gliding,
A fair, sad boy would gaze a moment in,

Then with a plaintive tone, as half in chiding,
Would murmur "mother," and depart again.

This could not last ;—day after day declining
Gave deeper shadows to the mournful eyes,
Though the soft curls upon his forehead shining
Still seemed too bright for aught beneath the skies—
And ere the autumn glory had departed,
They laid him gently by his mother's side :
There rest they both in peace—the weary-hearted,—
Whom time nor death shall ne'er again-divide !
Philadelphia, March, 1839.

NOTICE TO THE REVIEWER OF "NEW VIEWS OF THE SOLAR SYSTEM."

Mr. White: Permit me to review my reviewer in part, and in a very few words: reserving for a future occasion a more general review, and a drawing of the distinctive lines between the system I propose, and the system he defends, if indeed he defends any system. As to "ignorance," and "stuff," and "impertinence," I have no objection to make, except, if he pleases, that without a little more reflection on his part, he may find himself placed ultimately in the same condition others have been placed, by opposing the progress of science. He must see that there will be *necessarily* a vast difference between a *physical system* founded on a *stationary sun*, and a *physical system* founded on a *progressive sun*. Now would it not have been more philosophical—would it not have comported more with the *genius* of our country, for him to have entered into an investigation of this difference, and to have given his views of the difference, if any difference could have been discovered by him? I wrote with a view to excite inquiry; and what I principally had in view, was to lay the question before the learned, whether it was or was not a correct scientific principle to compare the Moon moving round the Earth, with Mercury round the sun? I too adverted to that which I consider to be the fact, the progressive motion of the sun; and of course, if so, then the progression of the sun must limit the progression of the planets, and that consequently their *progressive motion* must be equal. Now if this state of the system really exists, he (the reviewer) will find it no easy matter to apply all the principles of Sir Isaac Newton to such orbits, as the planets do actually describe, they having been applied to orbits which in fact have no existence, with, however, some exceptions—such as the eccentricity of their orbits, which really exists, but which is produced by the progressive motion of the system itself, and not from any principle advocated by Sir Isaac Newton, La Grange, or La Place. For all the phenomena discovered by the practical astronomer among the planets, as their times, and their *perturbations*, as the inner planets pass the outer ones, and as the inner moons pass those more remote from their primaries, the Principia of Newton may be considered good authority, *excepting the means* by which such phenomena are produced. The Principia applied to a physical system, supposed to be stationary, and occupying the same local position without progressing in any direction; but it is now supposed that such a fixed locality is incompatible with other views of astronomers, and the more recently discovered phenomena, and that of course the whole requires recasting. Well; I propose a system suited to a progressive sun, and why? Certainly not with a view to injure any science, but, on the contrary, to promote scientific inquiry in our own country.

Now, sir, I would be glad to see a review of the paper on the Tides, in the December No., by the same author; and he is at full liberty to use any epithets, he may (however unphilosophical) think necessary and proper to call to his aid. I thank him for the objections he has made to my views so far as he has gone; but I fear from the manner and style of his objections that he is not very well qualified to do justice even to himself. But be that as it may, I will take the liberty now to say to him, that the great question to be settled will render it necessary for me to draw largely upon Newton, La Grange, and La Place, and also on a still later astronomer than either, Sir John Herschel.

SOUTHERN LITERARY MESSENGER.

PUBLISHED MONTHLY AT FIVE DOLLARS PER ANNUM—THOMAS W. WHITE, EDITOR AND PROPRIETOR.

VOL. V.

RICHMOND, APRIL, 1839.

No. IV.

THE TRANSFIGURED:

A TALE FROM THE GERMAN.

The following tale is translated for the *Southern Literary Messenger*, by a lady of Pennsylvania, from the German of Techokke, published a few years since. The chief design of the author seems to have been to illustrate the German philosophy of *Animal Magnetism*; in the course of which he endeavors to explain some curious, not to say mystical, metaphysical speculations. The learned may find something in them for reflection, while the lovers of romance will be better pleased with a very ingenious story, diversified with several interesting characters and exciting incidents, drawn with great power and rich coloring. The whole is thoroughly German, both in its beauties and defects. As the subject of *Animal Magnetism*, engages, at this time, a good deal of attention, and has enlisted in its behalf some of our men of science, the publication of this exposition of its theories and mysteries may be peculiarly acceptable.—*Ed. So. Lit. Mess.*

The charm, elegance and retirement of the villa, the hospitality of our rich host, Ambrosio Faustino, and the grace of his most lovely wife, contributed not a little to the healing of our wounds, received in the battle of Molito, (we were four German officers,) but still more the pleasing discovery, that both the generous Faustino and his beautiful wife were of German descent. He was formerly called Faust, and was, by a singular chain of circumstances, induced to settle in Italy and to change his name. The delight of being able, far from our native land, to exchange German words, made us mutually confidential.

I had the liberty of passing my morning hours in Faustino's library. There I found in magnificent rows the choicest works, and also some volumes of Italian manuscripts, written by Faustino. They were memoirs of his own life, mingled with observations on painting and sculpture. I asked the favor of being permitted to read them, which Faustino was not only good enough to grant, but also drew out one of the volumes and pointed out what I should read.

"Read it," said he, "and believe me, however incredible it may appear, it is true. Even to myself, it seems at times a deception of the imagination, though I have experienced it all."

He also imparted to me many smaller circumstances. But this is sufficient for an introduction. Here follows the fragment from Faustino's or rather Faust's memoirs.

ADVENTURE IN VENZONI.

On the twelfth of September, 1771, I crossed the stream Tagliamento at Spilemberg. I approached with firm steps the German confines, which I had not seen for many years. My soul was full of an indescribable melancholy, and it seemed as if an invisible power drew me back. It constantly cried to me, return. In fact, twice did I stop on the wretched road, looked towards Italy, and wished to return again to Venice! But then, when I asked myself, "what argues it? to live! for

what?" I again proceeded onwards, towards the dark mountains, which rose before me in clouds and rain.

I had but little money in my pocket, scarcely sufficient to reach Vienna, unless I begged on the way, or should sell either my watch, linen or better clothes, which I carried in a knapsack. The finest years of my youth I had passed in Italy, in order to improve myself in painting and sculpture. At last I advanced sufficiently in my art to discover, in my twenty-seventh year, that I should never accomplish anything really great. It is true my Roman friends had often had the kindness to encourage me. Many of my pieces had occasionally sold well. Nevertheless this gave me but little comfort. I could not but despise creations which gave me no satisfaction. I experienced the painful feeling, that I was and should remain too weak to call into life with pencil or chisel the living conceptions within me. This threw me into despair—I wished not for money—I longed only for the power of art; I cursed my lost years and returned to Germany. At that time I still had friends there: I longed for a solitude, where I could forget myself. I would become a village schoolmaster, or engage in any humble employment, in order to punish my bold ambition, which had attempted to rival Raphael and Angelo.

The rainy weather had already continued several days and increased my uncomfortable feelings. The thought frequently awoke in me, if I *could* but die! A fresh shower drew me aside from the road, under a tree. There I long sat upon a rock, looking back with deep melancholy upon the destroyed plans and hopes of my life. I saw myself, solitary, amidst wild mountains. The cold rain fell in streams. Not far from me a swollen torrent roared through the rocks. What will become of me? sighed I. I looked at the torrent, to see whether it were deep enough to drown me if I threw myself in. I was vexed that I had not already made an end of my sufferings at Tagliamento. Suddenly an unspeakable anguish and the pangs of death seized me. I shuddered at my resolutions and wishes. I sprang up and ran on in the rain, as if I would escape from myself. It was already evening and becoming late.

I came to a single large house not far from Venzoni. The increasing darkness, continued rain, and my own fatigue, induced me to stop at this building, which exhibited the friendly and inviting sign of accommodation for travellers. As I passed the threshold of the door, a violent shuddering and the same mortal agony seized me, that I had experienced whilst sitting on the rock in the wood. I remained at the door to take breath, but quickly recovered myself. I felt lighter than I had for some days, when in the warm public room I again felt the breath of man. Without doubt it had been merely an attack of bodily weakness.

They welcomed me, and I cheerfully threw my knapsack on the table. I was shown a small room where I could change my wet clothes. Whilst undressing, I

heard a quick step on the stairs; the room door opened, and some hasty questions were asked about me, such as whether I should remain over night—if I came on foot and carried a knapsack—if I had light hair; and many more of a like nature. The interrogators went away—came again, and another voice asked similar questions. I knew not what it meant.

When I returned to the public room, all eyes examined me with curiosity. I seated myself as if I remarked nothing. Yet I was tormented to discover wherefore any one had made such particular inquiries about me. I led the discourse to the weather—from the weather to travelling, and from thence to the inquiry, if any more strangers were in the house. I was informed that there was a noble family from Germany, consisting of an old gentleman and a very beautiful and sick young lady, an elderly lady, probably the mother of the young one, a physician, two servants and two maids. The party arrived at mid-day, and had been detained, partly by the badness of the weather and partly by the weakness of the young lady. I learnt, besides, that both the physician and the old gentleman had come into the public room, in great haste, and had inquired with some anxiety and astonishment about me. The host was certain that the party knew me well. He urged me to go up, as I should certainly meet old friends and acquaintances, since they appeared to expect me. I shook my head, convinced that there was some mistake. In the whole world I had no noble acquaintances, and least of all could I claim any of the German nobility. What confirmed me still more in this belief, was that an old servant of the Count came in, seated himself at the table near me, and in broken Italian called for wine. When I addressed him in German, he was delighted to hear his native tongue. He now related to me all that he knew of his master. The gentleman was a Count Hormegg, who was carrying his daughter to Italy for change of air.

The more the old man drank, the more talkative he became. At first, he had seated himself gloomily by me; at the second flask, he breathed more freely. As I said to him, that I thought of going back to Germany, he sighed deeply, looked towards Heaven, and his eyes filled with tears. "Could I only go with you! could I only go!" said he sorrowfully and softly to me. "I can bear it no longer. I believe a curse rests on this family. Strange things occur amongst them. I dare confide them to no one, and if I dare, sir, who would believe me?"

THE MELANCHOLY COMPANY OF TRAVELLERS.

By the third flask of wine, Sebald, for so he was called, became openhearted. "Countryman," said he, and he looked timidly round the room; but no one was present but ourselves; we were sitting alone by the dim burning candles. "Countryman, they cannot blind me. Here is a curse under the veil and abundance of riches—here rules the bad spirit himself; God be merciful unto us! The Count is immensely rich, but he creeps along like a poor sinner; he is seldom heard to speak, and is never gay. The old lady, companion, governess, or something of that kind, to the Countess Hortensia, appears to be in constant fear, from a bad conscience. The Countess herself,—truly a child of

paradise,—can scarcely be more beautiful; but I believe her father has united her with the devil. Jesu Maria! what was that?"

The frightened Sebald started from his seat and became deadly pale. It was nothing but a window shutter, dashed violently too by the wind and rain. After I had tranquillized my companion, he continued:

"It is no wonder; one must live in constant fear of death. One of us must and will shortly die! That I have heard from the young woman Catharine. God be merciful to me! May I not, in the mean time, with my comrade Thomas, refresh myself with wine? Sir, there is no want of what we desire, to eat, to drink, nor of money; we fail only in a happy mind. I should long since have run off—"

Sebald's fable appeared to me to be full of his wine. "From what do you infer that one of you must die?"

"There is nothing to infer," replied Sebald: "it is only too certain. The Countess Hortensia has said it, but no one dares speak of it. Look you—at Judenberg, fourteen days ago, we had the same story. The young Countess announced the death of one of us. Being all in good health, we did not believe it. But as we were proceeding on the highway, Mr. Muller, the secretary of the Count, a man generally beloved, suddenly fell, together with his horse and baggage, from the height of the road, over the rocks, into the abyss beneath, ten times deeper than the church steeple. Jesu Maria! what a spectacle! Hearing and sight left me. Man and horse lay shattered to pieces. When you pass through the village where he lies buried, the people will relate it to you. I dare not think of it. The only question now is, which of us is to be the next victim? But if it comes to pass, by my poor soul, I will demand my discharge from the Count. There is something wrong here; I love my old neck, and do not wish to break it in the service of the God-forsaken."

I smiled at his superstitious distress, but he swore stoutly, and whispered: "The Countess Hortensia is possessed by a legion of devils. For a year she has frequently run over the roof of the castle Hormegger, as we scarcely could do on level ground. She prophesies; she often, unexpectedly, falls into a trance and sees the heavens open; she looks into the interior of the human body. Dr. Walter, who is certainly an honest man, affirms that she can not only see through people as if they were glass, but also through doors and walls. It is horrible. In her rational hours, she is very sensible. But, oh God, it is in her irrational hours that she governs us, when those evil spirits speak out of her. Could we not have remained upon the high road? But no, immediately upon leaving Villach, we must go on sumpter horses and mules over the worst roads and most frightful precipices. And wherefore? Because she so willed it. Had we remained on the great road, Mr. Muller (God be merciful to him!) would still to-day have drunk his glass of wine."

ATTEMPT FOR AN ENGAGEMENT.

The return of the people of the house, with my spare evening's meal, interrupted Sebald's gossip. He promised when we were again alone to disclose many more secrets. He left me. In his place, a small, thin, gloomy looking man seated himself, whom Sebald, on

going away, called Doctor. I knew, therefore, that I had before me another member of the melancholy travellers. The Doctor looked at me at my supper, for a while silently. He appeared to be watching me. He then began to ask me in French, from whence I came, and where I thought of going? When he heard I was a German, he became more friendly, and conversed with me in our native tongue. In answer to my questions, I learned that Count Hormegg was travelling with his sick daughter to Venice.

"Could you not," said the Doctor, "give us your company, since you have no particular object in going to Germany? You are more familiar with the Italian language than we are,—know the country, the manners and the healthy parts. You could be of great service to us. The Count could take you immediately in the place of his late secretary. You will be free of expense, have a comfortable life, six hundred louis'd'ors salary, and to that added the known liberality of the Count."

I shook my head and remarked, that neither did I know the Count, nor the Count me, sufficiently to foresee whether we should be agreeable to each other. The Doctor now made the Count's eulogium. I replied in return, that it would be very difficult to say so much to my advantage to the Count.

"Oh, if that is all," cried he hastily, "you are already recommended; you may therefore rely on it."

"Recommended! By whom?"

The Doctor appeared to be seeking for words, in order to rectify his hastiness.

"Eh, why, through necessity—I can promise you, that the Count will pay you an hundred louis'd'ors down, if you—"

"No," replied I, "I have never in my life labored for superfluities; only for what is necessary. From childhood I have been accustomed to an independent life. I am far from being rich, yet I will never sell my freedom."

The Doctor appeared to be irritated. In truth, I was serious in what I said. Add to this, that I particularly desired not to return to Italy, in order that my passion for the arts should not resume its power. I do not deny, also, that the sudden importunity of the Doctor and the general behavior of these travellers, were disagreeable to me, though I certainly did not believe that the sick Countess was possessed by a legion of devils. As all his persuasions had no other effect than to make me more unwilling, the Doctor left me. I then reflected on all the different little circumstances—weighed my poverty against the comfortable existence in the train of the rich Count, and played with the little money in my pocket, which was all my riches. The result of these reflections were,—*"Away from Italy; God's world stands open before you. Be firm! only peace in the breast—a village school and independence! I must first endeavor to recover my individuality. Yes, I have lost all—the whole plan of my life—gold cannot replace it."*

NEW OFFERS.

My surprise was not a little increased, when, scarcely ten minutes after the Doctor's departure, a servant of the Count appeared, and begged me, in his name, to visit him in his room. "What in the world do these

people want with me?" thought I. But I promised to go. The adventure began, if not to amuse, at least to excite my curiosity.

I found the Count alone in his room; he was walking with great strides up and down—a tall, strong, respectable looking man, with a dignified appearance, and pleasing, though melancholy features. He came immediately to meet me, and apologized for having sent for me—led me to a seat, mentioned what he had heard of me through the Doctor, and repeated his offers, which I as modestly, but firmly declined. He went thoughtfully, with his hands thrown behind his back, to the window, returned hastily, seated himself near me, and taking my hand in his, said, "Friend, I appeal to your heart. My eye must deceive me much if you are not an honest man—consequently sincere. Remain with me, I entreat you—remain only two years. Count upon my deepest gratitude. You shall have, during that time, whatever you need, and at the expiration of it, I will pay you a thousand louis'd'ors; you will not repent having lost a couple of years in my service." He said this so kindly and entreatingly, that I was much moved, more so by the tone and manner, than by the promise of so large a sum, which secured me, with my trifling wants, a free and independent fortune. I would have accepted the offer, had I not been ashamed to show, that at last I had yielded to vile gold. On the other side, his brilliant offers seemed to me suspicious.

"For such a sum, my lord, you can command much more distinguished talents than mine. You do not know me."

I then spoke to him openly of my past destiny and occupation, and thought by that means, without vexing him, to put aside his offers, as well as his desire to have me.

"We must not separate," said he, as he pressed my hand entreatingly. "We must not, since it is you alone that I have sought. It may astonish you; but on your account only, have I undertaken this journey with my daughter; on your account have I chosen the worst road from Villach here, that I might not miss you; on your account have I stopped at this inn."

I looked at the Count with astonishment, and thought he wished to jest with me.

"How could you seek me, since you knew me not? Since no one knew the road I wandered? I, myself, three days ago, knew not that I should take this road to Germany."

"Is not this a fact?" continued he: "This afternoon you rested in a wood; you sat, full of sorrow, in a wilderness; you leaned on a rock, under a large tree; you gazed at the mountain torrent; you ran on impetuously in the rain. Is it not so? Confess candidly—is it not so?"

At these words, my senses almost forsook me. He saw my consternation, and said, "Well, it is so! you are indeed the man I seek."

"But," cried I, "I do not deny that some superstitious horrors seized me," and I drew my hand out of his. "But who watched me? Who told you of it?"

"My daughter—my sick daughter. I can easily believe that to you it appears wonderful. But the unfortunate one says and sees many strange things in her sickness. Four weeks since, she declared, that only through your means could she be restored to perfect

health. As you now appear before me, so did my daughter describe you four weeks ago. Perhaps about fourteen days since she declared, that you came, sent by God, to meet us, and that we must break up and seek you. We set out. She directed the way we should take—at least the part of the world we should go to. With the compass in the carriage, and the map in hand, we travelled, uncertain where, like a ship at sea. At Villach, she pointed out the nearest way to you, described even the particulars, and that we must leave the high road. From Hortensia's mouth, I learnt this morning how near you were, and at the same time the little circumstances which I have mentioned to you. Immediately after your arrival, Dr. Walter declared to me, that from the description of the host, you resembled exactly the person whom Hortensia, four weeks ago, and since that time, almost daily had described. I am now convinced of it, and since so much has already been fulfilled, I do not for a moment doubt that you and no other can save my daughter, and give me back my lost happiness."

He was silent, and waited my answer. I sat long, uncertain and silent. I had never in my life met with so singular an adventure.

"What you tell me, my lord, is somewhat incomprehensible, and therefore, with your permission, somewhat incredible. I am, or rather I was, nothing but an artist; and I know nothing of medicine."

"There is much in life," said he, "that is incomprehensible to us, but all that is incomprehensible is not therefore incredible, particularly when we cannot put aside the reality, and the phenomenon stands before us, whose cause lies hidden from us. You are no physician; that may be. But the same power which discovered to my daughter your existence in the world, has, without doubt, destined you to be her saviour. In my youth I was a free thinker, who scarcely believed in God, and can now, in my mature age, even go as far as any old woman, and consider as possible the existence of devils, witches, spectres and familiar spirits. Hence is explained both my importunity and my offers. The first is pardonable in a father who lives in constant anxiety about his only child, and my offers are not too great for the saving of so precious a life. I see how unexpected, extraordinary and romantic it must all appear to you; but remain with us, and you will be a witness of many unexpected things. Do you wish for an occupation exempt from the care and trouble of a journey? It depends upon yourself to choose. I will impose no labor on you. Remain only as my confidential companion, my comforter. I have now before me a heavy hour, perhaps it is very near: one of our company will suddenly, and if I rightly understand, in an unusual manner, die. It may be myself. My daughter has foretold it, and it will happen. I tremble to meet the fatal moment, from which my whole fortune cannot redeem me. I am a very unhappy man."

He said still more, and was even moved to tears. I found myself in a singular dilemma. All that I heard, excited sometimes my astonishment, sometimes my just doubts. Sometimes I had a suspicion of the right understanding of the Count, and sometimes supposed the error was my own. At last I made the courageous resolution to attempt the adventure, come what would of it. It appeared to me unjust to consider the Count

as an impostor; and in God's wide world I had no employment or living.

"I renounce all your generous offers, my lord," said I; "give me only so much as I have need of. I will accompany you. It is sufficient for me, if I may hope to contribute to your happiness and your daughter's recovery, though, as yet, I in no way comprehend the *how*. A human life is of much value; I shall be proud if I have it in my power, one day, to believe that I have saved the life of a human being. But I release you from all that you promised me; I do nothing for money. On the contrary, I will, moreover, maintain my independence. I will remain in your retinue as long as I can be of service to you, or can find my life comfortable in it. If you agree to these terms, then I am in your service. You can introduce me to your invalid."

The Count's eyes shone with joy. He enclosed me silently in his arms, and pressed me to his heart, whilst he merely sighed, "Thank God." After a time he said, "To-morrow you shall see my daughter. She has already gone to rest. I must prepare her for your presence."

"Prepare her for my presence?" exclaimed I, surprised. "Did you not tell me a few minutes since that she had announced my arrival and described my person?"

"Your pardon, dear Faust; I forgot to inform you of one circumstance. My daughter is like a double person. When she is in her natural state, she is in no way conscious of what she hears, sees, knows and says in her state of trance, if I may so call it. She does not recollect the smallest trifle that occurred during that period, and would herself doubt that she had spoken and acted as we related to her, if she had not every reason to place confidence in my words. But in her trance she remembers all that has passed in a similar state, as well as what she has experienced in her usual and natural life. It is only during her trance that she has seen and described you, but out of that knows nothing of you, except what we, by repeating her own expressions, have been able to inform her; you are, therefore, entirely unknown to her. Let us only wait for one of her extraordinary moments, and I have no doubt she will immediately recollect you."

In a conversation of some hours, I learnt from the Count, that his daughter had had for years, even from a child, an inclination to sleep-walking. In a state of somnambulism, she had, without being able to recollect it afterwards, with closed eyes, left her bed, dressed herself, written letters to those present, or played the most difficult pieces on the piano, and executed a hundred other trifles, with a skill, which she not only did not possess when awake, but which she could not afterwards acquire. The Count believed that that which he now sometimes called a trance, and sometimes transfiguration, was nothing more than a higher grade of somnambulism, but which enfeebled his daughter almost to death.

A FRIGHTFUL EVENT.

It was late when I left the Count's apartment. There was no one but old Sebald, in the public room, who was still enjoying his wine.

"Sir," said he, "speak a little German with me,

that I may not entirely forget my noble language, which would in truth be a shame. You have spoken with the Count?"

"I have spoken with him. I shall now travel with him to Italy, and remain in your company."

"Excellent! It does me good, to have one more German face near me. The Italians, as I have heard, are bad birds. Now, with the exception of our possessed Countess, you will be pleased with all our company. As you now belong to us, I can speak more openly of our affairs. The Count would be a good man, if he could only smile. I believe he is not pleased when one laughs. All that surrounds him has the aspect of the last day. The old lady is also right good, but is easily vexed, if one does not immediately fly here and there, according to her motions. I believe she goes to Italy merely on account of the pure burnt water, as she sometimes loves a glass of liquor. The Countess, also, would not be bad, if she had not, besides her pride, an army of devils in her body. Whoever wishes to be in her good graces, must creep on all fours. Bow yourself diligently before her. Dr. Walter would be the best of us all, if he only knew how to exorcise the devils. My comrade, Thomas, is therefore ——" At this moment, the host, full of horror, rushed into the room, and cried to his people, "Help! help! there is fire."

"Where is the fire?" asked I, alarmed.

"Upstairs, in a chamber: I saw the bright flames outside the window."

He ran out; the house was filled with cries and confusion. I was following, when, Sebald, white as a corpse, held me by both arms: "Jesu Maria, what has happened?" I told him in German to get water, as the house was on fire.

"Another piece of devilry!" sighed he, and hurried into the kitchen.

The people ran up and down stairs. It was said that the room was fastened, and they sought instruments to break open the door. Sebald was up stairs even as soon as myself, with a bucket of water. As he perceived the door, towards which all pressed, he cried, "Jesu Maria! that is the chamber of the old lady."

"Burst it open," cried the Count Hornegg, in extreme agony. "Burst it open—Mrs. Montlue sleeps there, and she will be suffocated."

A man soon came with an axe, but it was not without difficulty that he could break the strong well mortised oaken door. All pressed in, but shuddering, bounded back.

The room was dark. Only in the back ground, near the window, a yellow flame played on the floor, which soon went out. An indescribably sharp stench, blew towards us as we opened the door. Sebald made the sign of the cross, and sprang headlong down stairs; some of the maids followed his example. The Count called for a light. It was brought. I went through the room in order to open the window. The Count directed us to the bed. It was empty and undisturbed, and no where any smoke. Near the window the stench was so great that it made me sick.

The Count called the name of Mrs. Montlue. As he came nearer with the burning candle, I saw at my feet—imagine my horror!—a large black spot of ashes, and near by a burnt head, we could not recognize; one

arm with the hand; in another place, three fingers with gold rings, and the foot of a lady, partly charred.

"Great God," cried the Count, turning pale—"what is that?" He observed, shuddering, the remains of a human figure. He saw the fingers with the rings, and sprang with a loud shriek to meet the Doctor, who was entering. "Mrs. Montlue is burnt, yet no fire, no smoke! Incomprehensible!"

He tottered back, in order once more to convince himself of the reality of his discovery. He then gave up the candle, folded his hands, looked fixedly before him, and turning deadly pale, left the room.

I stood petrified, by so horrible and unheard of a spectacle. All that had happened during this day, the wonders that had been told, had so stupified me, that I stood, without feeling, gazing at the black dust, the coals and the disgusting remains of a human form at my feet. The room was soon filled with the men and women belonging to the inn. I heard their whispers and their stealthy steps. It seemed to me, that I was in the midst of spectres. The nursery tales of my childhood were ripened to reality.

When I came to myself, I withdrew from the chamber, intending to go down into the public room. At that moment, a door at the side opened; a young lady, dressed in a light night dress, came out, supported by two maids, each of whom carried a lighted candle. I remained standing, as if blinded by this new apparition. So much nobleness in figure, movement and features I had never seen in reality, nor even found in the creations of the painter or statuary. The horrors of the preceding moments were almost forgotten. I was only eyes and admiration. The young beauty tottered towards the chamber, where the frightful event had occurred. When she perceived the men and women, she stood still, and cried out in the German language, and with a commanding voice, "Drive away this crowd from me." Immediately, one of the Count's servants executed her commands. He did it with such uncourtly violence, that he forced them all, and me with them, from the gallery to the stairs.

"If there ever has been a fairy, this is one," thought I.

Sebald was sitting, quite pale, in the public room, near the wine. "Did I not say so?" cried he. "One of us must go. The possessed, or rather that malicious Satan, so willed it. The one must break his bones and neck—the other, a living body, be burnt. Your obedient servant, I take my leave to-morrow, lest the next turn comes to my insignificant self. Whoever is as prudent as I am, will not travel with them to hell. In Italy, even the mountains spit fire. God keep me from going too near. I should certainly be the first roast of Moloch, since I am much too pious, and, nevertheless, at all hours, not a saint."

I told him of the young lady.

"That was she," said he; "that was the Countess. God be near unto us! She has probably desired to snuff up the burnt mess. Go with me to-morrow; let us make our escape. Your bright young life raises my sincere compassion."

"Even the Countess Hortensia?"

"Who else? She is handsome, therefore the chief of the devils has himself bewitched her; but"——

At this time Sebald was called by the Count; he went, or rather staggered, sighing deeply. The acci-

dent had filled the whole house with noise. I sat on my chair, amidst all these wonders, estranged from myself. Long after midnight, the host showed me a small room where there was a bed.

ANTIPATHY.

After the fatigues of the past day, I slept soundly till near mid-day. As I awoke, the events of yesterday appeared like a feverish phantom, or the illusions of intoxication. I could neither convince myself of their truth, nor yet doubt them. I considered every thing now with greater composure of mind. I no longer hesitated to remain with the Count. I rather followed him with pleasure and curiosity, so entirely new and wonderful did my destiny appear. Then also, what had I to lose in Germany? What even in life? What could I risk in following the Count? At last, it only depended upon myself to break the thread of the romance as soon as its length became disagreeable to me. When I entered the public room, I found it filled with the overseers of the place, police officers, Capuchins and peasants of the neighboring country, who had been drawn thither either from motives of curiosity or by their official duties. Not one of them doubted but that the burning of the lady was the work of the devil. The Count, indeed, had the remains of the unfortunate woman buried by his own people. But it was thought proper that the whole house should be consecrated and blessed by the reverend Capuchin fathers, in order that it might be purified from the evil spirit. This was a considerable expense. There was a question, whether we should be arrested and given to justice; but it was disputed whether we should be delivered to the civil or ecclesiastical authority. The majority were in favor of our being taken to Undine and brought before the arch-bishops.

The Count, not being master of the Italian language, was glad when he saw me. He had in vain offered a large sum of money to defray the expenses occasioned by the extraordinary circumstances. He entreated me, to finish the business with the people in his name.

I immediately drew near the priests and police officers, and declared to them, that until now, I had had as little connection with the Count as themselves, and offered two things for their consideration; either the misfortune of the burning had happened naturally, or at least without the participation of the Count, in which case they would bring much trouble on themselves by the arrest of so high a nobleman; or he was truly in league with bad spirits, in which case, he could out of revenge play some bad tricks on them, their cloister and their village. Their wisest course was to take the Count's money and let him go; they would then have no responsibility or resentment to fear, and in any case would be the gainers. My reasons were obvious. The money was paid. Our horses were given us—we mounted and rode on. The prospect cleared up.

The Countess with the women and other servants, had gone some hours before; the Count, with only one servant, having remained behind. On the way, he began to speak of the frightful event of the past evening. He said his daughter had been very much overcome by it. She had suffered, for some hours, with cramps and

convulsions, after which she had a quiet sleep. She appeared tranquil on awaking, but desired to leave the unfortunate house immediately.

Probably in order to prepare me for my future situation, he added—"I am obliged to pardon and yield much to my sick child. She is of unconquerable obstinacy. From her extraordinary irritability, the least contradiction moves her to anger, and a slight vexation is sufficient to cause many days of suffering. I have announced your arrival to her: she heard it with indifference. I asked if I might introduce you to her. Her answer was, "Do you think I have so much curiosity? It will be time enough when we are in Venice." I think, however, we shall have sufficient opportunities on the way. Do not allow the humors of my daughter to vex you, my dear Faust. She is a sick, unfortunate creature, whom we must treat with tenderness, lest we destroy her. She is my only treasure, my last joy on earth. The loss of Mrs. Montlue does not appear to be painful to her, as she had lately, I know not from what cause, taken an aversion to her. Perhaps the slight, certainly not violent, inclination of that person to strong drink, was disgusting to her. Dr. Walter affirms, also, that this habit was the cause of her spontaneous combustion. Formerly, she was a very good woman, and much attached to my daughter and myself. I lament her loss very deeply. Dr. Walter related to me other instances, which must be extremely rare, of the spontaneous combustion of the human body, by which it is in a few moments reduced to ashes. He endeavored to account for the phenomenon on very natural grounds, but I cannot comprehend it. Only this much I know, this burning-door of death is one of the most frightful."

Thus spoke the Count, and this formed the subject of our conversation to Venice. For the young Countess had now the humor, notwithstanding her bodily weakness and the objections of her father and physician, to make the journey by long day's rides, and with no other delay than the nightly rest demanded. I had not, therefore, the honor of an introduction. Nay, I must even keep at a distance, since, alas! I had not the good fortune to please her.

She was carried in a sedan chair—servants ran near her on foot. The women rode, and the Count likewise in his own carriage. The Doctor and myself rode on horseback.

As the Countess one morning came out of the inn to mount her sedan, she perceived me, and said to Dr. Walter, "Who is that man, that forever and eternally follows us?"

"Mr. Faust, my lady."

"A disagreeable fellow—send him back."

"You yourself have wished for him; it was on his account that the journey was undertaken. Consider him as the medicine which you have ordered for yourself."

"He has the disgusting qualities common to all drugs."

I was near enough to hear this not very flattering speech, and know not what countenance I put on, though I well recollect that I was almost vexed, and should immediately have left the whimsical Venus, had not the Count been so kind. I could not affirm that I was a handsome man, but I knew that generally I did not displease the women. But now only to be endured as disgusting me-

dicine, was too severe on the vanity of a young man, especially for one who, had he been a Prince or Count, would not have hesitated to have joined himself to the adorers of the charming Hortensia.

In the meanwhile I continued with them. The Countess reached Venice without any particular accident, and her medicine followed obediently after. A magnificent palace was hired, in which I had an apartment, and also servants, particularly appropriated to my service. The Count lived in great style, as it is called. He had many friends amongst the Venitian nobility.

THE TRANCE.

We had been about four days in Venice, when one afternoon I was hastily sent for by the Count. He received me with an unusually cheerful countenance.

"My daughter," said he, "has inquired for you. Indeed, no day has passed without her speaking of you: she has done so already to-day; but now is the first time that she has desired your presence. Enter her room with me, but very gently; the least noise throws her into dangerous cramps."

"But," asked I, with secret horror, "what does she wish me to do?"

"Who can answer?" replied the Count. "Wait for the future. May God direct all."

We entered a large state chamber, hung round with green silk hangings. Two female servants were leaning, silent and anxious, near the window—the Doctor sat on a sofa, watching the invalid. She stood upright, with closed eyes, in the middle of the room—one of her beautiful arms was hanging down, the other, half raised, stiff and immoveable as a statue. Only the movement of her bosom betrayed breath. The solemn silence which reigned, the goddess-like figure of Hortensia, upon whom all eyes were fixed, filled me with involuntary yet pleasing horror.

As soon as I entered this silent sanctuary, the Countess, without opening her eyes, or changing her position, said, with an indescribable sweet voice, "At last, Emanuel! why dost thou keep so far off? O come hither, and bless her, that she may be cured of her sufferings."

I probably looked rather foolish at this speech, being uncertain whether or not it regarded me. The Count and Doctor motioned me to draw nearer, and gave me a sign that I should, like a priest, make the sign of the cross towards, or else, as blessing her, lay my hands on her.

I approached, and raised my hands over her wonderfully beautiful head. But from extreme respect, had not courage to touch her. I let my hands sink slowly down again. Hortensia's countenance seemed to betray discontent. I again raised my hands, and held them stretched out towards her, uncertain what I was to do. Her countenance cleared, which induced me to remain in that position. My embarrassment, however, increased as the Countess said, "Emanuel, thou hast not yet the will to relieve her. O, only give thy will—thy will. Thou art all powerful. Thy will can do all."

"Gracious Countess," said I, "doubt all, but not my will to assist you." I said this truly, with the greatest earnestness. For had she commanded me to throw myself into the sea for her, I should with joy have done

so. To me it was as if I stood before a divinity. The soft symmetry of her form, and her countenance, which seemed to belong to the unearthly, had likewise disembodied my soul. Never had I seen grace and sublimity so united. Hortensia's face was, as I had before seen it, it is true, only transiently or from a distance, pale, suffering and gloomy; now it was quite different. An uncommon delicate color was spread over it, like the reflection from the rose. In all her features swam a light, such as a human countenance, under ordinary circumstances, could never obtain, either by nature or art. The expression of the whole was a solemn smile, and yet no smile, but rather an inward delight. This extraordinary state was justly called transfiguration by her companions, but such a transfiguration, no painter in his moments of inspiration, ever saw or imagined. Let one, therefore, figure to himself the statue-like position, the marble stillness of the features, with the eyes closed as in sleep. Never before had I felt such fearful delight.

"O, Emanuel," said she, after a time, "now is thy will sincere. Now knows she, that through thee she will be cured. Thy hair flows in golden flames; from thy fingers flow silver rays of light; thou floatest in heaven's clear azure. How eagerly her whole being imbibes this brilliancy—this health-bringing flood of light."

At this somewhat poetical form of speech, the drugs, with which I had the melancholy honor of being compared to a few days before, involuntarily recurred to me, and I continued silent, taking no notice of the gold and silver rays.

"Be not angry with her in thy thoughts, Emanuel," said Hortensia. "Be not angry that her weakness and distempered wit compared thee with bitter remedies. Be more generous than the thoughtless one, by suffering misled, and often by earthly weaknesses given up to frenzy."

At these words the Doctor threw a smiling look on me—I also towards the Doctor, but with a gesture of astonishment, not because the proud beauty humbled herself to an apology, but that she appeared to have guessed my thoughts.

"Oh! distract not thy attention, Emanuel!" said the transfigured quickly. "Thou speakest with the Doctor. On her alone turn thy thoughts, and on her safety. It distresses her when thy thoughts for one moment leave her. Continue in the firm desire to penetrate her half dissolved being with the beneficial power of thy light. Seest thou how powerful thy will is? The stiffened fibres relax and melt like the winter's frost in the sun's rays."

Whilst she spoke, her raised arm sank. Motion and life animated her figure. She asked for a seat. The Doctor brought her one which stood in the chamber, with richly embroidered green silk cushions.

"Not that kind," said she. After a while, she continued: "The arm chair, with a striped linen cover, which stands in Emanuel's chamber, before his writing table. Bring it here, and leave it forever!"

I had, truly, but the moment before left the arm chair standing before the table. But the Countess had never seen my room. As I reached the key of the room to one of the women, Hortensia said, "Is that the key? I did not understand those dark spots. Thou hast in the left pocket of thy vest, yet another key—put it away from thee." I did so. It was the key of my press.

So soon as the chair was brought, she seated herself in it, apparently with great comfort. She commanded me to stand near before her, with the ends of my fingers towards the pit of her heart.

"God! of what delight is the man capable!" said she. "Emanuel give her thy word, she entreats thee, not to forsake her till the ruins of her mind have been re-established—till her recovery is perfect. Shouldst thou forsake her, she must die wretchedly. On thee hangs her life."

I promised with delight and pride to be the protector and guardian angel of so precious a life.

"Also, regard it not," continued she, "if she, in the state of earthly waking, mistakes thee. Pardon her—she is an unfortunate, that knows not what she does. All faults are the sicknesses of the mortal part, which cripple the power of the spirit."

She was talkative, and so far from being vexed by my questions, she appeared to hear them with pleasure. I expressed my astonishment at her extraordinary situation. Never had I heard that sickness made a person, as it were, godlike,—that she should, with closed eyes, perceive what she had never seen before, and what was far distant from her, and even know the thoughts of another! I must believe that her state, which, with justice, might be compared to a transfiguration, was the perfection of health.

After a minute's silence, which was always the case before she answered, she said, "She is healthy like a dying person, whose material is breaking asunder. She is healthy as she will be, when her humanity ceases, and the earthly body of this lamp of eternal light falls to pieces."

"The transfiguration," said I, "makes all dark to me!"

"Dark, Emanuel? But thou wilt experience it. She knows much, and yet cannot express it; she sees much clearly, much dimly, and yet cannot name it. See,—man is combined from a variety of beings, which bind and arrange themselves together, as around a single point, and thereby he becomes man. So are all the little parts of a flower held together, whereby it becomes a flower. And as one part holds and binds the other, so the other restrains it in turn; no one is what it would be by itself, since only ALL can form man, and be otherwise nothing. Nature is like an endless ocean of brightness, in which single solid points are drawn together. These are creatures. Or like an extensive shining heaven, in which drops of light run together and form stars. All that is in the world, has run together from the dissolved chaos, which is everywhere and always imbibing and then dissolving itself again in ALL, since nothing can remain stationary. So is man, out of the manifold substances of the universe, grown around with floating flowers. But in order that man may be, more insignificant beings must place themselves around him, which shall support his divine part. The strange things or beings which are placed around us, form the body. The body is only the shell of a heavenly body. The heavenly body is called the soul. The soul is but the veil of the Eternal. Now is the earthly shell of the sick broken, therefore her light flows out, her soul meets in union with ALL, from which it was formerly separated by a healthy shell, and sees, hears and feels without it and within it. Then it is not the body that feels; the body

is only the inanimate casement of the soul. Without it, eyes, ears and tongue are like stones. Now, if the earthly shell of the sick cannot become healthy by thy aid, it will be entirely broken and fall to pieces. She will no longer belong to mankind, since she possesses nothing by which she can communicate with them."

She stopped. I listened as if she brought revelations from another world. I understood nothing, and yet divined what she thought. The Count and physician listened to her with equal astonishment. Both assured me afterwards, that Hortensia had never spoken so clearly, connectedly, and supernaturally, as at this time; that her communications had been broken and made often under great suffering; she frequently fell into the most frightful convulsions, or would lie for many hours in a torpid state; that she very rarely answered questions, but now the conversation appeared not at all to fatigue her.

I reminded her of her weakness, and inquired, if talking so much did not exhaust her strength? She declared, "Not in the least! She is well. She will always be well, when thou art with her. In seven minutes she will awaken. She will enjoy a quiet night. But tomorrow afternoon about three o'clock her sleep will return. Then fail not, Emanuel. Five minutes before three the cramps will begin; then, blessing her, stretch thy hands towards her, with an earnest desire of healing her. Five minutes before three, and by the clock in thy chamber, not by thy watch, which is three minutes different from the clock. Set thy watch exactly with the clock, that the sick may not suffer by their difference."

She also mentioned several trifling circumstances; ordered what they should give her to drink on her awaking; what for her supper; at what time she should go to bed, and gave other similar directions. She was then silent. The former death-like stillness reigned. Her face gradually became paler, as it usually was; the animation of her countenance disappeared. She now first appeared to wish to sleep, or actually to be asleep. She no longer held herself upright, but sank down carelessly, and nodded, as is usual with a person sleeping. She then began to extend her arms and stretch herself, yawned, rubbed her eyes, opened them, and was almost in the same minute awake and cheerful, as she had announced.

When she saw me, she appeared surprised—she looked around on the others. The women hastened to her, also the Count and Doctor.

"What do you want?" she asked me, in a hard tone.

"Gracious lady, I wait your commands."

"Who are you?"

"Faust, at your service."

"I am obliged to you for your good will, but desire I may be left alone!" said she, somewhat vexed; then bowing proudly towards me, she arose and turned her back on me.

I left the room with a singular mixture of feelings. How immeasurably different was the waking from the sleeping person! My gold and silver rays disappeared; also her confidential *thou*, which penetrated deep into my innermost feelings—even the name of Emanuel, with which she had enriched me, was no longer of value.

Musingly, I entered my chamber, like one who had

been reading fairy tales, and became so absorbed in them that he holds the reality for enchantment. The arm chair before my writing table was wanting. I placed another, and wrote down the wonderful tale, as I had experienced it, and as much of Hortensia's conversation as I recollected, since I feared that I might not hereafter believe it myself, if I had it not written before me. I had promised to pardon all the harshness she might show towards me whilst awake,—willingly did I forgive her. But she was so beautiful! I could not have borne it with indifference.

A SECOND TRANSFIGURATION.

The next day the Count visited me in my room, to inform me of the quiet night Hortensia had enjoyed, and also that she was stronger and more animated than she had been for a long time. "At breakfast I told her," said he, "all that passed yesterday. She shook her head and would not believe me, or otherwise she said she must have paroxysms of delirium, and began to weep. I quieted her. I told her, that, without doubt, her perfect restoration to health was near, since in you, dear Faust, there certainly dwells some divine power, of which hitherto you have probably been unconscious. I begged her to receive you into her society during her waking hours, since I promised myself much from your presence; but could not move her to consent. She asserted that your sight was insupportable to her, and that only by degrees could she perhaps accustom herself to your appearance. What can we do? She cannot be forced to any thing, without placing her life in danger."

Thus he spoke, and sought in every way, to excuse Hortensia to me. He showed me, as if in contrast to Hortensia's offensive antipathy, self-will and pride, the most moving confidence; spoke of his family circumstances, of his possessions, law-suits and other disagreeable circumstances; desired my counsel, and promised to lay all his papers before me, in order that my opinion of his affairs might be more precise. He did so, that same day. Initiated in all, even his most secret concerns, I became every day more intimate with him; his friendship appeared to increase in proportion as the antipathy which his daughter had taken to me augmented. At length I conducted all his correspondence—had also the management of his income, and the government of his household—so that, in short, I became every thing to him. Convinced of my honesty and good will, he depended on me with unlimited confidence, and only seemed discontented when he perceived, that with the exception of mere necessities, I desired nothing for myself, and constantly refused all his rich presents. Dr. Walter and all the domestics, as well male as female, soon remarked what extraordinary influence I had, as suddenly as unexpectedly, attained. They surrounded me with attentions and flattery. This unmerited and general good will made me very happy, though I would willingly have exchanged it all for mere friendship from the inimical Countess. She, however, remained unpropitiated. Her antipathy appeared almost to degenerate into hate. She cautioned her father against me, as against a cunning adventurer and impostor. With her women she called me only the vagabond, who had nestled himself into her father's confidence. The old Count

at last scarce dared to mention me in her presence. But I will not anticipate the history and course of events.

My watch was regulated. It was really three minutes different from the clock. Five minutes before three in the afternoon, neither sooner nor later, I entered, unannounced, Hortensia's room. The witnesses of the day before, were present. She sat on the sofa in a thoughtful position, but with her own peculiar grace, pale and suffering. As she perceived me, she threw a proud, contemptuous look on me, rose hastily, and cried, "Who gave you permission—without being announced?"

A violent shriek and fearful convulsions stopped her voice. She sank into the arms of her women. The chair which she had desired the day before, was brought to her. Scarcely was she seated in it, than she began, in the most frightful manner, and with incredible velocity, to strike herself, both on the body and head, with her clenched fist. I could scarcely support the horrible spectacle. Tremblingly, I took the position which she had prescribed the day before, and directed the finger ends of both my hands towards her. But she, with eyes convulsively distorted and fixed, seized them,—and thrust the fingers with violence many times against her person. She soon became more tranquil, closed her eyes, and after she had given some deep sighs, appeared to sleep. Her countenance betrayed pain. She fretted softly for some time. But soon the pain appeared to subside. She now sighed twice, but gently. Her countenance gradually became clearer, and soon again resumed the expression of internal blessedness, whilst the paleness of her face was overspread by a soft color.

After some minutes, she said, "Thou, true friend! without thee what would become of me?" She spoke these words with a solemn tenderness, with which angels alone might greet each other. Her tones vibrated on all my nerves.

"Are you well, gracious lady?" said I, almost in a whisper—since I yet feared she might show me the door.

"Very, oh! very, Emanuel!" answered she, "as well as yesterday, and even more so. It seems thy will is more decided, and thy power to assist her increased. She breathes—she swims in the shining circle which surrounds thee; her being, penetrated by thine, is in thee dissolved. Could she be ever so!"

To us, prosaical listeners, this manner of speaking was very unintelligible, though to me in no way unpleasing. I regretted only that Hortensia thought not of me, but of an Emanuel, and probably deceived herself. Yet I received some comfort when I afterwards learnt from the Count, that to his knowledge none of his relations or acquaintances bore the name of Emanuel.

Her father asked her some questions, but she did not hear them—as she began, in the midst of one of them, to speak to me. He approached nearer to her. When he stood by me, she became more attentive.

"How, dear father, art thou here?" said she. She now answered his questions. I asked her why she had not observed him sooner.

She replied, "He stood in the dark—only near thee is it light. Thou also shinest, father, but weaker than Emanuel, and only by reflection from him."

I then said to her that there were yet more persons in the room; she made a long pause, then named them all, even the places where they were. Her eyes were con-

stantly closed, yet she could denote what passed behind her. Yes, she even remarked the number of persons who were passing in a gondola in the canal before the house, and it was correct.

"But how is it possible that you can know this, since you do not see them?" said I.

"Did she not declare to you yesterday that she was sick? That it is not the body which discerns the outer world, but the soul? Flesh, blood and the frame of bones, is only the shell which surrounds the noble kernel. The shell is now torn, and its vital power would repair the defects, but cannot without assistance. Therefore the spirit calls for thee. The soul, flowing out and searching in the universe, finds thee and fulfils its duty with thy power. When her earthly waking comes, she sees, she hears and feels more quickly and acutely, but only that which is external and near—that which approaches her. Now, however, she meets things whether she will or not; she touches not, but penetrates; she guesses not, but knows. In dreams thou goest to the objects, not they to thee, and thou knowest them, and wherefore they so act. Even now, it is to her like a dream; nevertheless, she knows well that she is awake, but her body wakes not; the outward senses do not assist her."

She next spoke much of her sickness, of her sleep-walking, of a long fainting fit, in which she once laid—what had passed within her, and what she had thought whilst those around wept her as dead. The Count heard her with astonishment, since, besides many circumstances of which he was ignorant, she touched upon others which had occurred during her ten hours' stupor, of which no one but himself could have known; for example, how he had in despair, left her, gone into his chamber, fallen on his knees, and prayed in hopeless agony. He had never mentioned this, and no one could have seen him, since not only at the time, had he fastened his door, but it was also night, and his chamber without light. Now that Hortensia spoke of it, he did not deny it. It was incomprehensible how she could have known it in her fainting fit, and yet more so, that she should recollect it at this time, as the incident had occurred in her early childhood. She could scarcely have been more than eight years old at the time.

It was also remarkable that she always spoke of herself in the third person, as of a stranger, when she related her own history, or spoke of herself, as she stood in the civil and social relations. Once she said, explicitly, "I am no Countess, but she is Countess!" Another time, "I am not the daughter of the Count Hormegg, but she is."

As her whole exterior appeared to float in a transfiguration, more quiet, more exalted, more beautiful than usual, so was her voice a language in conformity to it. It was, though as soft and clear, yet more solemn than in common life; every expression was chosen, and sometimes even poetical. There was frequently a singular obscurity in her words,—often an apparent total want of connection, occasioned partly by her exalted imagination, and partly because she spoke of things, or observed them in a point of view, foreign to us. She, however, spoke willingly and with pleasure, particularly when questioned by me. Sometimes she sank in a long and quiet reflection, during which one might read in her features the expression, sometimes of a discontented,

sometimes a contented research, astonishment, admiration or delight. She interrupted this deep silence, from time to time, with single exclamations, when she lisped "Holy God!"

Once she began of herself: "Now is the world changed. It is one great ONE, and that eternal one is a spiritual one. There is no difference between body and spirit, since all is spirit, and all can become body, when they associate together, so that they may feel as a single one. The all, (or the component parts,) is as if formed from the purest ether; the all, active and moving; transforming itself; since all will unite; and the one counter-balances the other. It is an eternal fermentation of life, an eternal vibration between too much and too little. Seest thou how clouds move in the clearest heaven? They float and swell, till the mass is filled; then, attracted by the earth, they penetrate it in the form of fire or rain. Seest thou the flower? A spark of life has fallen in the midst of a throng of other powers; it unites itself with all that may be of service to it, forms them, and the germ becomes a plant, until the inferior powers overgrow and dislodge the original power. And as the spark is expelled, they fall asunder, since nothing any longer binds them together. So is the formation and decay of man."

She said yet much more, wholly unintelligible to me. Her transfiguration ended like the first. She again announced the period of her earthly waking, likewise the occurrence of a similar state the next day. She dismissed me, with the same dark looks as on the first day, as soon as she opened her eyes.

— SYMPATHY AND ANTIPATHY.

Thus it continued, always in the same way, for some months. I may not and cannot write down all her memorable annunciations. Her extraordinary indisposition experienced only insignificant changes, from which I could neither affirm that they denoted improvement or the contrary. For, if she suffered less from cramps and convulsions—and whilst awake there was not the slightest trace of uncomfortable feeling, except extreme irritability—her unnatural sleep and transfiguration returned more frequently, so that I was often called two or three times in the day.

I became thus completely the slave of the house. I dared not absent myself even for a few hours. Any neglect might cause serious danger. How willingly did I bear the yoke of slavery! I never faltered. My soul trembled with joy when the moment allotted to the beautiful miracle came. Each day adorned her with higher charms. Had I but for one hour seen and heard her, I had sufficient remembrances to banquet on for a long time in my solitude. Oh! the intoxication of first love!

Yes, I deny it not—it was love; but I may truly say not earthly but celestial love. My whole being was in a new manner bound to this Delphic priestess, by an awe in which even the hope died of ever being worthy of her most insignificant looks. Could the Countess have endured me without disgust, even as the most unimportant of her attendants, I should have thought that heaven could offer no higher happiness. But, as in her transfigured state, her kindness towards me seemed to increase, even so did her aversion, as soon as, when waking, she saw me. This dislike grew at last into the bit-

terest abhorrence. She declared this on every occasion, and always in the most irritating manner. She daily entreated her father, and always more harshly, to send me from the house; she conjured him with tears; she affirmed that I could contribute nothing to her recovery; and were it so, all the good I might effect during her unconscious state, was again destroyed by the vexation my presence caused her. She despised me as a common vagabond, as a man of low origin, who should not be allowed to breathe the same air with her—to say nothing of so intimate a connection with her, or the enjoyment of such great confidence from Count Horemegg.

It is well known, that women, particularly the handsome, indulged, and self-willed, have humors, and consider it not unbecoming if they sometimes or always are a little inconsistent with themselves. But never in any mortal could more contradiction be found, than in the beautiful Hortensia. What she, waking, thought, said or did, she contradicted in the moments of her trance. She entreated the Count not to regard what she might advance against me. She asserted that an increase of her illness would be the infallible consequence of my leaving the house, and would end in her death. She entreated me not to regard her humors, but generously to pardon her foolish behavior, and to live under the conviction that she would certainly improve in her conduct towards me as her disease abated.

I was, in fact, as much astonished as the others at Hortensia's extraordinary inclination to me during her transfigured state. She seemed, as it were, only through me, and in me, to live. She guessed, indeed she knew my thoughts—especially when they had any reference to her. It was unnecessary to express my little instructions; she executed them. However incredible it may be, it is not the less true, that she, with her hands, followed involuntarily all the movements of mine in every direction. She declared that it was scarcely any longer necessary to stretch out my hands towards her, as at the commencement; my presence, my breath, my mere will, sufficed to her well being. She refused, with scorn, to taste any wine or water, that I had not, as she said, consecrated by laying my hands on, and made healthful by the light streaming from the ends of my fingers. She went so far as to declare my slightest wishes to be irresistible commands.

"She has no longer any free will," said she one day; "so soon as she knows thy will, Emanuel, she is constrained so to will. Thy thoughts govern her with a supernatural power. And precisely in this obedience she feels her good, her blessedness. She cannot act contrary. So soon as she ascertains thy thoughts, they become her thoughts and laws."

"But how is this perception of my thoughts possible, dearest Countess?" said I. "I cannot deny, that you often discern the most secret depths of my soul. What a singular sickness—which seems to make you omniscient! who would not wish for himself, this state of perfection, though sickness is usually our greatest imperfection?"

"It is so, also with her," said she. "Deceive not thyself, Emanuel, she is very imperfect since she has lost the greater part of her individuality; she has lost it in thee. She is nothing now except through thee. She has her life only in thee. Shouldst thou die to-day, thy last breath

would also be her last. Thy serenity is her serenity—thy sorrow her sorrow."

"Can you not explain to me the miracle, that causes in me the greatest astonishment, and, notwithstanding all my reflections, remains inexplicable?"

She was long silent. After about ten minutes she said: "No, she cannot explain it. Come not persons before thee in dreams, whose thoughts thou seemest to think at the same moment with themselves? So is it with her; and yet to the sick one it exists clearly; she is conscious that she is awake. Truly," continued she, "her spiritual part is always the same; but that which united the spirit to the body is no longer the same. Her shell is wounded in that part with which the soul is first and most intimately connected: her life flows out and becomes weaker, and does not allow itself to be bound. Hadst thou not been found, Emanuel, the sick would already have been released. As an uprooted plant, whose powers evaporating, receives no sustenance, if its roots are again laid in fresh soil, will imbibe new life from the earth, put forth branches and become green—thus is it with the sick. Soul and life in the *ALL* flowing away, finds nourishment in thy life's fulness; forces new roots in thy being, and is restored through thee. She is an extinguished light, in a broken vessel; but the dried wick of life nourishes itself again in the oil of thy lamp. Thus the sick, now spiritually rooted in thee, exists from the same powers as thou; therefore has she pleasure and pain, feeling, will, and even thought, as thou hast. Thou art her life, Emanuel."

Neither the women nor the Doctor could refrain from smiles, at this tender declaration of the petulant Countess. On the same day, the Count said to me:

"Will you not for a jest make the strongest essay of your power over Hortensia?"

"And how?" replied I.

"Desire, as a proof of her obedience, that Hortensia shall have you called, when she is awake, and voluntarily give you, as a present, the most beautiful of the roses which are blooming in her vases."

"It is too much; it would be indiscreet. You know, Count, what an unconquerable aversion she has to the poor Faust, as much even as she appears to have regard for Emanuel."

"Even for that reason, I entreat you to make the trial, were it only to discover whether your will is powerful enough to have effect out of the state of transfiguration and in the waking usual life? No one shall tell her what you have wished. Therefore it shall be arranged, that no person except you and myself shall be present when you express the wish."

I promised to obey. Though, I confess, rather unwillingly.

THE ROSE.

When I went to her the following morning, as she lay in the slumber which usually preceded her transfiguration—and I never showed myself earlier—I found the Count there alone. He reminded me by a look, and with laughing eyes, of the agreement of the day before.

Hortensia passed into her transfigured waking state

and immediately commenced a friendly conversation. She assured us that her sickness had almost reached the turning point, when it would gradually diminish; this would be known by her having less clear perceptions in her sleep. I became more embarrassed the more the Count motioned to me to bring forward my experiment.

In order to divert or to encourage myself, I went silently through the room to the window, where Hortensia's flowers bloomed, and with my fingers, played with the branches of a rose bush. Inadvertently I stuck a thorn rather deep in the end of my middle finger.

Hortensia gave a loud cry. I hurried to her; the Count likewise. She complained of a violent prick in the point of the middle finger of her right hand. The appearance of her finger belonged to the witchcrafts, to which, since my intercourse with her, I had become accustomed. In fact, I thought I could remark a scarcely visible blue spot; the next day, however, a small sore developed itself, and likewise on my finger—only mine was sooner healed.

"It is thy fault, Emanuel," said she, after the lapse of a few minutes; "thou hast wounded thyself with the rose bush. Take care of thyself—what befalls thee, happens also to her."

She was silent. I also. My thoughts were how I should bring forward my proposition. The wounding appeared to offer the fittest occasion. The Count motioned me to take courage.

"Wherefore dost thou not speak out?" said Hortensia; "ask that she should have you called at twelve o'clock to-day, before she goes to eat, and present you with a new blown rose."

With amazement, I heard my wish from her lips. "I feared to offend you by my boldness!" said I.

"O, Emanuel, she well knows that her father himself suggested the wish!" replied she, smiling.

"It is likewise, my ardent wish!" stammered I. "But will you at twelve, when awake, remember it?"

"Can she do otherwise?" she replied, with a good humored smile.

As the conversation on that subject ended, the Count went and brought in the women and the Doctor, who were waiting without. After about half an hour, I, as usual, so soon as the transfigured was lost into a real sleep, absented myself. It might have been about ten o'clock.

Upon waking, Hortensia showed the Doctor her painful finger. She believed that she had wounded herself by the point of a needle, and was astonished not to find some outward injury.

About eleven she became restless, walked up and down her room, sought out all sorts of things, began to speak of me to the women, or rather, after her usual habit, to pour on me the fulness of her anger, and to attack her father with reproaches, that he had not yet dismissed me.

"This obtrusive man is not worth my spending so many tears and words about. I know not what forces me to think of him, and to embitter every hour with the hated thought. It is already too much that I know him to be under the same roof, and that I know how much you esteem him, dear father. I could swear the wicked man has bewitched me. Therefore,

take care, dear father, I certainly do not deceive myself. You will have cause, one day, bitterly to repent your good nature. He will deceive you and all of us."

"I entreat you, my child," said the Count, "do not be forever vexing and fatiguing yourself with speaking of him. You do not know him; you have only seen him twice, and but transiently. How can you then pronounce a condemnatory judgment upon him? Wait till I surprise him in some false act. In the meanwhile do you be tranquil. It is sufficient that he dares not appear in your presence."

Hortensia was silent. She spoke with the women on other subjects. Her disquiet increased. They asked her if she was not well. She knew not what to answer. She began to weep. They endeavored in vain to discover the cause of her grief or melancholy. She concealed her face in the cushions of the sofa, and begged her father as well as her women to leave her alone.

A quarter before twelve they heard her ring. She directed the woman who answered her summons, to say to me, that I should come there as soon as the clock struck twelve.

Notwithstanding I anxiously expected this invitation, it caused me great surprise. In part from the extraordinary fact itself and in part from fright, I was as much perplexed as embarrassed. I went many times before my glass, in order to see if I really had a face made to awaken horror. But—it struck twelve. With a beating heart I went and heard myself announced to Hortensia. I was admitted.

She sat negligently on the sofa; her beautiful head, shaded with her raven locks, rested on her soft white arm. She reluctantly arose as I entered. With a weak, uncertain voice, and a look which implored her mercy, I declared myself there to hear her commands.

Hortensia did not answer. She came slowly and thoughtfully towards me, as if she sought for words. At last she remained standing before me, threw a contemptuous side look on me, and said:

"Mr. Faust, it seems to me that it is I that should entreat, in order to induce you to leave the house and train of my father."

"Countess," said I, and the manly pride was a little roused in me, "I have forced myself neither on you nor the Count. You yourself know on what grounds your father entreated me to remain in his company. I did so unwillingly; but the heartfelt kindness of the Count, and the hope of being useful to you, prevents my obeying your expressed command, however it may distress me to displease you."

She turned her back on me, and played with a little pair of scissors near a rose bush at the window. Suddenly she cut the last blown rose off—it was beautiful, although simple—she reached it to me and said,—
"Take the best which I have now at hand: I give it to you, as a reward for having hitherto avoided me. Never come again!"

She spoke this so quickly and with such visible embarrassment, that I scarcely understood it; she then threw herself again on the sofa, and as I wished to answer, she motioned to me hastily, with her face turned, to go away. I obeyed.

Even at the moment I left her I had already forgotten all injuries. I flew to my room. Not the angry,

but only the suffering Hortensia in all her tender innocence swept before me. The rose came from her hand like a jewel, whose infinite worth all the crowns in the world could not outweigh. I pressed the flower to my lips—I lamented its perishable nature. I thought how I should most securely preserve it—to me the most precious of all my possessions. I opened it carefully and dried it between the leaves of a book, then had it enclosed between two round crystal glasses, surrounded with a gold band, so that I could wear it like an amulet to a gold chain round my neck.

THE BILL OF EXCHANGE.

In the meantime this event was the cause of much discomfort to me. Hortensia's hate of me spoke out more decidedly than ever. Her father, entirely too gentle, made my defence in vain. His conviction that I was an honest man, as well as my usefulness in the common affairs of his house, and his firm belief that I was indispensable to the saving of his daughter, were sufficient to render him for a long time deaf to all the whisperings which aimed at my downfall. In a short time he was the only one in the house that honored me with a friendly word or look. I remarked, that gradually the women, Dr. Walter himself, and at last the lowest servant of the family, kept shyly at a distance and treated me with a marked coldness. I learnt from the true hearted Sebald, who remained devoted to me, that my expulsion was aimed at, and that the Countess had sworn to turn any one out of her service, who dared to have any kind of intercourse with me. Her command was so much the more effectual, as from the physician and steward, to the lowest servant in the house, each one considered himself lucky to be a domestic in so rich a house; and whilst they only considered me as one of their equals, they envied me my unlimited credit with the Count.

Such a situation must of course become displeasing to me. I lived in Venice, in one of the most brilliant houses, more solitary than in a wilderness, without a friend or familiar acquaintance. I knew my steps and motions were watched; nevertheless I endured it with patience. The noble Count suffered no less than myself from Hortensia's caprices. He often sought comfort near me. I was the most eloquent advocate for my beautiful persecutor, who treated me during her transfiguration with as much kindness, I might almost say tenderness, as she vexed me when out of this state, with the effects of her hatred and pride. It seemed as if she were governed alternately by two inimical demons: the one an angel of light, the other of darkness. At last, even the old Count began to watch me and became more reserved; the situation was insupportable to me. I had only lately perceived how he was tormented on all sides; how particularly Dr. Walter sought to shake his confidence in me, by many repeated little malicious remarks; and what a deep impression a reproach of Hortensia's once made, when she said: "Have we all made ourselves dependant on this unknown man? They say my life is in his power; well, pay him for his trouble; more he does not merit. But he is also to be a participator in our family secrets. We are, in our most important affairs, in his charge, so that, were I

even in health, we could scarcely, without disadvantage, send him away. Who is surety for his secrecy? His apparent disinterestedness, his honorable appearance, will one day cost us much. The Count Hormegg will be the slave of his servant, and a stranger, by his cunning, become the tyrant of us all. This common fellow is not only the confidant of a Count, whose race is related to princely houses, but the all-doer and head of the family."

In order still more to revolt the pride of the Count, the subordinates appeared to have conspired together to fulfil his commands with a certain reluctance and doubt, as if they were afraid of displeasing me. Some carried this artful boldness so far as to express openly the question, whether the command he gave had also my consent. This acted upon the Count so much, little by little, that he became mistrustful of himself, and believed that he had overstepped the limits of prudence.

I remarked it, however much he endeavored to conceal his change of mind. This vexed me. I had never forced myself into a knowledge of his circumstances; he had imparted them to me by degrees, craved my council, followed it, and always gained by it. He had voluntarily charged me with the whole care of the receipts and expenditures of his income; it was by me, from the state of the greatest confusion, placed in such clearness, that he confessed he never had such an insight into his household affairs. He was now in a situation to make suitable arrangements both of his money and estates. By my advice he had terminated two old perplexed family law-suits, whose end was not to be seen, by an amicable agreement, and by this compact gained more immediate advantage than he himself hoped to have won, if he had succeeded in his suit. Many times had he, in the excess of his gratitude or friendship, wished to force considerable presents on me, but I had always refused them.

For some weeks I endured to be hated and mistaken by all. My pride at last revolted. I longed to get out of this unpleasant situation to which no one any longer troubled himself to reconcile me. Hortensia, even she, who was the author of all the mischief, was the only one, who, in her transfigurations, warned me incessantly not to regard any thing she might undertake against me in her waking hours. She would despise herself for it; she coaxed me with the most flattering speeches, as if she would in these moments requite me for all the torments which she immediately after, with redoubled eagerness, would cause me.

Count Hormegg had me called one afternoon to his cabinet. He desired me to give him the steward's book, and also a bill of exchange lately received for two thousand louis d'ors, which sum, he said, he wished to place in the bank of Venice, since his residence in Italy would be continued for the year. I took the opportunity to beg him to confide to another the whole of the business with which he had charged me, since I was determined, so soon as the health of the Countess would permit, to leave his house and Venice. Notwithstanding he remarked the irritability with which I spoke, he said nothing, except requesting me not to neglect his daughter and her cure; but as to what regarded the other affairs, he would willingly disburden me from them.

This was sufficient. I saw he wished to make me unnecessary to him. I went, out of humor, to my room, and took all the papers, as well those which he had not demanded as those which he had; but I could not find the bill of exchange; I must have mislaid it amongst some papers. I had a dim recollection that it was enclosed by me in a particular paper, and with some other things put on one side. My search was in vain. The Count, hitherto accustomed to see his wishes executed with the greatest promptitude by me, would certainly be surprised that I this time delayed. The next morning he reminded me of it again.

"Probably you have forgotten," said he, "that I asked you yesterday for the steward's book and the bill of exchange." I promised to give them to him at mid-day. I looked through the writings, leaf by leaf, in vain. Mid-day came; I had not found the bewitched bill of exchange. I excused myself with the Count that I must have mislaid a couple of sheets which hitherto had not happened to me; probably in my anxious hasty search, I had either overlooked some or taken the papers for others and placed them away. I asked for a delay till the next day, since they could not be lost, but only mislaid. The Count made, it is true, a discontented face, but yet replied, "There is time enough! Do not hurry yourself."

What time I could spare, I employed in searching. It lasted till night. The following morning I commenced anew. My anxiety increased. I must at last believe, that the bill was either lost, stolen, or perhaps, in a moment of absence, employed by myself as useless paper. Except my servant, who could neither read nor write, and who never had the key to my sitting room, no person entered those apartments. The fellow asserted that he had never allowed any one to enter whilst he was cleaning the room, still less, had he ever touched a paper. Except the Count, no stranger came to me, since from my retired life I had made no acquaintance in Venice. My embarrassment rose to the highest pitch.

THE SINGULAR TREACHERY.

The same morning, as I went to the Countess, to remain near her, during her transfiguration, and render her, in this state, the accustomed service, I thought I remarked in the countenance of the Count a cold seriousness, which spoke more than words. The thought, that he perhaps suspected my honesty and truth, increased my disquiet. I walked before the sleeping Hortensia, and at the same moment it struck me, that perhaps by means of her wonderful gift of sight, she might inform me where the papers were. It was indeed painful to me, to confess, before Dr. Walter and the women, the charge of neglect or disorder.

Whilst I was yet struggling with myself, what I should do, the Countess complained of the insupportable coldness which blew from me towards her, and which would cause her sufferings if it did not change. "Thou art pained by some disquiet. Thy thoughts, thy will, are not with her!" said she.

"Dear Countess," replied I, "it is no wonder. Perhaps it is in your power, from your peculiarity of being able to discover what is most concealed, to restore me again my peace. I have lost amongst my papers, a bill of exchange, which belongs to your father."

The Count Hormegg wrinkled his brow. Dr. Walter cried: "I beg you, do not trouble the Countess in this situation with such things."

I was silent; but Hortensia appeared thoughtful, and said, after some time, "Thou, Emanuel, hast not lost the bill; it was taken from thee! Take this key, open the closet there in the wall. In my jewel casket lies the bill."

She drew out a little golden key, reached it to me and pointed with her hand to the closet. I hurried there. One of the women, called Elenora, sprang before the closet and wished to prevent the opening of it. "Your lordship," cried she anxiously to the Count, "will not allow any man to rummage amongst the effects of the Countess!" Ere she had yet ended the words, she was with a strong arm pushed away by me; the closet opened, the casket likewise, and behold, the bewitched bill of exchange lay there on the top. I went with a face shining with joy to the old Count, who was speechless and motionless from astonishment. "Of the rest, I shall have the honor of speaking to you hereafter," said I to the Count, and went back with a light heart to Hortensia, to whom I gave back the key.

"How thou art metamorphosed, Emanuel!" cried she, with a countenance of delight, "Thou art become a sun—thou floatest in a sea of rays."

The Count called to me in violent emotion: "Command the Countess, in my name, to say how she came by these papers."

I obeyed. Elenora sank down fainting on a chair. Dr. Walter hurried to her, and was in the act of leading her from the room as Hortensia began to speak. The Count commanded, in an unusually severe tone, silence and quiet. No one dared to move.

"Out of hate, beloved Emanuel, the sick had the bill taken. She foresaw, maliciously, thy difficulty, and hoped to induce thy flight. But it would not have happened, since Sebald stood in a corner of the corridor, whilst Dr. Walter, with a double key, went in thy chamber, took the bill which thou hadst put in some letters from Hungary, and gave it on going out to Elenora. Sebald would have betrayed it all, so soon as it was known that some papers of importance had been lost. Dr. Walter, who had seen the bill of exchange with thee, made the proposition to the sick to purloin it. Elenora offered her assistance. The sick herself encouraged them both to do so, and could scarcely wait for the time when the papers could be brought to her."

During these words Dr. Walter stood quite beside himself, leaning on Elenora's chair; his countenance betrayed uneasiness, and shrugging his shoulders, he looked towards the Count, and said, "From this, one may learn that the gracious Countess may also speak erroneously. Wait for her awaking, and she will explain herself better how the papers came into her hands."

The Count made no answer, but calling to a servant, ordered him to bring old Sebald. When he came, he was asked whether he had ever seen Dr. Walter during my absence go into my room.

"Whether in the absence of Mr. Faust I know not, but it may well have been so last Sunday evening, since he at least unlocked the door. Miss Ellen must know better than I, as she remained standing on the stairs until the Doctor came back and gave her some notes, whereupon they talked softly together and then separated."

Sebald was now permitted to go; and the Doctor with the half fainting Elenora were obliged on a motion from the Count to depart. Hortensia appeared more animated than ever. "Fear thee not from the hatred of the sick" said she many times; "she will watch over thee like thy guardian angel."

The consequence of this memorable morning was, that Dr. Walter, as well as Elenora, with two other servants, were on that same day dismissed by the Count and sent from the house. To me, on the contrary, the Count came and begged my pardon, not only on account of his daughter's fault, but also for his own weakness, in listening to the malicious whisperings against me and half crediting them. He embraced me, called me his friend, the only one which he had in the world and to whom he could open himself with unlimited confidence. He conjured me not to forsake his daughter and himself.

"I know," said he, "what you suffer, and what sacrifices you make on our account. But trust with confidence to my gratitude as long as I live. Should the Countess ever be restored to perfect health, you will certainly be better pleased with us than hitherto. Look at me! is there on earth a more desolate, unfortunate man than myself? Nothing but hope supports me. And all my hopes rest on your goodness and the continuance of your patience. What have I already gone through! what must I yet endure! The extraordinary state of my daughter often almost deprives me of reason. I know not, if I live, or if destiny has not made me the instrument of a fairy tale."

The distress of the good Count moved me. I reconciled myself to him and even to my situation, which was by no means enticing. On the contrary, the ignoble disposition of the Countess much weakened the enthusiasm in which I had hitherto lived for her.

FRAGMENTS OF HORTENSIA'S CONVERSATIONS.

Through the kind and attentive care of the Count, it happened that I now never saw Hortensia when awake, for which I felt little inclination. I even did not learn how she thought or spoke of me, though I could easily imagine it. In the house strict order reigned. The Count had resumed his authority. No one ventured again to make a party with Hortensia, against either of us, since it was known that she would become the accuser of herself and confederates.

Thus I saw the extraordinary beauty only in those moments when she, raised above herself, appeared to be a being of a better world. But these moments belonged to the most solemn, often to the most moving of my life. The inexpressible charm of Hortensia's person was heightened by an expression of tender innocence and angelic enthusiasm. The strictest modesty was observed in her appearance. Only truth and goodness were on her lips; and notwithstanding her eyes were closed—in which, otherwise, her feelings were most clearly expressed—yet one read the slightest emotion by the fine-play of her countenance as well as in the varied tones of her voice.

What she spoke of the past, present or future, so far as the keen prophetic vision of her spirit reached, excited our astonishment; sometimes from the peculiarity

of her views; sometimes from their incomprehensibility. She could give us no information of the *how*, though she sometimes endeavored and sought by long reflection to do so. She knew by actual sight, as she said, all the interior parts of her body, the position of the superior and inferior intestines, of the bony structure, of the ramifications of the muscles and nerves; she could see the same in me or any one to whom I only gave my hand. Though she was a highly educated young lady, yet she had no knowledge, or only the most confused and superficial, of the structure of the human frame. I mentioned the names of many things, which she saw and described exactly; she on the contrary, corrected my ideas when they were not accurate.

Her revelations upon the nature of our life interested me most, since to me, her absolutely inexplicable state, led me most frequently to question her on it. I wrote down each time, after leaving her, the substance of her answers, although I must omit much which she gave in expressions and images not sufficiently intelligible.

I will not mention here all that she spoke at different times, but will only select and place in a better connection what she revealed concerning things which excited my sympathy or curiosity.

As I once remarked, that she lost much in not being able to recollect, in her natural and waking state, what she, during the short time of her transfiguration, thought, saw and spoke, she replied:

"She loses nothing, since the earthly waking is only one part of her life, that terminates in certain, single ends; it is only a circumscribed outward life. But in the true, unlimited, interior, pure life, she is as conscious of what is passing in this, as of what has passed in her waking state.

"That internal, pure life and consciousness continues in every person unbroken, even in the deepest fainting, as in the deepest sleep, which is only a fainting of another kind and from other causes. During sleep, as in a fainting fit, the soul withdraws its activity from the instruments of the senses back to the spirit. One is also then conscious to himself, when without, he appears unconscious, because the lifeless senses are silent.

"When thou art suddenly aroused from a deep sleep, on waking, a dark remembrance will sweep before thee, as if thou hadst thought of something before awaking, or, as thou thinkest, dreamt, though thou knowest not what it is. The sleep-walker lies in the fast sleep of the outward senses; he hears and sees, not with eyes and ears, nevertheless he is not only in the utmost perfection conscious of himself and knows exactly what he thinks, speaks or undertakes, but he remembers also every thing of his outward waking, and knows even the place where he, waking, laid his pen.

"The outward, limited life, may suffer interruptions and pauses; the true, inner consciousness, has no pauses and needs none.

"The sick knows very well that she now appears to thee perfect; but in fact, the powers of her mind and soul are not more exalted or commanding than formerly, though less bound or crippled by the restraints of the outward senses. An excellent workman works with imperfect tools more imperfectly than he should do. Even the most fluent human speech is tedious and difficult, since it neither can represent all the peculiarities

of the thoughts and feelings, nor the rapid changes and course of the ideas, but only single parts of the onflowing current of thought.

"In the purer life, although the tools of the senses rest, there is a more complete and exact remembrance of the past, than in the earthly waking. Since at the earthly waking, the *ALL* streams through the open doors of perception too powerful—almost stunning. Therefore, Emanuel, thou knowest when we wish during our earthly waking, deeply and seriously to think, we seek solitude and quiet and withdraw ourselves as it were from without, and neither see nor hear.

"The more the mind can be removed from outward life, the nearer it approaches to its purer state; the more it is separated from the activity of the senses, the more clear and certain it thinks. We know that some of the most remarkable discoveries have been made in a state betwixt sleeping and waking, when the outward doors were half closed and the spiritual life remained undisturbed by foreign intermixture.

"Sleep is not to be regarded as an interruption of the perfect conscious life; but the earthly waking is to be regarded as such an interruption, or rather as a limitation of it. Since by earthly waking the soul's activity is directed as it were to fixed paths and limits, and on the other side, the attractions of the outward world influence it so powerfully, that the remembrance of the pure life disappears; still more so, since on the earthly waking the attention of the spirit itself is distracted, and is attracted to the guarding of the body in all its single parts. Yes, Emanuel, sleep is properly the full awaking of the spirit; the earthly waking, as it were, a slumber or a stunning of the spirit. The earthly sleep is a spiritual sunset for the outward world, but a clear sunrise in the inner world.

"Yet even amidst the distractions of the earthly waking, we perceive occasionally glimpses of another life we have passed through, though we do not always know how to express it. So one sees from high mountains in a summer night the late or early red of a sun and of a day that has departed, which is the portion of other countries on the globe. Often, with wonderful quickness, in extraordinary accidents, thoughts and resolutions occur to men necessary to their safety, without foregone considerations—without reflection. We know not from whence they spring. Connection fails between our previous ideas and this sudden and commanding one. Men usually say it is as if a good spirit or a divinity had inspired me with the thought. At other times we see and hear in our daily life something that we seem already to have seen and heard; and yet we cannot fathom how, or when, or where, and we imagine it to be a singular repetition, or some resemblance to a dream.

"It is not extraordinary, Emanuel, that our conscious being never ends; that is, that whether sleeping or waking, it ever advances; since it is so, how can it cease? But wonderful is the change—the ebb and flow—the hither and thither turning of life from the inner to the outward and from the outward to the inner.

"The spirit, clothed by the soul, as the sun is by its rays, flying through the firmament of the world, can exist as well without a body, as the sun without foreign worlds. But the worlds without the sun are dead—

loosened from their path; the body without the soul is dust.

"The body has its own life, as every plant lives; though the earthly powers of life must first be awakened through the spirit. These rule and move themselves according to their own laws, independent of the soul. Without our will and knowledge, without the will and knowledge of the body, it grows, digests its nourishment, makes the blood flow, and changes in manifold ways its inheritance. It inhales and exhales; it evaporates and draws invisible nourishment for its want from the atmosphere. But like other plants, it is dependant upon the outward things, by which it nourishes itself. Its condition changes with day and night, like the condition of every flower; it raises or relaxes itself; its powers of life consume themselves like an invisible fire which demands fresh nourishment.

"Only by a sufficient supply of the vegetative powers of life, is the body fitted for the soul to enter into a close union with it, otherwise it is a heterogeneous substance. If its powers become too much consumed or exhausted, the spiritual life draws itself back from the outward to the interior part: that we call sleep—an interruption of the activity of the senses. The soul returns again into the union with the outer parts, as soon as the vegetative department has recruited its powers. It is not the soul which becomes fatigued or exhausted, but the body; the soul is not strengthened by rest, but the body. So there is a constant ebb and flood, an outstreaming and retreating of the spiritual essence in us, perhaps conformable to the changes of day and night.

"The greater part of our existence we watch outwardly; we should do so, since the body was given us on earth, on condition of our activity. The body and its inclinations give our activity a determined direction. There is something great and wonderful in this economy of God.

"With age the body loses the faculty of re-establishing its powers of life in a sufficient degree to sustain in all its parts its intimate union with the soul. The instrument formerly ductile and supple, stiffens and becomes useless to the spirit. The soul withdraws itself again into the interior. To the spirit remains all its inward activity, even till all union with the body is impeded; this arrives only through the destroying power of age or sickness. The loosening of the soul from the body is the restoration of the freedom of the first. It frequently announces itself by predictions at the hour of death and other prophecies.

"The more healthy the body, so much the more is the soul entirely united with all parts of the body; and the more closely it is bound to it, so much the less capable is it of predicting; it is then, as if the soul in extraordinary moments of enthusiasm, unshackled as it were, sees into futurity.

"The retreat of the soul from the outer world, produces a peculiar state of the human substance. It is the dream. To fall into a slumber, produces the last attraction of the senses, and the first activity of the free interior life. By the waking, the last ray of the inner world mixes itself with the first light of the outward world. It is difficult to disentangle what particularly appertains to the one or the other; but it is always instructive to observe dreams. Since the spirit, even in

its inner activity, occupies itself with that which attracted it in the outward life, one can expound the movements of the sleep-walker. Though, when the outward senses of the sleep-walker are again unlocked, he can remember nothing of what he did during his extraordinary state, yet it can return to him again in dreams. So do they bring from the inner world much knowledge to the outer. Dream is the natural mediator, the bridge between the outward and inner life."

CHANGES.

These were perhaps the most remarkable ideas which she uttered, either spontaneously or excited by questions; it is true, not in the order in which they are here placed, but, as regards the expressions, very little different from them. Much that she said, it was impossible for me to give again, since with the connection of the conversation, it lost much of the delicacy of its meaning; much remained wholly unintelligible to me.

"It was also my fault that I neglected leading her back at the right time, upon many things that remained obscure to me. I soon remarked, that she did not in all her hours of transfiguration discern and speak with equal clearness—that she gradually liked less to converse on these subjects, and at last discontinued them entirely, and spoke almost only of household affairs or the state of her health. This she constantly affirmed was improving, though for a long time we could perceive no traces of it. She continued as formerly to indicate to us what she must eat and drink when awake, and what would be beneficial and what prejudicial to her. She showed an aversion to almost all drugs, but on the contrary, desired daily an ice cold bath, and at last sea water baths. As the spring approached, her transfigurations became shorter.

I will, by no means, describe here the history of Hortensia's illness, but will in a few words state, that in seven months after my arrival, she was so far restored, that she could not only receive the visits of strangers, but also return them, and could even go to church, theatre and balls, though only for a few hours at a time. The Count was beside himself with joy. He loaded his daughter with presents, and formed around her a various and costly circle of amusements. Connected with the first houses of Venice, or courted by them either on account of his wealth or the beauty of his daughter, it could not fail that every day in the week was metamorphosed into a festival.

He had hitherto in fact lived like a hermit, depressed by Hortensia's misfortune and kept in a constant constrained and anxious state by the miracles connected with her illness. Therefore, he had become confined to an intercourse with me. Besides, from want of firmness of mind and through my influence over Hortensia's life, and by a kind of superstitious respect for my person, he allowed himself to be willingly pleased with what I directed. He yielded to me, if I may so call it, a kind of government over himself, and obeyed my wishes with a degree of submission which was unpleasant to myself, though I never abused it.

Now that Hortensia's recovery restored to him a mind free from care and the long denied enjoyment of brilliant pleasures, his deportment towards me changed.

It is true, I continued to hold the direction over his house and family affairs, which he had formerly given up to me, either from blind confidence or for his convenience, but he wished that I should conduct his affairs under some name in his service. As I firmly refused to place myself in his pay, and remained true to the conditions under which I had at first engaged with him, he appeared to make a virtue of necessity. He introduced me to the Venitians as his friend, yet his pride not permitting his friend to be a mere citizen, he gave me out generally as being from one of the purest and best of the German noble families. I opposed at first this falsehood, but was obliged to yield to the entreaties of his weakness. Thus I entered into the Venitian circles, and was received every where. It is true, the Count continued to be my friend, though not entirely as formerly, since I was no longer his only one. We no longer, as before, lived exclusively for and with one another.

Yet more remarkable was the metamorphose in Hortensia on her convalescence. In her transfigurations, she was, as ever, all goodness; but the old hate and aversion, during the remaining part of the day, appeared gradually to disappear. Either more obedient to the admonitions of her father, or from her own feelings of gratitude, she controlled herself so as not to wound me either by word or look. It was permitted me from time to time, though only for a few moments, to pay my most respectful homage to her as a guest of the house, as a friend of the Count, and as an actual physician. I could even at last, without danger of exciting an outbreak of her anger, be in the society where she was. Indeed this effort or habit proceeded so far, that she could at last, with indifference, suffer me to dine at table, when the Count was alone or had guests. But even then I always saw her pride through her manners as she looked down upon me, and except what decency and common politeness demanded, I never received a single word from her.

For myself, my life was truly only half gay, though from my greater freedom, I felt more comfortable. The amusements into which I was drawn, diverted me, without increasing my contentment. In the midst of bustle, I often longed for solitude, which was more congenial to my nature. It was my invariable determination, so soon as the cure of the Countess was perfected, to regain my former liberty. I longed with eagerness for the arrival of that moment, since I felt too deeply that the passion with which Hortensia's beauty inspired me would become my misfortune. I had struggled against it, and Hortensia's pride and hatred for me rendered the struggle more easy. To her feelings of high noble birth, I opposed my citizen feelings—to her malicious persecutions, the consciousness of my innocence and her ingratitude. If there were moments when the charms of her person affected me—who could remain insensible to so many?—there were many more in which her offensive behavior entirely disgusted me, and caused in my heart a bitterness which bordered on aversion. Her indifference towards me was as strong a proof of the want of grateful feelings in her disposition as her former aversion. At last I avoided Hortensia more assiduously than she did me. Could she have regarded me with indifference, she must have discovered in my whole behavior how great was my scorn of her.

Thus, during Hortensia's gradual recovery, had the situations between us all, unremarked and singularly enough, wholly changed. I had no ardent wish except soon to be freed from an engagement which gave me but little joy, and no greater consolation than the moment when Hortensia's perfect health would render my presence unnecessary.

PRINCE CHARLES.

Amongst those who in Venice connected themselves most intimately with us, was a rich young man, who, descended from one of the noblest Italian families, bore the title of Prince. I shall call him Charles. He was of a pleasing figure, with fine manners, intellectual, quick and prepossessing. The nobility of his features, as well as the fiery glance of his eye, betrayed an irritable temperament. He lived at an immense expense, and was more vain than proud. He had served for some time in the French army. Tired of that, he was upon the point of visiting the most distinguished European cities and courts. The accidental acquaintance which he made with Count Hormegg, detained him longer in Venice than he at first intended; for he had seen Hortensia, and joined himself to her crowd of admirers. In pursuit of her, he soon appeared to forget every thing else.

His rank, his fortune, his numerous and brilliant retinue, and his pleasing exterior, flattered Hortensia's pride and self love. Without distinguishing him from the others by any particular favor, she yet liked to see him near her. A single confidential friendly look was sufficient to excite in him the boldest hopes.

The old Count Hormegg, no less flattered by the Prince's addresses, met them half way, showed him a preference over all, and soon changed a mere acquaintance into a close intimacy. I doubted not for a moment that the Count had secretly chosen the Prince for his son-in-law. Nothing but Hortensia's indisposition and a fear of her humors appeared to prevent both the father and lover from more open approaches.

The Prince had heard, in confidential conversations with the Count, of Hortensia's transfigurations. He burnt with a desire to see her in this extraordinary state; and the Countess, who well knew that this state was far from being disadvantageous to her, gave him, what she had hitherto denied to every stranger, permission to be present at one of them.

He came one afternoon when we knew Hortensia would sink into this remarkable sleep, as she always announced it in the preceding one. I cannot deny that I felt a little touch of jealousy as the Prince entered the room. Hitherto I had been the happy one to whom the Countess, by preference in her miraculous glorifications, had turned her exterior graces and intellectual beauty.

Charles approached lightly over the soft carpet, moving on tip-toe. He believed that she really slumbered, as her eyes were closed. Timidity and delight were expressed in his features as he gazed on the charming figure, which, in her whole appearance, discovered something extraordinary.

Hortensia at length began to speak. She conversed with me in her usual affectionate manner. I was again,

as ever, her Emanuel, who governed her thoughts, will, and whole being; a language which sounded very unpleasingly to the Prince, and which to me was never very flattering. Hortensia, however, began to appear more restless and anxious. She asserted several times that she felt pains, though she could not tell wherefore. I motioned to the Prince that he should reach me his hand. Scarcely had he done so than Hortensia, shuddering violently, cried out gloomily: "How cold! Away with that goat there! He kills me!" She was seized with convulsions, which she had not had for a long time. Charles was obliged hastily to leave the room. He was quite beside himself with terror. After some time, Hortensia recovered from her cramps. "Never bring that impure creature to me again," said she.

This accident, which even alarmed me, produced unpleasant consequences. The Prince regarded me from this moment as his rival, and conceived a great hatred towards me. The Count, who allowed himself to be entirely governed by him, appeared to become suspicious of Hortensia's feelings. The mere thought that the Countess might acquire an inclination for me, was insupportable to his pride. Both the Prince and Count united themselves more firmly together; kept me at a greater distance from the Countess, except during the time of her miraculous sleeps; agreed upon the marriage, and the Count opened the wishes of the Prince to his daughter. She, although flattered by the attentions of the Prince, demanded permission to reserve her declaration till the complete restoration of her health. Charles, in the meanwhile, was generally regarded as the betrothed of the Countess. He was her constant attendant, and she the queen of all his fetes.

I very soon discovered that I began to be in the way—that with Hortensia's recovery I had sunk into my original nothingness. My former discontent returned, and nothing made my situation supportable, but that Hortensia, not only in her transfigurations, but soon out of them, did me justice. Not only was her old aversion towards me changed into indifference, but in the same proportion as her bodily health rebloomed, this indifference changed itself into an attentive, forbearing respect; to an affable friendliness, such as one is accustomed to from the higher to the lower, or towards persons whom one sees daily, who belongs to the household, and to whom one feels indebted for the services they perform. She treated me as if I were really her physician—liked to ask my advice, my permission, when it concerned any enjoyment or pleasure; fulfilled punctually my directions, and could command herself to leave the dance so soon as the hour was passed which I had fixed for her. It occurred to me sometimes, as if the authority of my will had in part passed over to her waking, since it began to act more weakly over her soul during her transfigurations.

THE DREAMS.

Hortensia's pride, obstinacy and humor, also passed gradually away from her like bad spirits. In her disposition, almost as lovely as during her trance, she enchained not less by her outward charms, than by her affection, humility and grateful kindness.

All this made my misfortune. How could I, a daily witness of so many perfections, remain indifferent? I

wished most earnestly that she might, as formerly, despise, offend and persecute me, that I might the more easily separate from her, and could be able to despise her in return. But that was now impossible. I again adored her. Silently and without hope, I pined away in my passion. I knew, by anticipation, that my future separation from her would take me to the grave. What made my situation worse, was a dream, which I from time to time had of her, and always in the same or a similar form. Sometimes I was sitting in a strange room—sometimes on the seashore—sometimes in a cave under overhanging rocks—sometimes on the moss-covered trunk of an oak, in a great solitude, and with a deeply agitated soul—then came Hortensia, and looking upon me with the kindest compassion, said, "Wherefore so melancholy, dear Faust?" and thereupon each time I awoke, and the tone with which she spoke thrilled through me. This tone was echoed to me the whole day. I heard it in the bustle of the city, the crowd of company, in the song of the gondoliers, at the opera, everywhere. Some nights when I had this dream, I waked so soon as Hortensia had opened her mouth to make the usual question, and then imagined that I actually heard the voice without me.

Dreams formerly in the world used to be dreams; but in the strange circle into which I was placed by my destiny, even dreams had an unusual character.

I was one day regulating some accounts in the Count's room, and had laid some letters before him for his signature. He was called to receive some of the Venitian nobility, who had come to visit him. Believing he would soon return, I threw myself upon a chair at the window, and sank into a deep melancholy. Soon I heard footsteps, and the Countess, who sought her father, stood near me. I was much startled, without knowing wherefore, and respectfully arose.

"Why so sad, dear Faust?" said Hortensia, with her own peculiar loveliness, spiritualizing my whole being, and with the same voice, whose tones sounded so movingly in my dreams. She then laughed as if surprised at her own question, or as astonished at herself, rubbed thoughtfully her brow, and said, after a while, "What is this? I fancy that it has occurred before. It is extraordinary. I have once before found you exactly as at this moment, and even so questioned you. Is not this singular?"

"Not more singular than I have experienced," said I, "since not once, but many times, have I dreamt that you discovered me, and asked in the same words the same question which you have now had the goodness to do."

The Count came in and interrupted our short conversation. But this, apparently in itself unimportant incident, caused me much reflection; nevertheless my researches were in vain to divine how the play of the imagination could mingle with the reality. She had dreamt the same as myself, and the dream had been accomplished in life.

These enchantments were yet far from being at an end.

Five days after this event, the god of sleep mimicked before me that I was invited to a great assembly. It was a great fete and dance. The music made me melancholy, and I remained a solitary spectator. Hortensia suddenly came to me from the crowd of dancers, pressed

secretly and fervently my hand, and whispered, "Be gay, Faust, or else I cannot be so!" She then gave me a look of compassionate tenderness, and was again lost in the tumult.

The Count Hormegg attended a pleasure party on that day, at the country seat of a Venitian. I accompanied him. On the way he told me that the Countess would also be there. When we arrived, we found a large company—in the evening there were magnificent fireworks, and then dancing. The Prince opened the ball with Hortensia; it was like the stroke of the dagger to me as I looked at them. I lost all inclination to participate in the ball. In order to forget myself, I chose a partner, and mixed with the floating, beautiful troop. But it seemed to me that I had lead fastened to my feet, and I congratulated myself when I was able to slip out from the crowd. Leaning at a door, I gazed on the dancers, not at them, but only at Hortensia, who moved there like a goddess.

I thought of the dream of the past night; in the same moment a dance broke up, and glowing with joy, yet timidly, Hortensia approached me, pressed secretly and lightly my hand, and whispered, "Dear Faust, be gay, that I also may be so." She spoke this so compassionately, so kindly—with a look from her eyes—a look—I lost sense and speech. When I recovered myself Hortensia had again disappeared. She swept again in the row of dancers, but her eyes constantly sought only me; her looks constantly hung on me. It was as if she had the humor, by her attention, to deprive me of the residue of my reason. The couples separated at the end of the dance, and I left my place with the view of seeking another situation in the room, to convince myself whether I had been deceived, and whether the looks of the Countess would seek me there.

Already fresh couples assembled for a new dance, as I wandered over to the seats of the ladies. One of them arose at the moment that I approached her—it was the Countess. Her arm was in mine—we joined the circle. I trembled and knew not how it had occurred, since I could never have had the boldness to ask Hortensia to dance, and yet it appeared to me as if I had done so in my absence of mind. She was unembarrassed—scarcely observed my confusion—and her brilliant glances roved over the splendid crowd. One moment and the music began. I seemed to be unbound from all that was earthly; spiritualized I swept on the waves of sound. I knew not what was passing around me—knew not that we chained the attention of all the spectators. What regarded I the admiration of the world? At the end of the third dance I led the Countess to a seat, that she might rest herself. Whisperingly I stammered my thanks—she bowed, with mere friendly politeness, as to the greatest stranger, and I drew myself back amongst the spectators.

The Prince as well as the Count had seen me dancing with Hortensia, and had heard the general whisper of applause. The Prince burnt with jealousy—he did not even conceal it from Hortensia. The Count was offended at my boldness in asking his daughter to dance, and reproached her the next day for so thoughtlessly forgetting her rank. Both maintained, like all the world, that her dancing had been more full of soul, more impassioned. Neither the Count nor the Prince doubted but that I had inspired the Countess with an unworthy inclination

for myself. I soon perceived, notwithstanding their efforts to conceal it, that I was an object of hate and fear to them both. I was very seldom, and at last not at all taken into the society where Hortensia moved. I was, however, silent.

Both gentlemen indulged, nevertheless, too much anxiety on this account. The Countess certainly did not deny that she felt a sense of gratitude towards me, but any other feeling was a reproach at which she revolted. She confessed that she esteemed me, but that it was all the same to her whether I danced in Venice or Constantinople.

"You are at liberty to dismiss him," said she to her father, "so soon as my cure is perfected."

THE AMULET.

The Count and Charles awaited this moment, in pain, to get rid of me, and to bring on the marriage of Hortensia. Hortensia looked for it with impatience, in order to rejoice over her own recovery, and at the same time to quiet the suspicions of her father. I also expected it with no less desire. It was only far from Hortensia, amidst new scenes, and other occupations, that I could hope to heal my mind. I felt myself unhappy.

The Countess one day announced, not unexpectedly, as she lay in her strange sleep, the near approach of her re-establishment.

"In the warm baths of Battaglia," said she, "she will entirely lose the gift of being entranced. Take her there. Her cure is no longer distant. Every morning, immediately on waking, one bath. After the tenth, Emanuel, she separates from thee. She sees thee never again, if such is thy will. But leave her a token of remembrance. She cannot be healthy without it. For a long time, thou wearest in thy breast a dried rose, between glasses, and set in gold. So long as she wears this, enclosed in silk, immediately about the region of the heart, she will not fall again into her cramps. Neither later nor earlier than the seventh hour after receiving the thirteenth bath, yield it to her. Wear it constantly till then. She is then healthy."

She repeated this desire frequently, and with singular anxiety; she laid particular stress upon the hour when I should deliver up to her my only jewel, and of whose existence she had never heard.

"Do you really wear such a thing?" asked the Count, astonished, and highly delighted on account of the announced restoration of health to his daughter. As I answered, he asked further, if I laid any particular value upon the possession of this trifle. I assured him the highest, and that I would rather die than have it taken from me—nevertheless, for the safety of the Countess, I would sacrifice it.

"Probably a remembrance from some beloved hand?" observed the Count, laughing, and in an inquiring manner, to whom it seemed a good opportunity to learn whether my heart had already been bestowed.

"It comes," I replied, "from a person who is every thing to me."

The Count was as much moved by my generosity as contented, that I had resolved to make the sacrifice on which Hortensia's continued health depended—and forgetting his secret grudge, embraced me, a circumstance which had not happened for a long time.

"You make me your greatest debtor!" said he.

He was most urgent to relate to Hortensia, so soon as I had gone, on her awaking, what she had desired in her trance; he, moreover, did not conceal from her his conversation with me on the subject of the amulet, which had so great a value for me, since it was the remembrance of a person that I loved above all. He laid great stress on this, as his suspicion still remained, and, in case Hortensia really felt any inclination for me, to destroy it, by the discovery that I, since a long time, sighed in the chains of another beauty. Hortensia listened to it all with such innocent unembarrassment, and so sincerely congratulated herself upon her early recovery, that the Count perceived he had done injustice to the heart of his daughter by his suspicions. In the joy of his heart, he was eager to confess to me his conversation with his daughter, and immediately to mention to the Prince all that had passed. From that hour I remarked, both in the manner of the Count and Prince, something unconstrained, kind and obliging. They kept me no longer, with their former anxiety, at a distance from Hortensia, but treated me with the attention and forbearance due to a benefactor, to whom they were indebted for the happiness of their whole life. Arrangements were immediately made for our journey to the baths of Battaglia. We left Venice on a beautiful summer morning. The Prince had gone before, in order to prepare every thing for his intended bride.

Through the pleasant plains of Padua we approached the mountains, at the foot of which lay the little town, with its healing spring. On the way the Countess often liked to walk; then I must always be her conductor. Her cordiality charmed as much as her tender sense of the noble in the human character, and of the beautiful in nature. "I could be very happy," she often said, "if I could pass my days in any one of these beautiful Italian regions, amidst the simple occupations of domestic life. The amusements of the city leave the feelings vacant—they are more stunning than pleasing. How happy could I be if I might live simply, unprovoked by the miseries of the palace, where one vexes one's self about nothing, sufficiently rich to make others happy, and in my own creations to find the source of my happiness! Yet one must not desire every thing."

More than once, and in the presence of her father, she spoke of her great obligations to me as the preserver of her life. "If I only knew how to repay it!" said she. "I have for a long time racked my head to discover something right pleasing for you. You must indeed permit my father to place you in a situation which will enable you to live quite independent of others. But that is the least. I need for myself some other satisfaction."

At other times, and frequently, she brought the conversation to my resolution of leaving them as soon as she recovered. "We shall be sorry to lose you," said she, good naturedly; "we shall lament your loss as the loss of a true friend and benefactor. We will not, however, by our entreaties for you to remain with us, render your resolution more difficult. Your heart calls you elsewhere," added she, with an arch smile, as if initiated in the secret of my breast: "If you are happy, there is nothing else for us to wish for; and I do not doubt that love will make you happy. Do not, however, therefore, forget us, but send us news from time to time of your health."

What I felt at such expressions, could be as little uttered as that I should repeat what I was usually in the habit of replying. My answers were full of acknowledgments and cold politeness; for respect forbid my betraying my heart. Nevertheless, there were moments when the strength of my feelings mastered me, and I said more than I wished. When I said something more than mere flattery, Hortensia looked at me with the clear bright look of innocence, as if she did not comprehend or understand me. I was convinced that Hortensia felt a grateful esteem for me, and wished me to be happy and content, without, on that account, giving me a secret preference over any other mortal. She had joined me in the dance at the ball, from mere good nature, and to give me pleasure. She herself confessed that she had always expected me to ask her. Ah! how my passion had created presumptuous hopes from it! Presumptuous hopes indeed; since had Hortensia, in reality, felt more than mere common good will towards me, of what service would it have been to me? I should only have become more miserable by her partiality.

Whilst the flame silently devoured me, in her breast was a pure heaven, full of repose. Whilst I could have sunk at her feet, and confessed what she was to me, she wandered near me without the slightest suspicion of my feelings, and endeavored to dissipate my seriousness by pleasantry.

THE DISENCHANTMENT.

By the arrangements of the Prince, rooms were prepared for us in the castle of the Marquise d'Este. This castle, situated on a hill near the village, offered, with the greatest comfort, the most lovely distant prospect, and rich shaded walks in the neighborhood. But we were obliged to resort to the town for the baths—therefore a house was arranged in that place for the Countess, where she passed the mornings as long as she bathed.

Her trance in Battaglia, after the first bath, was very short and indistinct. She spoke but seldom, did not once answer, and appeared to enjoy quite a natural sleep. She spoke after the seventh bath, and commanded, that after the tenth she should no longer remain in that house. It is true she once more fell asleep after the tenth bath, though she said nothing more than "Emanuel, I see thee no more!" These were the last words she spoke in her transfigurations.

Since then she had had, indeed for some days, an unnaturally sound sleep, but without the power of speech in it.

At last arrived the day of her thirteenth bath. Until now, all that she had commanded or predicted in her transfigured hours had been most punctually fulfilled. Now was the last to be done. The Count and Prince came to me early in the morning, in order to remind me of the speedy delivery of my amulet. I must show it to them. They did not leave me for a moment the whole morning, as if, that now being so near the long desired goal, they had suddenly become mistrustful, and feared I might, as regarded the sacrifice, change my mind, or that the relic might accidentally be lost. The minutes were counted so soon as the news came that the

Countess was in the bath. When she had reposed some hours after her bath, she was conducted by us to the castle. She was uncommonly gay, almost mischievous. Having been told that she was to receive a present from me in the seventh hour, which she must wear all her life, she was as delighted as a child at a gift, and teased me, jestingly, with the faithlessness I committed towards my chosen one, whose present I gave to another.

It struck twelve. The seventh hour had arrived. We were in a bright garden saloon. The Count, the Prince, and the women of the Countess were present.

"Delay no longer," cried the Count, "the moment which is to be the last of Hortensia's sufferings and the first of my happiness."

I drew the dear medallion from my breast, where I had carried it so long, and loosening the golden chain from my neck, pressed, not without a sorrowful feeling, a kiss upon the glass, and delivered it to the Countess.

Hortensia took it, and as her look fell on the dried rose, a sudden and fiery red spread over her face. She bowed gently towards me, as if she would thank me—but in her features one discovered a surprise or confusion, which she appeared to endeavor to conceal. She stammered some words, and then suddenly withdrew with her women. The Count and Prince were all gratitude towards me. They had arranged for the evening a little festival at the castle, to which some noble families from Este and Rovigo were invited.

In the meantime we expected long and in vain the re-appearance of the Countess. After an hour we learnt, that as soon as she had put on the medallion, she had fallen into a sweet and profound sleep. Two, three, four hours passed—the invited guests had assembled, but Hortensia did not awake. The Count, in great disquiet, ventured to go himself to her bed. As he found her in a deep and quiet slumber, he feared to disturb her. The fete passed over without Hortensia's presence—though, without her, half the pleasure was wanting. Hortensia still slept as they separated about midnight. And even the following morning she was still in the same sound sleep. No noise affected her. The Count was in great agony. My uneasiness was no less. A physician was called, who assured us that the Countess slept a sound and refreshing sleep—both her color and pulse announced the most perfect health. Mid-day and evening came—yet Hortensia did not awake! The repeated assurances of the physician that the Countess was manifestly in perfect health, were necessary to quiet us. The night came, and passed. The next morning rejoicing echoed through the castle as Hortensia's women announced her cheerful awaking. Every one hurried forward, and wished the restored one joy.

NEW ENCHANTMENT.

Wherefore shall I not say it? During the general joy, I alone remained sad—ah, more than sad, in my room. The duties, on account of which I had entered into an engagement with Count Hormegg, were now fulfilled. I could leave him whenever I chose. I had often enough expressed my desire and intention of doing so. Nothing more was expected from me but that I should keep my word. Yet only to be allowed to breathe

in her vicinity, appeared to me the most enviable of all lots—to receive only one of her looks, the most exquisite nourishment to the flame of life—to live far from her was to me the sentence of death.

But I thought of her near marriage with the Prince, and the fickleness of the weak Count—I thought of my own honor—of my necessities—that I was free to die—then my pride and firmness were roused, and the determination remained to withdraw from the service of the Count as soon as possible. I swore to fly—I saw that my misery was without end, but I preferred bidding adieu to joy for the remainder of life to becoming contemptible to myself.

I found Hortensia in the garden of the castle. A soft shudder ran through me as I approached her, in order to offer my congratulations. She stood, separated from her women, thoughtfully before a bed of flowers. She appeared fresher and more blooming than I had ever seen her—glowing with a new life. She first discovered my presence as I spoke to her.

“How you frightened me!” said she, laughing and embarrassed, whilst a deep blush overspread her beautiful cheeks.

“I also, my dear Countess, would offer to you my joy and good wishes.”

I could say no more—my voice began to tremble—my thoughts became confused—I could not support her looks, which penetrated into the depths of my heart. With difficulty I stammered an excuse for having disturbed her.

Her looks were silently fastened on me. After a long pause, she said, “You speak of joy, dear Faust; are you also gay?”

“Heartily, as I know you to be saved from an illness by which you have so long suffered. In a few days I must depart, and endeavor, if it be possible, in other lands to belong to myself, since I am no longer connected with any one. My promise is redeemed!”

“Is it your serious intention to leave us, dear Faust? I hope not. How can you say that you belong to no one? Have you not bound us to you by all the obligations of gratitude? What forces you to separate from us?” said the Countess.

I laid my hand upon my heart; my looks sunk to the earth; to speak was impossible.

“You remain with us, Faust. Is it not so?” said the Countess.

“I dare not,” I replied.

“And if I entreat you, Faust?” said the Countess.

“For God’s sake, gracious Countess, do not entreat—do not command me. I can only be well when I—No, I must go hence,” I replied.

“You are not happy with us—and yet what other employment, what other duty draws you from us?” asked the Countess.

“Duty towards myself,” I replied.

“Go, then, Faust,” said the Countess, “I have been mistaken in you. I believed that we also were of some value to you.”

“Gracious Countess,” I replied, “if you knew what your words excite, you would from compassion forbear.”

“I must then be silent, Faust. Go, then, but you commit a great injustice,” said the Countess.

As she said these words she turned from me. I ventured to follow her, and entreated her not to be angry.

Tears fell from her eyes. I was frightened. With folded hands I implored her not to be angry.

“Command me, I will obey,” said I. “Do you command me to remain? My inward peace, my happiness, my life, I sacrifice with joy to this command!”

“Go Faust, I force nothing,” said the Countess. “You remain unwillingly with us.”

“O! Countess!” said I, “drive not a man to desperation.”

“Faust, when do you depart?” said she.

“To-morrow—to-day,” I replied.

“No, no, Faust!” said she, softly, and approached nearer to me—“I place no value on my health, on your gift, if you—— Faust! you remain, at least, only a few days.” She whispered with such a soft entreating voice, and looked so anxiously at me with her moist eyes, that I ceased to be master over my own will.

“I remain,” said I.

“But willingly?” she asked.

“With delight,” I replied.

“It is well! Now leave me a moment, Faust. You have quite disturbed me. But do not leave the garden. I only wish to recover myself.” With these words she left me, and disappeared amongst the blooming orange trees.

I remained long in the same place, like a dreamer. I had never heard such language from the Countess before; it was not that of mere politeness. My whole being trembled at the idea that I possessed some interest in her heart. These solicitations for me to remain—these tears, and, what cannot be described, that peculiar something—the extraordinary language in her manners, in her movements, in her voice—a language, without words, yet which said more than words could express—I understood nothing of it all, and, nevertheless, understood all. I doubted, and yet was convinced.

In about ten minutes, as I wandered up and down the garden walks, and joined the women, the Countess approached us quickly and gaily. Enveloped in white drapery, and surrounded by the sun’s rays, she appeared like a being out of Raphael’s dreams. In her hand she carried a bouquet of pinks, roses and violet-colored vanilla flowers.

“I have plucked a few flowers for you, dear Faust,” said she; “do not despise them. I give them to you with quite different feelings from those with which, during my sickness, I gave the rose. But I should not remind you, my dear physician, how I vexed you with my childish humors. I recollect it myself, as in duty bound, in order to make up for it. And, oh! how much have I to make up! Do give me your arm—and you, Miss Cecilia, take the other,” which was the name of one of her women.

As we wandered around with light chat and jokes, her father, the Count, joined us, and soon after the Prince. Never had Hortensia been more lovely than on this, the first day of her restored health. She spoke with tender respect to her father—with friendly familiarity to her female companions—with refined politeness and goodness to the Prince; to me, never without demonstrations of her gratitude. Not that she thanked me in words, but in the manner in which she spoke to me. So soon as she turned to me, there was in her words and tone something indescribably cordial; in her looks and manner something of a sisterly confidence, good

naturally solicitous for my satisfaction. This tone did not change either in the presence of her father or of the Prince. She continued it with an ingenuousness and sincerity, as if it ought not to be otherwise.

Some delightful days passed by in fetes and joy. Hortensia's manners towards me did not change. I, myself, ever wavering between the cold laws of respect and the flames of passion, found once more in Hortensia's conversation an inward repose and independence which I had been deprived of since my acquaintance with this prodigy. Her sincerity and truth made me more calm and contented; her confidence, as it were, more fraternal. She did not at all conceal a heart full of the purest friendship for me—still less did I conceal my feelings, though at the same time I did not venture to betray their depth. Yet who could long behold so many charms, and resist their influence?

It was the custom for the visitors of the baths at Battaglia, on fine evenings, to sit assembled before a large coffee house, enjoying the air and refreshments. An unconstrained conversation reigned there. They sat upon chairs in the open street, and in a half circle. To the right and left were heard the sounds of guitars, mandolines and singing, after the Italian mode. In the great houses, also, music sounded, and windows and doors were lighted. One evening, the Prince having left us earlier than usual, the Countess took a whim to visit this assemblage of the visitors of the place. I was already in my room, and sat holding the bouquet in both hands, dreaming over my destiny. The light burnt dimly, and my room door stood half open. Hortensia and Cecilia saw me as they passed. They watched me for some time, and then came softly in. I did not observe them till they stood close beside me, and declared that I must accompany them to the town. They now amused themselves with jests at my surprise. Hortensia recognised the bouquet. She took it from the table where I had thrown it, and, withered as it was, stuck it in her bosom. We went down to Battaglia and mingled with the company.

It happened that Cecilia, in conversation with some persons of her acquaintance, separated from us, which neither Hortensia or myself regretted. On my arm, she wandered up and down through the moving crowd, till she was fatigued. We seated ourselves on a little bench under an elm which grew on one side. The moon shone through the branches upon Hortensia's beautiful face, and upon the withered flowers in her bosom.

"Will you again rob me of what you have given me?" asked I, as I pointed to the bouquet.

She looked at me long, with a strange, thoughtful seriousness, and then replied, "It always appears to me as if I could give you nothing, and could take nothing from you. Is it not sometimes the same with you?"

This answer and question, so lightly and quietly thrown out, placed me in embarrassment and silence. From respect I scarcely dared to dwell on the kind meaning. She once more repeated the question.

"Alas! it is often so with me!" said I. "When I see the abyss between you and myself, and the distance which holds me far from you, then is it so with me. Who can give or take from the gods, that which does not always belong to them?"

She opened her eyes and looked at me with astonishment.

"Why do you speak of the gods, Faust? Even to one's-self, one can give or take nothing."

"One's-self?" replied I, with an uncertain voice. "You know that you have made me your own property?"

"I do not myself know how it is!" she answered, and her eyes sank down.

"But I, dear Countess; I know it. The enchantment which ruled over us is not lost, but has only changed its direction. Formerly in your transfigurations I governed your will, now you govern mine. In your presence only do I live. I can do nothing—I am nothing without you. If my confession, a crime before the world, but not before God, vexes you, I am not the cause, since it is at your own command that I have acted. Can I dissemble before you? If it is a crime that my soul has involuntarily become chained to your being, it is not my offence."

She turned away her face, and raised her hand to denote that I should be silent. I had at the same moment raised mine, in order to cover my eyes, which were dimmed in tears. The upraised hands sank down clasped together. We were silent; thought was lost in powerful feelings. I had betrayed my passion—but Hortensia had pardoned me.

Cecilia disturbed us. We went silently back to the castle. As we separated, the Countess said, lowly and sadly, "Through you I have obtained health, only to suffer more."

PETRARCH'S DWELLING.

When we met the next day, there was a kind of sacred timidity between us. I scarcely ventured to address her—she scarcely to answer me. In our looks, full of seriousness we often met. She appeared to wish to look through me. I sought to read in her eyes whether in her calmer moments she were offended at my boldness of yesterday. Many days passed without our again seeing each other alone. We had a secret between us, and feared to profane it by a look. Hortensia's whole manner was more solemn—her gaiety more moderate—as if she did not enter with her whole heart into the customary routine of life.

Nevertheless, I counted too much on her changed manner, after that decisive hour under the elm. Prince Charles had, as I afterwards learnt, formally solicited the hand of the Countess, which had caused an unpleasant and constrained state between herself, her father and the Prince. In order to gain time, and not to offend them, Hortensia had entreated for time for reflection, and truly for such an unlimited period, and under such hard conditions, that Charles must almost despair ever to see his wishes crowned.

"Not that I have any aversion to the Prince," as she expressed her explanation, "but I wish still to enjoy my freedom. I will, at a future day, of myself and voluntarily, give my yes or no. But if the offer is repeated before I desire it, then I am determined to reject him, even though I may truly love him."

The Count knew of old the inflexible disposition of his daughter; though from that reason he hoped the best, since Hortensia had not directly refused the attentions of the Prince. Charles, on the contrary, was

discouraged. He saw in this declaration, only the finally rejected lover, without any definite hopes. Yet he had sufficient self love to believe, that by his constancy, he should at last move Hortensia's heart. Her confidence towards me was at times displeasing to him; not that he appeared to fear it. He even found it so much the more without danger, because it was open and unembarrassed. Hortensia also treated him in the same manner. He had accustomed himself to see me treated as the friend of the house and confidential adviser both of the father and daughter; and as the Count had confided to him the secret of my plebeian descent, he could still less fear me as a rival. He condescended to make me his confidant, and one day related to me the history of his wooing Hortensia's hand and her answer. He conjured me to grant him my friendly services to discover, however distant, if Hortensia had any inclination towards him. I was obliged to promise it. Every day he inquired if I had made any discovery? I could always excuse myself that I had had no opportunity of seeing Hortensia alone.

Probably, in order to facilitate this opportunity, he arranged a little party of pleasure to Arquato, three miles from Battaglia, where the visitors of the baths were accustomed to make a pilgrimage to the tomb and dwelling house of Petrarch. Hortensia esteemed, above all the Italian poets, this tender and spiritualized songster of pure love. She had long been enjoying the idea of this pilgrimage. But when the moment of departure arrived, Charles, under some slight pretence, not only remained behind himself, but contrived also to prevent the Count from accompanying Hortensia, promising, however, to follow us without fail. Beatrice and Cecilia, the companions of the Countess, rode with her alone. I followed the carriage on horseback.

I conducted the ladies to the church yard of the village, where a simple monument covered the ashes of the immortal poet, and translated the Latin inscription for them. Hortensia stood absorbed in deep and serious thought before the grave. She sighed, as she remarked, "Thus die all!" and I thought I felt her draw my arm slightly towards her. "Die all," said I; "then would not the life of man be a cruelty of the Creator, and love the heaviest curse of life?"

Sorrowfully we left the church yard. A friendly old man led us from thence to a vine hill, not far distant, upon which stands Petrarch's dwelling, and near by a little garden. From this spot the prospect of the plain is truly beautiful. In the house they showed us the poet's household furniture, which was preserved with religious faithfulness—the table at which he read and wrote, the chair on which he rested, and even his kitchen utensils.

The sight of such relics always have a peculiar influence on the mind. It annihilates the interval of centuries and brings the distant past prominently before the imagination. To me, it was as if the poet had only gone out, and that he would presently open the little brown door of his chamber and greet us. Hortensia found an elegant edition of Petrarch's sonnets on a table in a corner. Wearied, she seated herself there, rested her beautiful head upon her hand, and read attentively, whilst the fingers of her supporting hand concealed her eyes. Beatrice and Cecilia went to prepare refreshments for the Countess. I remained silently at

the window. Petrarch's love and hopelessness were my destiny. Another Laura sat there, divine, not through the charms of the muse, but of herself.

Hortensia took a handkerchief to dry her eyes. I was troubled at seeing her weep. I approached her timidly, but did not venture to address her. She suddenly rose, and smiling, said to me with a tearful look, "The poor Petrarch! the poor human heart! But all passes—all. It is centuries since he has ceased to lament. Though they say, that in his latter years he conquered his passion. Is it good to conquer one's-self? May it not be called destroying one's-self?"

"If necessity commands it;" I replied.

"Has necessity power over the human heart?" asked the Countess.

"But," I replied, "Laura was the wife of Hugo de Sade. Her heart dared not to belong to her lover. His fate was solitary to love, solitary to die. He had the gift of song, and the muses consoled him. He was unhappy—as I."

"As you?" replied Hortensia, with a scarcely audible voice—"Unhappy, Faust?"

"I have not," I continued, "the divine gift of song, therefore my heart will break, since it hath nothing to console it. Countess, dear Countess—dare I say more than I have said? But I will continue worthy of your esteem, and that can only be by a manly courage—grant me one request, only one modest request."

Hortensia threw down her eyes, but did not answer.

"One request, dear Countess, for my quiet," I again said.

"What shall I do?" whispered she, without raising her eyes.

"Am I certain that you will not refuse my prayer?" I asked.

She regarded me with a long, serious look, and with an indescribable dignity, said, "Faust, I know not what you would ask; but how great soever it may be—yes, Faust, I am indebted to you for my recovery—my life! I grant your request. Speak."

I seized her hand, I sank at her feet, I pressed her hand to my burning lips—I almost lost consciousness and speech. Hortensia stood with downcast eyes, as if from apathy.

I at length gained power to speak. "I must away from here. Let me fly from you. I dare tarry no longer. Let me, in some solitude, far from you, tranquillize and end my unhappy life. I must away! I disturb the peace of your house. Charles has demanded your hand!"

"I will never have him!" said the Countess, hurriedly and with a firm tone.

"Let me fly. Even your goodness increases the multitude of my miseries." Hortensia struggled violently with herself.

"You commit a fearful injustice. But I can no longer prevent it!" cried she, as she burst into a passionate flood of tears. She staggered and sought the chair—seeing which I sprang up, and she sank sobbing on my breast. After some moments she recovered, and feeling herself encircled by my arms, she endeavored to loosen my hold. But I, forgetting the old commands of respect, pressed her more closely, as I sighed, "A few moments, and then we part!"

"Her resistance ceased; she then raised her eyes on

me, and with a countenance, on which, as formerly, the color of transfiguration glimmered, said, "Faust, what are you doing?"

"Will you not forget me in my absence?" asked I, in return.

"Can I?" sighed she, and threw down her eyes.

"Farewell, Hortensia!" stammered I, and my cheek rested on her's.

"Emanuel! Emanuel!" whispered she. Our lips met. I felt tenderly and gently her reciprocal kiss, whilst one of her arms rested around my neck.

Minutes, quarters of hours passed. At length, together and in silence, we left the dwelling of Petrarch, and proceeded in the path down the hill, where we found two servants, who conducted us to an arbor under some wild laurel trees, where a little repast was prepared for us. At that moment the carriage of the Prince rolled by. Charles and the Count descended from it.

Hortensia was very serious and laconic in her answers. She appeared lost in continued meditation. I saw that she was obliged to force herself to speak to the Prince. Towards me she preserved, unchanged, the cordiality and confidence of her deportment. Petrarch's dwelling was again visited, as the Count wished to see it. As we entered the room, which had been consecrated by the mutual confession of our hearts, Hortensia seated herself again on the chair near the table, in the same place, and with the book as at first, and so remained till we departed. Then she arose, laid her hand upon her breast, cast a penetrating look on me and hurried quickly from the apartment.

The Prince had remarked this emotion and this look. A deep red rose over his countenance; he went out with folded arms and his head hung down. All joy retreated from our party. Every one appeared desirous to reach the castle soon again. I did not doubt but that Charles's jealousy had guessed all, and feared his revenge less for myself than for the peace of the Countess. Therefore, as soon as I returned home, I determined to arrange every thing for my speedy departure the next morning. I communicated my irrevocable resolution to the Count, gave up to him all the papers, and entreated him to say nothing to the Countess until I was gone.

MELANCHOLY SEPARATION.

I had long since obtained the consent of the Count, that in this event the honest old Sebald should accompany me, who had many times demanded his dismissal, in order to revisit his German home. Sebald twirled and danced round the room for joy, when he heard from me that the moment of departure had arrived. A horse and cloak bag for each, was our whole equipment for the journey.

I had determined to withdraw very quietly at the dawn of the following day. No one knew any thing of my departure, except the Count and old Sebald, and I desired that no one should know it. I determined to leave behind for Hortensia a few lines of thanks and love, and an eternal farewell. The old Count appeared surprised, though not discontented. He embraced me most tenderly, thanked me for the services I had performed, and promised within an hour to come to my room, in order to give me some useful papers, which would procure

me for the future a life free from care, and which, as he expressed it, was only a payment on account of a debt for life. I would not refuse a moderate sum for travelling expenses, in order to reach Germany—in fact I was almost without money—but my pride refused to take more.

I packed up, as soon as I returned to my room. Sebald hurried out to prepare the horses and arrange every thing for departing at the moment. In the meanwhile I wrote to Hortensia. I cannot describe what I suffered—how I struggled with myself—how often I sprang up from writing to relieve my pains with tears. My life until now had been one full of care and unhappiness—and the dim future to me presented nothing more soothing to the soul. Death, thought I, is sweeter and easier than thus to outlive hope.

I destroyed many times what I had written, and had not finished, when I was disturbed in a manner that I least expected.

Trembling and almost breathless Sebald rushed into my room, hastily took up the packed portmanteau and cried:

"Mr. Faust, some mischief has happened; they will drag you to prison; they will murder you! Let us fly ere it is too late."

"In vain I asked the cause of his fright. I only learnt that the Count was in a rage, the Prince raving, and every one in the castle roused against me. I replied coldly, that I had nothing to fear, and still less to fly like a criminal.

"Sir," cried Sebald, "one cannot escape without misfortune from this unhappy family, over which a bad star rules. This I have long since said. Fly!"

At this moment two of the Count's game-keepers came in and requested me to come immediately to the Count. Sebald blinked and winked, and urged me to endeavor to escape. I could not avoid smiling at his terror, and followed the servants. I, however, commanded Sebald to saddle the horses, since I no longer doubted that something extraordinary had occurred, and thought that the Prince, probably from jealousy, had projected some quarrel with me.

I had scarcely reached the Count Hormegg, when Charles came storming into the room, and declared that I had dishonored the house, and had a secret intrigue with the Countess. Beatrice, the companion of the Countess, gained over to the Prince, either by his presents or perhaps by his tenderness, had, as she left Petrarch's dwelling with Cecilia, become impatient at Hortensia and myself, and returned and seen us in the embrace of each other. The Abigail was discreet enough not to disturb us, but was prompt enough, so soon as we returned to the castle, to betray the important event to the Prince. The Count, who could believe any thing but this—since it appeared to him the most unnatural thing in the world, that a common citizen, a painter, should have won the love of a Countess of Hormegg—treated the affair, at first, as a mere illusion of jealousy. The Prince, for his justification, was obliged to betray his informer; and Beatrice, though much opposed to it, was compelled to acknowledge what she had seen.

The anger of the old Count knew no bounds; yet the event appeared to him so monstrous, that he determined to interrogate the Countess herself upon it.

Hortensia appeared. The sight of the pale faces, disfigured by rage and fright, excited her terror.

"What has happened?" cried she, almost beside herself.

With fearful earnestness, the Count replied, "That thou must say." He then, with a forced tranquillity and kindness, took her hand and said:

"Hortensia, thou art accused of having stained the honor of our name, by—well then, it must be said,—by an intrigue with the painter, Faust. Hortensia, deny it—say no! Give honor and tranquillity again to thy father. Thou canst do it. Refute all malicious tongues—refute the assertion that thou wast seen to-day in Faust's arms; it was a delusion, a misunderstanding, deception. Here stands the Prince, thy future husband. Reach him thy hand. Declare to him, that all that has been said against thee and Faust, are wicked lies. Faust's presence shall no longer disturb our peace: this night he leaves us forever."

The Count spoke still longer. He did so, in order to give an advantageous turn to the fact—since the alternate redness and paleness of Hortensia allowed him no longer to doubt of its truth—which might satisfy the Prince, and make every thing smooth again. He was prepared for nothing less than what Hortensia, as soon as he was silent, openly declared. Excited to the most impetuous feelings, as much by the treachery of Beatrice, who was still present, as by the reproaches cast upon her, and the news of my sudden departure, with her own peculiar dignity and resolution, she turned first towards Beatrice, and said:

"Wretch! I stand not opposed to you. My servant must not dare to be my accuser. I have not to justify myself before you. Leave the room, and the castle, and never appear before me again."

Beatrice fell weeping at her feet. It was in vain—she must obey, and departed.

"Dear Faust," said she to me—and her cheeks glowed with an unnatural color—"you stand here as one accused or condemned." She then related what had happened, and went on to say: "They expect me to justify myself. I have no justification to make before any one but God, the judge of hearts. I have only here to acknowledge the truth, since my father exacts it, and to declare my unalterable design, since destiny commands it, and I am born to be unhappy. Faust, I should be unworthy of your regard, could I not raise myself above any misfortune."

She then turned to the Prince and said, "I esteem you, but I do not love you. My hand will never be your's; nourish no farther hopes. After what has just passed, I must beg you to avoid us forever. Do not expect that my father can force me against my will. Life is indifferent to me. His first act of power, would have no other consequences than that he must bury the corpse of his daughter. To you, I have nothing more to say. But to you, my father, I must acknowledge that I love—love this Faust. But it is not my fault. He is hateful to you—he is not of our rank. He must separate from us. I annul my earthly union with him. But my heart remains with him. You, my father, can make no change, since any endeavor to do so will be the end of my life. I say to you beforehand, I am prepared for my death, since that only will terminate my miseries."

She stopped. The Count wished to speak—the Prince likewise. She motioned them to be silent. She approached me, drew a ring from her finger, gave it to me, and said, "My friend, I part from you, perhaps forever. Take this ring in remembrance of me. This gold and these diamonds shall become dust, sooner than my love and truth shall cease. Do not forget me."

As she said this, she laid her arms on my shoulders, pressed a kiss on my lips—her countenance changed—the blood forsook her cheeks—and pale and cold she sank with closed eyes, to the floor.

The Count gave a piercing, fearful shriek. The Prince called for assistance. I carried the beautiful body to a couch. Women hurried in—physicians were called. I sunk, without consciousness on my knees, before the couch, and held the cold hand of the senseless one to my cheek. The Count tore me away. He was like a madman.

"Thou hast murdered her," thundered he to me. "Fly, wretch, and never let me see thee again!"

He thrust me out of the door. Upon his sign, the huntsmen seized me and dragged me down the stairs before the castle. Sebald stood before the stable. As soon as he perceived me, he hurried forward and drew me towards the saddled horses in the stable. There I lost all power and sense. I lay, as Sebald afterwards said, a full quarter of an hour, senseless on the earth. I had scarcely recovered, when he lifted me upon one of the horses, and we hastened from the castle. I rode as if in my sleep, and was often in danger of falling. By degrees, I gained full consciousness and power. The past was now clear before me. I became desperate, and determined to return to the castle and know Hortensia's fate. Sebald entreated me, by all the saints, to give up so frantic a design. It was in vain. I had just turned my horse, when I saw a rider coming towards us at full gallop, and heard some one cry, "Cursed assassin." It was Charles's voice. At the same time some shot struck me. As I grasped my pistols, my horse fell dead. I sprang up. Charles rode towards me with a drawn sword, and as he was about to cut me down, I shot him through the body. His attendant caught him as he fell. Sebald pursued them in their flight and sent some balls after them. He then returned, took the portmanteau from the dead horse; I mounted with him, and we hurried on at a quick pace.

This murder had occurred in the vicinity of a little wood, which we soon reached. The sun had already set. We rode through the whole night, without knowing where. As we stopped at daybreak, at a village inn, in order to give our horse some rest, we found him so excoriated by the saddle, that we gave up all hope of using him further. We sold him at a very low price, and continued our flight on foot by a secure by-road, carrying our baggage by turns.

NEW ADVENTURE.

The first rays of the rising sun, as we journeyed on, fell on the diamonds of Hortensia's ring. I kissed it and wept over the recollections it brought to mind. Sebald had already told me in the night, that he had heard from one of the servants, whilst I was lying insensible near the horses in the yard, that Hortensia, who had

been considered dead, had returned to life. This news had strengthened and consoled me. I was perfectly indifferent about my own fate. Hortensia's greatness of soul had inspired me. I was proud of my misery. My conscience, free from reproach, raised me above all fear. I had but one sorrow—to be eternally separated from one whom I must ever love.

When we reached Ravenna, we took our first day's rest. It was a long day's rest—for I, shaken by the late events and exhausted by my unusual fatigue and exertion, was very ill. For two weeks I lay in a fever. Sebald endured the most painful anxiety, since he feared, and justly, the murder of the Prince would necessarily bring us into the hands of justice. He had given to us both feigned names, and bought other clothes. My good constitution, more than the science of my physician, at length preserved me, though great weakness remained in all my limbs. But as we had determined to go by ship from Rimini to Trieste, I hoped to recover my health on the way.

One evening Sebald came to me in the greatest fright and said, "Sir, we can remain here no longer. A stranger stands without, and wishes to speak with you. We are betrayed. He asked at first my name, and I could not deny it. He then asked for you."

"Let him come in," said I.

A well-dressed man entered, who, after the first exchange of politeness, inquired after my health. As I assured him, that I was quite well again, he said, "So much the better. I may then give you some good advice. You know, what passed between Prince Charles and yourself. He is out of danger, but has sworn to take your life. You had, therefore, better leave immediately. You intend to go to Germany by Trieste. Do not do so. There is no ship for Trieste at Rimini. There is only a Neapolitan vessel that goes back to Naples. When once at sea, you are safe; otherwise, in a few hours, death or a prison. Here is a letter for the Neapolitan captain, he is my truest friend, and will receive you with pleasure. Now, go immediately to Rimini, and from thence to Naples."

I was not a little embarrassed at seeing this stranger so well informed. To my questions, how he acquired this knowledge, he smiled and only replied, "I know nothing more, and can tell you nothing more. I reside here in Ravenna; am a clerk of the court. Save yourself." He then suddenly left us.

Sebald affirmed stoutly and firmly, that the man must be possessed by a devil, or he could not have known our secrets. As the stranger spoke with several of the people of the hotel, we learnt afterwards that the unknown so called court's secretary, was a good, honest man, wealthy and married. It was incomprehensible how our most carefully concealed plan of going to Germany by Trieste, could be so exactly known, as no one but ourselves was privy to it. The enigma was, however, soon solved, when Sebald confessed to me, that he had during my illness, written a letter to his former comrade Casper at Battaglia, begging to know whether the Prince was really dead or not. He expected the answer in vain. Without doubt, the letter had fallen into the hands of Charles or his people, or the contents were betrayed to him.

Sebald was now in the greatest anxiety. He engaged a carriage for Rimini without delay, and we set out that

same night. These untoward circumstances made me not quite at ease. I knew not whether I was flying from or going to meet the danger. The justices' clerk might be an agent of the Prince. In the meanwhile, we not only reached Rimini, but found there the Neapolitan captain. I gave him the letter of the clerk—though I do not deny that I had before opened and read it. I soon agreed with him as to our voyage to Naples. The wind became fair—the anchors were raised. Besides ourselves, there were some other travellers on board; amongst others, a young man, whose sight at first was not very agreeable to me, as I remembered to have seen him once, though very transiently at the baths of Battaglia. I, however, became easy, as I judged from his conversation, that he had not observed me, and that I was completely a stranger to him. He had only left Battaglia three days since, and was returning to Naples, where he carried on a considerable business. He mentioned the acquaintances which he had made at the baths, and spoke of the German Countess, who was a wonder of grace and beauty. How his remark made my heart beat! He appeared to know nothing of the wounding or death of the Prince. The Countess, whose name was unknown to him, had gone four days before him, but where, he had not troubled himself to inquire.

However imperfect this news was, it served not a little to tranquillize me. Hortensia lived—Hortensia was in health. "May she be happy!" was my sigh.

The voyage was tedious to all but myself. I sought solitude. Upon the deck, I watched through many nights and dreamed of Hortensia. The young merchant, who called himself Tufaldini, remarked my melancholy, and took much pains to enliven me. He heard I was a painter; he passionately loved the art, and constantly turned the conversation upon that subject, since nothing but that appeared to interest or make me talkative. His sympathy and friendship went so far, that he invited me to stay at his house in Naples, which I was the less inclined to refuse, as I was an entire stranger in that city, and my own and Sebald's joint stock of gold, particularly after the deduction of travelling expenses, had considerably dwindled away.

NEW WONDER.

The kindness and attention of the generous Tufaldini, in fact put me to the blush. From a travelling companion, he had made himself my friend, though I had done little or nothing to gain or merit his love. He introduced me as his friend to his aged and respectable mother and charming wife. They prepared the best chambers for Sebald and myself, and treated me, from the first day of our arrival, like an old family friend. But Tufaldini did not rest here. He introduced me to all his acquaintances, and orders soon came for pictures. He was as eager to make me known, as if it were for his own advantage. He consented at last to receive payment for my board and lodging, though he was at first much mortified by my offering it. But when he saw my determination to leave his house, if he would not accept any remuneration, he took the money, though more to gratify me than indemnify himself.

I was, above all expectation, fortunate in my works.

My pictures were liked, and I was paid what I demanded. One finished order brought on another. Even Sebald found himself so comfortable in Naples, that he forgot his home sickness. He thanked God for having escaped from the service of the Count with a sound head, and would, as he expressed it, rather serve me for bread and water, than the Count for a whole bowl of gold.

My plan was to gain sufficient by my labors to enable me to travel to Germany, and there settle myself. I was industrious and economical. So passed one year. The love which I enjoyed in Tufaldini's house; my quiet life in the dissipated city; the charm of the soft climate, and then, that I was without a vocation, without friends in Germany, induced me to forget my first design. I remained where I was. Joy bloomed for me as little in Germany as in the Italian soil; only the thought, that perhaps Hortensia dwelt on the estate of her father; that I might then have the consolation to see her once more, though at a distance; this thought alone, sometimes drew my desires towards the north. But then I recollected the parting hour and the words she spoke: *I annul my earthly union with him!* as, before her father, she solemnly, and with such heroic greatness, renounced me: I again roused my courage, and determined to suffer all and cheerfully. I was an oak, which the storm had shattered, without branches, without leaves, solitary, unregarded and dying in itself.

It is said, that Time's beneficent hand heals all wounds. I myself had believed the saying, but found it untrue. My melancholy continued the same—I avoided the gay. Tears often gave me relief, and my only joy was to dream of her—when I again saw her in her greatness and loveliness. Her ring was my holiest relic. Had it fallen into the depths of the sea, nothing should have prevented my plunging in after it.

The second year passed, but not my sorrow. A faint gleam of hope sometimes refreshed me, even in my darkest hour, that perhaps an accident might again bring me in the vicinity of my lost chosen one, or that at least I should have some news of her.

It is true, I did not see the possibility of it. How could the distant one know, after years, where the solitary one dwelt? It was all the same. What has hope to do with impossibilities? But at the end of the second year, I gave up this hope. Hortensia was dead for me. I saw her no longer in my dreams, except as a spirit shining in the rays of a glorified being.

Tufaldini and his wife had often asked me, in our confidential conversations, the cause of my melancholy. I could never prevail on myself to violate my secret. They no longer inquired, but they were more careful of my health. I felt that the powers of my life were sinking—and thoughts of the grave to me were sweet.

All was suddenly changed. One morning, Sebald brought some letters from the post. Amongst them were some new orders for pictures, and a little easel. I opened it. Who can imagine my joyful fright? I saw Hortensia's image—living, beautiful—but dressed in mourning—the face softer, thinner, and paler than I had actually seen it. On a small piece of paper, in Hortensia's hand, were written three words: "My Emanuel, hope."

I reeled through the room like an intoxicated person.

I sank down speechless on a chair, and raised my hands prayerfully to Heaven. I shouted—I sobbed. I kissed the picture and the little paper which her hand must have touched. I knelt, and with my face bowed to the floor, weeping did I thank Providence.

Thus Sebald found me. He thought I was deranged. He did not err. I feel that man is always stronger to bear misfortune than happiness; while against the one he always approaches more or less prepared, the other comes upon him without preparation or foresight.

Again my hopes bloomed out joyfully, and in them my health and life. Tufaldini and all my acquaintances were delighted at it. I expected from day to day fresh news from my dearly beloved. There was no doubt she knew my residence, though I could not comprehend how she had acquired the intelligence. But from what part of the world did her picture come? All my researches and inquiries on that subject were in vain.

THE SOLUTION.

At the end of eight months, I received another letter from her. It contained the following lines:

"I may see thee, Emanuel, only once more. Be in Leghorn the first morning of May, where thou shalt receive further information from a Swiss mercantile house, if thou inquierest for the widow Marian Schwarz, who will show thee my dwelling. Tell no one in Naples where thou goest; least of all speak of me. I belong no longer to any one in this world, except perhaps, for a few moments to thee."

This letter filled me with new delight, but at the same time with an anxious foreboding, on account of the sad secret which seemed to pierce through it. Nevertheless, again to see the most perfect of her sex, though only for a moment, was sufficient for my soul. I left Naples in April, to the great sorrow of the Tufaldini family. Sebald and every one believed that I was going back to Germany.

I arrived at Gaeta with Sebald. We had here an unexpected pleasure. In passing by the garden door of a villa, before the city, I observed among many other young ladies, Miss Cecilia. I stopped, sprang down, and made myself known. She led me into the circle of her relations. She had been married for three months. I learnt from her, that she had left Hortensia about a year since. She knew nothing of the residence of the Countess, only, that she had gone into a nunnery. "It is already a year," said Cecilia, "since Count Hormegg died. From the sudden contraction of his accustomed expenditure, I soon remarked, that he had left his affairs in a sadly confused state. The Countess diminished her train of domestics to a very few persons. I had the favor of remaining with her. As she soon after, by an unfortunate law-suit, lost all hopes of preserving any thing from the paternal estates, we were all discharged. She retained only one old attendant, and declared she would end her days in a cloister. Oh, how many tears did this separation cost us! Hortensia was an angel, and never more beautiful, never more charming, never more exalted than under the heaviest blow of destiny. She resigned all her accustomed splendor, and divided, like a dying person, all the riches of her

wardrobe, amongst her dismissed servants—rewarded all with a princely generosity, which must certainly have placed her in danger of want, and only begged us to include her in our prayers. I left her in Milan, and returned home here to my family. She has declared her intention of travelling to Germany and there seeking the solitude of a cloister.”

This relation of Cecilia quickly solved the enigma in Hortensia's last letter. I also learnt from her that Charles, who was severely but not mortally wounded, had immediately on his recovery, entered into the service of the order of Malta, and soon after died.

I left Gaeta in a pensive, yet happy mood. Hortensia's misfortune and the loss of her father, excited my compassion, but at the same time gave birth to a bolder hope than I had at any time ventured to conceive. I flattered myself that I might be able to change her determination for a cloister life, and with her heart, perhaps win her hand. I was dizzy with the thought of being able to share the fruits of my labors with Hortensia. This was my only dream the whole way to Leghorn, which I entered one beautiful morning, eight days before the allotted time.

I did not delay a moment in seeking out the Swiss commercial house, to which I was directed. I ran there in my travelling dress, and asked the address of the widow Schwarz, in order that I might learn whether the Countess had yet arrived in Leghorn. A menial servant conducted me to the widow, who lived in an obscure street, and in a very simple, private house. How great was my vexation to learn, that Mrs. Schwarz was gone out, and that I must call in two hours. Every moment of delay was so much taken from my life. I returned again at the appointed hour. An old servant woman opened the door, led me up stairs and announced me to her lady. I was invited to enter a very simply furnished but neat room. Opposite the room door, on a couch, sat a young lady, who did not appear to notice my entrance, or to return my salutation, but covering her face with both hands, endeavoured to conceal her sobs and tears.

At this sight, a feverish shudder ran through me. In the figure of the young lady, in the tone of her sobs, I recognized the form and voice of Hortensia. Without deliberating or assuring myself of the fact, like one intoxicated, I let hat and cane fall, and threw myself at the feet of the weeping one. Oh, God! who can say what I felt? Hortensia's arms hung round my neck—her lips met mine. The whole past was forgotten—the whole future seemed strewn with flowers. Never was love more beautifully remunerated, or constancy more blissfully rewarded. We both feared, simultaneously, that this moment was merely a dream of felicity. Indeed, on the first day of our meeting, so little was asked or answered, that we separated without knowing more of each other, than that we had met.

On the following day, one may easily believe, that I was ready in good time, to take advantage of the bewitching Hortensia's invitation to breakfast with her. Her servants consisted of a cook, a house maid, a waiting maid, coachman and footman. All the table service was of the finest porcelain and silver, although no longer with the arms and initials of the old Count. This appearance of a certain opulence, which was quite contrary to my first idea, and went far above the

powers of my own fortune, was very humbling to the dreamy plans I had indulged in during my journey from Gaeta to Leghorn. I expected, yes, I even wished to find Hortensia in a more limited situation, in order to have courage to offer my all. Now, I again stood before her, the poor painter.

I did not conceal, in our confidential conversations, what I had heard at Gaeta from Cecilia, and what feelings, what determinations, what hopes had been awakened. I described to her all my destroyed dreams, and hoped that she, perhaps, would give up her cruel design of burying her youth and beauty in the walls of a cloister; that she would choose me for her servant and true friend; that I would lay at her feet all that I had saved, and all that my future industry might gain. I described to her, with the colors of loving hope, the blessedness of a quiet private life, in some retired situation—the simple house, the little garden near it, the work room of the artist, inspired by her presence. I hesitated—I trembled—it was impossible to proceed. She threw her bright eyes upon me, and a heavenly color flew over and animated her countenance.

“Thus have my fancies revelled,” added I, after some time, “and shall they not be realized?”

Hortensia arose, went to a closet, drew out a little ebony casket, richly studded with silver, and handed it to me, together with the key.

“In order to deliver you this, I requested your presence in Leghorn. It belongs not in part, but in completion of your dream. After the death of my father, my first thought was to fulfil the duties of my gratitude to you. I have never lost sight of you since your flight from Battaglia. A fortunate accident brought into my hands the letter of your servant, written to one of his friends in my service, from Ravenna, giving your travelling plans. Mr. Tufaldini of Naples was persuaded by me, in a secret conference, to take care of you himself, forever. He received a small capital to defray all expenses, and even, if necessary, for your support. I would also, willingly have rewarded him for his trouble, but it was with the greatest reluctance the good man would accept from me the most trifling present. Thus I had the pleasure of receiving every four weeks, news of your health. Tufaldini's letters were my only comfort after our parting. On the death of my father, I separated myself, as regards fortune, from my family. Our estates must remain in the male line, all the rest I converted into gold. I no longer thought of returning to my native country—my last refuge should be a cloister. Under the pretence of impoverishment, I avoided all the old vicinities of my father, parted with my former domestics, took a private station and name, in order to live more concealed. It was not until I had accomplished all this, that I summoned you, in order to finish the work and redeem the vow which I had made to Heaven. The moment is at hand. You have related to me your beautiful dreams. Perhaps on yourself, more than on any other, now depends their realization.”

She opened the casket and drew out a packet of papers carefully secured and directed in my name; she broke the seal and laid before me a deed prepared by a notary, in which, partly as payment of a debt, partly as accrued interest which belonged to me, and partly as being heir to an inheritance left by the widow Marian

Schwarz, an immense sum, in bank notes of different countries, was made over to me.

"This, dear Faust," continued the Countess, "is your property—your well earned, well deserved property. I have no longer any share in it. A modest income is sufficient for me at present. When I renounce the world and belong to a cloister, you will also be heir to what I possess. If I am of any value to you, prove it by an eternal silence as regards my person, my station, and my true name. Yet more, I desire you to say not a syllable which can indicate refusal or thanks for this your own property. Give me your hand to it."

I listened to her speech with surprise and pain, laid down the papers with indifference, and replied:

"Do you believe that these bank notes have any value for me? I may neither refuse nor yet be thankful for them. Be not fearful of either. When you go into a cloister, all that remains, the world itself, is superfluous to me. I need nothing. What you give me is dust. Ah! Hortensia, you once said that it was my soul which animated you; were it still so, you would not pause to follow my example. I would burn these notes. What shall I do with them?—destroy you and your fortune also! Oh! that you were poor and mine! Hortensia, mine!"

She leant tremblingly towards me, clasped one of my hands in both of her's, and said passionately and with tears in her eyes:

"Am I not so, Emanuel?"

"But the cloister? Hortensia!"

"My last refuge—if thou forsakest me!"

Then made we our vows before God. At the altar, by the priestly hand, were they consecrated. We left Leghorn, and sought the charming solitude, in which we now dwell with our children.

CURRENTE CALAMOSITIES,

NO. IV.

BY THE AUTHOR OF "THE TREE ARTICLES."

Another change, my dear Editor! I am in New York, awaiting the opening of the spring, and, with pen in hand, ready to write whatever the contact of things around me shall impel me to scribble, *currente calamo*, for the April Messenger. I have described to you, before, many of my notions of the comforts, and conveniences, and enjoyments of this changeful world of ours, but these descriptions have chiefly consisted of rural and woodland sketches. But there are two sides to every picture. And, though I well know, as somebody, I forget who, very happily says, that

"When some mad poet stops to muse
About the moonlight and the dews,

The fairies and the fawns,
He's apt to think, he's apt to swear
That comfort dwells not any where

Except in groves and lawns:
That dreams are twice as sweet as dances,
That cities never breed romances," &c. &c.

yet, a man, after all the poets may say, will find much food for thought, nay, much material of solid and rational enjoyment in the crowded thoroughfares of a city. Yes, I, I confess it, Mr. Editor! It is all well

enough to have a *penchant* for what is in season. I have had my dreams, and told them, too, of all the dear delights of summer, and all the "pleasures of the pathless woods;" and like the author just quoted I may truly say,

"Yes! those dear dreams are all divine,
And those dear dreams have all been mine.
I like the dawning of the day,
I like the smell of new-mown hay,
I like the babbling of the brooks,
I like the croaking of the rooks,
I like the lowing of the heifers,
I like the whispers of the zephyrs,
I like the peaches and the posies,
I like the violets and roses;
To wander from my drowsy desk
To revel in the picturesque;
To hear, beneath the hoary trees,
The far-off murmur of the seas,
Or trace the river's mazy channels," &c. &c.

All this ground, I say, I have already gone over, in your pages. My engagements will keep me in the city, now, however, till the coming in of strawberry time, when I have an invitation again to ruralize, and shall do so: and the interim shall be occupied, so far as these papers are concerned, in giving you some city sketches, in place of those rural ones that have heretofore employed my pen. And why not? For

"I have been
A sojourner in many a scene,
And picked up wisdom in my way,
And dearly for it have had to pay,
Smiling and weeping all the while
As other people weep and smile.
And I have learned that Love is not
Confined to any hour or spot.
He decks the smile, and fires the frown,
Alike in country and in town:
And glances not a bit more bright
By moon-beam, than by candle-light;
I think much witchcraft oft reposes
On wreaths of artificial roses,
And ringlets,—I have ne'er disdained them,
Because the barber has profaned them!
I think that many a modern dance
May breed a topic for romance;
And many a concert have its springs
For touching hearts as well as strings," &c. &c.

My present *penchant*, then, is metropolitan; and I date from the Astor House. *Eccce signum!*

This granite pile is a village in itself;—standing, populous, in the midst of this great city, *imperium in imperio*. At this season of the year, its walls are crowded with people from all parts of this country, and with representatives, here and there, from every other. To-day, as I dined, I saw men from almost every state in the Union, among whom were several members of congress; more than one Frenchman, German, Dutchman, Spaniard, Italian, Englishman, Scotchman, Irishman, and Russian. There was a Smyrniote, a Greek, and a Swede, and after dinner a deputation of Oneida Indians examined the apartment, with great *sang froid* and immobility of mien! Besides those who sit at this immense table, there are the occupants of the ladies' dining hall, and many private families, who are never seen by the rest of the household, any more than if their residence were in Bond street or Waverley Place. Truly, a little world in its way, is our Astoria!

Among the long suites of rooms that border the spa-

cious galleries of this great caravanserai, is one range, the tenanting of which shall furnish me with a few sketches for this month's speculation. First in order, I will visit the temporary abode of a poet, who has come hither, all the way from his own "Glen Mary," in the heart of the Empire State, to superintend the bringing out of his new periodical, "The Corsair." This gallant little bark, by the bye, was launched upon her destined element of public patronage, last week, and was cheered, as she glided from the stocks, by the shouts of some thousands of subscribers. She has had a fair start, and has enjoyed favoring breezes, ever since she put forth on her voyage over the wide waste of waters, that, hereafter, are to be her home. The plan of this work is peculiar. Finding that, (by the operation of the booksellers' present, piratical system of publishing English light (the lightest) literature, in preference to the works of our own writers, combined with the reciprocity recently established in Great Britain towards this country, in withholding the power of taking out copyright there, from foreign writers,) there was no chance left for the native author, but to publish periodically, what he has to offer to the world, Mr. Willis and his friend and coadjutor, Dr. Porter, have fitted out this tight little craft to privateer also upon the wide sea of literature, and to take her chance with the book-selling pirates, in marauding upon the foreign commodity. The tendency of this will be to show the bibliopolists that they are not to enjoy, undisputed, the dominion of the ocean, and bear home all its treasures, to make the most of,—but are to be met on their own ground, to which, fortunately, they have secured no monopoly. The enterprise, so far, looks well and promises much; may it succeed! But I was talking of Willis.

The son of a respectable and much esteemed citizen of Boston, a practical printer, and editor of a religious weekly paper, Mr. Willis was early sent to Yale College, where he acquired a good belle-lettres education, and graduated with credit. His intellectual bent was ever towards poetry and romance, and long before he left college, he had distinguished himself as being capable of producing most touching poetry, and the most graceful prose. His first efforts were contributions to the pages of his father's paper, the Boston Recorder, the organ of the Calvinistic or Presbyterian church of New England,—and bore the signature of "Roy." These were principally upon scripture topics, and won for their author a precocious reputation, in that department. Indeed, I doubt if any thing he has done since, is superior to some of those early efforts,—such as "The Widow of Nain," "The Raising of Jairus' Daughter," &c. At about the same time Mr. Willis was writing some lighter effusions for the columns of the Boston Statesman, now the Morning Post, then under the editorial direction of Nathaniel Greene, brother of the present editor. These were sometimes humorous, sometimes serious, often of a very elevated character, and, combined with the productions of "Roy," soon established his reputation as one of the best of this country's poets. Soon after he left college, he set up the American Monthly Magazine, in Boston, in which he wrote some most graceful articles, exceeding in finish, as I cannot but think, any thing that he has more recently done. Among these, the paper, entitled "The Philosophy of Music,"

so sparkling with beautiful and lustrous imagery, so original in conception, so perfect in execution, cannot have been forgotten by any one who has ever read it. The "Editor's Table," (bating the vein of *petit maitre-ism*, which ran through its pages somewhat too prominently,) was always full of interest, and has since formed no small portion of the staple of a periodical, in this city, with which its author has since been connected. The Magazine lived but two years, and then Mr. W. came to New York, lent his name to the Mirror, and soon after, went abroad, as the European tourist for that establishment. His "First Impressions," "Pencilings by the Way," and "Inklings of Adventure," were the products of this enterprise, to which is to be added the obtainment of a lovely and accomplished wife. Returning home, after some years of foreign travel, he published his contributions to the Mirror, with considerable additions, under the above given titles, and, soon after, a volume of his poetry, called "Melanie, and other poems." The first winter after his return he passed at the seat of government, where he gathered many of the materials for his beautifully illustrated "Scenery of the United States," now in the course of publication, in numbers, by a London bookseller. His stores of information were increased, also, by subsequent extensive travel over the most interesting and picturesque portions of our country, and contributed to render the splendid work in question one of the most choice productions of the day. He then retired to a farm he had purchased in Owego, in this State, to which he gave the name of "Glen Mary." Here, cultivating trees and tilling the ground, he did not throw aside the pen, that use had made so familiar to his hand;—but employed it, occasionally, in a series of neat and graceful articles, addressed, through the Mirror, to his friend "The Doctor," upon all topics that, indifferently and casually, might occur to him, as he rambled over his rural realm. These letters were soon found to be popular; and they had proved a strong bond of union, moreover, between the author and the friend to whom they were addressed. The difficulties as to copyright and publication, to which I have already adverted, had taken place in England, and the sources of profit from the publication in that country, of an American author's book, which Mr. Willis had before enjoyed, were cut off by a successful motion to that effect, made in the British Parliament by Sir Lytton Bulwer, on the ground of reciprocity,—and the result of all was the project of "The Corsair." But I must hasten to another room in the attic of Astor's.

Here lives,—amongst political pamphlets, reports of congressional debates, of executive departments, and of investigating committees,—surrounded by such books as Junius, Say's Political Economy, Gouge on Banking, Carey on the Credit System, Vattel, Storey on the Constitution, The Federalist, &c. &c,—here lives, I say, for the nonce, the celebrated historiographer of the famous "Cruise of the Potomac,"—the originator and projector, though not allowed to be a participator, of "The Exploring Expedition." Mr. Reynolds is a citizen of Ohio, and has ever shown a devotion to the cause of science, which has been displayed, signally, in the two highly important cases above alluded to. It is no part of my plan, in penning these papers, to indulge in political disquisitions: but, in connection with

the brief notice already taken of my distinguished fellow boarder, I must be allowed to say, that it was an impolitic movement on the part of the government to deny to this gentleman the place in the expedition, which has recently sailed, so properly his dues for never had any administration a more formidable opponent than the present popular political orator of National Hall, has proved himself to be to that now in power. His political lectures are listened to by throngs, whom he addresses, not in the language and manner of a demagogue,—not by allusions to his own real or imaginary wrongs;—far, very far from it. He invites debate and discussion from the side he opposes,—and urges home his arguments upon the multitudes who crowd to hear him, with soberness and discretion, and not in the tone of a mere party haranguer of the populace. In manner he is very graceful, impassioned, and impressive; in the choice of language, discreet, well-prepared, and classical; and in argument close, subtle, fair, clear, and convincing. But, leaving Mr. Reynolds at his desk, whom have we here, next door?

Here is a man after your correspondent's own heart, my Editor! Let me introduce you to him. There he stands, the works of one William Shakspeare open before him, on one side, and those of "Rare Ben Jonson," on the other. He is conning a lecture upon the genius of the olden bards of Britain, to be delivered to-night at the hall of Stuyvesant Institute. Ask him to read you a passage, at random, with appropriate original comments thereon: he will do it for you,—for he has no silly affectation of believing you in error, or inclined, unduly, to compliment him, when you tell him, as you will, when you have heard him read, that he is beyond all compare, the best reader, and the most graceful speaker you ever listened to. Hear and see him deliver Shakspeare's "Antony over the dead body of Cæsar," or the scenes between Falstaff and Prince Hal, or Paul's speech before Agrippa, or Solomon's prayer at the dedication of the temple, or Hamlet's soliloquy on Death, or his advice to the actors, or Burns's Highland Mary, or Bonaparte's trip to Russia,—and say if I have too highly praised his eloquence.

Professor Simmons is the eldest son of Judge Simmons of Boston; he was educated at Harvard University, and, having graduated with honor, was appointed professor of elocution in that institution. He has lately left Cambridge, and is now delivering a very popular and much admired series of lectures upon the works and genius of Shakspeare, in this city. He is remarkable for the most perfect appropriateness of language, in conveying the most acute and accurate elucidations of the immortal bard,—displaying a verbal and philosophical intimacy and familiar acquaintance with the more recondite meanings of the text, and a tact at imparting that understanding to the minds of others, which are truly wonderful. Softer than the dew falls upon the flowers, fall the tender passages in Romeo and Juliet from his lips,—sweeter than honey from hives of Hybla, flow the liquid accents of the softer passions from his tongue,—while nothing can be more joyous and mirth-inspiring than the rich, riant, racy manner, in which he gives the comic conceptions of Avon's all-knowing, all-describing bard! The impetuous fire of Hotspur, the deep melancholy of Hamlet, the patient sorrows of Hermione, the mad ambi-

tion of Richard, the griefs of Imogen, and Desdemona, the savage jealousy of Othello, the infirm purpose of Macbeth, the innocent love of Miranda, and the voluptuous passion of Cleopatra,—all derive, from the tone and manner with which the reader delivers the passages that describe them, their most perfect elucidation and illustration. As Willis, the other day, remarked of the readings and commentaries of Simmons, "there are seven heavens in the genius of Shakspeare, and few people reach more than half of them: it was reserved for this man, to raise all, who hear him read and lecture, even to the seventh!"

But I have chatted too long, I fear, and must leave and relieve you, for another month. Adieu!

New York, April 1, 1839.

J. F. O.

THE WANDERER TO HIS NATIVE HOME.

FROM A LADY'S PORT FOLIO.

I come, but not in life's gladness—
I come, tho' in grief's hurried track—
Will ye take, in his rest heart's sadness,
The weary and wandering back?

I sigh for my childhood's glad bowers,
Whence, so long I've been destined to roam;
Oh! speed on, ye bright winged hours,
And waft to my dear native home.

Is the blue sky above it still bright,
And the green earth beneath still fair?
Do wild flowers still ope to the light,
In wonted luxuriance, there?

Will the voice of the same glad bird,
That charmed me in youth's sunny hour,
Again in its own haunts be heard,
As of yore, with a soul-soothing power?

I will seek the same moss-cover'd stone,
Where I hied in the sweet spring time,
And list to the 'customed moan
Of the brooklet's perpetual chime.

Perchance, the young cowslip still laves
Its brow in that pure, purling stream;
And the crests of the bright young waves
Are tipt with the dawn's early beam:

And the bee and the humming-bird sip
The sweets from the fox-glove's bell;
And the wings of the light zephyr dip
O'er mountain and streamlet and dell.

And dearer, far dearer than all
Of music that earth can afford,
As I enter the old wonted hall,
Will voices of lov'd ones be heard?

And cast o'er my wearied breast
The spell of affection once more;
And bid the poor wanderer rest,
When the night of his exile is o'er?

Oh, say! for in few fleeting hours,
To the haunts of my childhood I come,
Will you take to your own glad bowers,
The weary and wandering home?

Camden, S. C.

ETOILE.

* LETTERS TO MOTHERS:

By Mrs. L. H. Sigourney. Hartford: Hudson & Skinner, 1839.

The name of Mrs. Sigourney has long been known to the public, by her poetical writings. Perhaps no other American writer—certainly no writer of verse—has received so large a share of the popular approbation. This is as it should be. Her poems are always good; and if they are not *always* remarkable for redundant fancy, which some would fain consider a necessary constituent of verse, they are ever peculiar for pure thought, graceful diction, and well-timed moral truth; and when the lady pleases to let her fancy plume its airy wing, it returns with precious spoils from its flight.

But it is not as a poetical writer, that we come now to speak of our author. In her "*LETTERS TO YOUNG LADIES*," she presented herself, long since, to the public, in a new character—but of late, more especially so in the work before us, "*LETTERS TO MOTHERS*."

We took up this book with a half-formed prejudice—or, perhaps we had better say, with a thorough indifference—toward it. Its title sounded 'unpropitious.' We presumed it might be *useful*, and would most unquestionably prove *dry*! but a short time sufficed to correct our opinion. We found that it was indeed a work *useful*, in the highest sense of the term—and, to our surprise, intensely interesting. Though to afford entertainment, merely, was doubtless far from the writer's intention, yet the reader will not fail to derive it from every page. As he begins the perusal, he will recognise the poet in the matron—and as he proceeds he will be delighted with wholesome truth, adorned with the richest imagery which a cultivated fancy can bestow, and expressed in a style at once chaste and elegant.

The book is composed of some twenty chapters, or letters, upon almost every important subject which should enter into the direction of juvenile education, written in a familiar style, and addressed, as the title indicates, *to mothers*. The writer would commence with the infant, while yet in its cradle, and by judicious, mental and physical culture, she would prepare it for acting an honorable part on the great stage of life. But she is not content with this. Mindful of its immortal nature, she would teach the youthful spirit to take hold on Heaven!

We shall not attempt to give a critical analysis of the whole work; nor shall we linger to cavil about any imagined inaccuracy of thought or expression. We like the book; and though we be deemed less erudite for not evincing a disposition to find fault with an excellent thing, we shall proceed at once to give the reader an acquaintance with the book by various extracts from its pages. Let us commence at the beginning—even with the preface:

"ADDRESSED TO MOTHERS.

"You are sitting with your child in your arms. So am I. And I have never been as happy before. Have you? How this new affection seems to spread a soft, fresh green over the soul. Does not the whole heart blossom thick with plants of hope, sparkling with perpetual dew-drops? What a loss, had we passed through the world, without tasting this purest, most exquisite fount of love.

"Are you a novice? I am one also. Let us learn together. The culture of young minds, in their more advanced stages, has indeed been entrusted to me, and I have loved the office. But never before, have I been so blest, as to nurture the infant, when, as a germ quickened by spring, it opens the folding-doors of its little heart, and puts forth the thought, the preference, the affection, like filmy radicles, or timid tendrils, seeking where to twine.

"Ah! how much have we to learn, that we may bring this beautiful and mysterious creature, to the light of knowledge, the perfect bliss of immortality. Hath any being on earth a charge more fearfully important than that of the mother? God help us to be faithful, in proportion to the immensity of our trust!

"The soul, the soul of the babe, whose life is nourished by our own! Every trace that we grave upon it, will stand forth at the judgment, when 'the books are opened.' Every waste place, which we leave through neglect, will frown upon us, as an abyss, when the mountains fall, and the skies shrivel like a scroll! wherever we go, let us wear as a signet-ring, '*the child! the child!*' Amid all the music of life, let this ever be the key-tone, the soul of our child!"

The first letter is upon the "*privileges of the mother*," and is replete with sentiments of the soundest philosophy. We would like to transfer the entire chapter to our pages, but must be content with an extract or two:

"Woman is surely more deeply indebted to the government that protects her, than man, who bears within his own person, the elements of self defence. But how shall her gratitude be best made an operative principle? Secluded, as she wisely is, from any share in the administration of government, how shall her patriotism find legitimate exercise? The admixture of the female mind in the ferment of political ambition, would be neither safe if it were permitted, nor to be desired if it were safe. Nations who have encouraged it, have usually found their cabinet-councils perplexed by intrigue, or turbulent with contention. History has recorded instances, where the gentler sex have usurped the sceptre of the monarch, or invaded the province of the warrior. But we regard them either with amazement, as a planet rushing from its orbit—or with pity, as the lost Pleiad, vanishing from its happy and brilliant sisterhood."

Who will deny the truth of this? and yet it accords but poorly with some of the ill-starred reform-philosophy of the day. For our own part, we are happy, that one lady, at least, will claim for her sex its true dignity and its true delicacy. We would not be understood to assert that *any* would controvert the *letter* of this claim. But there certainly is a *spirit of sentiment* afloat, to which the spirit of the text does violence. But let our author be heard again:

"It seems now to be conceded, that the vital interests of our country may be aided by the zeal of mothers. Exposed as it is to the influx of untutored foreigners, often unfit for its institutions, or averse to their spirit, it seems to have been made a repository for the waste and refuse of other nations. To neutralize this mass, to rule its fermentations, to prevent it from becoming a lava-stream in the garden of liberty, and to purify it for those channels where the life-blood of the nation circulates, is a work of power and peril. The force of public opinion, or the terror of law, must hold in check these elements of danger, until education can restore them to order and beauty. Insubordination is becoming a prominent feature in some of our principal cities. Obedience in families, respect to magistrates, and love of country, should therefore be inculcated with increased energy, by those who have earliest access to the mind. A barrier to the torrent of corruption, and a guard over the strong holds of knowledge and of virtue, may be placed by the mother, as she watches over her cradled

son. Let her come forth with vigor and vigilance, at the call of her country, not like Boadicea in her chariot, but like the mother of Washington, feeling that the first lesson to every incipient ruler should be, 'how to obey.' The degree of her diligence in preparing her children to be good subjects of a just government, will be the true measure of her patriotism. While she labors to pour a pure and heavenly spirit into the hearts that open around her, she knows not but she may be appointed to rear some future statesman for her nation's helm, or priest for the temple of Jehovah."

There is beauty and touching pathos in the following extract, from the second "letter"—"influence of children upon parents:"

"I have seen a young and beautiful mother, herself like a brilliant and graceful flower. Nothing could divide her from her infant. It was to her as a two-soul. She had loved society, for there she had been as an idol. But what was the fleeting delight of adulation, to the deep love that took possession of her whole being? She had loved her father's house. There, she was ever like a song-bird, the first to welcome the day, and the last to bless it. Now, she wreathed the same blossoms of the heart around another home, and lulled her little nursing with the same inborn melodies.

"It was sick. She hung over it. She watched it. She comforted it. She sat whole nights with it in her arms. It was to her like the beloved of the King of Israel, 'feeding among the lilies.' Under the pressure of this care, there was in her eye a deep and holy beauty, which never gleamed there when she was radiant in the dance, or, in the halls of fashion, the cynosure. She had been taught to love God, and his worship, from her youth up: but when health again glowed in the face of her babe, there came from her lip such a prayer of flowing praise, as it had never before breathed.

"And when in her beautiful infant there were the first developments of character, and of those preferences and aversions which leave room to doubt whether they are from simplicity or perverseness, and whether they should be repressed or pitied, and how the harp might be so tuned as not to injure its tender and intricate harmony, there burst from her soul a supplication more earnest, more self-abandoning, more prevailing, than she had ever before poured into the ear of the Majesty of Heaven.

"So the feeble hand of the babe that she nourished, led her through more profound depths of humility, to higher aspirations of faith. And I felt that the affection, to whose hallowed influence she had so yielded, was guiding her to a higher seat among the 'just made perfect.'"

Equally touching and beautiful is the following,—the conclusion of the third "letter"—"Infancy:"

"The religion of a new-born babe, is the prayer of its mother. Keep this sacred flame burning for it, in the shrine of the soul, until it is able to light its own feeble lamp, and fill its new censor with praise.

"As the infant advances in strength, its religion should be love. Teach it love, by your own accents, your countenance, your whole deportment. Labor to fashion its habits and temper after this hallowed model. Let the first lessons of earth, breathe the spirit of Heaven.

"When the high gifts of speech and thought are given it, point it to Him who caused the sun to shine, and the plant to grow, and the chirping bird to be joyful in its nest. Teach it, that it is loved of this Great Being, that it may love Him in return. Mingle the majesty of His goodness with the elements of its thought. You will be surprised to see how soon the lisping lip may learn communion with the Father of Mercies.

" 'Teach me to pray—instruct me in religion!' said a young prince, to his tutor. 'You are not yet old

enough.' 'Ah, yes! I have been in the burying-ground. I have measured the graves. There are some there, which are shorter than I.'

"Mother, if there is, in your church-yard, one grave shorter than your child, hasten to instruct him in religion!"

Too much attention cannot be given to the character of the "first lessons" of maternal instruction. By neglecting to teach the "first, best lesson of obedience," how many a fond mother has entailed upon her offspring an inheritance of crime and woe, which in return has "brought down her grey hairs with sorrow to the grave."

"Watch for the time when your little one first exhibits decided preferences and aversions. The next letter in the alphabet, is obedience. It is its first step towards religion. The fear of God, must be taught by the parent, standing for a time, in the place of God.

"Establish your will as the law. Do it early, for docility is impaired by delay. It is the truest love, to save the little stranger in this labyrinth of life, all those conflicts of feeling, which must continue, as long as it remains doubtful who is to be its guide. As the root and germ of piety, as a preparation for submission to the Eternal Father, as the subduing process, which is to lead it in calmness through the storms and surges of time, teach obedience.

"It is a simple precept in philosophy, that obedience should be the most entire and unconditional, where reason is the weakest. Its requisitions should be enforced, in proportion to the want of intelligence in the subject. The parent is emphatically a light to those who sit in darkness. The transition from the dreamy existence of infancy, to the earliest activity of childhood, is a period when parental authority, is eminently needful, to repress evil, and to preserve happiness. But it must have been established *before*, in order to be in readiness *then*. Without this rudder, the little voyager is liable to be thrown among the eddies of its own passions, and wrecked like the bark canoe.

"You will not suppose me, my dear friends, the advocate of austerity. As the substitution of your wisdom, in the place of the wayward impulses of your child, is the truest kindness, so it is a feature of that kindness, to commence it when it may be done with the greatest ease. Gentleness, combined with firmness, will teach it to your infant. Wait a few months, and perhaps, it may not be so. Obedience, to the mind in its waxen state, is like the silken thread, by which the plant is drawn toward its prop; enforced too late, it is like the lasso, with which the wild horse is enchained, requiring dexterity to throw, and severity to manage.

"Deaf and dumb children, or those whose intellect is weak, it is peculiarly cruel, not to subjugate. With them, the will of the parent must longer, and more entirely operate. As reason develops, and the habits become regulated, and the affections take their right place, parental authority naturally relaxes its vigilance. It loosens, and falls off, like the thorny sheath of the chestnut, when the kernel ripens. But the husk of the chestnut is opened by the frost, and the sway of the parent yields to the sharper lessons of the world; and of this teaching, the young probationer is not always able to say that

'When most severe, and mustering all its wrath,
'Tis but the graver countenance of love.'

"With many of our most illustrious characters, the obedience of earlier years was strongly enforced. We know it was so, in the case of Washington. Other examples might be easily adduced. Those who have most wisely ruled others, have usually tested, by their own experience, the nature of subordination, at its proper season. Fabius Maximus, whose invincible wisdom tamed the fierce spirits of Rome, was so distinguished by submission to his superiors, as to be derided by the insubordinate, and called in his boyhood, 'the little sheep.'"

From the fifth "letter,"—"Maternal Love,"—we subjoin an extended extract:

"To love children, is the dictate of our nature. Apart from the promptings of kindred blood, it is a spontaneous tribute to their helplessness, their innocence, or their beauty. The total absence of this love, induces a suspicion that the heart is not right. 'Beware,' said Lavater, 'of him who hates the laugh of a child.' 'I love God, and every little child,' was the simple, yet sublime sentiment of Richter.

"The man of the world, pauses in his absorbing career, and elaps his hands, to gain an infant's smile.

"The victim of vice, gazes wishfully on the pure, open forehead of childhood, and retraces those blissful years that were free from guile. The man of piety loves that docility and singleness of heart, which drew from his Saviour's lips, the blessed words, 'of such is the kingdom of Heaven.'

"Elliot, the apostle of the Indians, amid his laborious ministry, and rude companionship, showed, in all places, the most marked attention to young children. In extreme age, when his head was white as the Alpine snows, he felt his heart warm at their approach. Many a pastor, whom he had assisted to consecrate, bore witness to the pathos of his appeal, the solemnity of his intonation, when he inquired, 'Brother, lovest thou our Lord Jesus Christ? Then feed these lambs!'

"The love of children, in man, is a virtue; in woman, an element of nature. It is a feature of her constitution, a proof of His wisdom, who, having entrusted to her the burden of the early nurture of a whole race, gives that sustaining power which produces harmony, between her dispositions and her allotted tasks.

"To love children, is a graceful lineament, in the character of young ladies. Anxious as they usually are to acquire the art of pleasing, they are not always aware what an attraction it imparts to their manners. It heightens the influence of beauty, and often produces a strong effect, where beauty is wanting.

"'Love children,' said Madame de Maintenon, in her advice to the young dauphiness; 'whether for a prince or a peasant, it is the most amiable accomplishment.' It was this very trait in her own character, that won the heart of Louis the Great. When she was governess of his children, and past the bloom of life, he surprised her one morning, in the royal nursery, sustaining with one arm, the oldest son, then feeble from the effects of a fever, rocking with the other hand a cradle in which lay the infant princess, while on her lap reposed the sleeping infant. His tenderness as a father, and his susceptibility as a man, accorded that deep admiration which would have been denied to the splendor of dress, the parade of rank, or the blaze of beauty.

"But how feeble are all the varieties of love, which childhood elicits, compared to that which exists in a mother's breast. Examine, I pray you, its unique nature, by contrast and comparison. We are wont to place our affections where our virtues are appreciated, or to fix our reliance where some benefit may be conferred. But maternal love, is founded on utter helplessness. A wailing cry, a foot too feeble to bear the burden of the body, an eye unable to distinguish the friend who feeds it, a mind more obtuse than the newborn lamb, which discerns its mother amid the flock, or the duckling that hastens from its shell to the stream, are among the elements of which it is compounded.

"It is able also to subsist without aliment. Other love requires the interchange of words, or smiles, some beauty, or capability, or moral fitness, either existing, or supposed to exist. It is wont, as it advances in ardor, to exact a vow of preference, above all the world beside, and if need be, to guard this, its Magna Charta, with the sting of reproach, or the pang of jealousy. It is scarcely proof against long absence, without frequent tokens of remembrance, and its most passionate stage of existence, may be checked by caprice."

We next turn to the seventh letter—"Health." This chapter, through the politeness of the author, some months ago graced the pages of our magazine. But we deem it of too much worth to be passed silently by, and we believe our readers will not object to our calling their attention to it again. At the time of our former publication of it, the "*New Yorker*" (one of our most spirited and judicious journals,) remarked, that "it deserved to be printed on satin, and suspended over every mantle-piece and toilet-table in the country."

Our limits will not allow us to quote the entire letter. We shall confine our extracts, therefore, to that portion which treats of the evils resulting from the too prevalent practise of *corset-wearing*—or, as it is commonly termed, "*tight lacing*." We are aware—as who is not—that it has come to be deemed indelicate to speak of this subject. The lady, whose work we are now discussing, has deemed it far otherwise. It is not deemed indelicate to speak of murder and crime, when they appear in their accustomed character; it is not deemed indelicate to hold back the hand of one who seeks destruction by the ordinary means; then why should it be judged offensive to speak boldly of this most common, this most fatal folly? *Indelicate*, forsooth! we would that those who feel themselves aggrieved by such discussions could be made to feel that their practise is something worse than indelicate—that it is positively suicidal!

Away, then, with this morbid sensibility! Let truth be heard, in the spirit of honest candor, and let its simple dictate be obeyed. Or, if fashion must still hold her undisturbed sway, let us brand with some more deserving and more opprobrious epithet, the most fearful instrument by which she works her cruel destruction. There is much in the magic of a name. An ingenious class of our industrious citizens have given to the useful result of their invention, the appropriate name of "*Life Preservers*." We like it. It is highly proper that in the name of any "invention," (and our author evidently classes the *corset* with "new inventions,") some reference should be made to the purpose to which it is to be applied. And if the fairest portion of community will still go on in the work of self-immolation, let us be true to truth, and call the horrid implement of this sacrifice by the juster term of "*Life Destroyers*!"

"Mothers ought to be ever awake to the evils of compression, in the region of the heart and lungs. A slight ligature there, in the earlier stages of life, is fraught with danger. To disturb or impede those laborers, who turn the wheels of life, both night and day, how absurd and ungrateful! Samson was bound in fetters, and ground in the prison-house for a while; but at length he crushed the pillars of the temple, and the lords of the Philistines perished with him. Nature, though she may be long in resenting a wrong, never forgets it. Against those who violate her laws, she often rises as a giant in his might; and when they least expect it, inflicts a fearful punishment.

"Fashion seems, long enough, to have attacked health in its strong holds. She cannot even prove that she has rendered the form more graceful, as some equivalent for her ravages. In ancient Greece, to whom our painters and sculptors still look for the purest models, was not the form left untortured? the volume of the lungs allowed free play? the heart permitted without manacles to do the great work which the Creator assigned it?

"The injuries inflicted by compression of the vital parts, are too numerous to be here recounted. Im-

paired digestion, obstructed circulation, pulmonary disease, and nervous wretchedness, are in their train. A physician, distinguished by practical knowledge of the Protean forms of insanity, asserted, that he gained many patients from that cause. Another medical gentleman of eminence, led by philanthropy to investigate the subject of tight-lacing, has assured the public, that multitudes annually die, by the severe discipline of busk and corset. His theory is sustained by collateral proof, and is illustrated by dissections.

"It is not sufficient, that we mothers protect our younger daughters, while more immediately under our authority, from such hurtful practises. We should follow them, until a principle is formed, by which they can protect themselves, against the tyranny of fashion. It is true, that no young lady acknowledges herself to be laced too tight. Habits that shun the light, and shelter themselves in subterfuge, are ever the most difficult to eradicate. A part of the energy which is essential to their reformation, must be expended in hunting them from their hiding places. Though the sufferer from tight-lacing will not own herself to be uncomfortable, the laborious respiration, the suffused countenance, the constrained movement, perhaps the curved spine, bring different testimony.

"But in these days of diffused knowledge, of heightened education, is it possible than any female can put in jeopardy the enjoyment of health, even the duration of existence, for a circumstance of dress? Will she throw an illusion over those who strive to save her, and like the Spartan culprit, conceal the destroyer that feeds upon her vitals? *We know that it is so.* Who that has tested the omnipotence of fashion, will doubt it? This is by no means the only sacrifice of health that she imposes. But it is a prominent one. Let us, who are mothers, look to it. Let us be fully aware of the dangers of stricture on the lungs and heart, during their season of development.

"Why should not we bring up our daughters, without any article of dress which could disorder the seat of vitality. Our sons hold themselves erect, without busk, or corset, or frame-work of whale-bone. Why should not our daughters, also? Did not God make them equally upright? Yes. But *they* have 'sought out many inventions.'

"Let us educate a race who shall have room to breathe. Let us promise, even in their cradle, that their hearts shall not be pinioned as in a vice, nor their spines bent like a bow, nor their ribs forced into the liver. Doubtless the husbands and fathers of the next generation will give us thanks."

Aye—doubtless the husbands and fathers of the present generation will give you thanks. But we must pass on, and entertain the reader with an exquisite *morceau* from the ninth letter—"Early Culture:"

"The husbandman wakes early, though the mother sleeps. He scarcely waits for the breath of spring to unbind the soil, ere he marks out his furrow. If he neglected to prepare the ground, he might as well sow his seed by the way-side, or upon the rock. If he deferred the vernal toil till the suns of summer were high, what right would he have to expect the autumn-harvest or the winter-store? The florist mingles his compost, he proportions warmth and moisture, he is patient and watchful, observant of the atmosphere and of the seasons, else he knows that his richest bulbs would be cast away. Should the teacher of the infant heart, be less diligent than the corn-planter, or the culturer of a tulip?"

"Not only by the volume of Inspiration, but by their daily intercourse with the animal creation, and from the ever open page of Nature, guide them to duty and to God. Take in your arms, their favorite kitten, and pointing out its graceful proportions, teach a lesson of kindness. While the dog sleeps at the feet of his mas-

ter, tell of the virtues of his race, of their fidelity and enduring gratitude, and bespeak respect for the good qualities of the inferior creation. Teach their little feet to turn aside from the worm, and spare to trample the nest of the toiling ant. Point out the bird, 'laying the beams of its chambers among the green leaves, or the thick grass, and make them shudder at the cruelty which could rifle its treasures. Inspire them with love for all innocent creatures—with admiration for every beautiful thing; for it is sweet to see the principles of love and beauty, leading the new-born soul to its Maker.

"As you explain to the young child, the properties of the flower that he holds in his hand, speak with a smile of Him, whose 'touch perfumes it, and whose pencil paints.' Make the voice of the first brook, as it murmurs beneath the snow, and the gesture of the waving corn, and the icicle with its pen sharpened by frost, and the sleeted pane with its fantastic tracery, and the nod of the awful forest, and the fixed star on its burning throne, adjuncts in teaching your child the wonderful works of the Almighty.

"The mother who is thus assiduous in the work of early education, will find in poetry an assistant not to be despised. Its melody is like a harp to the infant ear, like a trumpet stirring up the new-born intellect. It breaks the dream with which existence began, as the clear chirping of the bird wakes the morning sleeper. It seems to be the natural dialect of those powers which are earliest developed. Feeling and fancy put forth their young shoots ere they are expected, and poetry bends a spray for their feeblest tendrils, rears a prop for their boldest aspirings."

We can but glance at the tenth letter—"Domestic Education." The subject is one of great importance, and is well sustained throughout the chapter. Would our limits allow, we should not turn it off with a simple extract:

"I am not without hope of persuading mothers to take charge of the entire education of their children, during the earlier years of life. After devoting daily a stated period, morning and evening, to their moral and religious training, I cannot but trust that the pleasure of the communion will lead to a more extended system of domestic culture. Indeed, it is not possible to convey instruction to the *heart*, without acting as a pioneer for the *intellect*. The docility, the application, the retentive energy, which the mother awakens in her child, while she teaches it the principles of justice, and the love of truth, and the reverence of the Creator, lead her continually, though it may be unconsciously, into the province of scholastic education."

"Whoever educates his children well," says Xenophon, in his letter to Crito, 'gives them much, even though he should leave them little.' If parents felt, that by spending three hours daily, they might secure for each of their offspring, an ample fortune, not to be alienated, but made sure to them through life, would they grudge the sacrifice? Let the mother try, if by an equal expenditure of time, she may not purchase for them a patrimony, which rust cannot corrode, or the robber rifle, or the elements that sweep away perishable wealth, have power to destroy. If she feels it impossible to dispense with their attending school, let her at least teach them herself to *read*, ere she sends them there. I once heard an aged and intelligent gentleman, speak with delight of the circumstance, that he learned to read from maternal instruction. He gave it as one reason why knowledge was pleasant to his soul, that its rudiments entered there with the association of gentle tones, patient explanations, and tender caresses."

"The correct reading of our copious language, is not a branch of such simplicity, that it may be well taught by careless, or slightly educated instructors. The perfect enunciation which is so important to public speakers, is best acquired when the organs of articulation are most

flexible, and ere vicious intonations are confirmed b. habit. One of the most accomplished orators that I ever heard, used to take pleasure in referring his style of elocution to his mother, who taught him early to read, and devoted much attention to his distinct utterance, and right understanding of the subjects that he rendered vocal."

* * * * *

"A mother, who succeeds in teaching her child to read, and partakes the delight of perceiving new ideas enrich and expand its intellect, will be very apt to wish to conduct its education still further. And if it is in her power to do so, why does she send it to school at all, during its most susceptible years? Who can be so deeply interested in its improvement, as herself. Why then does she entrust it to the management of strangers? Why expose it to the influence of evil example, ere its principles are sufficiently strong to withstand temptation? Why yield it to the excitement of promiscuous association, when it has a parent's house, where its innocence may be shielded, and its intellect aided to expand?"

"I have no time," replies the mother. How much time will it require? Two or three hours in a day is a greater proportion than any teacher of a school would devote exclusively to them. Even if they could receive such an amount of instruction, the division of their own attention among their companions, would diminish its value to them."

We pass rapidly over the succeeding chapters; many of which—as especially that upon "Schools," and "Opinion of Wealth"—cannot be too carefully studied, and pause at the seventeenth "Letter." It is a right plain, old-fashioned essay, and treats of a virtue which, in this reign of degeneracy, has become quite obsolete:

"It is one proof of a good education, and of refinement of feeling, to respect antiquity. Sometimes, it seems the dictate of unsophisticated nature. We venerate a column, which has withstood the ravages of time. We contemplate with reverence the ivy-crowned castle, through which the winds of centuries make melancholy music. We gather with care, the fragments of the early history of nations, which, however mouldering or disjointed, have escaped the shipwreck of time. There are some who spare no expense in collecting coins and relics, which rust has penetrated, or change of customs rendered valueless, save as they have within them the voice of other years. Why then should we regard with indifference, the living remnants of a former age, those ambassadors whom the old world sends to commune with the new, through whose experience we might both be enriched and made better?"

* * * * *

"Reverence for age, being a divine command, should form an inseparable part of the earliest christian education. It must be inculcated with the rudiments of religion, when the mind is in its forming state. It seems inexplicable that parents should neglect to impress on their children the solemn injunction, 'Thou shalt rise up before the hoary head, and honor the face of the old man, and fear thy God: I am the Lord!' The command derives force, from the situation in which it is placed, guarded by the majesty of Him from whom it emanates; and linked with the duty which man owes to his Maker and his Judge.

"It is rather a surprising fact, that some heathen nations should have been more exemplary in their treatment of the aged, than those who enjoy moral and religious culture: that the dim teachings of nature should be more operative among ignorant men, than the 'clear shining of the sun of righteousness,' upon those who believe the gospel.

"The Spartans, so proudly adverse to every form of delicacy and refinement, paid marked deference to age, especially when combined with wisdom. A fine tribute to their observance of this virtue, was rendered them by

the old man, who, having been refused a seat in a crowded assembly at Athens, saw the rougher Lacedæmonians rise, in an equally dense throng, and reverently make room for him: 'The Athenians know what is right, but the Spartans practise it.'

"The wandering sons of the American forests, showed the deepest respect to years. Beneath each lowly roof, at every council-fire, the young listened reverently to the voice of the aged. In their most important exigences, the boldest warriors, the haughtiest chieftains, consulted the hoary-headed men, and waited for their words. Their deportment illustrated the assertion of the friend of Job—'I am young, and ye are old; therefore I was afraid to show you my opinion.'"

* * * * *

"If we admit that there is a general declension in duty to the aged, and if it must be traced to error in domestic culture, heads of families are responsible for the evil.

"Mothers! is not much of the fault at our own doors? If so, where is the remedy? Must it not be sought in the power of early instruction, and in the influence of example? Is there as fair a prospect of success in admonishing those who have been long in error, as in forming correct habits for the yet uncontaminated?"

"Begin, then, with your little ones. Require them to rise and offer a seat, when an old person enters the room—never to interrupt them when speaking, but to solicit their advice, and reverence their opinions. You will say that these are simple rules. Yes. But the oak springs from a diminutive germ. Show them the reason for even these simple rules in the book of God. Consider the slightest disrespect to aged relatives, or any person advanced in years, as a fault of magnitude. If you have yourself a parent, or a surviving friend of that parent, make your own respectful deportment a mirror by which they can fashion their own. Confirm these habits, until they obtain a permanent root in principle, and determine that your own offspring shall not swell the number of those who disregard the divine precept to 'honor the hoary head.'

"I was acquainted with the father and mother of a large family, who, on the entrance of their own aged parents, rose, and received them with every mark of respect, and also treated their cotemporaries as the most distinguished guests. Their children, beholding continually this deference shown to the aged, made it a part of their own conduct. Before they were capable of comprehending the reasons on which it was founded, they copied it from the ever-open page of parental example. The beautiful habit grew with their growth. It was rewarded by the approbation of all who witnessed it. Especially was it cheering to the hearts of those who received it, and who found the chill and solitude of the vale of years alleviated by the tender love that walked by their side.

"I saw the same children when their own parents became old. This hallowed principle, early incorporated with their character, bore a rich harvest for those who had sown the seed. The honor, which from infancy they had shown to the hoary head, mingling with the fervor of filial affection, produced a delightful combination; one, which, even to the casual observer, had an echo of that voice from Heaven, 'train up a child in the way he should go, and when he is old he will not depart from it.'"

We turn to the last "letter." Its subject is "Death;" fitly chosen to conclude the sentiments of such a volume:

"Christians err, in not speaking to each other more frequently and familiarly of death. Teachers of youth and mothers, should not hesitate to make it the theme of their discourse. And when they do so, they should divest their brow of gloom, and their tone, of sadness. While they mingle it with solemnity, they should soften it from terror, lest they bow down the tender mind, like

those heavy rains, which wash away the bloom of the unfolding flower!

"I once attended a funeral, in a remote village of Moravians. It was in the depth of summer. Every little garden put forth beauty, and every tree was heavy with fresh, cool verdure.

"It was a Sabbath afternoon, when a dead infant was brought into the church. The children of the small congregation wished to sit near it, and fixed their eyes upon its placid brow, as on a fair piece of sculpture. The sermon of the clergyman was to them. It was a paternal address, humbling itself to their simplicity, yet lofty, through the deep, sonorous tones of their native German. Earnestly and tenderly they listened, as he told them how the baby went from its mother's arms, to those of the compassionate Redeemer. When the worship closed, and the procession was formed, the children, two and two, followed the mourners, leading each other by the hand;—the little girls clothed in white.

"The place of slumber for the dead, was near the church, where they had heard of Jesus. It was a green, beautiful knoll, on which the sun, drawing towards the west, lingered, with a smile of blessing. The turf had the richness of velvet; not a weed, or a straw defaced it. Every swelling mound was planted with flowers, and a kind of aromatic thyme, thickly clustering, and almost shutting over the small, horizontal tomb stones, which recorded only the name and date of the deceased. In such a spot, so sweet, so lowly, so secluded, the clay might willingly wait its reunion with the spirit.

"Before the corpse, walked the young men of the village, bearing instruments of music. They paused at the gate of the place of burial. Then a strain from voice and flute rose, subdued and tremulous, like the strings of the wind-harp. It seemed as if a timid, yet prevailing suppliant, sought admission to the ancient city of the dead.

"The gate unclosed. As they slowly wound around the gentle ascent, to the open grave, the pastor with solemn intonation repeated passages from the book of God. Thrilling, beyond expression, amid the silence of the living, and the slumber of the dead, were the blessed words of our Saviour, 'I am the resurrection and the life!'

"He ceased, and all gathered round the brink of the pit. The little ones drew near, and looked downward into its depths, sadly, but without fear. Then, came a burst of music, swelling higher and higher, till it seemed no longer of earth. Methought, it was the welcome in Heaven, to the innocent spirit, the joy of angels over a new immortal, that had never sinned. Wrapped as it were in that glorious melody, the little body was let down to its narrow cell. And all grief, even the parent's grief, was swallowed up in that high triumph-strain. Devotion was there, giving back what it loved, to the God of love, not with tears, but with music. Faith was there, standing among flowers, and restoring a bud to the giver, that it might bloom in a garden which could never fade!"

Beautiful! beautiful beyond praise! we shall give one more extract, and close the volume. Indeed the extract is itself the conclusion:

"Once, when spring had begun to quicken the swelling buds, a fair form that was wont to linger among them, came not forth from her closely-curtained chamber. She was beautiful and young; but Death had come for her. His purple tinge was upon her brow. The lungs moved feebly, and with a gasping sound. It would seem that speech had forsaken her. The mother bent over her pillow. She was her only one. Earnestly she besought her for one word—"only one more word, my beloved!" It was in vain.

"Yet again, the long fringes of her blue eyes opened, and what a bursting forth of glorious joy! They were raised upward: they expanded, as though the soul

would spring from them in ecstasy. Then, there was a whispering of the pale lips. The mother knelt down, and covered her face. She knew that the darling whom she had brought into the world, was to be offered up.

"But there was one, deep, sweet harp-like articulation, 'praise!' And all was over! Then, from that kneeling mother came the same tremulous word—"praise!" Yet there was an ashy paleness on her brow, and they laid her, fainting, by the side of the breathless and beautiful. There she revived, and finished the sentence that the young seraph had begun, 'praise ye the Lord!' The emotions of that death-scene, were too sublimated for tears.

"More surely might we hope thus to part with our dear ones, and thus to die in Jesus, did we, in our brief probation, live near him and for him! Friends, who have, with me, meditated on many duties, and on the event that terminates them,—dear friends, whom I shall never see in the flesh, may we meet in the vestments of immortality! With those, whom we have given birth, and nurtured, and borne upon our prayers, in the midnight watch, and at the morning dawn,—may we stand, *not one lost*, a glorious company, where is neither shade of infirmity, or sigh of penitence, or fear of change, but where 'affection's cup hath lost the taste of tears!'"

We have thus endeavored, by our extracts, to give the reader some idea of the merits of the volume before us. We have made them in almost a desultory manner, and, so far as the merits of the book are concerned, might as well have made them from any other portions of it. We believe they are sufficient, and of such a nature as will awaken the reader's desire to secure the volume. And let no one infer from its title that it is ill adapted for his perusal. Though the "letters" are with propriety addressed to mothers, there are many of them of so general a character, and their subjects of such universal interest, as to merit the attentive perusal of all. No one would feel himself poorly rewarded for his attention to them—and from the study of some of them the statesman might go away instructed.

In conclusion—we predict for the work a rapid and extensive sale. We hope that edition may follow edition, till in every family throughout our land the "Letters to Mothers" may not only be found a respected work, but revered by every one as a "family text book."

SHOBAL VAIL CLEVINGER, THE SCULPTOR.

The queen city of the west may indeed be proud of her arts, and her artists. Powers, Beard, Frankenstein, Powell, Clevenger, will give her a reputation, we believe, which will be honored wherever the arts are cultivated. Many of their productions already grace the halls of her citizens, where the travelling stranger, in partaking of their hospitality, often gazes in wonder on their works, which he pronounces to exhibit a genius kindred to that which guided the pencil and the chisel of the masters of the olden time.

Situated so beautifully by the "beautiful river," Cincinnati, as if conscious of her advantages, already displays an architectural elegance, which

is not surpassed by any city in the Union. She now numbers fifty thousand inhabitants; yet there are many who well remember when the glancing river rolled on unshadowed by any thing that denoted civilization. In patronising her artists, her citizens will not only reward merit, but cultivate their taste, and thus, adding the graces of ornament to the beauties of situation, will crown the queen with an enduring magnificence.

I propose, hastily, and I fear very imperfectly, to give your readers a slight sketch or two of some of our artists. As CLEVINGER is a "born Buck-eye," I begin with him. Middletown, a small village in the interior of Ohio, is the place of his birth. He was born in 1812. His father is by trade a weaver, and Shobal is the third child of a family of ten. His parents are still living to rejoice in the rising reputation of their son. A year after the birth of Shobal, his parents moved to Ridgeville, and afterwards to Indian Creek. At the age of fifteen, Shobal left his parents, and went with his brother to Centerville, to learn, under his direction, the art of stone cutting, in which employment his brother was engaged on the canal. It was indeed fortunate for the future sculptor, that he thus early learned the use of the chisel, and it accounts for the accuracy and tact with which he handles it.

On the canal, the future artist, at his humble occupation caught the ague and fever, and was compelled to return home. As soon as he recovered, he went to Louisville, from which, after being engaged for a short time, he came to Cincinnati and stipulated to remain with Mr. Guiou, a stone cutter, for the purpose of learning the trade. While he was with Mr. Guiou, an order among others came to the establishment, for a tombstone, which was to have a seraph's head chiselled upon it. Mr. Guiou undertook the task himself, and formed the figure, which Clevenger criticised. His master said satirically, "you shall do the next." This remark galled Clevenger and he determined to try. The next day was Sunday, and instead of enjoying its recreation, he repaired to the shop and busied himself all day in producing a seraph's head. On Monday when his fellow workmen saw it, they pronounced it better than Mr. Guiou's. This, as may be supposed, gave great pleasure to the youthful aspirant, and inflamed his ambition. He used to visit the grave-yard on the moonlight nights, and take casts from the tombstones, particularly from those sculptured by an English artist, which are thought to be very good. Mr. Guiou now gave Clevenger all the ornamental jobs to do, which sometimes provoked the ill humor of his fellows, as was to be expected, but the amiability of the artist and his acknowledged skill, soon reconciled them to the justice of the preference.

Soon after Clevenger's time expired with Mr.

Guiou, he married Miss Elizabeth Wright, of Cincinnati, and repaired to Xenia, an inland town of Ohio, where he commenced business. Meeting with poor encouragement there, he returned to Cincinnati and worked as a journeyman for his former master, but shortly after entered into partnership with Mr. Bassot, and they established themselves in a little shop on the corner of Seventh and Race streets.

It was this shop that Mr. E. S. Thomas, the editor of the *Evening Post* chanced to enter one day, attracted as he glanced in by the figure of a cherub which Clevenger was carving. Mr. Thomas, who has a fondness for such things, and who has had an opportunity of seeing the best statuary of Europe, was instantly impressed with the genius of Clevenger and warmly told him that he had great talents in the art. The next day Mr. Thomas noticed Clevenger in his paper and expressed firmly his conviction that his genius was of the first order, and that if encouraged he would be eminent.

Powers, the sculptor, who is now in Florence, pursuing his art, and who will shed fame on the queen city, was then in Washington, where he had modelled the heads of some of our leading statesmen, with an accuracy and talent that was winning universal commendation. Clevenger, still at his stone cutting, understood that Powers was about to return to Cincinnati, and bring with him his clay model of Chief Justice Marshall, from which he meant to take a bust in stone. On hearing this, the youthful aspirant said, to use his own expression, that he "would cut the first bust from stone in Cincinnati, if he could'nt cut the best!" He accordingly forthwith procured the material—the rough block of stone, and asked Mr. Thomas to sit to him. Mr. Thomas did so, and from the rude block, without moulding any model previously in clay, with the living form before him, and with chisel in hand, in his little shop, the young artist, went fearlessly to work, and, without having seen any thing of sculpture, but the memorials of the dead in a western grave-yard, casts from which he had taken by moonlight, unaided, by the inspirations solely of genius, he struck out a likeness that wants but the Promethean heat to make it in all respects the counterpart of the veteran editor.

This bust was executed about three years ago. The press of the city spoke in just terms of praise of the performer. Patronage followed. Many of the wealthiest citizens had their busts taken, and the accuracy of each successive one, seemed to strike more and more. The artist's shop—now dignified with the name of studio—attracted the attention of all classes of the citizens. There the visitor might behold him eagerly at work, apparently unconscious of the attention he attracted; his fine clear eye lighting with a flash upon the face of the

sitter, and then upon the stone, from which, with consummate skill he would strike the incumbrance which seemed to obscure from other eyes, (not his own,) the form which he saw existing in the marble.

Clevenger is now in Boston, where he has moulded a bust of Mr. Webster, said universally to be the best likeness ever taken of the great lawyer. Among his best efforts are said to be his busts of Mr. Biddle, Clay, Van Buren and Poindexter. 'The visitor stands in his studio, and gazes at the casts, even of those he has not seen, with the conviction that they must be likenesses—there is ever something so lifelike about them.

This spring Clevenger goes to Italy, for the purpose of studying the master pieces of his art, mid the scene where they were fashioned. We can sympathise with the deep devotion with which he will gaze on the glories of his craft, and call up the memories of the mighty masters of old upon the very spot where they bent, chisel in hand, over the marble, and almost realized, without the aid of the gods, the fable of Pygmalion. While he is over the waters in that classic land, we shall send glad greetings to our bold Buckeye and bid him not despair. Let him assist to make his land classic too—what man has done, man may do.

T.

THE REVIEWER OF "NEW VIEWS OF THE SOLAR SYSTEM" REVIEWED.

My reviewer thinks I am very ignorant indeed, as, according to him, I cannot divide one decimal number by another; and I have no doubt (and why should I doubt) that he believes it all; at least he would have no objection to his readers' believing it. But the mere scholastic mechanically educated man is not always the best qualified to judge of questions arising out of an untrammelled scientific pursuit. This probably will not be admitted by my reviewer; but it will be admitted by all who are not intellectually restricted to systems already existing, as my reviewer appears evidently to be.

He says: "In the sequel he shall abundantly prove what he has asserted of *our author's* mathematical abilities, and as a present specimen of them let us take the following problem, viz: A travels 400 miles at the rate of 4 miles per hour, and B 300 miles at the rate of 10 miles per hour; required the comparative lengths of time they are travelling."

Now, I ask the reviewer, what in the name of common sense has he reviewed to do with such a question? I cannot view it otherwise than as a vain and intrusive exhibit. I presume, however, he intended it to have some relation to the planetary movements, perhaps of Mercury and Venus.

The true question to be settled is, whether these two planets move with the same velocity or with different velocities. It indicates more intellectual imbecility in my reviewer than I am willing to impute to him, to suppose that he thinks such a question can be settled either way by his A and B problem. I know that Kepler's rule gives different velocities—but what has nature to do with either squares or cubes? Kepler's orbits were drawn round a supposed stationary sun, and his followers adopted his suggestions. But my reviewer admits that the sun is a progressive body, and that he carries his planets with him; and admitting this, he admits a state of the system which furnishes at once the most ample proof that the motion of the planets in their paths must be precisely equal, or some would run ahead, and

others would be left behind, and so lose their places in the system.

The followers of Kepler proceeded upon the assumed fact that the sun is a stationary body, not occupying, however, the centre of the planetary orbits, and all moving with different velocities, so as to crowd into their *physical system* Kepler's rule, and to show with what philosophy they could, how their orbits were brought into elliptical figures by that undefined force which they called *gravitation*. Now, if they had calculated the elements of such orbits as a progressive sun would necessarily produce, they would have soon discovered that all their labors, geometrical and mathematical, were entirely useless, as the progression of the sun alone gave ellipticity to the planetary paths, as the progression of the earth gives ellipticity to the path of the moon, and would have saved them from much of their mathematical turmoil.

Let us suppose for a moment that the earth is a stationary body, and the moon moving round her at the distance of 340,000 miles; then, if we admit the truth of what the European mathematicians call their *central forces*, and which my reviewer certainly understands, though he has said nothing about such forces in his review, she would keep at that distance all round her orbit; but put the earth in motion, and such an orbit would be changed into an ellipse. They both move in the same direction, and the earth forces the moon out of her way from the opposition to the conjunction, and this brings them nearer together through the elasticity of their electro-magnetic spheres.

Suppose the sun to move 10,000 miles per hour in his path, then from the wide range of Mercury's path he must have a greater motion than the sun, and I will say 15,000 miles, he partaking of the sun's motion 10,000 miles, which will be common to both, and the extra 5,000 miles per hour will constitute Mercury's revolutionary velocity. If Mercury had only the velocity of the sun, then Mercury's path would run parallel with that of the sun; but this extra-revolutionary velocity of Mercury carries him ahead of the sun, and he describes what I may call an *elongated curve*. It is well known that Mercury makes two periods and half of another, while Venus makes one; and if we give to Venus the same revolutionary velocity we give to Mercury, their periodical results harmonize; but if we give them different velocities these results cannot be made to harmonize as they really exist in the natural field of astronomy. Then the sun has a motion which is common to Mercury and Venus, and these two planets have a revolutionary motion entirely distinct from the motion in common, and which is derived from distinct sources of impulse. Now the motion of the sun being common to all the planets, the revolutionary motion of the planets must also be equal and common to the whole of these bodies.

Suppose the revolutionary motion of Mercury to be 5,000 miles per hour, and the revolutionary motion of Venus to be 3,000 miles only, then every hour Venus would fall behind Mercury 2,000 miles, and of course, would soon lose her place in the system and throw the mathematician with his figures and calculations into confusion. The mathematician, however, calculates right; but it is because he really calculates upon the equal revolutionary motion of his planets, though he seems not to know it. If he will take the times of all the planets, and give them distances suited to their times, he will quickly find that Kepler's rule is a very useless appendage to the science. For Venus to keep her place in the system, her motion must be equal to that of Mercury. The motion which is common to the three bodies, and that motion which is revolutionary and belongs to the two planets, requires to be distinguished the one from the other, and the impulses which produce them distinctly developed. But this cannot be done without appropriate diagrams, showing the condition of their electro-magnetic spheres, by which they are kept in their places and regulated in their motions. My reviewer will now see that his A and B problem can be of no use to me; nor will it be of any use to him in combating my views.

As to the distances of the planets from the sun, if the mathematicians can by any means ascertain the exact distance of the moon from the earth, and the exact diameter of the sun, then the true distances of all the planets from the sun, the velocity of the sun in his path, which is common to all the planets, and the revolutionary velocity of the planets, we, knowing the diameter of the earth, the distances and revolutionary velocity of the planets and their satellites, can be settled upon the strictest principles of dynamics. Will my reviewer pardon me if I say, that no one single dynamic principle has ever been brought to bear upon any

of the phenomena realized in our physical systems of astronomy? It is true our physical astronomers have talked and written a good deal about dynamics, but all their views (physically) exclude that science from any of their systems.

My reviewer says, "That our system has a motion of translation, I hold to be highly probable. But in whatever way this question shall ultimately be determined, it will require no change to be made in a single diagram or demonstration of modern astronomy, as a few considerations will show. Were our author to take a pair of dividers, and placing one of its legs upon a point, were he to sweep the other leg around, would he deny that he describes a circle *about that point*? And yet to be consistent, he must do so; for the leg, as it moves around the point, is carried rapidly on by the rotation of the earth on its axis, as well as by the motion of the earth about the sun, and does in fact describe in space a curve of a very complex character, and wholly different from a circle."

Here my reviewer is quite inconsistent with himself. He says I must, to be consistent, admit that the leg which is swept round describes a circle; then, for himself, he says, it "does not describe a circle, but a curve of a very complex character, and wholly different from a circle." Now the curve which any planet describes through space or of the heavens, has no complexity about it; it is an elongated curve, very little different from the curve described by the sun himself. I very readily admit that my reviewer's notions about the circles and curves which the planets may or may not describe, are the results of complexities which education has produced; and he will no doubt "permit me to smile" at his confusion, and say "modestly" to him, that such confused notions about his "complex curves" show the necessity of a new set of diagrams, showing the true nature of these curves as they are described by the sun and his planets. He says: "The diagrams of astronomy were never intended to represent the *absolute paths* of the planets in space, but their *relative paths*." What then becomes of their *elliptical figures*? Is my reviewer ready to abandon the supposed *gravitation* of the system, and all the refined analyses founded upon orbits returning into themselves round a stationary sun or centre? Will he cast away the fashionable and long used rule of Kepler, respecting the distances and velocities of the planets? His curves of "complex character" will effectually do this. Such "complex" curves with *loops*, and each planet passing or rather intersecting its own path each curve it describes, would throw much more of his mathematics out of his physical system than he seems to have thought of. My reviewer supposes there is one important point which I have conceded, to wit: "That the moon rotates about its axis, and also the sun. If there be other evidence of these motions than that derived from observations upon the spots of those bodies, *our astronomer* will state it. If this evidence be sufficiently strong to produce conviction upon his mind in respect to the sun and moon, he cannot refuse to admit that Mars has a rotatory motion also, which is completed once in 24.66 hours—for the evidence in this case is just the same. Now if the earth would have rotated but once during a revolution, had not a moon been given her; why does not Mars, which has no moon, so rotate? Why does not Venus?" He puts another question: "If the moon was necessary to cause the earth to revolve on its axis, what caused the moon to revolve on its axis?" He then puts another question—Supposing that I admit that the moons of Jupiter do not revolve on their axis, he asks: "What is the difference between the relation subsisting between the earth and its moon, and that subsisting between Jupiter and its moons, or any one of them; which renders the cause that is efficient in producing the rotation of the satellite of the former, inoperative in producing the rotation of the satellites of the latter?"

When I said that Jupiter's moons have not rotatory motion, I intended nothing more than that they did not rotate as their primary did. It is true, I wrote unreflectingly, supposing every reader would understand what kind of rotation I intended to deny to them. But my reviewer, perhaps, anticipating that I would introduce into his physical system of astronomy dynamical forces only, and fearing the consequences, seems to be catching at every straw which has been inadvertently dropped in his way by either the printer or myself.

Now I contend, that there is no other force in creation but *pressure*; and however variously applied, all the phenomena, all the effects, however variant in appearance, *pressure* is the producing cause. The whole range of physical and dynamical science admits of but the one force, *pressure*—and this is the only

force which produces all the phenomena we observe in the planetary system or in the arts, whether we use muscular, water, or steam agents. In the planetary systems, however numerous, the electro-magnetic material is the powerful agent. Then so to arrange this material as will necessarily produce the phenomena observed, is the great object of my pursuit; and, really, if I desired any aid in my researches, with a view to diminish the force of educational prejudgings, I know of no one at present I would repose more confidence in than my reviewer. Those who have previously opposed me, and who have had some knowledge of the physical system of the schools, have very readily discovered, that to maintain the system with all its mathematical parade, they must deny the progressive motion of the sun, and treat the orbits of the planets as circles returning into themselves, with the exception of ellipticity—as Newton, Lagrange and Laplace did. "Complex curves" they have tried, and found that they would not answer; and my reviewer will find it necessary to review his own system, having a progressing sun, and such curves as he indicates the planets must describe. Such a system, though he, perhaps, does not yet see it, destroys more effectually the gravitation, the attraction and projection of Newton, Lagrange and Laplace, than the curves I give them. For in fact, I preserve the gravitation of the system, the only difference being the instrumentality through which its effects are counteracted. I consider it my duty now to thank him for thus far giving me aid in effecting "a new era in the science." He admits the progressive motion of the sun, and that the planets do not describe orbits returning into themselves. That he has done this without a knowledge of the consequences, I think, is very certain.

With respect to Mars and Venus, some observers have thought that Venus revolved on her axis once in 24 days—some in 24 hours; but Herschel could not discover that she had any rotatory motion at all. Some have said she has a moon; others that she has not. Thus they disagree. Mars may have a moon or something equivalent, if he rotates on his axis. To give rotatory motion, the pressure must strike or press upon the rotative body unequally and obliquely, as the moon presses upon this earth. If the rotative body is not so pressed, there will be no rotation. That force which presses centrally or equally will not produce rotation, though it may produce progression. Then why has the moon rotation once during her period only? Why, plainly, because she is carried round by her electro-magnetic sphere, just as the hub of a coach wheel is carried round by its band or outer circumference. And so it is with all Jupiter's moons—and with Mars and Venus also, if they have no moons, or something that will press upon them unequally and obliquely. But to show how these different effects are produced requires a full suit of diagrams.

With respect to the distance of the earth from the sun, all that has been effected trigonometrically, is but an approximation—so say the mathematicians. To infer the distance from the magnitude of the sun, and the magnitude of the sun from the distance, is only adducing one uncertainty to prove another. Suppose the sun to have a real diameter of 780,000 miles, and at the distance of 95 or 96,000,000 of miles to be reduced, with such constructed eyes as we have, to thirty inches; what would be his apparent diameter at half that distance? 390,000 miles I suppose. This seems to be in accordance with my reviewer's reckoning, he having demonstrated as he thinks, that if the sun was removed to twice her distance from us, he would appear just one half less than he does at his supposed distance, 95,000,000 of miles. He must make a very rapid diminution of diameter the first 95,000,000 of miles, if he only accomplishes a diminution of fifteen inches the next 95,000,000. The inhabitants of Mercury, if they are provided with such eyes as we have, must see the sun with an apparent diameter of 400,000 miles. But my reviewer has mathematics for all these strange things. The first 95,000,000 of miles, the sun is reduced from 780,000 miles to thirty inches; but the next 95,000,000 he loses only one half of his thirty inches! All this, however, may be mathematically true; but it does not appear to be quite so, *philosophically*. Would it not be as well for my reviewer to bring his mathematics to bear upon the eyes of the *Mercurians* and *Saturnians*, they occupying very different distances from the sun, taking our own eyes as the basis of his calculations, instead of a sun having a diameter of 780,000 miles? If he will try, I have no doubt he can make out a set of figures, and so arrange them as to produce results which will be quite as satisfactory to himself at least, as are the results of his

arrangement of figures reducing the magnitude of the sun. I can very readily conceive, that the Saturnian may have an eye which enables him to see the sun much larger than we do; and the Mercurian much less. But he seems to be limited in his range of thought, and cannot go beyond the lessons he has learned.

In relation to the moon and Mercury, he says: "Thus, if the moon were removed to such a distance as was necessary to make her time equal to that of Mercury; if there be any truth in the *Newtonian system*, the orbit of Mercury should be much greater than that of the moon, because the force exerted by the sun is to the force exerted by the earth, at equal distances, as 354,936 to 1. And if the path of Mercury be greater than that of the moon, and these paths are described in the same time, it follows of necessity that the velocity of Mercury must be greater than that of the moon."

Here I must admit that my reviewer has displayed some ingenuity, by stating the question in a way to produce a result that certainly no one will question. The question to be settled is very different from the one he has stated; but I give him credit for his ingenuity, though I may question the motive which prompted it. In our physical systems, Mercury is placed 37,000,000 of miles from the sun, and is given 110,000 miles per hour in his path; he performing one period in eighty-seven days. The moon is placed 240,000 miles from the earth, and is given 70,000 miles per hour in her path, she performing her period in twenty-nine days. Now I say, if the distance and velocity of the moon are rightly given, then the distance and velocity of Mercury cannot be. Mercury cannot be 37,000,000 of miles from the sun; and this my reviewer well knows if there is any truth in mathematics, or he would not have varied the question so as to produce a result suitable to his own wishes, not his judgment. Besides, he ought not, either directly or indirectly, to say, "if there is any truth in the *Newtonian system*," because it seemed to imply a doubt. If Mercury moves 110,000 miles an hour, and the moon only 70,000, of course the orbit of Mercury will take a wider range than the orbit of the moon, *without any force from the sun* being exerted upon him or his orbit. By this force does my reviewer mean attraction, gravitation, or projection? I presume not; as he seems to be a little shy of such imaginary forces; and he certainly knows, or he ought to know, that such forces are not within the widest range of dynamics. He ought not abandon the *centripetal* and *centrifugal* forces—projection in a direct line, and the attraction of the sun drawing off the planets from that line, and compelling them all to describe an *ellipse* round him. As dynamics furnishes no other moving power than *pressure*, how are the planets deflected from the projectile straight line? Is it by the sun drawing them off from that line? Then it is this power which the sun exerts upon Mercury, I suppose, and so expands his orbit. Now, what has dynamics to do with the sun's attraction? Or, what can attraction do with my reviewer's "complex curves?" The force which drives the earth 68,000 miles an hour, (and our mathematicians say this is a *mathematical* truth) must strike the planet equally and centrally, and if her rotatory motion depended upon this force, she would necessarily rotate once every hour, as such a force could not be applied so as to unequalize the two motions. As it is, the earth rotates once in twenty-four hours only. Then, as my reviewer agrees that the "sun may have a translation in space," that translation must equally influence the whole planetary system, as they can have no motion which might, directly or indirectly, interrupt the equal translation or progress of the whole. Then, as I have before intimated, this motion is equal and common to the sun and planets; but the *revolutionary motion of the planets*, and which is common to them all, is the motion my reviewer and myself have to settle; and, therefore, to settle it scientifically, the forces to be applied must be sought for either in the *Newtonian system*, or in the *system of dynamics*.

I will then admit that the sun moves 68,000 miles an hour in his path, and that the earth partakes of that motion. But the revolutionary motion of the earth being distinct and independent of the motion which is common to the sun and earth, from whence then are the forces derived which give to the earth this revolutionary movement? This revolutionary motion of the earth will be communicated to the moon, and will be common to them both, but the moon also has a revolutionary motion, which is distinct and independent of the motion which is common to the earth and moon—and from what source is this motion of the moon derived? The impulse which gives motion to the sun, gives a common motion to all the planets; but their revolutionary motion requires

an impulse differently circumstanced. Then, as there are two distinct sources of impulse, these sources must be sought for in the condition of the system itself. The revolutionary motion of all the planets is derived from the electro-magnetic sphere of the sun; and the revolutionary motion of the satellites is derived from the electro-magnetic spheres of their primaries. Here again diagrams are required. The condition of these *electric spheres* cannot be explained so as to be well understood without them. My reviewer has seen one magnet press off another, and keep it at its appropriate distance—the action and re-action of the magnetic spheres being equalized. He will not, I presume, contend that the bars of iron act and re-act without other agencies. These magnetic spheres are the agents acting and re-acting, and not the bars of iron. The planets do not act and re-act—it is their magnetic spheres which produce all the *perturbations* which the practical astronomer discovers among them. He will (my reviewer,) recollect Newton's inquiry. Newton considered this electric or magnetic fluid, as it has been called, as in a state of simple diffusion. I take it from this diffused condition, and give to it specific appropriations. My reviewer will admit its power. I now advise him to defend the *Newtonian system as it is*, and not attempt to mend it by introducing into it his "complex curves." He might as well introduce the *loops and curves* of the Alexandrian physical astronomer, as they would answer the purpose just as well.

Now the truth is, my reviewer does us great violence to the scheme of Copernicus, Kepler and Newton as I do. If he gives any other description of orbit to the planets than they did, he breaks up the whole fabric, mathematical as well as geometrical, for which they have been so much applauded. He cannot defend their system of mathematics, if he changes the *bases* upon which that system was erected. He, as a teacher and reviewer, ought not to be "ignorant" of this fact. I, however, have seen learned men blunder sometimes from the want of knowledge, and at other times from the perversion of it. Which of the two is most applicable to my reviewer I shall not now undertake to determine.

There is one remark of my reviewer which ought to have been noticed in another place; it can be done here. Speaking of the times of Mercury and the moon, he says: "In this exertion of a greater force by the sun, consists the error of comparing a body moving round the sun with a body moving round the earth." Then, if the sun exerts no power over Mercury, the comparison must be considered as having been made upon correct principles. To show that the sun exerts no such power over Mercury, I have only to adduce the forces which were employed by Newton, to sustain me as to the correctness of the comparison I have made. Is it the sun that projects Mercury in a direct line? Is it the sun that gives gravity or weight to Mercury? Here then we have Newton's *projection* and *gravitation*; and which of the two powers does the sun exert? Why neither the one nor the other. Gravity or weight is the property of Mercury, and exists independently of the sun; gravity or weight is also the property of the moon, and exists independent of the earth. Then the sun does not give the *projection* to Mercury; nor does he give the *gravity* which Mercury has. Neither does the earth give either *projection* or *gravity* to the moon.

My reviewer requests me to turn my attention to dynamics or mechanics. Why, these are the very sciences upon which I base all my views. I could with much more propriety request him to do so. Mercury presses upon the sun, and the moon upon the earth; and here we have a mechanical force—a dynamical force. Does my reviewer employ such a force for the production of any one phenomenon in the planetary system?—did Sir Isaac Newton? The forces employed by him are either not understood by my reviewer, or he finds them too defective to be attended to. Mercury acts upon the sun, and not the sun upon Mercury; and the moon acts upon the earth, not the earth upon the moon. The tides give us the true nature of the moon's action upon the earth, and which is mechanical altogether. My reviewer had better say less about dynamical forces—they do not belong to the system he defends.

He thinks I "place no reliance in the laws of mechanics, as at present developed and taught." It is true, I place no reliance in that description of mechanics which has been introduced into our physical systems of astronomy. There is but one force to be found in the entire range of mechanics, and that is *pressure*. Will my reviewer be able to point out a single phenomenon which has been ascribed to this force in the *Newtonian system*?

I will now ask my reviewer, if the exact distance of the earth from the sun has ever been ascertained? I know what the mathematicians say, and I know what Sir John Herschel says of their "ill-conditioned triangles." Well, my reviewer must know that the exact distance is not known; then why would he so far attempt to deceive his readers as to say that the practical astronomer made any use of either the distance or velocity of the planets? *Practical astronomy* has been in a state of uniform improvement for thousands of years, and has at length arrived to, perhaps, the highest degree of perfection, as it relates to our own solar system. But this science has progressed regularly—as well under the burthen of the loops and curves of the Egyptian physical system; and at times and places with the most absurd schemes of both distances and motions, until the time of Newton; who was a practical astronomer, and who combined his physical views with his practical views, or rather *practical facts*, and which he so intermixed with his physical views as to triumph over all opposition at the time—and strange as it may appear, though practically true, yet, physically, it is but a tissue of errors from beginning to end. My reviewer may be a very good practical astronomer for aught I know; but he had better let the physical department alone. Brewster says, "We have already discovered the absolute motion of the solar system, and it now remains to discover the means by which the Almighty has bound the whole together." Is my reviewer afraid that adequate means may be discovered? And the very means, too, pointed out by Newton himself? He ought to recollect that Galileo had learned judges—and Fulton had sneerers in abundance. I put him in mind of these occurrences for his own good, not for mine. His opposition does me no injury—it only proves his own attachment to educational error. I wish him to review my paper on the tides, and review it according to his views of dynamics—his views of mechanics.

To show how the planets and satellites are wielded by electromagnetic machinery, may lead the way to discoveries of more importance than even the discoveries which followed the use of steam. That force which keeps the sun and planets in their places, and drives them on in paths, if once understood, mechanism may receive a new impulse from new agencies, heretofore but little thought of.

My reviewer knows that the two departments of the science have been by modern astronomers kept separate, and are treated separately in all our books of astronomy. He also knows that many efforts have been made to place the physical department on a more satisfactory basis. He shows from his own review, that he would willingly do this himself; but the difficulty to be encountered in so applying the *ether* of Newton, as to produce the effects, has so far prevented it. This difficulty has arisen chiefly from our want of knowledge of the true nature of magnetism. But if he will look around him, he will find that this knowledge is beginning to display itself in several ways. This alone, independently of other considerations, shows the onward progress of the sciences.

He seems to lay great stress on what has been called Kepler's rule, "That the squares of the periodical times are as the cubes of the distances." Well—admitting this, and what then? It is of no use to the practical astronomer, and for the plainest of reasons, the exact distance of the earth from the sun is not known. The practical astronomer requires *exact data* in his department. He knows the times and positions of all the planets, and their satellites. He knows that they are all more or less disturbed in their paths, and the physical astronomer teaches him to consider these disturbances the results of their *mutual attractions*. Now I ask my reviewer what other aid does the practical astronomer derive from the physical department? The discovery of the planetary perturbations belongs to the practical astronomer; and it is the effects, and not the cause, that he calculates; and it is of no consequence to him whether Newton called the cause attraction, gravitation, or any thing else. But, physically, it is of vast importance for the philosopher and the mechanic to ascertain, if it can be ascertained, how the *electro-magnetic* material is arranged so as to produce *mechanically* the effects the planets exhibit to the mathematical eye of the practical observer—the practical calculator. I say the times of the planets are proportioned to their distances from the sun, simply. Well, this rule stands on the same footing that Kepler's does. Neither is of any importance to the practical astronomer, as distance and velocity never enter into his calculations.

Speaking of the sun, my reviewer says: "Since the apparent

diameter decreases as the distance increases, to find what the apparent diameter of the sun would be at double its present distance, we have this proportion, viz:

"As twice the present distance is to the present distance, so is the apparent diameter at the present distance to the apparent diameter, as it would be at double the present distance."

Now if the real diameter of the sun was only sixty-four minutes, then at 95,000,000 of miles, it being reduced to thirty-two minutes, I agree at the distance of 190,000,000, it would be reduced to twelve minutes. But, unfortunately for my mathematical reviewer, there is said to be a real diameter of 780,000 miles to begin with; and which he has very prudently kept out of view. He sends me back to my "*Horn book*;" but really I think he requires one as much as I do. He will now have no objection, I presume, to my stating the question, as I understand it. If a real diameter of 780,000 miles is reduced to an apparent diameter of thirty-two minutes at the distance of 95,000,000 of miles, what will the apparent diameter of thirty-two minutes be reduced to at 190,000,000? Or at the same distance 95,000,000? His "*figures*" prove very conclusively, that the real diameter of the sun ought to be no more than sixty-four minutes, instead of 780,000,000 miles. This is all they do prove. And it may be true too, for aught I know, or he knows. We see a dark body surrounded by an immensity of light, and the inhabitants of all the planets may see it just as we do; as well the Mercurian as the Herschelian.

In conclusion, I must express my surprise, that my reviewer should have so far departed from correct quotation, as to make me say, "they are destitute of common sense"—meaning those who differ with me. Reviewers ought not to misrepresent the reviewed.

ON A MINIATURE PORTRAIT.

TO A YOUNG LADY.

I know a young lady,—pray who can she be?
If you look in the mirror perhaps you may see—
A painter once tried her resemblance to trace,
But his picture seem'd nought but a form and a face:
The form was complete, and the features were fair—
But the something, I know not, was all wanting, there.

I sought for the painter, and questioned him why
He had left out the dance of her bright, sparkling eye;
I asked him how could he neglect to embrace
The expression, along with the lines of the face;
The picture might well with the masters compare,
But the something, I know not, was all wanting, there.

I told him, moreover, the beautiful form
Stood out from the ivory, glowing and warm;
But in vain did I look for the ease and the state,
That betrayed her a goddess, at once, by her gait;
The picture was perfect, again I declare—
But the something, I know not, was all wanting, there.

The painter, impatient, made haste and rejoined—
Can man shadow forth the invisible mind?
Can aught, but Omnipotence, hope to portray
The varying grace of the spirit at play?
Then seek not that beauty, nor question me why
I traced not the spirit that sports in her eye.

Oh, then, I exclaimed, 'tis a sin to transfer
To the ivory lifeless, a being like her!
For, such must mock ever the pencil's control,
Whose forms are all life; and whose faces, all soul;
And surely the mortal deserves to be sainted,
Who the something can paint, that can never be painted!

Camden, S. C.

A. W. H.

THE MAY-FLOWER.

There is a darling little flow'r
That blossoms in the northern woods,
It smiles not in the florist's bow'r
But loves its sylvan solitudes ;

And there with tints as pure and bright
As those to Eden's spring-flow'rs given,
Hid from the heartless gazer's sight,
It blooms for solitude and Heaven.

Yet 'tis not when the moss's cup
Is sparkling with the crystal dew,—
Not when a thousand flowers send up
Their perfumes to a Heaven of blue ;

'Tis not when June, delicious June,
With warm breath woos the glowing rose,—
Not in the year's high, gairish noon,
This little flower in beauty blows :

But while the lingering winter yet
Throws fitfully its feathery snow—
The russet turf is cold and wet,
And keen the early spring winds blow,—

'Tis then the little May-Flower blooms,
And in its lonely, leafless bower,
Opens such treasures of perfumes
As 't were earth's only incense-flower.

Who owns?—who loves a kindred lot?—
Blest in her native sphere to move,
And home, her own, sweet, hallowed spot,
Cheer with her purest heart of love ?

Oh, her's is bliss!—the purest—best ;—
By woman crav'd—to woman given ;—
Here is her heart's sole, sacred rest,
Beneath the smile of home and Heaven.

Maine.

ELIZA.

LIGHTS OF LIFE.

BY E. W. H.

Life's canopy sparkles with hues that are given
To glow with a meteor smile ;
Like tints that spring out, when the windows of Heaven
Are op'd on this air-girted isle :
Tho' transient their sojourn, yet large is their sum ;
Tho' fleeting, yet brightly they glow ;
They are brief, but to gladden our souls when they
come,
Not to waken our tears when they go.

Yon glorious traveller, whose path is the sky,
No glory like their's can unroll ;
He comes—and his coming gives joy to the eye,
But a day-spring is their's, to the soul.
In pencils of light they illumine our path,
As if shower'd from cherubic wings ;
For a token of Heaven their radiance hath,
Which Fancy adores while she sings.

They tinge, as with sunbeams, the shadows of care ;
Bid the weary forget to repine ;
Wake the flowers of hope on the soil of despair,
And each vision of gladness, refine.
Like goodness, they catch an additional grace,
For every charm they impart ;
And, oh ! shall we ever deny them a place,
Because they are brief, in the heart ?

Are beauty's warm blushes less fair to the eye,
That their life is the life of a breath ?
Do roses lose fragrance, or flowers, their dye,
When fancy foretokens their death ?
And shall man, the false ingrate, forever invest
Each bliss with a premature shroud ;
Make life's sunlight more fleet, because fleeting at best,
And soon to be dimm'd by a cloud ?

Earth were but a desert, if clouds were no more ;
Seal up the deep fountains of Heaven,
And seed-time and harvest and fruit would be o'er,
Though sunshine eternal were given.
But the sands of the tropic, or ice of the pole,
Would out-rival humanity's clod,
If clouds never shadow'd the sky of the soul,
With their dew from the river of God.

Then hush'd be the murmur that pines at the thought,
How the brightest are soonest to fade ;
In various colors life's tissue is wrought,
And light ever softens the shade.
If 'tis wisdom to turn from each good as it falls,
Because blessings come wing'd for a flight—
Let us shut out the glory of day from our halls,
For e'en day must be follow'd by night.

Camden, S. C.

THE ELYSIAN ISLE.

BY PARK BENJAMIN.

"It arose before them the most beautiful island in the world."
Irving's Columbus.

"And to the voyager's eye, this island, clothed in the richest verdure, and bathed by the warm airs of the tropics, seemed to realize the poet's fabled Elysium."
Anon.

It was a sweet and pleasant isle—
As fair as isle could be ;
And the wave that kissed its sandy shore
Was the wave of the Indian sea.

It seemed an emerald set by Heaven
On the Ocean's dazzling brow—
And where it glowed long ages past,
It glows as greenly now.

I've wandered oft in its vallies bright,
Through the gloom of its leafy bowers,
And breathed the breath of its spicy gales
And the scent of its countless flowers.

I've seen its bird with the crimson wing
Float under the clear blue sky ;
I've heard the notes of its mocking bird
On the evening waters die.

In the starry noon of its brilliant night,
When the world was hushed in sleep—
I dreamed of the shipwrecked gems that lie
On the floor of the soundless deep.

And I gathered the shells that buried were
In the heart of its silver sands,
And tossed them back on the running wave,
To be caught by viewless hands.

There are sister-spirits that dwell in the sea,
Of the spirits that dwell in the air;
And they never visit our Northern clime,
Where the coast is bleak and bare:

But around the shores of the Indian isles
They revel and sing alone—
Though I saw them not, I heard by night
Their low, mysterious tone.

Elysian isle! I may never view
Thy birds and roses more,
Nor meet the kiss of thy loving breeze
As it seeks thy jewelled shore,—

Yet thou art treasured in my heart
As in thine own deep sea;
And, in all my dreams of the spirits' home,
Dear isle, I picture thee!

NOTES OF A TOUR

FROM VIRGINIA TO TENNESSEE, IN THE MONTHS
OF JULY AND AUGUST, 1838.

By Rev. H. Ruffner, D.D., President of Washington College.

CHAPTER IV.

From West Tennessee, by the eastern route to Virginia.

From Sparta I crossed the Cumberland mountains by the main road from Nashville to Knoxville. These mountains part from the more eastern ridges of the Alleghanies, between Virginia and Kentucky, where they divide the waters of the Tennessee from those of the Kentucky and Cumberland rivers. They run by a straight course through the state of Tennessee, on the southern border of which they are broken by a chasm, affording the great Tennessee just room to press its contracted waters through, with a swift but unbroken current. The mountains extend into Alabama, till they gradually sink into the lowlands near the gulf.

The Alleghany mountains generally, are cut into sharp ridges and spurs, with narrow vales between them, or else broad vallies of limestone separating the chief parallel ridges. The Cumberland mountain, is of a different character: it is a single ridge with two broad plateaus or tables of land on the western side. In the preceding chapter, I described the Barrens of Tennessee, as a broad level space of sandy country, about four hundred feet above the rich limestone district of Middle Tennessee. This is the first plateau of the Cumberland. You no sooner reach this upper level from below, than you see what is called the mountain, rise before you in a long straight line, broken at intervals by

ravines which discharge the mountain streams. This line of mountain is in fact the great bank of the second plateau, elevated about one thousand feet above the former. In ascending to its top from Sparta, I observed that the horizontal limestone lay six hundred feet or thereabouts in depth above the lower plateau; then eighty or one hundred feet of sandstone—then as much limestone again; but finally all was sandstone to the top. This being attained, the road passes over a plain as broad as the Barrens below,—that is, about fifteen or twenty miles. The surface is cut at intervals by ravines, but no sharp ridges occur. The road crosses the plateau diagonally, and the whole distance across, from Sparta to the eastern base, is about forty miles. The soil on the top is very poor, too poor to nourish stout forests, such as clothe the mountains of Virginia. Yet some families endeavor to extract a living from these dry sands. Chalybeate springs and a pure atmosphere, attract some visitors from the lower country in the hot season. I found a house, at the distance of nine miles from Sparta, that was filled with boarders, who drank the water of a fine chalybeate, spouting from the rocks in a ravine shaded with evergreens. It is only in a few ravines that I saw the Rhododendron, the Kalmia, the Hemlock, (*Pinus Canadensis*), and other evergreens, so common in our mountains.

After travelling a few miles further over this plateau, I began to see the eastern ridge of the mountain stretch along the horizon. It rises about five hundred feet above the plateau, running in a single straight line parallel with the western bank of the plateau, and broken at intervals of some miles with gaps. The road leads to one of these gaps, and passes through with scarcely an ascent, at a large farm called the Crab-Orchard. The soil improves in the neighborhood of the ridge; the sandstone ceases, and limestone appears again, seeming to constitute the body of the ridge. But this is not the recent shell-limestone of West Tennessee; it is the old blue limestone, in shapeless masses, so common in the valley of Virginia; and it shows that here, as well as elsewhere, the mountains are older than the plains.

Immediately on passing through the gap, the road begins to descend into the great valley of East Tennessee. The descent is much less than the total ascent on the opposite side, because this great valley is a much higher country than the low lands of the west.

To my sorrow I missed the sight of a remarkable curiosity, in descending the mountain; because I did not hear of its existence, until I had left it far behind. Near Nance's tavern, on the mountain side, a brook falls in a single cascade, to the depth of at least three hundred feet, into a narrow gloomy ravine. The bottom is said to be a wild romantic place, overshadowed with precipices and trees, where the visitor's sense of loneliness is increased to awe, and almost to terror, by the perpetual dash of the torrent, that seems to fall from the skies into this dusky glen. The scene inspires that sort of horror, which freezes the veins in reading stories of robbers, caves and deeds of blood, in solitary places. Such a deed was actually committed here, two or three years ago. A traveller known to have on his person a large sum of money, stopped at the tavern, and out of curiosity, clambered down the rocks by himself, into this wild chasm. Not returning to the

house, he was sought for, and his body found with the marks of murder on it, but no money. He lies buried, where he so mysteriously lost his life; and now the visitor, who descends to see this romantic water-fall, must stand by the grave of the unfortunate stranger, who "sleeps alone."

From the mountain to Knoxville, the road passes through a country of little interest to a traveller. There are vales of limestone land, more or less fertile, and watered by springs: the hills are dry and gravelly, and covered with oaks, sometimes goodly timber; but too often, especially about the Clinch river, miserable scrubs of the black jack pattern. The Clinch is a pleasant sort of river, one hundred yards wide, with some fertile low grounds. At Kingston, I looked for a fine water scene, at the junction of the Clinch with the great Tennessee; but I was disappointed: the junction, more than a mile below the village, is hidden from view by the dry gravelly hills of black jacks—the very image of tame poverty.

Through the one street of the village, the road strikes off into the dry gravelly hills of black jacks, avoiding both rivers, and threading the intermediate country. The season was hot and dry; I was weary of the sandy plateaus of the mountain, and fatigued with travelling from Nashville on horseback; I longed for interesting scenery; I looked from the tops of the dry hills for a sight of the great Tennessee—but I saw nought except other dry gravelly hills of black jacks; from other hill tops, I looked again—and I saw—ditto, ditto. I was in a state of mind to be easily disgusted; and disgusted I was. Disgust leaves as durable impressions as pleasure. I have, and through all my days I shall retain, in my imagination, vividly pictured, the perfect image of *dry gravelly hills covered with black jacks*.

Farther up the country towards Knoxville, the hills were less tame and barren, the lands between them more spacious and fertile. A few miles below Knoxville, I was at length gratified with a sight of the Holstein, the chief branch of the Tennessee, but much smaller than the main river below the Clinch. The Holstein has a clear lively current, winding among hills, and bluffs, and low grounds.

On approaching Knoxville, I was struck with the conspicuous appearance of the college, seated on the flattened summit of a round hill below the town. The chief edifice, resembles a church. This occupies the centre of the area; around three sides of which are ranges of low dormitories. The institution is attended by eighty or ninety students. Classical studies are said to be pursued here with more success than the sciences.

I was disappointed in my expectations of Knoxville—I mean its external appearance. I had expected to find in the chief town of East Tennessee, something more than three hundred houses scattered over the hilly ground about two neighboring creeks. Near the upper and larger of these creeks, there is a street which for a hundred yards is almost compactly built. Unfortunately for this, the most populous quarter of the town, the creek is a mill-stream; dams have collected a large mass of stagnant water, and consequently the neighborhood is annually infested with fevers. The yearly visitation had already begun, when I arrived there about the 3d of August. From recent notices in the

papers, the sickness appears to have been unusually severe, owing probably to the extraordinary drought. I found in this instance a confirmation of the remark formerly made, that opposite sides of stagnant waters are not equally affected by the pestilential vapors. The eastern, which is the leeward side of this creek, is more sickly than the western; because the western winds prevail, and blow the miasma, towards the east.

My stay in Knoxville was too short to furnish me with notes on the character and manners of the inhabitants. Information leads me to believe that they are moral, sociable and hospitable, with all the essentials of true politeness, but with less refinement of mind and manners, than may be found in some older towns.

My venerable friend, Judge White, of the United States Senate, advised me to pursue a route to Abingdon in Virginia, less direct, but more pleasant, than the one usually travelled, through the Sequatchy valley. A stranger, he observed, would find more interesting objects on the southern route by Dandridge, Greenville and Jonesborough; and would moreover find the less frequented way, more shaded from the scorching rays of the sun, in such hot dry weather as then prevailed. Disagreeable intelligence from home induced me, desirous as I was to take the most pleasant route, nevertheless to pursue the most direct: so I went to Rogersville by way of Rutledge, in the long narrow vale of Sequatchy. The road enters this vale a few miles above Knoxville, and pursues the middle of it in a straight course for the space of some forty miles. The vale is about two miles, often less, in width. The Chesnut ridge separates it from the valley of the Clinch on the north-western side, and a range of hills less bold and regular from the valley of the Holstein on the opposite side. It maintains strictly the character of an Appalachian valley, in its direction, its almost uniform width, its limestone soil, and its being crossed by streams of water, which here cut the south-eastern hills and flow into the Holstein. It is nearly all under cultivation; the road lies between an almost uninterrupted succession of fields, with scarcely a tree to shelter the traveller from the fierce blaze of the sun, in dog-days. For a while the pleasant features of the scene, and the repose which seemed to reign among the inhabitants of this secluded valley, amused me; but the tedious uniformity of the whole, united with the fatigue of travelling, and the ceaseless glow of the sunshine, made it so wearisome at last, that I almost wished for a mile or two of the dry gravelly hills covered with black jacks. On the second day of my journeying through this quiet length of valley, I saw before me an evident sign of change, in the loftier swell and closer approximation of the mountains ahead; the valley seemed to divide—a narrow portion of it ran up between the high mountains, another turned to the right: this latter was my route, and conducted me again to the valley of the Holstein. The scenery was now both various and pleasant. The road wound up again among the hills, and led me, by ups and downs, and turns of all sorts, among fields, rocks and hills, to Rogersville, two miles from the river.

Near the village I observed among the gray limestones, some rocks of extraordinary color. On breaking

off some fragments, I found them to be a calcareous breccia composed of small crystalline fragments, brown and white. On alighting at the village tavern, I observed that the windows were full of polished specimens of this breccia, exceedingly various and beautiful. Some were white, a little discolored with brownish grains; some black, but dusted with grains of lighter hue; most of them, however, were variously made up of brown and white pieces, round or angular, of different sizes and shades of color; often brilliant, and often displaying an intermixture of shells, and other animal remains, with the native stone. Some of them resembled, a good deal, the variegated marble of which the pillars in the capitol at Washington are made. Inexhaustible quarries of this marble might be opened about Rogersville. Some of it may find a market, by water carriage, down the Tennessee; but it is too remote from the seats of luxury, to be much used for ages to come, beautiful though it be. As yet but one stone cutter finds employment by it; he makes tombstones, and some articles of furniture.

Rogersville is a small village of sixty or seventy dwellings. Its marbles are its only distinction from ordinary villages. From this to Kingsport at the confluence of the north and south branches of the Holstein, the country presents nothing remarkable, except that the mountains in view assumed a bolder and more picturesque appearance. The road traverses an arable country of good limestone land, but hilly, as such lands commonly are. Kingsport is but a poor village; the scenery about it is, however, the finest on the whole of this route through East Tennessee. The ridge that separates the vallies of the Clinch and the Holstein has been in view all the way from Kingston; but it has now risen to grandeur, and puts on quite a dominating aspect. Between the branches of the Holstein another ridge presents itself, and would seem, after running down from Virginia, to terminate here; but on turning your face southward, you observe a high ridge, arising from the rivers at their point of junction, and stretching away quite loftily towards the southwest; showing itself on examination, to be only the last mentioned ridge, continued, after a breach had been made for the south Holstein. From Ross's bridge over the north branch, a very sweet scene presents itself. You see the rivers meet a few hundred yards below, their banks shaded with fine trees; and an island just below the junction, with its thicket of willows and other trees, half hides and half displays the united waters, as they steal away under the shady foliage of the banks. This pretty scene was to me the more refreshing, because I saw it on a calm summer evening, after riding wearily under the beams of a scorching sun.

Near the bridge is the residence of its wealthy proprietor, the Reverend Frederick A. Ross, whom I name here as worthy of commendation for two enterprises, which, if imitated by the East Tennesseans, will greatly improve the condition of their remote valley. He has erected on the North Holstein a cotton mill with one thousand spindles. What is probably of more importance, he has planted thirty acres of the Chinese mulberry, to which the soil and climate of East Tennessee are well adapted; and so flourishing are the young trees, that by next year they will feed worms enough to make at least a thousand pounds of silk.

Being now on the borders of Virginia, which I entered by way of Blountville, I will stop to make some observations on the country of East Tennessee.

On my return from the west, I would fain have passed through Cherokee on the southern border of East Tennessee, and the borders of the adjacent states. This last remnant of the once great territory of the Cherokees, embraces the south-western extreme of the Appalachian mountains. All reports agree in representing it as a beautiful country of hills and vallies: the hills sometimes gravelly and rather poor, but clothed with vegetation: the vallies rich and watered by perennial springs. The climate is the most temperate in the United States, and the whole region highly salubrious. Here the peach, the melon, and the grape, acquire their most delicious flavor: maize, yams and all the products of mild climates flourish abundantly. The mulberry could not find a more congenial soil and climate. The high hills and mountains will produce the grains and fruits of the north; the low warm vallies will mature some of the most valuable products of a tropical climate.

No wonder that the Cherokee loved his father-land, when it was so lovely in itself, and was moreover the seat of his tribe and the dwelling place of his fathers, from times beyond the reach of tradition. All that can attach mankind to the earth, attached him to the woody hills, the rich vales and the clear fountains of this beautiful region. No wonder that this, the most civilized of the Indian tribes, clung with fond affection to the delightful home which God had given to them: but the white man coveted, and would have it, because he could take it by force. A fraudulent treaty had been made, and was now, at the time of my journey in the process of execution by military coercion. The Georgians had already cast lots for their portion of the spoil, and threatened bloodshed if it were not immediately surrendered. Troops of soldiers were hunting the Indians, and driving them like cattle to the encampment. Like cattle the Indians submitted, and were peacefully gathered, preparatory to their removal. I was deterred by the confused state of the country, from taking this southern route on my way home.

The valley of East Tennessee, comprehending the space between the Cumberland mountain and the great Unaka or Iron Mountain on the south-east, is from forty to sixty miles wide, and two hundred long. It terminates in the hills of Cherokee, on the southern border between Tennessee and Georgia. It is but a continuation of the great valley of Virginia, spreading to a greater breadth by reason of the many waters which converge and form the Tennessee; thus joining in one, several vallies before separated by continuous mountains. The country is hilly, the atmosphere pure and healthful. There is much good soil, but not much of first rate fertility.

The people are generally moral, sober, and plain in their manners; education is more attended to than in most parts of the south. Several institutions besides the one at Knoxville, have the name of colleges: they are rather academies, where many youth of the country obtain some knowledge of the classics and of several branches of science. The comparative poverty of the inhabitants is apparent to a traveller. Few

handsome houses or other indications of wealth and luxury, present themselves. Though nature bestows the gifts of the earth with sufficient liberality, the productions of art are difficult to obtain, owing to the remoteness of this valley from all the great marts of trade. The navigation of the Tennessee and its upper branches is long and difficult; the roads toward the Atlantic are long and rough. Live stock is therefore the principal export. With this single resource, and a heavy freightage on imports, the farmer may acquire the necessaries and some of the comforts which are obtained by exchange; but the elegancies and luxuries are generally beyond his reach. Cotton mills, by aiding domestic industry; and the culture of silk, by furnishing a valuable staple of easy carriage; would improve the circumstances of the people. A rail road to Charleston, and another to the James river canal, with an improved navigation of the rivers, would complete the means, by which East Tennessee might ere long become as prosperous and delightful a valley, as any of the thousand vallies of the Appalachian mountains. At present this is not the country for any one who aims at the rapid accumulation of wealth. The inhabitants seem to be aware of this. Hence there is little of the activity and bustle, the eager enterprise and noisy driving of business, visible in many parts of the United States. Considering the density of the population, it is the most quiet country that I ever saw. This indicates both poverty and contentment. If the people are not rich, still they are evidently not miserable.

A farmer who lives in rural plenty below Knoxville, related to a party of us who lodged at his house, an anecdote that may illustrate the philosophic contentment, which many in this country feel in their quiet abodes. A man who lived in a secluded nook in the mountains, came to his house; and when he saw the farmer's large stock of cattle, and other constituents of rural wealth, he turned to the proprietor and said:—but I should remark that the mountainer habitually uttered his words with a loud droning accent, making pauses to gather breath, and closing every sentence with a long drawn—hah! by way of emphasis. Turning to the farmer who was a magistrate, he drew forth this speech. “Why—squire—what in the world do you want with all these cows—hah? And such a parcel of horses—hah? And I see you have two wagons—hah! you can't use so many things—hah! And there you have a barn yard—full of stacks—hah! Too much trouble—squire—hah! Why I hav'n't a quarter as many things as you have—and I have too much—hah! I have three cows—and two horses—and a wagon—hah! I mean to sell one horse—and the wagon—hah! I can make enough to eat and wear, without them—hah! All that's over what one needs—is useless trouble—hah! That's my notion—hah! A'n't I right—squire—hah?” This speech of the droning mountaineer, expresses the philosophy of many in this quiet country—and in other countries too.

I entered Virginia on the evening of a sultry day. I was fatigued with my long travel on the open roads of Tennessee—exhausted with a perpetual sweat of three hot weeks—sore with the effort to keep an umbrella over my head. I had seen clouds pour out showers at a distance, but not one had shed refreshment on my debilitated frame. This afternoon a heavy shower

had fallen before me, and what was extraordinary the road entered a forest; in the evening a delightful coolness was diffused through the atmosphere. As I entered the forest at dusk, that musical tribe of insects, the *catydids*, began to chirp merrily on the trees. The woods grew darker; the air freshened to a delightful temperature; the notes of my shrill musicians grew shriller and multiplied, till every tree and bush and leaf, seemed to quiver with the sound. Thus was I ushered into the limits of my native state by dark woods, that rang with the sharp strains of a million of joyful *catydids*.

The next morning on paying my bill, I had palpable evidence that I had crossed the line. Tennessee *shin-plasters* were rejected; Tennessee bank notes were gently declined—but a Virginia bank note, brought me silver dollars in change! During a ride of four hundred and fifty miles from Nashville, I had seen nothing in circulation but Tennessee bank notes, (mixed occasionally with an Alabama note,) down to the denomination of six and a quarter cents; and *shin-plasters* of all sorts and of all sizes, from a dollar downwards, and manufactured by all sorts of persons, from the wealthy merchant, to the market butcher and the petty shopkeeper. This latter generation sprang into being immediately on the stoppage of specie payments by the banks.

As I proceeded through the well-peopled county of Washington, I recognized, more and more, the distinctive features of the great valley of Virginia; low hills and vales of limestone land, well watered and moderately fertile, with lines of high mountains on either side, and about twenty-five miles asunder. About the heads of the Holstein, the valley becomes more broken into hills and ravines. The poor village of Mount Airy is loftily situated, where the waters of the Holstein and the New River divide. The scenery about here is fine. All this country is very high, with the climate of the lowlands in Pennsylvania.

From Mount Airy, the country descends a little, and the valley about Evansham, in Wythe county, again assumes more the common appearance of the great limestone valley. About New River, the limestone is covered or intermingled with quartz or flint rocks and pebbles, of all hues, from white to black, but the black flint rock especially prevails in ascending from New River to Christiansburg in Montgomery county. Here the soil is less fertile, than it is where the limestone is the sole rock. The high country of Montgomery on the New River, has less of the characteristics of the great valley, than any other part between the Susquehanna and the Tennessee. The features of the country are modified by the change of the great dividing ridge of the eastern and western waters. The line of the Alleghany, ceases here to cast off the waters on both sides, and the line of the Blue Ridge, assumes the swell and magnitude of the great divider of the waters. The New River flows northwardly over the great table land, formed where the mountains meet, and where the Alleghany yields the ascendancy to its eastern rival.

At Rogersville I saw specimens of granite and other primitive rocks, brought from an exceedingly high mountain in the Iron or Unaka range, that parts from the Blue Ridge near the head of New River, and divides North Carolina from Tennessee. This eminence is

called the Roane mountain, and rises a little south of the Virginia line, at the head of Roane's creek, a branch of the Holstein. A gentleman who had repeatedly ascended it, told me, that in the upper regions of the mountain, the pine, the hemlock and other resinous trees alone flourish ; but even they gradually dwindle as the traveller ascends, and finally cease, leaving the flat top bare of all vegetation but grass and strawberries, which ripen here in August. He once went up near the end of April, and found that the vernal sun had not yet thawed the earth more than two inches below the surface. The top is composed of primitive rocks. Pure felspar, is found on this mountain.

There are two points in the great Appalachian mountain, which deserve notice, not only for their superior elevation, but for their effect on the geographical features of the country. Each of them is a central point, from which rivers flow out in all directions. One of these is in Virginia, about the Elaystack knob, where the counties of Pocahontas, Randolph and Pendleton meet. A spectator on the top of this knob might see, as he turned his face about, the head springs of the southern branches of the Potomac, the northern branches of the James river, and then of the Greenbrier, the Elk and the Monongahela.

The other point is the great Grandfather mountain, in North Carolina, from which the New River, the South Holstein, the Notachucky, a branch of the Holstein, Yadkin and the Catawba, issue and flow off to their several destinations.

These are doubtless the two highest regions in all our mountains. The vallies, and high table lands about them, produce fine grass, and will some day nourish a pastoral people, who will make their now lonely rocks, echo with the voice of mirth and the notes of the shepherd's pipe.

The head waters of the Roanoke, have cut deep vallies in the border of the high table land of Montgomery. Into one of these vallies, the road descends, and pursues it to the open country about Salem, where the great valley reassumes its usual features. But on proceeding north-eastward, the traveller, sees a mountain rise before him in a direction athwart the valley, which it contracts to the breadth of three or four miles. Passing this, he finds the country open again, to the width of some twelve or fifteen miles. The narrow place just passed, is found to divide the waters of the Roanoke and the James river. Crossing the latter at Buchanan, a place destined to be of commercial importance, the road ascends and passes near the Natural Bridge, to Lexington, where I arrived on the 18th of August.

I will close these hasty notes, with an allusion to the Natural Bridge in Scott county, Virginia. A gentleman of Tennessee, who had been there, described it to me as a *tunnel*, rather than a bridge. A creek flows three or four hundred feet under an arch of limestone, less elevated than our Natural Bridge ; the tunnel makes two angles between its extremities, so that both openings can never be seen at once by a spectator under the arch. It is a great curiosity, but differs materially from its namesake in Rockbridge, which for a union of beauty and grandeur, is still, and probably will ever be, in its kind incomparable.

April, 1839.

SISTER AGNES :

OR, THE DOOMED VESTAL OF THE HOTEL DIEU.

The association of native writers, who cater diligently for the intellectual man, and a goodly portion of the congregation of divines, who vigilantly guard the fold, like the wine merchants of Andalusia and Madeira, seem to have carefully observed the peculiar taste of the American people. A youthful and active race, we have not yet attained that maturity which gives polish and refinement to nations older than ourselves, nor have we leisure to seek, amid the beautiful philosophy of more cultivated writers the hidden and delicate manna for which we are not yet prepared. The land of promise is before us, but we still wander in the desert, and though sometimes regardless of the report of our spies, who have gone forth in advance, and returned with abundant evidence of the exquisite beauty of our destined country, our ruder appetites still prevail, and we turn not unfrequently to hunger for the flesh pots of Egypt. We do not find welling up around us the refreshing rivulets which pour forth from a thousand fountains in the hillsides of Judea, and water all the land ; but in the parched and arid wilderness through which we wander, we trust for refreshment to those alone, who with a strong arm smite the rock, and unseal the hidden torrent.

Both the wine merchant and the author, to secure a wide circulation to his merchandise, must give a high flavor, a quick relish, a powerful zest, to whatever is intended for American consumption. Hence, although a shrewd and intelligent people, our political, intellectual, and religious condition, is one continuous subjection to quackery and humbug. No matter how insolent the impostor, he speedily collects around him a school of disciples and a multitude of followers ; and while Irving and Matthias proclaim their fanatical folly in the North, the enthusiastic Mormon dictates a new law to his catechumens in the West. Improving upon the beautiful principles of government, upon which our sagacious forefathers founded those free institutions which have rendered our unprecedented growth and happiness a wonder to the nations of the earth, we have ceased to consider them a permanent republican settlement, and only regard them as a nursery of future revolutions. The wildest dreams, the most incoherent speculations of modern enthusiasts, are implicitly received as emanations of truth, though their immediate tendency is to sap the foundations of morals and religion. Thus, fatalism and destiny lurk under the popular tenets of phrenology ; and materialism, once more erects its head under the auspices of animal magnetism.

We maintain the sacred right of opinion in matters purely political, and crush its indulgence under the iron domination of party ; we proclaim freedom of religious observances, and sack and fire a convent, even in sight of the cradle of liberty ; we boast of the capability of man for self government—we assert the supremacy of the laws, and yet the most populous cities of the Union are frequently at the mercy of a riotous populace. Each religious sect affects to be founded in piety and love, and yet they revile and persecute each other with all the bitterness of intolerance and fanaticism. Ministers of peace and good will, anointed to bless mankind, have

borrowed their inspiration from the foul breathings of a strumpet, and the purses of parsons have been filled by the sale of the lewd libels of Maria Monk.

I was seeking, during the latter part of the summer of 1838, some relaxation from the cares and labors of an arduous profession, at Saratoga, when, wearied at length with the crowds of fashionable folly with which I was surrounded, a friend induced me to accompany him to the falls of Niagara, and exchange for the artificial refinements and pleasures of modern society the stupendous scenery of nature. I will not attempt to describe the feelings of admiration for this display of the powers of the Supreme Architect, who weighs in the hollow of his hand the waters of the great deep, as I stood beneath this arch of tumbling waters, nor the humiliating sensation of nothingness which oppressed and almost overpowered me as I felt the firm-set foundations of the earth trembling beneath the collected tribute of inland seas, as they leaped with a flashing and terrific plunge over the sheer precipice, and deafened me with the precipitate tumult and terrors of this bursting cataract. I passed on to Montreal, and thence to Quebec, and from the impregnable heights of the latter, looked forth on the waters before me, musing on the memories of the illustrious dead, who have made this consecrated ground. At length, musing on the far-famed narrative of Miss Monk, I resolved to seek in Quebec some of those evidences of the truth of her story, which I had failed to discover in Montreal.

Bear with me, gentle reader, and I will unfold to you a tale of sorrow, the memory of which has sunk deep into my soul. Poor sister Agnes! I shall never again hear those melancholy strains which thy vestal lips breathed in such melting tenderness before the image of the Virgin—but long, long will it be before I forget thy hapless fate:—a soul darkened—a mind in ruins—a broken vow, and a broken heart!!

I proceeded to the Hotel Dieu, and accompanied by an elderly sister of the order of Ursuline Nuns, I visited the different apartments, and beheld with mournful feelings of approval the pious efforts of the good sisters to redeem from the paths of sin its hapless inmates. At the extremity of one of the corridors, a voice of melting tenderness and sorrow fell upon my ears. It was the plaintive melody of a woman's voice, chanting some pious hymn, the strains of which were not unfamiliar to me. Filled with tender emotions, and moved to compassion by the scenes through which I had passed, my attention was rivetted in a moment upon a chamber at the extremity of the corridor, from which the tone of this lone one's voice seemed to proceed. My conductor advanced to the door, and touching a spring on the outside, disclosed to my sight the fairest vision of beauty, upon which the eyes of man have ever gazed. In the recess of her apartment, before an image of the Virgin and a crucifix, knelt a form of exquisite mould, from which poured forth that beautiful hymn, which had already engaged my attention. Suspending her song at intervals, she seemed to be absorbed in penitential prayer, and that voice, which, while singing, breathed such unearthly sweetness, was convulsed with sobbing.

Admonished by my conductor not to disturb her devotions, I remained standing for some moments in the doorway, and she continued alternately to sing and weep until I was nearly choked with emotion. At

length she discovered us, and springing forward, she held the crucifix aloft in her left hand, and pointing to it with the other, the tears still streaming down her cheeks, she continued to repeat, "BEAUTIFUL—OH, BEAUTIFUL!!"

By the wildness which glared from her eyes, and by the peculiar expression of her features, it was apparent that she was laboring under some strange illusion, which brought into full play those most hallowed and exquisite of the sentiments of the female bosom—love and piety. Still she stood immediately before us, weeping bitterly, and exclaiming, "BEAUTIFUL—OH, BEAUTIFUL!!" At length she returned to her devotions, and chanting one of those touching hymns to the Virgin, which find their way directly to the heart, I turned to my conductor for an explanation. But the good sister was overpowered with her feelings, and I followed her footsteps in silence, as she withdrew, and gave a sign to me to retire. Upon arriving at the outer door of the building, she kindly observed, "I see that you are interested in the fate, and desire to learn the history of sister Agnes. It is a tale of sorrow and suffering, which I have not the heart to relate, though I have long been familiar with her afflictions, and she has been placed here at her request from her attachment to me. Call upon father Clement at the cathedral, and he will inform you of all that it is proper you should know."

It was about four o'clock in the afternoon when I entered the cathedral, during that most interesting service of the church, the vespers. It was the festival of the Annunciation of the Virgin, and I had scarcely taken my seat, when amid the wreaths of incense ascending and obscuring the blaze of lights upon the gorgeous altar, the solemn tones of the organ rolled around the spacious edifice, and the whole congregation bowed down in silent devotion before the sacrament exposed upon the offertory, as if preparing themselves to merit the blessing which awaited them at the approaching benediction. But what were my emotions when a female voice of exquisite sweetness and compass commenced in an affecting solo the very hymn I had so lately heard in the cell of the doomed vestal of the Hotel Dieu. But amidst all the powerful tones of the organ, far above all the voices of the choir, the words of the afflicted maiden still rung in my ear, "BEAUTIFUL—OH, BEAUTIFUL!!" Her form was still before me. I was haunted with the peculiar expression of her tristful countenance. I could not banish that beautiful form from my memory, as she knelt before the emblems of her faith—and her words, far above the solemn hymn of adoration of the Eucharist, still lingered in my thoughts—still resounded in my hearing—"BEAUTIFUL—OH, BEAUTIFUL!!"

The service, although conducted with all that impressive decorum, which even those who protest against that church, cannot fail to respect, was becoming intolerable to me; and while my fellow-mortals around were worshipping in the depths of their hearts the great Father of us all, my thoughts were wholly occupied with the lorn and stricken inmate of the Hotel Dieu. At length the service closed, and I lingered for a few moments only to view the tasteful architecture, the gorgeous ornaments, the rich drapery of the altar, and the paintings of the cathedral. I forthwith hastened to the dwelling of father Clement, with whom I

had been long acquainted, and made known to him the object of my visit. The good old man was bowed down with years and premature old age. He was one of the disciples of Loyola, devoted to the interests of his order, not for its temporal goods or worldly gear, but because of his sincere conviction of its usefulness. He had lived to hear it charged with the heaviest crimes; he had seen their property confiscated, their colleges and seminaries closed, and his brethren expelled from kingdom after kingdom, until they had scarcely an abiding place on earth. The afflictions of the Society had preyed upon him, until his health had been impaired; and his once vigorous constitution had been exposed to the wasting action of foreign climes, in which he had been an outcast and an exile. But, though bowed down with sorrow and humiliation, he preserved the calm equanimity of his temper, he still cherished the benevolent feelings of his nature, and was the favorite instructor of the crushed and broken-hearted.

"VITTORIA NIGRETI," said father Clement, "whom you have to-day known as sister Agnes, was the only child of respectable and wealthy parents in the city of Oaxaca, in the republic of Mexico. In the civil wars which desolated that unhappy country, her father held a distinguished command under Iturbide, when he marched to quell the insurgent forces of Morelos. Her mother was a native of Spain, and had been educated in a convent in that country, which she had only left at the early age of fifteen, to marry Felix Nigreti, then on a visit to Madrid. Ildefonsa Nigreti, the mother of Vittoria, was eminently beautiful; but, whether from some hereditary predisposition, or from the nature of her education in the seclusion of a convent, her mind from early youth had been deeply affected with melancholy, which continued to increase after she had left her parents and her native clime to accompany her husband to Mexico. When her father departed from Oaxaca for the camp of Iturbide, Vittoria, then in her fifth year, was left at home under the sole protection of her mother. Morelos, the insurgent chief, finding it impracticable to advance upon the city of Mexico, as he had originally designed, fell back upon Oaxaca, and, as it was unprotected, entered the town in triumph at midnight. With his own hand he applied a torch to one of the principal houses, and the greater part of the place was soon wrapped in flames. Sleeping in fancied security, the dwellers of that ill-fated town were awakened from their slumbers by the shouts of the exulting insurgents and the crackling of the spreading flames. To timid and unprotected females, the fire which blazed around and threatened to consume them in the general conflagration, was scarcely more terrible than the brutal license of the soldiery in the streets. Among others, the terrified mother of Vittoria rushed forth from her dwelling with her infant daughter in her arms, and looked around in vain for some familiar face, of whom she might claim protection for herself and child. Struck with her extraordinary beauty, she was instantly and rudely seized by some of the ruthless soldiery—but struggling in their rude grasp, she at first appealed to them with all the persuasive eloquence of a mother of an only child, to conduct her to a place of safety. Yells of triumph and obscene ribaldry were the only reply she received from these hardened and remorseless ruffians. Shriek after shriek, from the wild, struggling

and distracted mother, arrested the attention of Morelos as he passed along the crowd. Knowing him by his dress as an officer in command, she turned towards him and implored protection for herself and the infant hope of the house of Nigreti. "Spare us, save us, shield us, brave soldier," she exclaimed, in the agony of her soul,—"Shield and protect us; and if the fortunes of war should ever throw you in the path of Nigreti, he will requite your kindness!" The dark countenance of Morelos grew darker as Ildefonsa spoke; and snatching the child from its raving mother, he shouted with triumph, "I am avenged at last;—know lady, that my banner would this night have floated in triumph in the streets of Mexico, but for the accursed counsels of Felix Nigreti. He is my evil genius. Twice has he foiled the fondest hopes of my heart—twice has he rode victoriously through my broken ranks—twice have I sworn vengeance—and lo! vengeance is mine." Ildefonsa shrieked aloud, and, as if her spirit had gone forth in that last cry of a mother's agony, she sank to the earth. The agitation of the dense crowd, and the shouts which now resounded at a short distance, bore evidence that the inhabitants had at length resisted, and that the possession of the town was to be disputed. At this moment a gallant band of the younger citizens, led on by Carlos Carrera, rushing upon the soldiery through a narrow lane that opened upon the main street, in which the insurgents were assembled without order or discipline, pressed forward to the very spot where Morelos stood with the infant in his arms. The attack was too sudden and precipitate to allow the use of musketry, and in a moment the sanguinary conflict with the sword and the stiletto raged around. In the confusion of the moment, the mother of Vittoria had been raised and removed by some of her attendants, while the soldiery, forgetful of every thing but the defence of their persons, resisted this sudden and terrible assault. Nor was this the only scene of conflict—the invading army had been attacked at the same moment in different parts of the town; and the citizens pouring in upon their enemies by every avenue, and firing upon them from the windows of the blazing houses, committed fearful havoc. Meanwhile Carrera, pressing forward at the head of his detachment had nearly reached the spot where Morelos stood, when the latter, throwing the infant into the arms of one of his soldiers, drew his sword, and rushed forward to meet Carrera. Their swords flashed in the flames of the burning city as they fought hand to hand with desperate valor. At length the sword of Carrera fell with such force upon the covered head of Morelos, that the latter, stunned for a moment, sunk upon his knees—while the shivered blade of the former's sword flew to a distance, leaving in his grasp nothing but the hilt. Springing with the vigor of a lion upon the soldier in whose arms the infant had been placed, he struck his dirk to the heart of the defenceless man, and seizing the child in his arms sought to bear her to a place of safety. He had forced his way through the crowd but a short distance, however, when Morelos recovered from the shock of the blow he had received, and inflamed with wrath, levelled his pistol, and as the sharp report rang around, Carrera was perceived to start and reel in his course. Retaining his hold upon the child, however, he pressed forward; and his companions having formed around him, he succeeded in making

good his retreat to one of the flaming buildings. His band of followers was now scattered and defeated, and were compelled to leave him to the dreadful fate which seemed to await him in the blazing dwelling. The troops of Morelos spread themselves around the house, and cut off every hope of escape—the roof was already tottering—the flame was pouring forth from every window—and it seemed impossible that any being could breathe in the dark volume of smoke which ascended from the house. Blackened and scorched, the tall form of Carrera was seen in the midst of the smoke and flame, rushing along the flattened roof, which gave way and sunk behind him at every step. Musket after musket was discharged; but, apparently unscathed, he pressed forward, and, with one desperate leap, made just at the moment when the whole roof fell in one blazing ruin, he cleared the narrow lane which separated him from the next dwelling, and disappeared. The struggle continued with various success in other parts of the town; but in less than two hours the forces of Morelos were expelled from the city, and the fire arrested in its progress. Ildelfonsa Nigreti, removed to the house of a friend, still raved for her lost child; and the voice of consolation fell like a chill upon the heart of the mother without a hope.

There was a rush in the entry—there was a cry of rejoicing in the hall,—and, Santa Maria! the panting, the exhausted, the wounded and half-burned Carrera burst into the room, and in a moment the frightened infant was nestling its terrors in the bosom of the exulting, the hysterical, the frantic mother.

The instant the child was brought into the chamber, she sprang from her couch, snatched the little one from the arms of its deliverer, and uttering shriek after shriek, she retired into the farthest corner of the apartment, and there, folding it close to her bosom, crouched to the floor a trembling maniac!"

During the latter part of this narrative, the good father Clement had yielded to the tender current of feeling which the afflictions of poor Ildelfonsa Nigreti caused to swell in his bosom. He paused; and when I looked up to his pale countenance, the unbidden tear, starting in his eye, showed abundantly, that although he had renounced for himself all worldly ties, yet that he had the heart of a father for the sufferings of the children of men. After a brief struggle with feelings so pure and holy that I dared not interrupt him, the old man resumed his story.

"Ildelfonsa Nigreti had been too tenderly nurtured to resist the shock which the trials and exposure of that awful night had given to a delicate frame. Her reason, however, was restored a few hours before her death, and she lived to breathe a mother's blessing over her tender infant, to recommend her to the protection of the youthful deliverer, and to express a hope that Providence might place it in the power of some of her family to reward his gallantry, and discharge the debt of gratitude.

Carrera soon recovered from his wounds; but the manly beauty of his countenance was marred forever. In rescuing the infant, his face had been frightfully burned, and the smoke and blackened and charred timbers of the burning buildings through which he had rushed, had marked his face with many an ugly scar. The profession of arms in which the father of Vittoria

was ardently engaged, only allowed him time to place his daughter under the charge of his brother, and to evince his gratitude to Carrera by obtaining for him an honorable command in the service of Iturbide, whose fortunes were then in the ascendant. Before Vittoria had attained her twelfth year, she had wept over the early fate of her only surviving parent, who fell in battle after a brief but distinguished career. Carlos Carrera soon became distinguished in arms, and amid the stormy revolutions of the times, continued to increase a well-earned reputation. He was a frequent visitor at the house of Vittoria's uncle, and tenderly watched the progress of her studies and the development of her mind and person.

She had been fully impressed with the sense of her obligation to her preserver, but her first recollections of him were associated with the memory of her parents, and she entertained for him the same filial regard and reverence. But as she approached that period of life when the youthful heart pants for the enjoyment of worldly bliss, and the wilder fancy paints every thing in the most joyous colors, that tinge of melancholy, which she seemed to have inherited from her mother—increased perhaps by the events of her tender years, and the early loss of her parents—appeared to have banished from her heart all relish for society and its allurements, and she became daily more and more attached to the sisters of the neighboring convent, at which she was educated. And thus,—while Carrera was exulting in the budding and clustering virtues of one whom he had always regarded as his destined bride, bestowed upon him by the last wishes of her parents,—Vittoria had already abandoned the world in her affections, and impatiently awaited the period at which she would be permitted to renounce her princely estates, and seclude herself within the consecrated precincts of the convent.

It would have been well, perhaps, both for herself and Carrera, that the latter should have sought to win her affections before they had been so entirely weaned from the things of this world. But Carrera had so confidently indulged the belief that she whom he had preserved was to be the crown of all his hopes; he had watched so tenderly over her ripening years, and had been always welcomed and treated by the family of Vittoria's uncle and guardian so entirely as the betrothed of the heiress of the house of Nigreti, that he never doubted for a moment that the object of his affections was fully apprised of his feelings, and looked forward to this union as the end of her existence.

Vittoria was now in her fifteenth year; and the beautiful being you this day beheld in the cell of the Hotel Dieu, is but the wreck of one of the loveliest of those creatures whom Providence sometimes permits to visit the earth as if to teach us how beautiful is his handiwork even of earthly mould.

It was about this time that the conflicting factions of Mexico became blended into one great division of the people; and the Yorkinos, or liberal party, which received countenance from the minister of the United States of North America, and the Escocés, or constitutional party, were competitors for the administration of the government. Carrera, who was himself possessed of large estates, and already considered himself the representative of the princely fortunes of the house

of Nigreti, connected his interests with the Escoces party, which was composed for the most part of large proprietors, and men of moderate principles—while the Yorkinos were in favor of universal freedom of religious opinion, the demolition of all monastic institutions, the confiscation of all church property, and the expulsion of the Spanish residents. The citizens of the United States residing in Mexico, were active supporters of the Yorkinos; and, among others, Charles James Lamar, a young man of brilliant talents and fine person, became an ardent partisan. His employment as one of the family of the United States minister gave additional consequence to his efforts. Carrera, naturally of strong impulses, and a native Mexican, expressed openly his indignation at the interference of foreigners in the domestic polity of Mexico, and indulged in feelings of decided hostility to young Lamar.

About this time Lamar was the bearer of some despatches from the leaders of his party to General Santa Ana, who was then in the vicinity of Oaxaca with a division of the army. The uncle of Vittoria was inclined to favor the Yorkinos, and Lamar became a frequent visitor at his house. Struck with the peerless beauty and fine intellect of Vittoria, he exerted all the powers of his richly cultivated mind to interest her. Educated within the narrow precincts of a convent, unfamiliar with other climes, it was with intense interest that this charming girl listened to the rich tones of a voice, which spoke of the once beautiful, but now desolate land of her mother's nativity and childhood,—of the excellent institutions and diversified climes of his own native land,—and who displayed before her admiring soul the rich mines of his varied information.

Vittoria Nigreti, though simple and artless in her manner, and although seemingly listless and unsusceptible, was naturally of a sanguine and ardent temperament, which was almost unfelt by herself, and entirely unperceived by others, under the modest veil of pensiveness and melancholy, which had hitherto concealed and apparently suppressed her feelings. All the sentiments of her heart had been absorbed in a tender piety; and hence in the absence of any earthly object to attract her affections, her kindred spirit seemed to mingle with the loves of the angels, and to linger around the altars of her religion. Upon Carrera, she looked as upon a stern but fond parent; he had always been associated in her heart with the memory of her mother, and she had regarded him as the nearest friend of her lamented father. She felt for him unbounded reverence, and was prepared up to this period, to have made any sacrifice of her feelings for the happiness and even at the request of her deliverer. But, in the singleness and simplicity of her heart, she made no effort to conceal the pleasure she derived from the frequent visits of Lamar. Their voices often mingled with the music of the light guitar and the resounding harp; and while Lamar drank in with delighted ears the beautiful Spanish airs she sang so sweetly, she would love to learn of him the loftier and more refined music of Germany and Italy. Little dreamed she, but well did Lamar know, that music was the food of love.

This new and fascinating scene in the life of Vittoria, was suddenly closed; and those afflicting trials, which never visit us, except when the passions are awakened, speedily followed. Santa Ana had removed and con-

centrated his forces in the capital on the eve of the election of the chief executive officer of Mexico, during the canvass of which the two great political parties had exerted all their influence. The candidate of the Escoces party was declared duly elected, but Santa Ana threw his sword into the scale, maintained that his opponent of the Yorkinos faction was chosen, and being supported by the whole power of his army on the spot, he frowned down all opposition.

Inflamed with resentment, and driven into retirement, the impetuous Carrera flew to Oaxaca, resolved to consummate his marriage with the lovely Vittoria, and to find, if not new resources in the wealth and influence of the house of Nigreti, at least forgetfulness of the past in the society of his blooming bride.

"I have neither the power nor inclination, my son," continued the venerable father Clement, "to portray the strong violence of Carrera, nor the sufferings of Vittoria in the interview which followed between this unhappy couple. Carrera was astonished to find the girl he had so long guided and nurtured, no longer a docile child. Under the glowing sun of her native clime she had sprung up suddenly into womanhood—a new feeling had been awakened in her bosom—the master chord had been struck, and its vibrations found a quick and thrilling response in every string of the delicate instrument. He urged his suit at first with all the delicacy of refined sentiment, but as he found no return to his ardent feelings, he resorted to every theme which he thought likely to prevail with the beautiful orphan. He spoke feelingly of the friendship of her father, of his long and devoted admiration, and at length, impelled by disappointment and despair, he ungenerously urged the dying wishes of her mother, and finally her own preservation at the imminent peril of his life, and the sacrifice of his personal appearance, scarred, blackened, and scorched as he had been by the flames through which he had securely borne her from the pursuing vengeance of Morelos. Alas, for poor Vittoria! how bitterly did she lament that generous act of noble daring, which made her, the last survivor of her family, appear ungrateful to her preserver. She threw herself in a paroxysm of grief at the feet of Carrera, she poured forth the gratitude of her heart in the most affecting terms, she spoke of her fixed resolve to take the veil, and of the solemn vow made in the sincerity and solitude of her heart to consecrate herself to the service of Heaven. Her lover was inexorable, until overpowered by a burst of overwrought feeling, the impassioned and afflicted girl, unable longer to support herself, sunk pale and inanimate upon the floor. Even the hard and selfish heart of Carrera relented at this distressing scene, but in the very moment when he was renouncing his suit, and relinquishing his claim, he discovered suspended from the neck of Vittoria the miniature of his triumphant foe, the Yorkino Lamar. Surrendering the still insensible girl to the care of her attendants, he rushed into the presence of her uncle, and there learned, for the first time, the frequent visits and intimacy of the young American. In a few moments he was on the road to Mexico, stung with defeated hope and inflamed with resentment. When he arrived at that city, he found the parties which divided the great body of the people highly exasperated with each other. You have already been informed of the armed interposition of Santa Ana,

in pursuance of the advices borne to him by Lamar, while he was encamped at Oaxaca, and of his declaration that the election of Pedraza of the Escoces party was not a fair expression of the popular will, and that the Yorkino Guerrero was the president elect of the Republic. The party of the Constitutionals was the more wealthy and intelligent—the usurping party the more powerful. But it was not to be expected that the proud and rich proprietors, who composed the great body of Pedraza's friends, would tamely submit to this arrogant assumption of power by a military chieftain. It was at this moment of political excitement that Carrera arrived in the city, and of all the counsellors of Pedraza he was the most violent and uncompromising. Pedraza, although a man of great firmness of character, was anxious to avoid a civil war, and exhausted all the arts of negotiation to effect a compromise with his competitor. He offered to resign the dignity, to which he had been called by a majority of the voices of his countrymen, in favor of Guerrero, provided the election should be remitted to the people. Carrera, apprehensive that this proposition would be accepted, resolved, by a decisive movement, to prevent the compromise.

In the open face of day, at the head of a determined band of Constitutionals, he contemptuously struck down the American flag, as it waved its folds over the dwelling occupied by some of the legation, and trampled its stripes and stars beneath his feet. The Yorkinos, to whose faction the Americans openly adhered, considered this an insult offered to themselves, and rushed forth to resent the indignity. Besides the defeat of the pending negotiation by this outrage, Carrera had flattered himself that his ardent and fiery rival in the affections of Vittoria, would lead on the assault, and thus at the same moment compromise the neutrality of his nation, and expose himself in open combat. But the partisans on either side rushed indiscriminately to the deadly conflict—the citizens closed their doors and mingled in the affray. Fortunately the street was narrow, and the number of combatants actually engaged was small. High above the surrounding din was raised the stern voice of Carrera, urging his friends to renewed exertions. The conflict was continued for a few moments only, when a detachment of horse from the army of Santa Ana, charging upon the rear of Carrera's party, put them to flight. The insulted flag was redeemed, and hoisted to its former station; and the blood-stains upon it proclaimed, that either at home or abroad—on land or mountain wave—in every clime and in every sea,—it was not only the emblem of freedom, but the protection of all who dwelt beneath its starry field.

The Yorkinos party was now triumphant, and Pedraza, to avert a civil war, resigned his office, and left the country. An act of general amnesty was passed, and Carrera, apparently forgetful of the past, brooded in solitude and bitterness of heart over the disgrace of his party, and cherished in the depths of his heart the hatred he bore to Lamar. Revenge in his bosom supplied the place of banished love. Some months after the events which have been related, the two rivals met at a private table at the house of one of the friends of Guerrero, to which many of the officers of the two parties were invited, and as the wine circulated freely, the restraints of good breeding and the gentle rules of de-

corum yielded to the sterner impulse of the passions. Elated with the success of his friends, and for a moment forgetful of the feelings of those who had lately been his opponents, Lamar sprang upon his feet, and proposed as a sentiment:

"The American Flag—the banner of the free, which none can touch with unhallowed hands, and live."

In compliment to the young American, the toast was drunk with acclamation by all but Carrera, who sat in silence, pale with resentment. "You do not fill your glass, Col. Carrera," observed Lamar, looking him sternly in the face—"I hope from no objection to the sentiment."

"I will respond to your question by another sentiment," coolly replied Carrera; "we will drink standing." Each one filled, and stood with his glass in hand awaiting the sentiment of Carrera. "I propose to you, gentlemen:

"The Constitutional Banner of Mexico—though humbled now, it still bears inscribed upon its ample folds the prophetic word *Resurgam!* May we speedily behold the day when it shall stream in triumph to the breeze, with our feet planted once again, as mine have been, upon the accursed *stars and stripes!*"

The words had scarcely died upon his lips, when Lamar, who stood directly across the table, emptied his glass in Carrera's face. A profound silence throughout the room succeeded to the voice of revelry, and the inevitable consequences which every one perceived must follow this insult and defiance, seemed to have restored to each one, in a great measure, his wandering reason. The company gradually divided; the Constitutionals proceeding to the side of the table on which Carrera stood, and the Yorkinos crowding around Lamar. Proud and erect stood the principal actors in this shifted scene. With his cheeks still flushed with indignation, but otherwise tranquil and composed, stood the latter, his dark keen eyes still fixed upon his adversary, against whom he appeared to have no further resentment, and seeming satisfied with the promptness with which he had resented his insolence, and with the extent of the indignity he had offered him. Although the proud feelings of Carrera were disturbed in their uttermost depths—although his soul was fired with vengeance—he gave no other evidence of the flame which was consuming him inwardly, than the snowy paleness of his countenance. His swart features assumed an ashen hue; his eyes with tremulous restlessness sparkled with excitement; his lips were compressed until the rivulet of life seemed to have deserted them; nevertheless, he stood calmly erect, and in a deliberate but husky voice observed, with a slight inclination of his head to Lamar, "This insult cannot be borne beyond the spot upon which we stand. Let the arrangements be made here—and at this board, where the outrage has been committed, shall it be expiated." A nod of acquiescence from Lamar closed all hope of explanation, and indeed affairs of this kind had been of too common occurrence among the Mexican officers to shock the better feelings of those who surrounded the table; moreover, the uncompromising character of the combatants, and the nature of the quarrel satisfied all that the matter must proceed. The doors of the apartment were locked, to prevent any alarm from being given, as soon as one of the company had returned from an adjoining room with

a case of pistols. Both of the combatants were capital shots, and the friends of the two, after a moment's consultation, decided that they should fire across the table, and took no other step to avoid a result fatal to both, than to require each to retire one step from the table, and stand back to back, with directions to wheel and fire at discretion after the word should be given. The friend of Carrera won the word. The company fell back a short distance from the duellists, and the arrangements were finally made to conclude this horrible affair. The pistols were charged, the triggers sprung; and the short click of the cocks, as they were drawn back, seemed, like an electric shock, to have been felt throughout the room. The words of the preliminary inquiry, "Are you ready?" fell with fearful distinctness from the lips of the second. "Wheel! Fire!" and at the same instant both pistols were discharged as if with one report. As the curtain of smoke lifted itself, Lamar was seen standing calm, motionless, and unhurt, with his pistol reeking from the lock and muzzle—but the pistol of Carrera flew from his hand to the distance of six or eight feet, and he reeled backwards a few paces towards the wall, until he was caught and supported by his friend. The whole party crowded around, and the blood-stain on his forehead about an inch above the left eye, induced all to believe that he had received a mortal wound. He recovered, however, in a few moments, and inflamed with passion, demanded another fire. The ball of Lamar had struck the muzzle of Carrera's weapon, and knocked it from his grasp, and a small piece of the barrel, or of the split ball, had touched his forehead and glanced along his temple, stunning but not seriously wounding him.

Strange as it may seem, no effort was made to arrest the matter here, although one party had been wounded and disarmed. Carrera demanded that they should be placed face to face, in order that the contest might be brought more speedily and certainly to a close. The report of the pistols had attracted a large crowd to the door of the room, and apprehensions were entertained that they might be interrupted—the proposition was therefore accepted. The pistols were re-loaded, the parties were stationed directly facing each other, and all the other lights in the hall having been extinguished, a solitary light was placed in the centre of the table immediately between the combatants. The word was again given, and the report of both pistols was heard; but the concussion produced by two weapons, whose muzzles so nearly approached each other, extinguished the light on the table, and left the room in utter darkness. Meanwhile the door of the apartment had been forced—and a dense crowd burst promiscuously into the room. The result of the second fire was unknown, and lights were loudly called for on all sides, but in the general confusion, it was some time before they were procured. Meanwhile the impression prevailed that both had fallen, for, on either side of the table, a few who were nearest to the place of combat, felt that the floor was slippery with blood, and neither of the principals answered to the repeated calls which were made to them by their respective friends. Lights were at length obtained, and the result was ascertained to have been to all appearance fatal to at least one of the parties. Lamar was found extended motionless and insensible on the floor, with the blood pouring from a wound on his right

side. Carrera had disappeared. His friend, who had watched closely the effect of his principal's fire, had seen that the ball of Carrera had taken effect; and as the crowd broke into the room, apprehensive that violence might be offered to the survivor, he whispered to him to depart. Immediately behind Carrera, there was a large window coming down to the floor, which opened into the garden, and throwing up the sash he retired in that direction under cover of the darkness in the room.

But during these occurrences between parties, in whose welfare she was deeply interested, where was the gentle Vittoria, to whom it is high time I should return? It was a beautiful summer's eve, and all nature was blooming around her, as she walked along the ornamented pathway in her uncle's garden, accompanied by Isabella Mendez, one of her favorite companions, who had been her intimate associate for many years, and from whom, until lately, she had concealed none of her sentiments. They were engaged in earnest conversation—the manner of Vittoria being somewhat more serious than that of her arch and sportive friend.

"Tell me, Vittoria," said Isabella, "why it is that you seem so much less anxious now than formerly for the arrival of the time when the rules of the convent will permit you to become one of its inmates. Has the gallant Carrera persuaded you to forget the disparity of your ages, and to turn from the secluded and solitary cell of the convent, to preside over his domestic circle, to make him the happiest of men,—or has the gay young American, with his rich voice and light guitar, like our own St. Cecilia and her organ, won another spirit from the skies?"

"Alas! my beautiful cousin," replied Vittoria; "we never know when we are blessed in this world. I confess to you that the happiest, I might well say the only happy, moments of my life, have been passed in the company of Charles Lamar—but, in the fulness of my breaking heart, I bitterly regret that we have ever met, or having met, that we should ever have parted."

"Why so, Vittoria? Can you not meet again? And if the heiress of the princely fortunes of Nigreti choose to see the stranger, is she not mistress of her own will, and who shall say her nay? This will be sad news, however, for the good sisters of the convent; for unless the world does them great scandal, the loss of a fair sister from the community will not fail to be embittered by the loss of the broad lands of Nigreti. The heavy contributions which have been exacted in these times of civil feud, require that their purse should be replenished, and where will they look for aid if all their hopes of your fortunes should be disappointed?"

"Speak no evil of the good sisters, Isabella; there will be enough found for that uncharitable work, without the aid of my pretty cousin, who does not respect them the less because she has a light spirit and a nimble tongue. But in good earnest, Bella, I have been an altered being since my acquaintance with Charles. I find new feelings, other and deeper emotions, springing within my bosom, since I have learned to listen to the accents of his persuasive lips. Before I saw him I was the same thoughtless, careless girl that you are, but I am now a different being. I live no longer in the same world—I have no longer the same affection, except for you, my dear Bella—and my thoughts oppress me—and I have learned to weep, until I sometimes

fear my reason will abandon me, or my poor heart will break."

"Nay, do not weep, Vittoria. I fear my lightness and indiscretion have distressed my good cousin. But tell me, has Col. Carrera never made any pretensions to your favor, and does he know any thing of your acquaintance with the young American?"

"I will be frank with you, Isabella, and conceal nothing from so dear a friend. Some months ago, shortly after Charles had left Oaxaca, Col. Carrera visited my uncle, and for the first time spoke to me of love. I have but an indistinct recollection of what passed between us. But the interview was to me most painful, for he, who had been always to me as a father, tender and affectionate, urged his suit with vehemence—and at length yielding to the native ardor of his temperament, reproached me with ingratitude, and seemed to demand as his right those affections, which, alas! I had it no longer in my power to bestow. I fell upon my knees before him, and entreated him by the memory of my poor mother, by the friendship of my father, to forbear to press his suit. But he remained unmoved—or rather became transported with passion; and surprised and astounded at this exhibition of angry feeling towards me, I fell senseless upon the floor. Oh! Isabella! you know not how it wrings the heart to find one who from your infancy has cherished and loved you—one for whom you entertain the feelings of a child, withering you with dark and angry looks. It is like the dreadful tempests of which we read, when the dark clouds towards evening begin to gather and lower and blacken, and spreading their gloomy veil over the whole face of nature, shut out the beautiful light of day, and are the harbingers of fearful suffering and ruin. I could not bear to behold Carrera, the friend of my childhood, and the preserver of my life, frowning thus darkly upon me—my heart shrunk within me—my limbs refused to support me, and I sunk down before him. He left my uncle's house in anger. My nurse informed me, that when I had swooned, she found him supporting me, and the big tear starting from his eyes; but that in her efforts to relieve me, a miniature of Charles fell from my bosom, which he had no sooner seen than he left me abruptly, breathing vengeance against the innocent Lamar."

"And have you not seen either of them since?" said Isabella. "Surely Charles, after so many delicate attentions and so many protestations of his enduring friendship, has not forgotten his favorite Vittoria."

"I have heard from neither," said Vittoria; "and indeed I have no desire to see Carrera; for the recollection of the dark features of his swart countenance when we last parted, fills me with awe. Oh! Bella! cheerfully would I lay down my life to preserve his, or to render him happy. I am not ungrateful—but I can never love him. I will live single for his sake. I will marry none other; no, though my heart break in the struggle—I will not give that to another which I have refused to my preserver."

"Did you say you had never heard from Charles since he left you? How ungrateful! And this is the end of all his assiduous attentions and profession of regard during an acquaintance of several months. This is his gratitude for the kindness extended to him by your uncle."

"Nay, Bella, you do Charles less than justice. As

soon as my uncle informed me that Carrera had left him in anger, because of the intimacy of the young American at his house, I requested my uncle to write to him, declining his intended visit about this time, and informing him of my fixed determination to abandon the world, and retire to the convent. I intended this as a peace-offering to Carrera. How unkind, how unnatural, how insincere must Charles believe me to be!"

"Have you never regretted your rashness—for I can call it nothing less—in thus abruptly crushing all his budding hopes?" said Isabella; "for Charles loves the gentle Vittoria—and Vittoria, my own blushing cousin, is not indifferent to the virtues of Charles. Tell me now, Vittoria, would you chide very severely the disobedience of this ardent and impetuous youth, if, forgetful of the injunction, he should once again enter the forbidden ground! You were not made for a dissembler, my dear girl; and even now Heaven could not send you a richer blessing than the person of this same American. Am I not right, Vittoria?"

"I can scarcely read my own heart, for it has been visited by feelings I have never known before, since I have known Charles. With him came life, and buoyancy, and happiness, and hope—and with him they departed! I will never see him again, lest I should forget my duty to Carrera and myself."

During the greater part of this conversation, the two ladies had been sitting beneath the foliage of an arbor, in the most retired part of the garden. Isabella arose to depart, and her friend accompanied her to a private gate in the wall of the garden, which opened upon a pathway leading to the dwelling of this affectionate girl, a few steps from where they stood.

"Good night, Vittoria," said the playful Isabella, imprinting a kiss on the cheek of her friend; "good night, and take care that the good sisters of the convent may not yet lose the bird already fluttering around the cage!"

Vittoria returned to her seat beneath the frame-work of lattice, and yielding to the tender emotions which this conversation had awakened in her heart, she wept long and freely—and the tears which she poured forth, fell upon that miniature, which had been the pledge of love from one, and the cause of resentment in another friend. But the tears which she shed were not tears of bitterness—she had let concealment, like a worm in the bud, prey upon her heart; and the imperfect confession of her love to Isabella, had unsealed the well of waters, and they gushed forth unbidden, and unrestrained. They were tears of tenderness, such as she had not shed before, and they flowed on without interruption. Oh! there is a luxury in tears! When the affections have been stifled, and the heart has become seared with the intensity of its concealed emotions, the first tear that falls comes like the first drops of an April shower on the parched and withered daughters of the mead, and lo! all the fountains of living waters are broken up, and we weep in very tenderness of soul.

"Vittoria!" and the deep, solemn tone of the voice would have aroused any one less deeply absorbed in reflection than this sorrowing girl. "Vittoria Nigreti!" The alarmed Vittoria sprang up, and unconsciously concealed the miniature in her bosom, but turning deadly pale in an instant, sunk back upon her seat, and covering her face with both her hands, she remained silent.

"Is this then the welcome which the friend of the father—the protector of the orphan child, is to expect from one who has been the sole care of his life? Is it thus that *she* receives me, who has heretofore been the first to welcome, and the last to say adieu?" As he spoke, the tall form of Carrera, enveloped in a cloak, stepped forward and stood erect before her. His countenance was somewhat paler than usual, and there was an air of deep dejection in his usually animated features. Vittoria arose, and pressing his hand to her lips, welcomed him with a feeble voice.

"Your coming was sudden, Carlos, and I have been very, very unhappy. We parted in anger, and I feared you had forgotten the lone one, whom you have preserved only to behold her wretchedness. Are we friends, Carrera?"

"Lady! I have been rude; and when last we met I wooed you like a soldier—but I come now with the tenderness of a lover, to pour forth the feelings of my heart. Vittoria! he stands before you, who is unpractised in the arts of gentle persuasion, but who openly declares, that from your childhood upward he has looked forward to this moment as the crowning point of his happiness or misery. Speak, daughter of Ildefonso Nigreti, for it is upon this spot, and from those lips alone, that I will learn my destiny."

Overpowered with emotion, Vittoria could only reply with a renewed burst of feeling—and without raising her eyes she continued to weep. The painful meeting, which she had long foreseen, and for which she had been endeavoring to prepare herself, had suddenly occurred, and in a most unpropitious moment for the exercise of that energy and decision of manner, which she had persuaded herself she could assume. He had come to brush away the beautiful illusions of hope in which she had for the first time indulged—he had found her in tears. Had he—and she almost trembled as the question occurred—had he again seen the miniature which had before so much excited him! Carrera contemplated the beautiful and suffering girl with mingled emotions of love and resentment. He awaited her reply for some moments, but finding that she only continued to weep more and more bitterly, the sterner feelings of his nature prevailed, and rising from the seat near her, which he had occupied, and relinquishing her hand, which he had taken, he abruptly exclaimed:

"Uncandid girl! I know it all! Vittoria Nigreti loves the handsome stranger—the daughter of Nigreti has given her affections to the enemy of her father's cause, and her father's friends—the child of the church would bestow her earthly fortunes upon a foreign heretic. I know it all—those emotions which have deprived you of your speech and welcome to a friend, are for the Yorkino Lamar, whose image, bathed in your tears, now reposes in that bosom. I know it all. Isabella Mendez knows less of your heart than I do."

Resentment for this violation of her privacy, effected at once in the breast of Vittoria, that change in the current of her feelings which alone could have enabled her to reply to Carrera.

"And is this the gallantry that is practised by the high-souled Col. Carrera? Is this the delicacy which is to be expected from one who, though he has led a soldier's life, has yet moved in a lady's bower? Has the hero of a hundred fields, stooped to become a concealed lis-

tenor to words of confidence in a lady's retreat? It is well—for it has spared me the bitterness of repeating what you already know."

He stood before her motionless as a statue—and filled with amazement at the spirit of one, whom his past acquaintance had induced him to believe was all meekness and timidity. Indeed he had often thought that the equable flow of her temper, and the retiring timidity and simplicity of her character, would unfit her for the high stations to which, in the fulness of his early aspirations, he had hoped to raise her. He had returned to Oaxaca with a fixed resolution to press his suit with delicacy—to endeavor to win her favor by all those gentle attentions to which, in his calmer moments, he was no stranger—to appeal to her feelings of gratitude to the friend of her parents—to speak of their last wishes for their union—and, in fine, to make her his own before the news of the fate of Lamar should reach her ears. With this view, he had visited her uncle's dwelling, and finding no person within, availing himself of his privileges as a familiar visitant, he had entered the garden just as the ladies were entering the arbor. Unable clearly to distinguish in the distance that there was more than one, he stepped lightly forward, expecting to find Vittoria alone. As he discovered, upon his nearer approach, that there were two, he turned suddenly into a circular walk which led around the arbor, where he thought he could remain undiscovered. It is improbable that Carrera would have remained a moment in a position in which he could overhear their conversation, had not the first words which he heard touched a chord to which he was tremblingly alive. His own name and that of Lamar, connected in the same sentence, arrested his attention at once, and made him forgetful of every thing but the language itself. It was with difficulty that he could suppress his feelings, when he heard from the lips of Vittoria an indirect avowal of her repugnance to him and of her admiration of Lamar. He resolved, however, to appear ignorant of the true feelings of Vittoria, until he had declared his love, and ascertain the nature of her reply, before resorting to the assertion of any claim upon her hand. But the silence and the tears of Vittoria—the concealment of the miniature—her cool reception of him—all contributed to hurry on the angry tempest of feelings which was gathering in his bosom. He expected to have seen her covered with shame and confusion when she learned that her words had been overheard—and he hoped, that humbling herself before him, she would acknowledge the power of the secret he possessed, and at length favor his unprosperous suit. Since his first sight of the miniature during his former visit, he had ceased to love Vittoria. Revenge and ambition alone were left to share between them the host of violent feelings which occupied the dark chambers of his soul. The former had been gratified by the fall of his rival beneath his unerring aim—the latter still whispered, that with the large fortunes of the house of Nigreti, he might yet expel the Yorkinos, and attain supreme eminence in the state.

"Forbear to insult me, proud lady. I bear with me a charm to quell those exalted feelings, and with a word I can add a degree of bitterness to the chalice, which you hasten to prepare for yourself, purely unmixed, without one alleviating ingredient to commend it to your lips."

"Speak on," said the resolute girl; "speak on—you

may wring my heart, but never, never can I love the man who can steal upon the hours of confiding friendship, and use its language to afflict a helpless woman."

"Vittoria Nigreti, have I not this evening heard from your lips a declaration of love for the Yorkino, and of dislike, if not of hatred, for me? Have not the fair features of the heretic, won from you, in a few short months, that favor which it has been the labor of my life to purchase? Would that the deep and hungry waters from which I rescued you had rolled over us both, rather than I should have lived to hear the names of Lamar and Carrera coupled in the same expression of love and disgust by those lips, which, even in their infant prattle, mingled the name of Carlos with those of your sainted mother, and your heroic father. You cannot deceive me, fickle girl."

"Carlos Carrera! I have betrayed the secret of my affections; and it has been most disingenuously obtained—most cruelly used. Yes, I have laid open the innermost recesses of my heart, and you have read every thing that has long been stored and treasured therein. But tender as are my affections for another, gratitude for my deliverer has induced me to sacrifice them all, and to purchase peace with Carrera by a voluntary sacrifice of the only hopes of happiness which ever dawned upon my cheerless soul. Not even the rudeness I have suffered shall make me forget the debt I owe you. Yes, Carlos; I have loved another, but I offer up that love as a sacrifice of propitiation. Let me hope that when this sacrifice is made, I may still find in you the same affectionate friend. I am an orphan, I am alone in the world, and besides yourself, I have no other friend but my aged uncle, now hastening on the verge of the grave to meet my parents in another world. Be thou to me, then, Carrera, as a father—accept the sacrifice which I make, in the spirit in which it is offered. I can never love another, but I can venerate the virtues of my earliest, best of friends. And when, in a few short weeks, I shall have entered the hallowed precincts of yonder convent, every aspiration which I breathe towards the fountain of mercy, shall bear on high my humble but fervent petitions for the happiness of my deliverer. Do not frown thus darkly on me—pity, help, forgive the unprotected, the unhappy girl who kneels before you!"

"Arise, maiden! I grow weary of the humility which is mingled with deception, of the professions of piety which would wed a heretic, and of the protestations of regard for one you have so lately dreaded to meet. I have read the secret feelings of your heart, as expressed when you thought no listener was near, and I am not to be deceived by insincere and hollow declarations to my face. Yes, you will renounce the heretic Yorkino, until by some accident of war, my hateful life is ended, and the funeral of Carrera will be speedily followed by the nuptials of Lamar. Such are your thoughts. Offer up no prayers for me, gentle lady, in yonder chapel—let your affections accompany your prayer. Let your petitions be for the Yorkino—he needs your prayers, if your prayers can aught avail for him in his present abode. I leave you for a season,—and that you may feel somewhat of the misery you have inflicted upon me, know, that Lamar lies green in his grave, and that the hand which is now upraised in triumph above you, is red with the sign of his death!"

Before Carrera had closed, Vittoria, chilled with hor-

ror, had seized him by his uplifted arm, and seemed by the wild intensity of her gaze, to endeavor to search his innermost soul, and know if this frightful tale were true. Casting her from him, pale and horror-stricken, she reeled back to her seat; and before Carrera had escaped from the garden, he heard scream after scream from the bower—and with the rejoicing, which none but a fiend in mortal shape could know, he felt that he had rendered this innocent creature more miserable than himself. Let us draw the curtain over this child of sorrow, and return to Lamar.

When lights had been brought into the room in which he fell, he was found weltering in his blood, and apparently lifeless. But instead of that placid languor of expression which settles upon the features of those who have fallen by wounds of this kind, the physician in attendance at once discovered that the brow was contracted, as if with excruciating pain, and gave some promise that the shot had not been instantly fatal. He was cautiously removed to an adjoining chamber. Meanwhile the fury of the populace was excited beyond all control against his slayer, and every part of the city was searched with the view of inflicting upon him that summary justice, peculiar to the mob, which knows no mercy. We have seen how he escaped.

About six months after this occurrence, the friends of Pedraza in the different provinces, having entered into a combination to make yet another effort for his restoration, the leaders of that party had in many parts of the country already taken the field in arms, and were preparing to concentrate their forces on Mexico. Among the rest Carrera, whose fortunes were now desperate, was one of the most formidable enemies of the government. Frequent and bloody engagements took place between divisions of the forces of the two parties in distant parts of the republic. Carrera, who now more than ever felt the necessity of means to conduct his ambitious enterprise, determined to make yet another desperate effort to secure the person and the fortunes of Vittoria. He was now encamped in the vicinity of Oaxaca, and a large body of the enemy's forces was rapidly approaching to engage the troops under his command. He resolved to attack the convent to which Vittoria had now retired after the death of her uncle—which happened very shortly after her last interview with Carrera—with the double purpose of loading her away captive, and of seizing upon the treasures which it contained. The sacking of these retreats of piety and learning had not been unfrequent of late, and the opposing troops which were hastening forward, made forced marches to anticipate his design, more with a view of depriving him of the means of carrying on his measures by the booty he would acquire, than from any motive of protection to the peaceful inmates. It was at the dead hour of night, that a select band, headed by Carrera in person, cautiously approached the enclosure of the convent, and speedily scaling the walls, fired the building in every direction, before the alarm was given. The terrified inhabitants were frightened from their quiet slumbers by the shouts of the brutal soldiery, and hurried, half clad, from their solitary cells, to escape from the devouring flames, which were rapidly spreading around them.

In the midst of the bustle and confusion, two of the inmates had been seized and hurried to a vehicle drawn

up on the outside of the wall, when the driver, lashing his horses, drove off at a fearful speed. Carrera, with about forty horsemen, leaving his men to complete the work of ruin at the convent, accompanied this band which followed closely the carriage. Meanwhile the troops of Carrera in the town had been surprised by a detachment of the enemy's forces, and the shouts of the combatants in the streets of Oaxaca gave back a fearful echo to the outcry of the plunderers of the convent. Giving some hasty directions to the driver of the carriage, Carrera, who saw his troops sorely pressed, and already giving way before their assailants, placed himself at the head of the little squadron, and charged at the top of their speed upon the front ranks of his enemies. This sudden and unexpected reinforcement, restored, for a moment, the confidence of his soldiery, and arrested the force of the enemy's assault. But another division having advanced to the relief of the assailants, the retreat was renewed. Carrera still fought gallantly at the head of his troops, and disputed every foot of ground, until he saw a squadron file off under the command of a daring leader, and wheeling to the right at the end of the street, beyond which the battle now raged, at once struck off at full speed in the direction of the carriage he had just left. Leaving the main battle to its fate, he once again placed himself at the head of the squadron he had just brought into action, and by a nearer and more direct course sprang forward to the rescue. The two squadrons were nearly equal in number and equipments, but Carrera having overtaken the carriage first, and formed his men around it, gave to his opponents the advantage of the charge. They came down upon their enemies with a resistless shock, and bursting into their ranks, overthrew horse and rider, and committed a ruinous slaughter. All discipline was now at an end, and each one fought to the best advantage. The sword of Carrera waved like a firebrand on high, as it gleamed with the reflected light from the blazing ruins of the convent, and did dreadful execution wherever it fell. The strife was now most deadly immediately in front of the carriage, and Carrera pressing forward had nearly dropped his sword from his grasp, and reeled in his saddle as he saw, pressing forward towards him in the hottest of the fight, the tall form of Lamar. But his was not a spirit which could quail for any length of time before any apparition. He seemed, however, by no means anxious to seek the contest with this supposed tenant of the grave. But Lamar had now cut his way almost to the very door of the vehicle—his foes were yielding before him, and Carrera finding that his prize was about to be wrested from him, sprang forward to defend it. Arm to arm, hand to hand, impelled with all the feelings which can give quickness to the vision, strength to the body, and skill in the contest, did they assail each other. The other combatants fell back from their terrific blows—each seemed animated with more than human force, and to be inspired with more than human motion. In the midst of this deadly struggle, the blind of the carriage window next to the combatants suddenly fell, the head of a female appeared, and a loud shriek, seemed to have attracted the attention of Carrera for an instant, and his horse veering at the same moment, he was thrown from his guard, and the sword of Lamar descending upon his unprotected head, he was felled to the earth, immediately in front of the horses

of the carriage. As soon as Carrera had fallen, his companions fled, and the driver, leaping from his seat, joined in the flight. In an instant, Lamar ordered one of his followers to take the reins, and drive rapidly to the town of Oaxaca, from which the troops of Carrera had now retreated. The frightened horses started off at full speed, and dashing over the body of Carrera, were soon out of sight. Lamar followed in pursuit of the flying enemy, whose retreat had now become a general rout.

"It was some years after this period," said father Clement—"about the year 1833 or '34, that I for the first time saw sister Agnes, formerly Vittoria Nigreti, one of the community of nuns at the Ursuline Convent, whose ruins now totter on the heights of Charlestown, near the city of Boston, in the United States. Finding that no retreat in Mexico was protected from the assaults of the armed bands which scourged the whole face of the country during the civil feuds which desolated that unhappy republic, many of the nuns abandoned their native land and sought an asylum in the British provinces of North America. Vittoria, after her deliverance from Carrera, had remained sometime at the house of the parents of Isabella Mendez, in Oaxaca, whither the two had been driven after the battle of which we have spoken, and were restored in safety to their friends. Alone in the world, without a human being of whom she could claim protection, she resolved to accompany her companions of the convent to America, and seek that protection at the foot of the altars of her religion, which seemed to be denied to her in the world. She was alike ignorant of the fate of Carrera, and of the recovery of Lamar, and paid but little attention to the solemn assurances of Isabella, that the cry which escaped her from the window of the carriage, during the engagement at Oaxaca, was occasioned by the sight of these two men engaged in deadly strife. The deep attachment of Carrera to the institutions of his religion, forbade her to believe for an instant that he had been guilty of the sacrilegious assault upon the convent; and she had been too firmly convinced of the death of Lamar by the hands of the former, to credit Isabella's report. It was in this city," said father Clement, "that renouncing all earthly feelings, she knelt before the altar in the chapel of the sisterhood, and took those solemn vows, which have never been broken with impunity. A deep melancholy had settled upon her mind, and affected her spirits—and with a view to her relief, a change of scene and climate was recommended, and she was sent to aid those of the order, who were engaged in the instruction of youth at Mount Benedict. Her spirits gradually revived, and the native ardor of her character impelled her to devote herself earnestly to the prosecution of those studies which might render her eminently useful in her vocation. Yet in the midst of the most disinterested labors of charity, her mind would frequently dwell upon the past, and regrets for the untimely fate of Lamar not unfrequently mingled with her purer and holier thoughts.

About this time, from some cause which I have never been able to explore, a feeling of hostility to all the institutions of our holy religion seemed to pervade the lower classes of the people in the vicinity of Boston; and the freezing apathy and indifference of those whose education and station in life lifted them above these vulgar prejudices, soon led to a frightful catastrophe. In-

timations had been received from various quarters that violence was openly threatened. But never dreaming that the descendants of the Pilgrim fathers, who had fled from the persecutions of the old world, and who had borne over the sea of waters the emblems of their religion, and had sought in this unfrequented land an asylum for the free indulgence of their opinions, would surpass even their oppressors in ruthless fanaticism, the good sisters of Mount Benedict, relying upon the protection of the civil authorities, and upon the sacred rights of their sex among a refined and christian people, quietly pursued the even tenor of the way.

Charles Lamar had now returned to this country, and having learned that Vittoria, under the name of sister Agnes, had taken the veil, and was now an inmate of the convent of Mount Benedict, resolved to inform her of the approaching storm, and to exert all his powers of persuasion to induce her to renounce her calling, and to leave the institution. His visit to Mexico had confirmed the early prejudices of his life against these religious orders. The party to which he belonged in that country had demanded the expulsion of the Spanish residents, the demolition of all monastic institutions, and the confiscation of all their treasured wealth. Actuated by such sentiments, it is not to be supposed that they were modified when he discovered that the walls of the convent of Mount Benedict separated him from the object of his ardent affections. He consequently exerted himself to disseminate widely all rumors prejudicial to the institution, and actively fomented the growing discontent. When all things seemed ripe for immediate action, and the blow was only suspended to make the necessary arrangements for a united and concerted effort, he found means to convey a letter to sister Agnes, informing her of the time the attack would be made, and entreating her to grant him an interview that evening in the garden of the convent. He related to her the result of his duel with Carrera—his recovery after a tedious and painful confinement—the subsequent defeat and death of his rival—and his despair, when he learned upon his return from the expedition in which he was then engaged, that Vittoria was one of the prisoners of Carrera whom he rescued in the carriage, and that she had departed for North America ; that he had himself returned to this country as soon as he could with propriety leave Mexico, and was now afflicted to find that she was one of the objects of popular resentment. He concluded by stating, that in the event of her being unable to grant him the desired interview, if, when the convent was assailed, she would escape into the garden, he would be present with sufficient force to rescue and protect her, and bear her whithersoever she pleased.

"I will not undertake," continued father Clement, "to afflict you with the narrative of the conflicting feelings of sister Agnes as she afterwards related them to me, upon the receipt of this letter. Joy and sorrow, hope and despair, hysterical bursts of laughter and weeping, religious duties and worldly affections, rendered her by turns the happiest and most wretched of mortals. She threw herself at one moment upon her couch and wept long and bitterly, at another she would kneel before the image of the Virgin, and pray for light to guide her through this perilous path. She felt it to be her duty to communicate this intelligence to her Superior, and yet if she did, she must disclose the source whence

she derived it. Should she meet Lamar that evening ? Alas, my son, when the affections are divided between heaven and earth—when we would serve God and Mammon, the erring tendency of our nature always gives the victory to the evil one. She did meet Lamar, and from that moment sister Agnes looked impatiently for the moment which was to liberate her, but to bring ruin and dismay to the other inhabitants. Although she might have withdrawn without interruption from the convent upon declaring her desire to do so, a mode of retirement less mortifying to her pride was about to present itself.

The Superiors of the convent had received in the course of this day so many intimations of the designs of their enemies, had been so earnestly entreated by their friends to withdraw before the attack commenced, that they became seriously alarmed. Still they resolved to evince no distrust, either in the intelligence or virtue of a free people, or in the disposition and power of the civil authorities to protect them. Group after group of strange faces began to assemble towards nightfall in the vicinity of the grounds—insolent and blasphemous threats occasionally reached their ears—and in the course of four or five hours more, the street was filled with a dense crowd of human beings, many of whom were disguised. What a contrast did the interior of this doomed house of refuge and piety present to the scene without. Profanity, insolence, indecency, bigotry, intolerance, fanaticism and riot held their midnight revels in the street by the light of blazing torches ; while within, the terror-stricken inmates of the convent clustered around their Superior in the silent chapel, were pouring forth on their knees, to their Heavenly Father, their fervent prayers, that he would turn away from them the wrath of their pursuers,—and that He, who had proclaimed himself the father of the fatherless, and the protector of the orphan, would preserve his children. There they were, bent down to the earth in meek submission to His holy will, a group of helpless and sorrowing beings, who would have moved even a heart of stone to pity. But the fanatic knows no mercy—he celebrates the orgies of hell, and offers them up a sacrifice to Heaven !

The storm had burst—the enclosures were torn down—the work of destruction and spoil commenced—the wild boars had broken into the vineyard,—the spirit of the abyss seemed to be abroad, and all the dark and malignant feelings which degrade man to a level with the powers of darkness, hurried them to the wildest excesses. Furniture was dashed to pieces, windows were broken, the privacy of chambers insulted, and at length a general cry rang long and loud around, to fire the building. The torches were instantly applied, and the whole building was soon wrapped in one eddying sheet of flames.

At this moment father Bennet, who sometimes visited the convent in the discharge of his holy functions, appeared among the kneeling sisters, and moved with tenderness at their affliction, could scarcely repress his feelings, as he beheld them even in their humble confidence in Heaven, kneeling before his altar, awaiting his will for their preservation or ruin. There they knelt like lambs for the sacrifice—and meet victims they were, for they were without stain or blemish.

"Arise, daughters of affliction !" said the father ; "the

Being whom you invoke has departed from this house, and there is no mercy here. Let us take up our sick, and depart."

The dense volume of ascending smoke hung like a dark mantle around the increasing flame, until the blazing roof and rafters tumbling in with a frightful crash, the towering flames surmounted every obstruction, and rose upon the evening skies one huge and burning beacon, affrighting far and wide the populous country around! How awfully sublime was this scene! The light of the blazing pile was reflected on the broad bosom of the bay, and from every turret and spire of the neighboring towns. The rioters, assembled in large groups in the streets, their dusky visages burnished by the brightening flame—the crashing of falling timbers, was mingled with shouts of exultation as floor after floor gave way—and around were scattered the fragments of goods and furniture, which had been thrown out while the building was burning, as if this desperate band, not satisfied with the consuming ruin of the flames, carried on their destructive labors at the same time. Far in the distance, the Monument of the illustrious dead, who died in the purchase of their country's rights, reared its unfinished head on a neighboring height, gilded with the light which it reflected far abroad over the land. In another direction, unprotected, uncovered, and unsheltered, the pale and terrified sisters, with their Superior at their head, turned their backs, like Lot and his family of old, upon their blazing home, and meekly pursued their way amid the insults, obscene scoffing, or cold indifference of the frequent passers by. In another direction, a band of these incendiaries had invaded the house of the dead—coffined bodies were exposed—the ceremonies of the dead were disturbed, as if they were searching amid these sacred recesses with the ferocity of howling hyenas, for some hidden morsel of slander, with which to blacken the name, after they had destroyed the property, of an unoffending sisterhood of pious women.

"I admire, my son," said father Clement, with a sorrowful voice, "I admire the free institutions of your country, but the future reader of your history can only preserve his respect for your people, by supposing that this night of horrors had been interpolated into the narrative, and that it belonged to another age and to another people, long before the diffusion of free principles of government, and the light of civilization and refinement. Posterity will close their ears incredulously, and carry back this deed of darkness to the gloomiest ages of intolerance among free-booters and vandals. The blackened walls of that convent still look forth upon the pale and distant Monument of your infant glory, and I trust will stand until the public councils of that State shall by some formal declaration denounce the deed.

But let us turn from those smouldering ruins to seek sister Agnes. True to her appointment, and without seeking the blessing of heaven on her purpose, she had changed her dress and left the burning building before the other inmates, and throwing herself under the protection of Lamar, was hurried into a coach, which drove off instantly on the great northern road. She was carried by her request to the residence of a distant relative of her father, who had been an early settler in the province, and had continued to reside near Chippewa, on the Canada shore. In a few weeks Lamar called upon her, but she could not be prevailed upon to name a day for

the consummation of his happiness by their union, though she made no effort to conceal her attachment to him. Do not imagine, however, it was without a struggle that she withdrew her heart from the duties of her vocation, and surrendered up all her affections to her lover. She had taken the veil under the mistaken impression that Lamar had fallen in the duel with Carerra, and that she had no other refuge from the persecuting addresses of the latter. Indeed she had not known the extent of her love for Lamar until she was informed of his death; and in her holiest vigils in the cell of her convent, she wept over his untimely fate, and breathed a ritual for his departed spirit.

Lamar, in consequence of the disturbances along the frontier, in which he was actively engaged on the American shore, urged Vittoria to fix an early day for their nuptials, lest open hostilities, which seemed to impend, should separate them. She resisted all his entreaties, until he informed her that hostilities had already commenced in Canada, and that he was about to engage in a perilous enterprise, from which he might never return. He did not ask her to leave her friends, or to accompany him at that time, but he only desired to have a claim to protect her amid the scenes of violence which seemed to menace the province. In an evil moment she consented, and from that time her peace of mind was gone forever. Although Vittoria was ardently attached to Lamar—although her love for him had become a part of her existence, and she felt that she only lived for him, yet no sooner had the fatal promise been made, than she drooped like the bruised lily of the vale, and hung down her head in anguish and bitterness of spirit. Religion, stronger than love, was enthroned in her heart—the vows which she had taken, her tender conscience constantly rung in her ears; and she, who had consecrated herself to Heaven, had consented to become the earthly bride of a fellow mortal. She seemed to seek for alleviation to her sufferings in the fervor of her piety—but still the fatal promise recurred, and the day would speedily arrive when Lamar would return to claim her hand. It was then that she commenced singing those tender hymns to the Virgin, some of which filled your heart with sympathy this morning in the Hotel Dieu. She became pensive and abstracted; and often in the early evening, when the stars were newly lit in the skies, she would walk forth alone along the banks of the river, and listen to the sound of the mighty cataract of waters, whose thunders had resounded amid the solitudes of the forest from the beginning of time. The eve of the day fixed for their nuptials had arrived, and on the wings of love Lamar was hastening to meet her; but when he reached the frontier, the state of feeling was such, on the opposite shores, that it was dangerous, if not impossible, to pass over uninterrupted. He therefore remained at Schlosser, on the American shore, awaiting an opportunity to cross, and was suddenly aroused at night by an alarm that the British troops had attacked and were cutting out the steamer *Caroline* from the landing.

All the sympathies of Lamar's heart were with the oppressed Canadians in their struggle—the same love of adventure, and the same enthusiastic devotion to the cause of freedom, which had made him an active partisan in Mexico, impelled him to aid the insurgents in the British provinces. He was only awaiting an organized opposition to the government, to offer his services

to the Patriot army. And perhaps too, he was restrained by his love for Vittoria, with whom he desired to consummate his union before they should be separated by open hostilities. But this insolent invasion of the soil of his native country by an armed force, fired his soul, and hastily arming himself, he hurried through the darkness of the night to repel the invaders. But little more is known of the short, but desperate struggle that ensued, than the result. Lamar was seen to spring on board the steamer; by the flash of the fire-arms he was observed in the midst of the struggle; but before further aid could arrive, the boat was towed out by the captors into the middle of the stream, and having been set on fire, was abandoned in the midst of the waters, to float onward, until it was consumed. It was a sublime spectacle—that burning boat. Herself blazing in the darkness of the night—the foliage of the forest trees on the bank was beautifully lit up as she drifted by—and the waters around her reflecting the mass of flames, she seemed to float in a sea of fire. Onward she went—that boat without a guide—the flames ascending higher and higher, like a mighty holocaust of fire, sent forth to appease the angry spirit of the water-god, whose voice thundered in the cataract below. Pale as the lily, that loves the margin of the brook, sat Vittoria on the shore, as this vision of light passed before her eyes. She started from her seat; and in admiration of the moment, stretching forth her arms towards the vessel, she looked like some priestess placed upon the spot to bless the offering to the mighty god, as it descended. Onward swept the boat, faster and faster, as she approached the precipice—now whirling around in the eddies which prevail near the fall—and at length, having arrived at the verge of the steep precipice, she plunged headlong downwards, and the waters continued to tumble and thunder in solitude and darkness. Lamar was never afterwards heard of—and whether he was thrown from the deck in the struggle, or whether among the wounded and the slain he was borne onward on this fiery bier to a watery grave, none can tell! The sad tidings soon reached Vittoria—but she was spared—in mercy, spared the wretchedness they were calculated to inflict. Her reason had been shaken on its throne, by her exposure during that night and the remorse she had suffered. She was found in her room on the evening of her bridal day, dressed in her bridal garments, singing her hymn to the Virgin, weeping at intervals, and occasionally, with the crucifix in her hand, exclaiming, as you heard her this day, “Beautiful—oh! beautiful!” I learned from one of the family,” said father Clement, “that she must have lost her reason in the excitement and paroxysm of her feelings, when the blazing boat passed her,—that in her deranged imagination, she thought she beheld Lamar standing erect on the stern of the boat as she passed, arrayed in his bridal suit, with the sign of her faith stretched forth in one hand, and beckoning to her with the other to follow him. And straining her mind’s eye to behold him to the last, as that light went down amid the whirl of waters, her reason followed her loved one into the fathomless abyss. But as the whole life of this ill fated girl had been divided between piety to Heaven and love for a fellow mortal, so, amid the ruins of her mind, she has blended her betrothed husband with her heavenly Redeemer, and with a heart overflowing with love for this strange per-

sonification of the two passions of her soul, and ever thinking of the sublime attitude of the vision on the stern of the boat, she still exclaims, with the cross in her hand, “BEAUTIFUL—OH! BEAUTIFUL!”

Such, my son, is the melancholy history of the doomed vestal of the Hotel Dieu. Let us trust that the sufferings she has undergone will at length appease the demands of offended justice—and that before her spirit wings its flight to another world, a ray of mercy may fall upon her darkened soul, and she may look with a clear vision upon the emblem of her faith, and turn with undivided hope and love to Him who died upon it, that she might live. Verily, she has been a vessel of afflictions, and a creature of love. Peace to her disturbed spirit!”

Such was the outline of the narrative of father Clement. It has been imperfectly remembered, and rudely told in these pages. But often in the silent vigils of the night, does the venerable form of the good father appear before me, relating the fortunes of this stricken one, with the tender feelings of a parent for the sufferings of his afflicted child. And oftener still, do the words of the doomed one, herself, fall meltingly upon my soul—“BEAUTIFUL—OH! BEAUTIFUL!”

“BIRD OF MY HEART!”

BY PARK BENJAMIN.

Bird of my heart,—come, sing to me
The dear, old tunes of early hours,
And, as thou sing’st, I’ll weave for thee
A nest of Summer’s sweetest flowers:
There shalt thou sleep, if on my breast
Thou find’st a less congenial rest,
There shalt thou sleep, if by my side
Thy beauteous plumes thou wilt not hide!

Bird of my heart,—in distant climes
I’ve strayed since last thy notes I heard;
And, after Vesper’s solemn chimes,
I’ve listened to the Evening bird;
That songstress strange, who only sings
When Night unfolds her sable wings—
But ah! than thine a fainter tale
Was warbled by the nightingale!—

Bird of my heart,—thy lightest tone
Lulls all my senses to repose;
So sings the Eastern charmer lone,
So droops to sleep the captive rose!
Come, sing—and to my soul entice
A pictured dream of Paradise;
For in that dream I shall not see
A Houri, angel, saint, like thee!

Bird of my heart,—come sing to me
The song it thrills my heart to hear,
And as thou sing’st, I’ll fancy thee
The spirit of some starry sphere;—
For Music, poets call divine
And once she made her secret thine,
And, touching her melodious shell,
Hung on thy lips her magic spell!

JONSONIAN READINGS.*

NO I.

"Jonson, to whose name wise Art did bow, and wit
Is only justified, by knowing it :
To hear whose touch, how would the learned choir
With silence stoop ! And, when he touched his lyre,
Apollo stopt his lute, ashamed to see
A rival to the god of Harmony !"

Shirley.

A rich and rare volume ! In manner and matter beautifully according ! Eight hundred milk white, hot-pressed pages, margining most luxuriously the glossy impressure of matter more choice than is often found within the arabesque covers of modern publications. Prefixed to the poems of "Rare Ben," from which we mean to make liberal selections, ere we close the volume, are a fine portrait of the poet, an exquisite engraving of Hawthornden, and a Memoir from the pen of Mr. Procter, who has won so distinguished a name in the modern world of letters, under the *soubriquet* of "Barry Cornwall." From this sketch, we derive the following incidents in the poet's life.

Benjamin Jonson was born in Westminster, in the year 1574. His mother, soon after the decease of his father, which happened shortly after his birth, married a bricklayer. The boy was sent, at an early age, to school, and thence to Cambridge, where, however, he made but a brief stay, his friends being unable to incur the expense of keeping him at the university. Returning home, he was forced to work at his step-father's trade of bricklaying, an occupation not at all to his taste, and which he speedily abandoned for that of a soldier, in the army then serving in Flanders. Having highly distinguished himself in that capacity, he returned to his home, once more, and soon after went upon the stage, not as a bricklayer, but as an actor, being, at this epoch of his life, only nineteen years of age. His business was occasionally to act, but chiefly to alter and rearrange pieces for performance, and it was not until two years after he had commenced this mode of life, that he produced an original piece. This was his yet celebrated Comedy of "Every Man in his Humor," which still possesses the stage. He had acquired some reputation both as author and actor, when, quarrelling with a fellow-player, he slew him in a sword-fight, and was thrown into prison, on a charge of murder. Escaping, soon after, he was married, and had a son and daughter born to him, in 1595 and 1596, neither of which survived many months. In 1596 his play, "Every Man in his Humor" was first produced, and was immediately quite successful. He continued to write, incessantly, and was constantly producing works of more or less merit, for the stage. In 1598, he first became acquainted with Shakspeare, and, in 1603, upon the production of his great tragedy, "Sejanus," he became a frequenter of "The Mermaid," in company with the immortal Bard, and Beaumont, Fletcher, Selden, Carew, Donne, and the rest of the choice spirits of that golden age of English literature. In that renowned hostelry there was much rare sport, and Fuller has described the "wit-contests" that used to occur at those merry meetings,

* The works of Ben Jonson : with a memoir of his life and writings. By Barry Cornwall, London : Edward Moxon, Dover Street ; 1838.

between the Bard of Avon, and Rare Ben, in the following quaint and racy terms :

"Many were the *wit-contests* betwixt him and Ben Jonson, which two I beheld like a Spanish great galleon and an English man-of-war. Master Jonson, (like the former,) was built far higher in learning ; solid, but slow in his performances. Shakspeare, (like the latter,) lesser in bulk, but lighter in sailing, could turn with all tides, and take advantage of all winds, by the quickness of his wit and invention."

Jonson was a great favorite with James I., who, upon his accession to the throne, employed the talents of the poet, at court, in arranging and inventing "Masques," and other dramatic entertainments,—adhering to the favorite, indeed, throughout his life, an unwavering and indulgent patron and friend. In 1605, appeared "Volpone, or the Fox ;" in 1610, "The Alchemist" and, in 1611, the tragedy of "Catiline." In 1616, Jonson compiled all he had written in a folio volume, containing "Tragedies, Comedies, Epigrams, and Masques,"—together with various minor poems. About the same period, he was appointed poet Laureate to the king, (in the place of the celebrated Daniel,) upon a handsome salary. The same year, Shakspeare died, and the noblest verses which the occasion brought forth to the memory of that supremest of the Bards in

"The brightest Heaven of invention,"

were from the pen of his sometime rival, but ever firm and honoring friend, Ben Jonson ! It was in this elegy that the well known line occurs, now as familiar to the lover of Shakspeare, "as household words ;"—

"He was not of an age, but for all time !"

In 1621, Jonson was appointed "Master of the Revels," by reversion, after Sir John Astley, who, however, survived the poet, so that the latter never came into the enjoyment of the office. Charles, succeeding James, imitated his predecessor in bestowing upon Jonson every mark of royal patronage and protection, increasing his salary, as poet Laureate, and adding to it the grant of an annual "tierce of Canary," which was the poet's Fulcrum. The city of London also gave him a yearly stipend of one hundred rubles, as a sort of retaining-fee for his services, to be rendered when demanded. These means enabled Jonson to keep up a generous hospitality ; and this he did even after he could not well afford to do so ; his city pension being stopped suddenly, as well as his court salary, on account of a quarrel with the famous architect Inigo Jones. By dint of a zealous and urgent application to the Lord Treasurer, (Weston,) for relief from this state of distress by presents made to him from various quarters, and by his own literary exertions, he recovered from this embarrassment, for a time at least. After a life of much vicissitude, he died, in 1637, a widower, and childless, at the age of sixty-three. He was buried in Westminster Abbey ; the only monument erected to his memory being a common flat stone, bearing the well known inscription :

"O RARE BEN JONSON !"

Mr. Procter's remarks upon the Drama, and upon the genius of Jonson, which follow the Memoir, we have so hastily condensed, form one of the choicest morceaux of criticism we have ever enjoyed. Our design, in taking

up this beautiful volume, being simply to string together, for our readers, some of the choicest pearls that are scattered over its pages, as the golden sands lie on the bed of the Pactolus, we must resist the temptation that would impel our pen to make liberal extracts from this portion of the "Memoir." What Mr. Procter says of Shakspeare and the rest of that noble band, is, however, irresistible: and we must transcribe it, if only for the pleasure of dwelling, still a little longer, upon the truthful beauty of the passage.

"Amongst the poets of the Drama, Shakspeare was, beyond all comparison, the foremost. Nevertheless, his contemporaries, (the old Dramatists,) were remarkable men. And they exhibit the character of English genius, more completely than any other race of writers. Unencumbered by the weight of authority, and almost untrammelled by precedent, *they looked directly at Nature*; and, instigated and inspired by her smiles, they let loose their imaginations upon us, in all the varieties of passion and humor. Ignorant of the unities, and un-intimidated by critics, they built up their dramas to a towering height. They were circumscribed by no measurement or model, save that of truth alone. They penetrated into the depths of the heart, and exhibited its secret springs of action; and thus shaped their labors so as to suit each constitution and character; not making the passion of Revenge, the light of Love, the gloom of Despair, alike, in all; but giving each as many phases as the moon [has]. It is, therefore, that, in Shakspeare and others, we have Wit, in all its moods, airy, saturnine, and bacchanalian; Humor, in fifty fantastic aspects; Vanity, both solemn and gay: every thing, in short, that exhibits the lineaments and distinctions of men; omitting no class or kind of person, either from timidity or scorn, from the beggar up to the king."

One more passage;—nay, we *must*!

"Shakspeare was, and is, beyond all competition, the greatest poet that the world has ever seen. He is greatest in general power, and greatest in style, which is a symbol or evidence of power. For the motion of verse corresponds with the power of the poet, as the swell and tumult of the sea answer to the winds that call them up. From Lear down to Pericles, there ought to be no mistake between Shakspeare and any other writer. And, in considering his qualities, it should ever be remembered that he was not a mere poet in the vulgar sense of the term: that is to say, a creature dwelling in the regions of fancy, babbling in verse, dreaming in the sunshine, and spinning idle (although ingenious) metaphors. On the contrary, he was a man, eminently acute, logical, philosophical. His reasoning faculty was equal to his imagination, and as completely pervaded all his works. His Henry the Fifth proves that he could argue a case with the precision of a lawyer, His Coriolanus, Julius Caesar, Troilus and Cressida, Lear, the Tempest, and the historical plays, show that he was profoundly versed in the secrets and ends of government, the movements of factions, the administration and abuse of justice, and all that constitutes the political world. We hold him to have been 'not one, but Legion!' And we think that in all the cases where critics have attempted to distinguish him by any one particular excellence of intellect, they have failed."

* * * * *

"It was the harmonious combination, the well-adjusted

powers, aiding and answering to each other, as occasion required, that produced his completeness, and constituted, as we think, the secret of his great entire intellectual strength!"

The leading article in the last number of Blackwood's Magazine, is a notice of this edition of Jonson, and a most unjustifiable, unworthy, unmanly "notice" it is. It is an unmethodized, desultory, incoherent compilation of personal allusions, and flings, against the author of the "Memoir:" and forms another chapter in the long list of "Quarrels of Authors." Among other things Wilson takes occasion to say of the book before us:

"BEN JONSON by Barry Cornwall!"—"One of the greatest of English poets, patronised by one of her smallest poetasters!" "BEN JONSON by Barry Cornwall!"—An eagle heralded by a wren; or is it absolutely a tom-tit?" &c. &c.

The whole of the article is written in the spirit of which these scraps are fair specimens, and the conviction on the mind of the reader as he lays down the critic, after a perusal of the "Memoir," is irresistible,—that a personal motive lies at the foundation of the assault. There is not a line of fair criticism in the article. It is, throughout, captious, querulous, inconsequential, and pointless.

Some few years have gone by, since Barry Cornwall wrote a biographical memoir of John Keats, in which he took occasion to allude in terms of becoming severity to the course that had been pursued towards that promising poet, by certain critics: among these, Blackwood's Magazine came in for its share, and the epithets, "venal, vulgar, and venomous," were, if we remember rightly, applied to the critique upon Keats, which appeared in the pages of that work. From that time to this, Barry Cornwall has been a marked man, and has not been permitted to raise so much as his head above water, without forming a target for the swiftest and most envenomed arrows, in the quiver of old Christopher. We all remember how his "Life of Kean" was cut up in "Maga,"—and it is but just what was to have been expected, neither more nor less, that precisely such a notice of the work before us should appear in Blackwood, as that which we have been noticing.

Our *preliminaries* have insensibly stretched themselves to such an unintended extent, that we must postpone our promised "Readings," another month.

J. F. O.

FIRST LOVE.

O! if there be in Memory's chain,
One link which knits us to youth again,
And binds us to the past,
One thought that carries in its range
The heart, unseared by after change,
To bliss, too pure to last—

If in the darkened sky of life,
One star, undimmed by clouds of strife,
Still sheds a bright'ning beam,
'Tis the remembrance of that love,
Which shines, all other joys above,—
Our first and dearest dream:

J. T. L.

SPRING BIRDS.

Listen! when morn to the east is springing,—
Music is then in the welkin ringing;
Merry and joyous and free as air,
Birds are soaring and singing there;
Sweet—how sweet, for a world of sin,
Those notes that usher the morning in.

They're songs of rapture and songs of love,
Fit to be warbled in skies above,—
Fit for the songs of their first spring hours,
Amidst the myrtles of Eden's bowers.
Beautiful birds! were ye not then given
Tidings to bear to earth from Heaven?

Oh, ye are sweet to the ear and eye,—
Your plumes are bright as the rainbow's dye,
And your notes are clear as the air-harp throws
To the wind that opens the morning rose.
My heart is glad, though it knows not why,
When I hear your songs in the morning sky.

They do from Heaven good tidings bear
To the child of sorrow, the child of care;—
When they spread their pinions and soar away,
Far—upward, far to the realms of day;
They teach him sweetly that even so
Faith leaves the world and its cares below.

MINE.

ELIZA.

BAYLE, THE SCEPTIC.

The admirers and the enemies of this famous personage have, as is usual, equally erred in their opposite estimates of him. Those who look into the six ponderous folios of his dictionary, filled, as he professes, only with what other such works had omitted, and expect to find wit, satire, or wisdom in every sentence,—will be wofully disappointed at having to toil through an immense mass of cumbersome, irregular learning, references to works now long forgotten, citations of authors never to be heard of elsewhere, and tedious discussions of questions not worth a thought. And unless the inquirer be patient and laborious, he will think the diamonds he discovers, too few to requite the fatigue of clearing away so much rubbish.

On the contrary, whoever opens Bayle with hostile prejudices, will often be agreeably surprised to see him strike as powerfully for Religion, as for humanity and freedom. How nervous the subjoined passage, tending to show that nations can be taught wisdom, as Fisher Ames hath it, 'only by the scars and wounds of their adversity,' inflicted by the 'whip of scorpions, which Experience brandishes in her school!'

'Accusations of treason, as a cover for religious persecution,' says Bayle, 'have been so hackneyed an artifice from the time when the Jews employed

it against our Lord, that it seems strange they should still be relied on. Might it not well be feared, that so threadbare a trick could no longer deceive?—No—there is no ground for such a fear. *The world is too unteachable, to profit by the errors or misfortunes of past ages.* Every generation acts, as if none had gone before it: and, as the spirit of persecution and revenge to this day tries to enlist monarchs in its own quarrels, it will so try, till the world shall end. We may apply here the saying of Solomon: 'What has been, will be; what has been done, will be done.' Our posterity will say, as we say,

'Qui meprise Cotin, n'estime point son rot:
Et n' a, selon Cotin, ni Dieu, ni Foi, ni Loi.'

[Bayle, Dict. Tom. 1. 'Abelard,' note O.]

What a lesson to *Ultraists* of all sorts, is conveyed in his remark upon a perversion made by some Anabaptists, of a passage in Luther's book on *Christian Liberty*! They deduced from it, maxims subversive of all government and laws. 'The hottest enemies of the Reformation,' says Bayle, 'could not have conceived so effectual a way to suppress it, as this schism of Munzer,' &c. 'As they professed to follow Luther, all the odium due to their extravagances recoiled upon him; and this greatly retarded the Reformation.'

[Dict. 'Anabaptistes,' note B.]

What we have here said and quoted, is suggested by our having seen in the March Knickerbocker, some verses happily commendatory of the man who has quite shut out Pyrrho from modern contemplations of scepticism. By the way, let all readers distinguish between *scepticism* and *unbelief*. They are too often confounded. After the verses, we present a much more full, and an admirably just view of the same character; translated from an able French work which was published in 1822.

[From the Knickerbocker.]

BAYLE.

Who had escaped the tomb, could wit prevail,
Or wisdom? Wit and Wisdom answer, BAYLE!
Star of a lowering sky, that shunned the light,
Still more refulgent from surrounding night;
He wielded Luther's force, without his rage,
Erasmus and Melancthon of his age;
Young eyes that o'er his ponderous folios pore,
Deem them too much, yet read and wish them more.

And to that feast return, divided quite
Betwixt instruction, wonder, and delight:
Yet he that knew so much, decided nought;
Lost in perplexity or depth of thought,
Holding the key of Truth within his hand,
On Doubt, her vestibule, behold him stand,
And point, like Moses, to that brighter spot,
Pursued, explored, attained, but entered not.

[From the French.*]

*** Bayle, the boldest and coolest of sceptical philosophers. Most writers employ *doubt* to overthrow what exists, in order to rear their own

* De la Littérature Française, pendant le 18^{me} Siècle. Par M. de Barante, Pair de France.

notions instead: it is their weapon for conquest. With Bayle, on the contrary, doubt is the end—not a means. There is a perfect balancing between opposite opinions; and nothing can turn the scale. Party spirit, prejudices, the power of eloquence, the seductions of imagination, affect not Bayle; nothing can determine him. To him, all opinions appear probable. If he find them ill defended, he adopts, and sustains them. In this uncertainty he seems to take a strange pleasure: his mind is not in the least oppressed or disturbed by this ignorance, even of the most important questions. He marches up to them, and delights in being unable to resolve them. What forms to so many great minds a source of mortal agony, is to him the merest sport.

'A dangerous influence has been ascribed to Bayle's Philosophy. At first view, this equipose of opinions may indeed seduce some minds, that fancy it a mark of superiority. But the doubt of Bayle is a wise doubt: he far more pungently ridicules those who reject hastily and inconsiderately, than those who believe submissively. Knowledge once led to scepticism: a broader way has since been opened, by ignorance and frivolity. The vulgar are misled not by works like Bayle's: they are more remotely hurtful. Their vast learning has made them an immense arsenal, whence infidelity easily borrows weapons. In them, too, is found the sad pattern of that perpetual sneer, so withering to every high thought or emotion, and which treats as folly or madness, whatever does not abide the test of Bayle's cold reason. His pleasantry is generally clumsy and vulgar. It sometimes amuses, by its quietude, and its curious blending with critical pedantry: but there have since been men, who by imparting airiness and grace to his jests, have made them subservient to frivolity and procured them a universal circulation.'

EXCERPTS FROM FISHER AMES.

Party. 'The fellowships thus formed are more intimate, and impose commands more imperious, than those of society. Thus party forms a state within the state, and is animated by a rivalry, hatred, and fear, of its superior. When this happens, the merits of a government become fresh provocations and offences; for they are the merits of an enemy.' [*Eulogy on Washington*]

Necessity of Experience to Nations. 'Perhaps multitudes are not to be taught by their fears only, without suffering much to deepen the impression; for Experience brandishes in her school a whip of scorpions, and teaches nations her summary lessons of wisdom by the scars and wounds of their adversity.' *Ibid.*

Benefactors of Mankind. 'Of those who were born, and who acted through life as if they were born, not for themselves but for their country and for the human race, how few, alas! are recorded in the long annals of ages; and how wide the in-

tervals of time and space that divide them! In all this dreary length of way, they appear like five or six light houses on as many thousand miles of coast: they gleam upon the surrounding darkness with an inextinguishable splendor, like stars seen through a mist: they are seen like stars, to cheer, to guide, to save. WASHINGTON is now added to that small number. Already he attracts curiosity, like a newly discovered star, whose benignant light will travel on to the world's and time's farthest bounds. Already his name is hung up by History as conspicuously, as if it sparkled in one of the constellations of the sky.' *Ibid.*

TRUE BEAUTY.

Say—where does Beauty dwell?—
I gazed upon the dance, where ladies bright
Were moving in the light
Of mirrors and of lamps. With music and with flow'rs,
Danced on the joyous hours,
And fairest bosoms
Heaved happily beneath the winter-roses' blossoms:—
And it is well—
Youth hath its time—
Merry hearts will merrily chime:—
The forms were fair to see,
The tones were sweet to the ear:
But there's beauty more true to me;
That beauty was not here.
I stood in the open air—
Nature's soul was bare:
The beautiful stars were over my head,
The crescent moon hung over the west,
Beauty o'er river and hill was spread,
 wooing the feverish soul to rest.
Beauty breathed in the summer breeze,
Beauty rocked the whispering trees,
Was mirrored in the sleeping billow,
Was bending in the swaying willow,
Flooding the skies, bathing the earth,
Giving all lovely things a birth:
All, all was fair to see,—
All was sweet to the ear,
But there's beauty more true to me,
That beauty was not here.
I sat in my room alone;
My heart began a tone:
Its soothing strains were such,
As if a spirit's touch
Were visiting its chords.
Soon it gathered words,
Pouring forth its feelings
And its deep revealings;
Thoughts and fancies came
With their brightening flame;—
Truths of deepest worth
Sprang embodied forth;—
Deep and solemn mysteries,
Spiritual harmonies,
And the faith that conquers time,
Strong and lovely and sublime.

Then the purposes of life
 Stood apart from vulgar strife;
 Labor in the path of duty
 Gleamed up like a thing of beauty:
 Beauty shown in self-denial,
 In the hour of solemn trial,
 In a meek obedience
 To the will of Providence;
 In the lofty sympathies,
 That forgetting worldly ease,
 Prompted acts that sought the good
 Of every spirit,—understood
 The yearnings of the human heart—
 Eager ever to impart
 Blessings to the weary soul
 That hath felt the bitter world's control.

Here is Beauty—such as ne'er
 Met the eye or charmed the ear.
 In the soul's high duties then I felt
 That the loftiest Beauty ever dwelt.

C. P. C.

THE CAMELIA.

ADDRESSED TO *****.

The following lines were occasioned by seeing a very beautiful *Camelia fimbriata* (which two sisters wandering through a conservatory were regarding in admiration) suddenly drop to pieces. The verses addressed by the younger sister to her husband.

Blythe as the lark whose carol hails the dawn,
 Two laughing girls went forth one wintry morn;
 Light o'er the slipp'ry earth they fearless glide,
 Their comrade Mirth, and Pleasure for their guide.

* * * * *
 Their ramble o'er—delighted now they strayed
 Where Flora's touch had ev'ry hue displayed;
 Thick lay the snow without—and drear the scene;
 Spring held her court within, perpetual queen!
 Nature and Art combining there embraced,—
 (And Nature's offspring's Art, harmonious placed;)
 The Hyacinth here with perfumed breath outspread
 Her Iris tints—and raised its timid head,
 The Crocus wild—there Clytie, reft of hope,*
 Bloomed loveliest, to the scented Heliotrope,
 By Jupiter transformed; the Daphne too,
 (From coy nymph named, who 'fore Apollo flew,)
 Mid leaves befringed with silver, beauteous shone;
 And clust'ring there, like bridal joys, half blown,
 The orange blossoms shot their white buds forth;
 Children of ev'ry clime! from hardy north
 To glowing south, where Sol the op'ning flower
 Most perfume gives—to Beauty loftiest power,
 And poesie, and witchery of soul,
 Warm heart, fond eye, and love beyond control.

Sporting awhile in youth's Elysian morn,
 Plucking life's rose, (unfelt the lurking thorn,)
 With thoughts more pure, than buds that round them
 sprang,
 Gaily the damsels' merry laughter rang,

* Clytie deserted by Apollo, who became enamored of her sister, pined away and was changed to a Heliotrope, otherwise termed Sun-flower.

Until before a flower, of virgin white,
 Chaste as her breast, but than her smile less bright,
 The elder stood, and gazed—and gazed as though
 She ne'er might tire—and on her cheek the glow
 Of rapture crimson'd, kindling lip and eye.
 Still as she paused—a gentle wind swept by,
 Play'd like a spirit through the leaves around,
 Touch'd the fair flow'r—it fell—bestrew'd the ground!
 Lone as a widowed heart the stalk stood bare,—
 The leaves like early hopes lay withering there!

Oh! what an emblem of this fading earth!
 Life's transitory dreams, Ambition's birth,
 Meridian splendor, and declining day—
 Thou fair and fallen flow'r! Thus fleet away
 Hope's gay mirage—joy's phantom, so like truth—
 And Fame, the ignis fatuus of our youth,
 Reaching too soon perfection's dizzy height,
 Like thee to perish, loveliest in their flight;
 So with the loved and lost—not 'till they part
 Know we their wide dominion o'er the heart:
 Virtues and charms and beauties dawn anew
 In the sad hour we breathe our last adieu.

This shalt thou feel, alas! when she is gone,
 Thine Hesperus—thy star of eve and morn—
 She who is now the loadstone of thy thought,
 Drawing to her each wish, from her first caught,
 When the bent bow of Azrael from the sky
 Aims at her breast, and lets the arrow fly.
 Oh! when thy home is desolate—thy hearth
 No more enlivened by her joyous mirth—
 When no loved face and no light step each eve
 Shall greet thy coming—no fond cheek receive
 Thy dear accustomed kiss—no arms entwine
 Thee round—no heart responsive beat to thine—
 And when the voice which calmed thee oft to rest,
 With ready tale, is hushed—when on thy breast
 The nestling head no longer softly lies—
 When thou shalt cease to meet the love-filled eyes,
 That with the morning sun upon thee shone—
 When fled these sweetnesss—and thou'rt alone—
 Though she is now than life more dear to thee,
 Dearer than aught below can ever be,—
 A deeper, holier, passion then—a love,
 Such as alone the bright and blest above
 Inspire—shall pure, undying, deathless burn
 Within thy breast, and reverently turn
 Thy meek devotion to that heavenly throne
 At foot of which thou deem'st her spirit flown.

While grief with sad and softening influence warms
 Thy soul, shall Mem'ry's wand in ideal charms
 Robe the departed—oft her look, her tone,
 Her image, than of erst far sweeter known,
 Will haunt thee—and thou'lt linger, all in vain,
 Her virtues o'er—but Lethe's chalice drain
 To drown her faults—what, tho' her wayward eyes
 Shone changefully as April's varying skies!
 In stormiest mood, could not thy frown, thy smile,
 Or grieve her heart or all her griefs beguile?
 Thy frown! 'twas lightning, and all lightnings scathe;
 Yet one soft word of her's would calm its wrath.
 Thy smile! 'twas sunshine—to her breast how dear!
 Which broke thro' ev'ry cloud when she drew near!
 Thy pleasure guided still each deed and thought,—

Thy kiss was all the guerdon that she sought ;
For thee, and thee alone, the minstrel lyre
She tuned—for thee, who first the embryo fire
Aroused—and thy approval doth she prize
More than all incense that can e'er arise,
E'en from thy heaven-saluting altar, Fame !—
Than minstrel lays, or poet's honored name !

To her 'twas ever sweet to do thy 'hest :
E'er opened to thy view, her windowed breast,
Useless (wert thine) had made Ithuriel's spear,
Whose art reveals all *seemers* as they are.
The path she trod—the home where long with thee
She dwelt—far from the city's turmoil free ;
The flow'rs she loved will speak to thee of her ;
Aye—ev'ry leaf a tongue shall have, to stir
Each inmost pulse. In dreams thou'lt clasp her form,
And wake—no longer then to hail the morn.
And thou wilt woo no other bride—again
Thy lips can never breathe the hallowed strain,
Whose murmurs to her tend'rest passions spoke,
And struck the chord which first that touch awoke.
Thy love, thy constancy ! 'twas such of yore
The fabled Cephalus for Procris bore ;
Vainly o'er him her spells Aurora wove,
And where are Earth or Heavens to change thy love ?

CORA.

VERBAL CRITICISMS.

To progress.—This word, as well as guess and reckon, is denounced by the English writers of the present day as an Americanism. In a former article (*Southern Literary Messenger*, volume 2, page 388,) it was shown that the people of this country were justified in using these words as they do, by the authority of English writers of eminence. It remains to perform the same service to the verb *to progress*. It is to be found in Johnson's Dictionary, who cites Shakspeare as authority for it, and it is to be met with in Ben Jonson's works—I think in the *Alchemist*. Whilst the English are corrupting their language, and at the same time forgetting many good words familiar to their and our forefathers, it is fortunate for us that the language used by the writers of Queen Elizabeth's day is not obsolete.

Declination.—"Mr. So-and-so, who was lately nominated for congress has sent in his *declination* to the committee of conference." Such language is not uncommon in our newspapers—particularly in those which speak of "two hundred of a majority," and "three thousand of a majority." Declination is an astronomical term ; and if a new word is to be coined to express the fact of an individual's declining to be a candidate for an office, declension would seem preferable.

Ameliorate and Amelioration.—These barbarisms still maintain their ground. To meliorate, would signify to improve, to better ; but the *a*, prefixed, negatives what follows ; and consequently the meaning of, to ameliorate, would be the same as to deteriorate.

"Grant to bless"—"Grant to prosper"—"Grant to aid." Such uncouth expressions are often heard in extemporaneous prayers. It is probably not too late to check this inaccurate and inelegant mode of speech, which has not yet made its way into print.

D.

"THERE IS NO STAR."

BY PARK BENJAMIN.

There is no star in Heaven so bright
As that dark eye of thine ;
The gems that gild the crown of night
With paler lustre shine !

I'd leave the fairest thing of Art
To gaze upon that face
And faultless form, whose every part
Is redolent of grace.

Thy step is like the wild gazelle's,
As firm, and light, and free ;
And Beauty, like a spirit, dwells,
Enchanting girl, with thee !

I love—oh, who could ever view
That face and form divine,
Nor feel, when first that smile he knew,
His heart was wholly thine !

REMARKABLE LONGEVITY.

[The subjoined communication, though not precisely adapted to the pages of a literary periodical, is too interesting, in reference to its facts, to be excluded. Mr. Coles is among the most respectable and opulent of our citizens, and inhabits one of the fairest portions of Virginia. So many instances of extraordinary longevity, in so small a territorial circumference, would seem to point out the Green Mountain as the favorite abode of the goddess Hygieia herself. The facts themselves are given upon such high authority that they will not be disputed.—*Editor S. L. Mes.*]

The undersigned, in presenting the annexed document to the public, feels it due alike to those into whose hands it may fall, and to his own integrity to say, that no care has been spared and no investigation omitted, which might have a tendency to prevent error or inaccuracy in the statement subjoined.

A few years since his attention was elicited to the comparative *health*, and consequent *longevity*, of the part of Virginia in which he is a resident—and he made a list of each farm within a circuit of eight miles around his own dwelling—that forming the centre—giving in every instance the original settler on the different farms, heads of families, (sixty in number with their wives,) who had lived and died there ; he believed that such a document could be completed in a few weeks, but soon ascertained that many of the descendants (of whom only, correct intelligence could be obtained,) had removed to a distance, and some of them even beyond the limits of the State ; which, together with the investigation of registers, tomb-stones, &c., produced a delay difficult to be conceived ; he believes that it now presents a faithful list of the respective ages subjoined, and the annexation of the publisher's name is an evidence of his own conviction of its accuracy.

From the list exhibited below, the average age of the sixty males is something less than seventy-eight years—one-tenth of the number being still alive: that of the sixty females is seventy-five years, and near a fourth of the number still living.

In a note the reader will find a certificate from a most respectable member of the Clarkson family, attesting that of thirteen brothers and sisters, (of whom James Clarkson in the subjoined list was one,) lived, with a single exception, (a female who died somewhat short of it,) to the advanced age of eighty years; and the publisher is farther confirmed in his belief of the accuracy of the statement from the concurrent testimony of many members of the family.

My father intermarried into the Clarkson family when I was a small boy—and my marriage into the same family, gave me the chance of being personally acquainted with the thirteen children, as I have heard their mother say were all by one husband, namely, eight sons and five daughters; they were all born in the county of Louisa,—and all of them did, at some time, live in the county of Albemarle. And I have no doubt in my mind, that (with the exception of one, and she was near eighty,) the sons and daughters did live to be more than eighty years of age, and several of them bordering on ninety years.†

Given under my hand this fifth of February, one thousand eight hundred and thirty-seven.

JESSE LEWIS.

† Mr. Lewis does not here allude to the senior member, James Clarkson, who he is aware lived to a still greater age.

TASSO AND LEONORA.

The hour of freedom came at last, the dungeon was unclosed !
He quitted now, the couch of stone, where years he had reposed,
Within the damp and vaulted walls, of that deep, gloomy cell,
Where the pure and peaceful gleamings of sunlight never fell.
Once more he trod the verdant turf, with a footstep firm and free,
But his heart was sad and silent, and his voice had lost its glee;
For she was gone—the beautiful—the peerless and the great,—
And the captive's longed for freedom, had come, alas ! too late !

What now to him, was liberty, or happiness, or mirth,
When she, his first and best beloved, had parted from the earth ?
He could not teach his broken lyre to sound another's name,
And when the praise he loved, was mute, what reck'd he then
of fame ?

The proud applause that met him now, he held no longer dear,
For all his sweetest hopes had died on Leonora's bier.
His soul had lost the impulse wild, that lured him to be great,
And the glorious pomp of royal praise, had greeted him too late !

DREAMS.

What are our dreams?
 What are those visions, calm and bright,
 That shed o'er the hours of solemn night,
 A radiancy, that seems
 The splendor of that better land—
 Where peace and love, go hand in hand—
 And the sun of glory beams?

What are our dreams?
 Do angels round our pillows bow,
 And whisper us in accents low,
 Of the beauty of the sky?
 Of the Heavens, and the radiant band,
 That near the throne of mercy stand,—
 Of life that may not die?

No! it cannot be so!
 Our dreams are not always bright as this;
 They speak not always of worlds of bliss;
 For they sometimes throw
 Across the spirit, their shadows deep:
 And gloomy thoughts o'er our slumbers sweep,
 In sadness, still and low!

What then, are dreams?
 Ye ask in vain! 'tis all unknown
 To us, the influence o'er us thrown
 By a power divine;
 And what ye ask, may not be told,
 Till darkness from the grave is rolled,
 And immortality thine!

ANTHON'S CLASSICAL SERIES.

Published by Harper and Brothers, New York.

This admirable series has met, as was predicted long ago, with success so unequivocal, that, having advanced already to the sixth work, it will be carried out by successive publications, to the fullest extent originally contemplated, under the supervision of the able and accomplished scholar, whose name prefaces our remarks. The volumes already given to the public, in this series, are, *Horace*, *Cicero*, *Sallust*, *Cæsar*, a grammar of the Greek Language, a system of Prosody, for the student of the same rich tongue, and a volume of *Latin Lessons*. It is, we are aware, a bold assertion, that we are about to make, but we are well assured, it is as true, as bold—namely, that there is not one of these works, which does not immeasurably surpass any previous school edition of the same author.—The *Horace*, *Sallust*, *Cicero*, and *Cæsar*, are remarkable for an excellently correct text, and notes brief, luminous, comprehensive and admirably adapted to youthful intellects; the two latter works are adorned with many additions known to no other edition; the *Cæsar*, with a set of admirable maps and plans, besides a Greek

paraphrase, of several books—which is not only highly curious, but of great real value to the student—and the *Cicero*, with geographical and historical indexes, compiled with great diligence and acumen. The *Greek Grammar* and *Prosody*, are even more valuable than those already specified; each of them being completely a *sine qua non* to the proper and thorough acquisition of the noble tongue, to which they belong, and both together filling a void which has long existed, and long been regretted alike, by the ripe scholar, and the raw tyro. They are emphatically excellent, and unsurpassed—the grammar being the best, the prosody the only work of the kind, fitted for the use of schools. The *Latin Lessons*, we have not had time to examine with the same care and attention, which we have bestowed on the former volumes of this admirable series, though we doubt not, they will be found fully equal to their predecessors. We look forward with the deepest interest to the forthcoming numbers, and especially to the higher order of classics, the *Greek Tragedians*, and *Orators*, which are included in the plan, and from which, should the editor succeed, as he has thus far succeeded, in blending deep lore and the results of vast research, with the singular simplicity and rare faculty of explaining that, he has brought to his arduous task, the most desirable effects may be expected, both as to the facilitating the acquisition of this branch of learning, and the increasing the number of classical scholars in the United States; which, to say truth, notwithstanding the boasted diffusion of knowledge through their limits, are yet, in this respect, centuries behind the European countries, which they would fain imagine their inferiors, in all pertaining to that choicest blessing to a people, a *Liberal Education*.

THE YOUTHFUL DEAD.

Why mourn the young? we know the early dead
 Are welcomed in a world of bliss above—
 That from a sphere of darkness, they have fled
 To one of spotless and eternal love.

Why mourn the flower, plucked in its earliest bloom,
 Ere it had felt a single chilling blast?
 We know that it will meet a blighting doom—
 Then why regret its brilliancy is past?

We weep not, when the tempest-driven barque
 Reaches a haven free from storm and cloud—
 We mourn not, when at morning hour, we mark
 The light of day disperse night's sable shroud.

Then mourn them not—the blest, the early dead!
 The fairest things of earth, to die, were made—
 Repine ye not, when those ye loved, have fled—
 The best and dearest, are the first to fade!

J. T. L.

THOUGHTS AND FANCIES.

GREAT MEN.

The pure gold of human character can only be wrought out into the noblest forms of majesty and beauty after passing through a fiery ordeal of trial and suffering. Without this ordeal whatever of gold originally belongs to character is corrupted by the presence of much dross. No very great man ever rose sun-like in the firmament of mind, who had not previously passed through a night of doubt, despair and disquietude.

POETS.

All true poets are of necessity mythologists, for the multiform spirit of the universe is seen by them in ten thousand symbols in creation. To them the ocean is a symbol of its majesty, the stars of its glory, the forests of its beauty, the tempests of its strength, and the mountains of its grandeur.

BAXTER.

People like to be talked to as if they were wiser than they are. Baxter was aware of this, and used to put something in each of his sermons which he knew to be above the understanding of his listeners.

TALKING.

Some men in conversation utter nothing but parallelisms of your own thoughts, thereby giving them extension, but not force. They hammer out your gold, and exhibit much action and but little progress.

WOMAN.

Gibbon very truly remarks, that the condition of woman is elevated towards equality with the rougher sex in proportion as civilization is advanced. In Asiatic countries, woman, to this day, is but the slave of her haughty lord. Mahomet said that he stood at the gates of Heaven and the inmates were mostly of the poor, and that he stood at the gates of hell and the inmates were mostly women!

HAPPINESS.

It is a very common error to suppose children happier than men. This is only true on the supposition that happiness means absence of care. But happiness is positive enjoyment, and we are in a condition to feel the most of it when all our faculties are most fully developed, as it is the result of action.

GALLANTS.

From the avidity with which ladies, who have no other charm than that which a bountiful allotment of acres gives them, are sought for by gentlemen in general, one cannot help recognising a likeness between those gallants and those Jews who were enamored of a golden calf in the desert.

ASSIMILATION.

If it be true, as some suppose, that one's nature assimilates to the nature of the food one feeds on, I should think a certain distinguished general lived

on files and handsaws, for his face is as rough as the one and his temper as jagged as the other.

PRINCIPLES.

A principle which is genuinely good, cannot be run into ridiculous extremes. The way to test a principle is to carry it out to its farthest legitimate results. Run it to seed, and its fruits will condemn or commend it.

CREEDS.

I cannot avoid objecting to all creeds, because they essay to fix forever the boundaries of belief and to stereotype opinion—because they take it for granted that all is known that can be known on certain subjects—because they assume that no farther revelation will be made from Heaven, and because they decree that human investigation has penetrated to the very *ultima thule* of truth.

GREAT MINDS.

Great minds do not act immediately on the mass. They require interpreters to be rendered intelligible to common intellects. They are suns in the firmament of mind, and their light is blinding to weak visions. They enlighten their satellites, and they in their turn reflect that light on the world.

INCONSISTENCY AND DEFORMITY.

I know a lady of talent whose opinions are very ingeniously maintained, and are very inconsistent. It is a curious association, but I never think of her inconsistent opinions without having a vision of Madame de Stael's shoulders before my mind. That great woman's shoulders were very symmetrically formed, but, unfortunately, they were not matches; and hence, though each was beautiful when contemplated without reference to what was meant to be its fellow, when viewed together they presented a deformity.

MADAME DE STAEL.

By the way, speaking of De Stael, reminds me of what she once said in regard to the relative desirableness of genius and beauty in woman. She said she would willingly exchange her mind for a beautiful person. This remark is startling at first glance, but when we recollect that she of all things most desired the admiration of men, and that men are, as Byron says, mere moths to be caught by glare, we discover that the lady's opinion, viewed in connection with what she most desired, was not very remarkable for its silliness.

HUSBANDS.

It is to be feared that but too many husbands are like the father of Charles the Twelfth, in one particular, who, when his wife was entreating him to be merciful to some of his subjects, said to her—"Madame, we took you to bring us children, not to give us advice."

PICKPOCKETS.

A pickpocket is a tax gatherer, who gets his commission from nature, and levies on those who have more pounds in their purses than bullion in their brains.

PHILANTHROPISTS.

If there were ground on which to fix a moral lever, then philanthropists might hope to lift the world. But the misfortune with them always has been that they try to elevate the world before they find out the ground on which to plant their levers.

MEN OF GENIUS.

The Roman victors had slaves attached to their chariots to remind them of the mutability of fortune—and men of genius have always had malignant critics near them to remind them of their fallibility.

WALPOLE'S OPINION OF POETS.

Walpole said in reference to Chatterton, that singing birds should not be too freely fed, and the world has very generally acted upon Walpole's opinion.

EXPECTATION.

Look hopefully on what seems to be most darkly mantled with clouds, and do not expect too much from whatever is most brilliant with promise; for the one will turn out better and the other worse than you apprehend.

LOVE.

Love, like a flower, may be crushed to earth—but, like the flower again, it may lift up its head and fling fragrance on the winds. When we are young, it soars like the bird in summer time, and though its pinions may be ruffled by tempests, and broken by the hunter, yet if it have the true *vis medicatrix nature*, it will rise and soar again in the wide empyrean.

A PRAYER.

Give me one kind, confiding heart
To cheer me on life's pilgrimage,
To soothe me when my hopes depart,
And shield me when misfortunes rage,—
And then, though Fortune's brow be dark,
Or bright before me is Hope's form,
Light o'er life's waves my bounding bark
Shall onward sweep through sun and storm.

CIVILIZATION.

Civilization results from the action of those insatiable longings which belong to the heart, craving elevation above the condition in which it finds itself. Commerce, science, and art, instead of being its creators are its creatures—are the means it makes use of to realize in possession what has been glorious in its dreams.

GREATNESS.

Nature scatters the seeds of moral and intellectual greatness with an impartial hand on every soil, although their fructification is frequently frustrated by untoward circumstances. Jesus showed that slandered Nazareth could produce the sublimest specimens of moral greatness, and Plutarch's birth vindicated Bæotia from the current calumny.

FOOLS AND FORTUNE.

Chesterfield remarks that most people complain of Fortune—few of Nature. This is true, for the most egregious fool even supposes Nature has

endowed him with sufficient merit to entitle him to consideration, and imputes the whole blame of his want of success to the especial unkindness of Fortune—as if the blind goddess would condescend from ruling empires to wage hostilities against one so unspeakably inconsiderable as himself.

PASSION AND INSANITY.

From the best established intellect, the judgment, which is the monarch *jure divino*, may be cast down by rebellious passions, which when excited are not content with the servility of eunuch slaves. Who, that has seriously entertained, and been enamored of the visions that love, ambition, revenge, or any other subtle sorcerer evokes from the unfathomed abysses of feeling, has not at times acknowledged himself not only fanatical, but mad. The truth is, a passion is never fully panoplied while sanity is uninvaded.

TITUS' RULE.

The best conservative rule to be commended to those who are anxious to "act well their parts in life," is that observed by Titus, who, at the close of each day, instituted a rigid inquisition into its occurrences.

DOUBT.

The liberty to doubt is forbidden by all creeds, and yet doubt has paved the way for every triumph which truth has won over error and superstition. If I were to build a temple I would dedicate it to Doubt, because she has been of incalculably greater service in the cause of humanity, than all the deities of Olympus and all the saints on the calendar combined.

GENIUS.

Genius has no standing army, but it has an intellectual cohort which is an overmatch for all opposition. When was genius overcome by external force? Never! It may fall a victim to the weaknesses which it has associated with itself in dishonorable friendship, but it has never yielded to the hostility of its sworn foes.

LEADING APES IN H***.

PATTY'S RETORT.*

"Ah, know you not," said Martha's bean,
Whom she that morn had sent a-packing—
"The doom that in the realm below
Awaits lone ladies, husbands lacking?
Dismal, for aye, the hapless maids
Lead apes, through Pluto's gloomy shades!"

"I know:" quoth Pat, with scornful air;
"Nor does the doom awake my fear:
I'd rather, far, lead monkies there,
Than let a monkey lead me here."

THE WOMEN OF FRANCE.

Une belle femme qui a les qualités d'un honnête homme, est ce qu'il y a au monde d'un commerce plus délicieux : l'on trouve en elle tout le mérite des deux sexes.*—*La Bruyère.*

It may be asserted that no country has produced so many remarkable women as France. No where, too, does the sex occupy such a prominent position or wield so potent an influence. The history of France teems with examples of women who have achieved distinction in almost every career—social, literary, political, even martial. Clotilde, Joan of Arc, Eloisa, Diana of Poitiers, Margaret of Navarre, Scudéry, Dacier, Sévigné, Ninon de l'Enclos, Montespan, Maintenon, Lafayette, Deshoulières, d'Epinay, Deffand, Roland, Corday, and in our own day, De Stael, Genlis, Recamier, Lavalette; these are but a few of the eminent female names which might be cited. A female biographical dictionary, would be constrained to draw its chief materials from France. I have often busied myself in conjecturing whence might proceed this acknowledged superiority of the sex so characteristic of a particular country. The question is one of difficult solution, since the fact must depend upon a variety of circumstances and influences, many of which are too remote, fugitive, or gradual in their operation, to be readily seized. The discussion of the problem, will, it is hoped, have more than a local interest, as it involves the various causes which promote and modify the development and formation of the female character in general.

It is an undisputed fact, that the social position and relative importance of woman, have undergone a remarkable modification since the birth of modern civilization. The attempt to account for this change, has given rise to a very interesting controversy. It has been variously attributed to the ancient manners of the German race, which peopled many of the northern and central countries of Europe; to the softening and benevolent spirit of christianity, and to the influence of feudalism or chivalry. Not rejecting, altogether, the first, and attributing much importance to the second cause, I am disposed, with many writers, to ascribe the most direct and marked effect to the last. Combined, they have essentially modified the whole system of female manners and relations. In this regard, the most cultivated and humane societies of antiquity, present a most disadvantageous contrast with modern civilization.

In the East, the cradle of the human race, where more than elsewhere society has retained its primitive stamp, from the earliest period to the present day, woman has been subjected to a state of comparative seclusion and tutelage. If the early manners of the Hebrews present a partial exception to this general remark, it was

* A fine woman who has the qualities of a well-bred man, is the most agreeable of persons: she combines the merits of both sexes.

owing to causes peculiar and local. Among the ancients—I speak now particularly of the Greeks and Romans—the condition of woman was scarcely less humiliating, I will not say, degraded. Love, in its purest form, as practised and avowed by its most elegant votaries, was but a refinement of passion, however adorned with the graces of art and imagination. It had nothing holy or reverential in its character. It was “of the earth, earthy.” However etherialized by the poet, or sublimated by the metaphysician, its essence was not purified from the dross of sensuality. Though the flower was beautiful and fragrant, its root did not spring from the purest soil. It did not partake of that high and generous devotion which exists, I will not say without the hope, but the calculation of reward. Venus, though born of the froth of the ocean, was but the incarnation of material beauty; and Cupid, though graceful and volant, the type and personification of passion alone. The Syrian damsels mourned over the beauty of Adonis; and it was not for a saintly smile, that the enamored Leander braved the fatal waves of the Hellespont. What would a lover of that day have thought of the poet* who transformed his mistress after death, into the personification of heavenly wisdom; or of him†, who worshipped, through long years of undying devotion, the austere virtue of the object of his hopeless affection, mingling with the passionate praises of her beauty, that unmelting purity of spirit, to render himself worthy of which, he came forth from the vulgar herd, and consecrated himself to a life of religious sanctity. Anacreon, Tibullus, Sappho, would have beheld such love with an incredulous smile, and deemed it cold, pale, and visionary, like the passion of the chaste Diana, for the sleeping Endymion. Yet what could be more earnest, heartfelt, and enduring, than the devotion of Dante to his Beatrice, or, of Petrarch to the virtuous Laura, whose every feature he has painted with a poet's pencil and a lover's enthusiasm. The metaphysical transports of Platonism, were of a character very different from this holy feeling, for woman was not deemed worthy to be the object of such “abstracted sublimities.” They were but magnificent phrases, sublime ideas, beautiful speculations. Of that classical fountain, Milton, whose spirit was austere and high, rather than tender and affectionate, had drunk deeply, and he describes the reverie of the academics, as nothing more than an intellectual exaltation, a metaphysical passion. “Thus from the laurent fraternity of poets, riper years and the ceaseless round of study and reading, led me to the shady spaces of philosophy, but chiefly to the divine volumes of Plato and his equal Xenophon; where, if I should tell ye what I learned of chastity and love, I mean that which is truly so, whose charming cup is only virtue, which she bears in her hand to those who are worthy, (the rest are cheated with a thick, intoxicating potion, which a certain sorceress, the abuser of Love's name carries about;) and

* Dante.

† Petrarch.

how the first and chiefest office of love begins and ends in the soul, producing those happy twins of her divine generation, knowledge and virtue—with such abstracted sublimities as these, it might be worth your listening, readers; as I may one day hope to have ye in a still time, when there shall be no chiding; not in these noises." Such aliment is a little too thin and sublimated for mortal sustenance. The love of which I speak, is real, personal, heartfelt, but embracing the soul as well as the body, and cultivating for its object something of religious reverence.

As long as the system, described as that of the ancients, endured, female subordination and degradation were necessary consequences. Woman was not the endeared companion of man, his bosom counsellor, the yoke-fellow of his spirit, the partner of his privileges. She was but a delicate toy, an instrument of delight, at best, a favorite and indulged slave. The elevation, the emancipation of woman, is the great characteristic, the efficient cause and preservative of modern civilization. As I before observed, it is mainly to feudalism or chivalry, aided by the subduing influences of christianity, that we are indebted for this happy reformation.*

Chivalry enjoined upon its votary a long sacrifice of personal feeling, and made him esteem the virtue of his mistress as her most adorable quality.† The true knight prided himself upon the purity and disinterestedness of his devotion; and a smile of approbation amply indemnified him for years of toil and danger. His passion

* Was it not in the bosom of the feudal family that the importance of woman, that the value of the wife and mother, at last made itself known? In none of the ancient communities—not merely speaking of those in which the spirit of family never existed, but in those in which it existed most powerfully—say, for example, in the patriarchal system—in none of these did women ever attain to any thing like the place which they acquired in Europe under the feudal. It is to the progress, to the preponderance of domestic manners in the feudal halls and castles, that they owe this change, this improvement in their condition. The cause of this has been sought for in the peculiar manners of the ancient Germans, in a national respect which they are said to have borne, in the midst of their forests, to the female sex. Upon a single phrase of Tacitus, Germanic patriotism has founded a high degree of superiority—of primitive and ineffable purity of manners—in the relations between the two sexes among the Germans. Pure chimeras! Phrases like this of Tacitus—sentiments and customs analagous to those of the Germans of old, are found in the narratives of a host of writers who have seen or inquired into the manners of savage and barbarous tribes. There is nothing primitive, nothing peculiar to a certain race in this matter. It was in the effects of a very decided social situation—it was in the increase and preponderance of the domestic manners that the importance of the female sex in Europe had its rise, and the preponderance of the domestic manners in Europe, very early became an essential characteristic in the feudal system.

[Guizot, *History of Civilization in Europe*.

† "I read it in the oath of every true knight, that he should defend to the expense of his best blood, or of his life, if it so befel him, the honor and chastity of virgin or matron; from whence even then I learned what a noble virtue that sure must be, to the defence of which so many worthies, by such a dear adventure of themselves, had sworn; and if I found in the story afterward, any of them, by word or deed, breaking that oath, I judged it the same fault of the poet, as that which is attributed to Homer, to have written indecent things of the gods: only this my mind gave me, that every free and gentle spirit, without that oath, ought to be born a knight, nor needed to expect the gilt-spur, or the laying of a sword upon his shoulder, to stir him up, both by his counsel and his arms, to secure and protect the weakness of any attempted honor."—[Milton.

was a species of religious sentiment, and its object was almost spiritualized in his imagination. His mistress was more than a vestal in his eyes—she was an angelic being, and her earthly dwelling a shrine of adoration. The principal ridicule in the character of Don Quixotte, turns upon the exalted idea which he had formed of his Dulcinéa, whom he celebrates with an orientalism of phrase, though not of passion. Woman was the chief incentive to the prowess of the *preux chevalier*, the guardian angel of his course, the crown of his unceasing labors. We may smile at this exaggeration of sentiment and hyperbolism of language, yet much of the refinement and elevation of modern sentiment may be traced to this source. It is not necessary to dwell upon the effect of this "homage paid to the sex in general as such, and without distinct views," as Burke expresses it, to elevate woman in the social scale, to augment her relative importance and to increase the happy influence which she exerts upon man. Although the age of chivalry has long since departed, it has left many of its traces impressed upon the face of modern society, and its vocabulary of love and honor is still in vogue. The spirit of knight-errantry may have vanished, indeed, with all its romantic enterprises, yet the change which it effected in the position and estimation of woman has fortunately survived the epoch of heroic adventure.

France was, perhaps, more than any other country, the seat of these influences and changes—the land where romance exercised its greatest fascination and left its most enduring results. The purity of its sentiment subsided indeed, with the pristine simplicity of manners, and as luxury and corruption advanced, was succeeded by the less innocent commerce of gallantry. Still, however, the sex retained its position, maintained its influence, and was addressed with an enthusiasm of language and sentiment, which has left its traces to the present day. Woman was still the centre and object of heroic enterprise; feats were performed to win her approbation; life exposed in public or private encounter, to propitiate her favor or vindicate her honor: the policy of princes, the fate of provinces, the fortune of kingdoms often hung upon her nod. She every where exercised a potent sway, and nothing was undertaken in which she did not participate at least by her influence. Francis the First, after the fatal battle of Pavia, writes to his regent mother: "All is lost, save honor!" Diana of Poitiers, ruled the heart and realm of Henry the Second, with a sway attributed to the potency of magic. An Italian princess, by the religious wars which she fomented, plunged the kingdom, for years, in blood. Henry the Fourth, the noblest and best of kings, after conquering his enemies in the field and in the cabinet, and winning an empire by valor and policy combined, sacrificed the happiness of his life and the tranquillity of his reign to the wiles and intrigues of beauty. To the remonstrances of the grave and virtuous Sully, he replied, with a deprecating consciousness of his weakness, that he could not find it in his heart to hurt the feelings of a woman. The *Marechale d'Ancre* was publicly burnt as a sorceress, for the influence which she wielded over the feeble, yet turbulent Marie de Medicis. When asked at the stake, by what magic she had captivated the mind of her royal mistress—"The magic which a strong mind possesses over a weak one," was the proud reply of the unterrified Italian. The haughty

genius of the vindictive Richelieu could scarcely cope with the obstacles thrown in his way by the arts of female management, against which he prevailed only by a harsh and courageous *coup d'état*. At a later period, in the interregnum of a minority, and under the politic sway of an unpopular and avaricious minister, the beautiful and accomplished Duchess de Longueville materially assisted the turbulent de Retz, in exciting the troubles of the *Fronde*. By what a constellation of bright, though not pure names, was the heart of the grand, not great Louis the Fourteenth, successively captivated! If any thing could palliate the immorality of that amorous and ostentatious monarch, it would be the selection of such favorites as La Vallière, Fontanges, Montespan, Maintenon, and the little influence, which—except the latter, who, it is believed, became his wife, though not his queen—those who ruled his heart were permitted to exercise upon his councils. The regency, which succeeded, was a sink of corruption, in which the obscure sway, wielded by the fair, if wielded at all, redounds not to the honor of the sex. It was the reign of the grosser vices, of hideous profligacy, and unscrupulous *agiotage*, rather than that of female influence. That of the weak and corrupt Louis the Fifteenth, was almost entirely under the control of the boudoir, which sank at length into something worse. Such names as Chateauroux, Pompadour, and Dubarry, contrast most disadvantageously with the elegant and accomplished favorites of his stately grandfather. Frederick the Great, in allusion to the ignoble paramours, who ruled in succession the councils as well as the passions of this profligate and contemptible prince, humorously sub-divided his reign thus—"Petticoat, first, second and third." An Austrian princess, the courageous and unfortunate Marie Antoinette, whom the eloquence of Burke has immortalized even more than the pen of history, headed the counter-revolutionary party, whose desperate efforts but precipitated the triumph of that cause, which brought her head, and that of her virtuous and amiable husband, to the block. In the early stage of that terrific drama, whose final *dénouement* is not yet completed, the Roman spirit of the enthusiastic Madame Roland, may be regarded as the genius of republicanism. Women then legislated in the streets, and dictated from the galleries, to the assemblies of the nation, with stentorian lungs, and flourishing pikes. The devoted arm of a magnanimous maiden* rid the world of a monster,† whose sanguinary thirst the blood of thousands could not slake. Even the heroic spirit and indomitable temper of Napoleon, acknowledged the influence of an amiable and affectionate woman, and he dreaded the power of a female pen more than the hostility of a kingdom. The conjugal heroism of the wife of Lavalette, will not be forgotten, while female devotion is admired by man.

In France, women have entered the literary arena, and striven for the honors of science. They have been associated in all the triumphs of art and civilization; their capacity has not been thought too narrow or unsuited for any pursuit, which is not altogether repugnant to their nature and habits. Genius and learning have sought their participation and sanction, and shared with them their rewards. Women of the highest rank

have preferred the pleasures of intellectual pursuits and intercourse to the frivolous enjoyments of fashion and fortune. They have deemed it no derogation from the pride of birth or the elevation of rank, to acknowledge with unaffected deference, the superior aristocracy of genius. Their ambition has been to preside in the circle of chosen spirits, and to see themselves surrounded by the lights and ornaments of the age. Witness the *coteries* of the reign of Louis the Fourteenth, the *petits soupers* of a later period, and the *salons* of our day. Molière reads his manuscripts to Ninon de L'Enclos; Voltaire makes a literary *confidante* of Madame de Châtelêt, and displays his embryo productions in the boudoir of Madame de Pompadour. Madame D'Epe- nay is the friend and patroness of Rousseau, Diderot and Grimm. The memoirs of Marmontel, the letters of Grimm, the confessions of Rousseau, the correspondence of Madame du Defland, and many other interesting publications, all testify to the intimacy, social and literary, on which men of letters, lived with women of rank and fashion. Madame de Stael could never forgive Napoleon for the scorn with which he treated her intellect—she wished to admire him, but he would not encourage her advances. His ideas of woman were not French. The most confidential friend of De Stael, perhaps something more, was the orator, politician and author, Benjamin Constant. The most remarkable of her works, is the Essay upon the French Revolution, which abounds with original thoughts and profound political reflections. I visited, with no small interest, Coppet, the family seat, on the banks of the lake of Geneva, where she reposes by the side of her celebrated father. Since then, her son, a most estimable man, has joined them in the tomb, where he was soon followed by a posthumous child, the last of the illustrious name. Rank, fortune, genius, fame, all these could not avail, to preserve a line of which France has such just reason to be proud. The wives of at least two ministers of Louis Philippe, Guizot and de Broglie, have been authors. The latter, whose untimely death I lately noticed with painful surprise, was the lovely and estimable daughter of Madame de Stael, who united to a goodly portion of the talents of her mother, all the attractions which can adorn and dignify a woman. She was conspicuous for unaffected piety, fine sense, gentle elegance of manners, and elevation of character. She was the pride and stay of her husband, one of the first and best men living in France. It was my good fortune to meet her sometimes in a society of which she was the ornament and grace, and I could not permit this occasion to pass without an humble tribute to the memory of this estimable daughter of an illustrious mother.

In France, authors do not lead secluded lives, but mingle constantly in the most animated company. They live much in the society of women, and cultivate sedulously the favorable opinions and good graces of the fair. They frequently submit their compositions, before publication, to the tribunal of female taste, more however, I suspect, from a love of approbation, than with a view of profiting by criticism. Chateaubriand, who is proverbial for his devotion to the sex, is in the constant habit of reading his manuscripts to a coterie of literary friends at the *Abbaye aux Bois*, over which presides the accomplished and still lovely Madame

* Charlotte Corday.

† Marat.

Récamier. He has prepared a copious work, under the title of "Posthumous Memoirs," of which he has read some of the most interesting portions to this friendly auditory, whence they have already found their way to the press. This is, it must be confessed, rather a singular anticipation of posthumous approbation and celebrity. Notwithstanding all I have said, there are, perhaps, no women so little addicted to pedantry, as the French. In a residence of some years, I do not recollect to have met with a single example; yet it is curious to go into the public libraries and witness the number of women engaged in literary annotation and research. The keen sense of the ridiculous, so characteristic of the nation, added to the practical good sense and liveliness of temperament of French women, doubtless, protect them from this weakness.

In France, woman occupies a more independent position, than in other countries. The laws of property sanction and enforce the principle of conjugal equality. The predominance of man in his appropriate sphere is the result of natural causes alone. The existence of woman is not confined within the narrow circle of the family hearth; she is not condemned to the exclusive duties of domestic economy; she is something more than a mere nursing mother, or the manager of a household. It is by no means my wish to derogate from the dignity or importance of these duties, with which, however, other occupations and aspirations are not incompatible. It is for these reasons that French marriages which are generally mere family compacts, in which previous attachment, or even intimate acquaintance, is not deemed necessary, are not more generally productive of unhappiness. The selection of husband and wife, is almost uniformly made by parents, and the inclinations of the parties are scarcely consulted. Considerations of birth and fortune are allowed to have more influence upon the determination, than congeniality of age, temper or affections. It is not uncommon to see blooming youth linked to decrepit age, and the instances are rare, where an attachment, or even the opportunity of forming it, exists before the union. The cheerfulness, the unmurmuring patience, at least, with which young French women submit to this sacrifice and barter of the affections, is not easily comprehended by those reared in a different state of society. Not having known a different condition of things, and being trained to obedience by education and example, they never think of going counter to the wishes of their mammas and aunts, who ought to know so much better than themselves, what is to their advantage. No marriage is agreed to, without a stipulated dowry; and the signing of the contract is a more important matter than the wedding ceremony. In the preliminary consultations, there is much more said about houses, stocks and estates, than about sentiment, and the whole business is transacted with the coolness and circumstantiality of an ordinary pecuniary transaction. When a man has made up his mind to marry, he requests his friends to look out for a partner for him, with certain advantages, of birth, fortune or person; and when daughters have arrived at a marriageable age, husbands are negotiated for them in the same manner. In some cases, the parties are affianced at a tender age, when it rarely happens that they are not united at a suitable period. In making these arrangements, a profession is regarded as

equivalent to the capital of the income which it will yield—talents, the chances of promotion, &c., are taken into consideration as leading to fortune and position; the want of youth or beauty is indemnified by the possession of rank or wealth. All these things are calculated and balanced with the nicest accuracy. This cold-blooded system, as we should call it, by no means indicates a want of sensibility; it is simply the custom of the country.

"I congratulate you, my dear," exclaims an affectionate father, in a play, as he embraces his daughter, who has just been promised to a receiver general, "*tu vas épouser une recette générale*," which may be rendered in the political phraseology of the day, "you are going to marry a sub-treasury." I recollect asking an accomplished young lady, who was affianced to a grave physician of sixty, for whom, she admitted, she felt nothing but esteem, how she reconciled herself to the idea—not a very proper question by the by. "He is an excellent man, and the choice of my father," replied the innocent girl—for whom it was impossible not to feel increased esteem.

Cruel and unnatural as seems the system of marriages in France, it should be recollected that it has prevailed in nearly all nations, from the earliest times. Throughout the continent of Europe it exists under various modifications, and it is found in a still harsher shape in all the countries of the East, where it has prevailed from the remotest epoch, as is manifest from the sacred writings. It is our system, then, which forms the exception, and we should, therefore, be less harsh in judging that of other nations. Such a habitual sacrifice of feeling, or rather neglect of inclination, in forming the most important and enduring engagement of life, would certainly lead to very unhappy consequences, were not its effects much qualified and palliated by the peculiar state of society. There are compensating circumstances which diminish or at least disguise the hardship. With us, indeed, the happiness of woman is essentially bound up in the marriage tie; her chief, her almost sole felicity is comprised within the family circle. If disappointed in her affections, or sacrificed to considerations of interest or ambition, to what refuge can she fly from a desolate hearth? She is ever within the control of causes which, if they do not affect her happiness, render her doubly miserable. Her life becomes one long sacrifice; a tedious succession of joyless moments. When the affections have once been awakened, they may be crushed, but they cannot be eradicated. But the case is very different in France, where marriage is regarded not so much an affair of sentiment, as an honorable establishment in life. Marriage there is an epoch to which the girl looks forward with eagerness, as the period when she will be emancipated from a rigid parental restriction and virginal restraint, and obtain a free participation in all the pleasures of social intercourse. Her liberty, instead of ceasing at her nuptials, is then first acquired, and derives additional zest from the previous interdiction. Then commences an exhaustless succession of balls, soirees, routs, promenades, parties of pleasure, and all the brilliant amusements of a gay and light-hearted people. Her ambition is to shine in society—and she cannot be made to believe, that the happiness of her husband will be diminished by making herself agree-

able to all those who come within the influence of her attraction. She observes the importance, attached in society, to wit, taste and elegance, and all her exertions are directed to the development and improvement of these qualities and accomplishments, to the culture of which her whole education has been directed. She is not only proud of the admiration of the gay and the envy of the fair, but endeavors to enlist also the suffrages of superior minds by the liveliness of her wit and the fascination of her conversation. She perceives that the sober qualities which contribute only to domestic bliss are thrown into the shade by the more brilliant, if less solid accomplishments, and she soon learns that a lively sally or pointed repartee confers more reputation, than the longest practise of the homely duties of life. Her ambition is to dance with elegance, sing with expression, touch the harp with grace, and converse with spirit; and the successful exertion of these faculties delights no one more than her husband, who is as proud of her accomplishments, as of her affections.

Without advocating the French system, in this extreme, it may be permitted to observe that the excessive liberty and familiarity before marriage, which are to be met with in some countries, are almost equally objectionable, and perhaps less interesting, as we certainly look for more delicacy and reserve in the maiden than the matron. It is indeed reversing the order of nature to permit more confidence of manners and independence of deportment in the former, than in the woman of the world, who has taken her position in society. The proper system is, doubtless, the intermediate one—more maidenly reserve in the one case, and less of frivolity in the other.

As I have already observed, the education of a French woman is directed more to the acquisition of accomplishments than of solid instruction, though the serious duties of life are by no means neglected. It is indeed questionable whether such an education be not better adapted to the desired end, than the superficial science which is taught with so much parade by a system of more ostentatious pretension. A smattering of Algebra, Geology, Phrenology, Anatomy, &c., &c., is, after all, a poor substitute for good sense, good manners, and feminine grace. Delicacy, propriety, refinement,—these are indispensable to woman, whose position and pursuits are scarcely compatible with profound erudition. Not that I would undervalue the female mind, but that I would discriminate between the desirable and attainable, and the superficial and inapplicable. French women are distinguished in an eminent degree by vivacity of intellect, brilliancy of imagination, promptitude of reply and felicity of expression,—all those qualities, indeed, which contribute to the enjoyments of social intercourse, and heighten the fascination of female attractions. They are never at a loss in discourse, and are gifted with a readiness of wit, which never permits conversation to languish, and infuses into society an exhaustless fund of life and motion.

Much has been said of the frivolity of French society, and the insignificance of the topics discussed, but it should be recollected that general conversation would be extremely dull if it were always serious, argumentative or didactic; were it not frequently relieved by elegant badinage, or airy pleasantry. Its perfection, perhaps, consists in the unpremeditated interchange of brilliant

ideas, witty allusions, and prompt, felicitous expressions, not in a tedious and systematic discussion of grave and substantial topics. A party of pleasure is not a scientific assembly, nor a fashionable dinner a parliamentary sitting. Your instructive talker is generally a sad prosier, if not an intolerable bore. There is, perhaps, as much sense as wit in the reply of Talleyrand, who, when asked why he had married an ignorant woman, observed that it was to relax his mind. It is because their feelings are more quick and spontaneous, their ideas less systematically connected, that women shine in elegant conversation, and it is for the same reason that they excel in familiar letters. There is a raciness, a freshness, a delicacy, a spontaneousness in female conversation and letters, which men, in vain, seek to imitate. Madame de Sevigné observes, that when she put her pen to paper she permitted it to go *comme Dieu le veut*; and this is the secret of her inimitable style, which is the spontaneous expression of her mind and heart. A Newton or a Locke would, in her peculiar province, doubtless yield the palm to the presiding spirit of a Parisian drawing room. The quick penetration and delicate sensibility to all the light and fugitive shades of character and sentiment which distinguish the female mind, are infinitely better adapted to social spirit and entertainment, than the more ponderous and unwieldy faculties of man. It often happens, too, that an observation apparently the most thoughtless and unmeaning, conceals an ingenious idea, or striking thought. The mind of woman is less artificial and sophisticated than that of man, and there is often a deep philosophy in her intuitive impulses. She is not yet weaned from Nature, the mother of us all—from whose simple teachings she imbibes wisdom, often above the knowledge of the world. She reaches conclusions, and just ones too, by a shorter route than that of logic; she overleaps the intermediate stages, and arrives at once at results. Her knowledge is intuitive, perceptive; her thoughts are feelings; her opinions sentiments. This method would, indeed, be found defective in the investigations of science, or the conduct of complicated affairs, but succeeds admirably, when confined within its appropriate sphere. The refinements of feeling, the delicacies of propriety, the nicer shades of sentiment, motives and character, even many of the highest duties of life, can only thus be discerned and estimated; which accounts for the superior penetration, elegance and justness of the feminine mind and deportment.

In merely physical beauty, that of feature and complexion, the women of France are inferior to those of many other countries, and particularly of England. This is admitted by the French themselves, who admire the beauty of English women as much as they ridicule their lumpishness and awkwardness. But French women have, in an unrivalled degree, the beauty of physiognomy or expression, as distinguished from that of feature, which is further adorned and heightened by the graces of mind and body, to which I have already alluded. Generally speaking, to find a French woman handsome, one must know her; and a nearer intercourse often reveals attractions, where a casual glance would have discovered nothing to admire. Sometimes she has but to speak to be handsome. The plainest features are often redeemed by a graceful animation; the most ordinary face heightened into beauty by the charm

of expression. A bright eye, a soul-speaking glance, an expressive countenance, aided by a genteel person, a graceful carriage, an elegance in every act and motion, but above all, a soft and well modulated voice—these are infinitely more captivating than mere regularity of feature, or faultless symmetry of proportion.

In France, the greatest attention is paid to the physical education of woman, and all the refinements which heighten or preserve female attractions, are thoroughly understood and practised. Every motion is directed, every gesture attended to, and all the advantages of manner and attitude sedulously cultivated from the most tender age, until the person falls naturally and without effort into graceful positions and movements. Delicacy of expression and elegance of language, too, are not only carefully inculcated, but the greatest attention is even paid to the cultivation of the voice. There is nothing which strikes and interests the stranger so much as the elegant deportment and lady-like manners of the female children, who are dressed with great taste, and freely admitted into society until they attain a certain age, when they are again withdrawn. And here I seize with great pleasure the opportunity of defending French women from the calumny so frequently heard, that they sacrifice the care of their offspring, to the frivolous pleasures of fashionable life. This is chiefly founded upon a custom not so prevalent as formerly, about which a great deal of sentimental twaddle has been ignorantly expended, and which proceeds in high life, from certain ideas or prejudices relating to health and beauty, and in the lower ranks from the active engagements of life, not permitting the faithful discharge of the duty. To infer a want of affection from this, would be as logical as to maintain, as has been humorously observed, that a child reared by the hand, should entertain a filial affection for a teaspoon. I have often been agreeably surprised, by discovering upon a nearer acquaintance, that fashionable women, who were to be constantly seen shining in the gay circles of the capital, and apparently thinking of nothing but the pleasure of the moment, were in the daily habit of instructing their children, and devoting much time to the cultivation of their minds, and the formation of their manners. In sickness they are affectionate nurses, and the respectful attachment of their children affords the best proof that they have not neglected the pleasing though often painful duties of maternity. They are also admirable managers, prudent economists, and, in the humbler walks of life, of great assistance to their husbands in their business, in which they often actually participate. Their industry and cheerfulness in foreign countries are proverbial, and the exiles of the revolutions of France and St. Domingo, even women of the highest life and tenderest breeding, evinced a courage and energy which called forth general admiration. We talk heedlessly of the frivolity of French women, and yet the education of many of our young ladies of fashion is in their hands.

To revert to a topic on which I have already lightly touched, I would observe, that with us society is instituted almost exclusively for the benefit of the very young and the unmarried, and its chief object seems to be to afford the opportunity and facilities of courtship. Beardless boys and boarding-school misses almost monopolize its privileges, from which persons of riper years are entirely banished. This is much to be lament-

ed, as it gives to society a much less intellectual cast, and confines the pleasures of social enjoyment within too narrow a circle. It is apt to convert social intercourse into whispering tête à tête, giggling gossip, vapid sentimentalism, upon merely personal topics. It is inconsistent, too, with the first principles of politeness, which require that respectful attention should be paid to all ladies without exception.

In France, perhaps, the opposite error prevails—the pleasures and privileges of society being almost engrossed by married women. Young ladies, there, are admitted into company by a kind of sufferance, and rarely, for a moment, are permitted to leave the eye of the anxious mother. The poor girl sits by the side of her mamma or *chaperone*, with downcast, timid countenance, and not a word can be addressed to her, except in the hearing of her parent or protector. When she joins the dance, her partner does not permit himself a remark beyond the merest common places of ceremony, and when conducted to her chair, he must not take a seat by her side. She is not even allowed to read a novel, lest it should make her familiar with sentiments, in which she must not indulge before the eventful epoch of marriage. If she is carried to the play, it is only to see the most moral productions of the most moral stage, and particularly such as inculcate an implicit obedience to parental will, or which display the lamentable consequences that necessarily spring from a *mariage de sentiment*. It is not surprising, then, that she should look forward with eagerness to the day which is to put an end to her captivity, as the school-boy anticipates the approach of the holidays. A husband is the knight-errant who is to relieve her from thralldom, and she regards the wedding day as the era of emancipation from irksome control. Runaway matches are out of the question, as the penalties of the law are severe, and no marriage is valid without the consent of the parents, until a certain age at least, and then recourse must be had to legal forms and judicial proceedings, tedious, degrading, and accompanied by a humiliating publicity. But what a change is wrought by the wedding day! An almost unlimited liberty, within the bounds of decorum, succeeds to the previous restraint, and the brilliant pleasures of society woo with resistless attraction the youthful bride. She arrays herself in the costly ornaments of her *corbeille de mariage*, and shines among the gay and the fair, at the court, the opera, the ball room and the promenade. The modest timidity of the maiden gives place to the elegant ease and dignified confidence of the woman of the world.

The susceptible ear of the stranger is sometimes offended by a certain freedom of language and manner in French women, which is not altogether compatible with his idea of female delicacy, and of which I do not wish to become the apologist. It would be a mistake, however, to argue from this, a want of essential propriety, since it is met with in persons of the most unquestionable character. French custom permits the use of any language or allusion, which is not coarse, repulsive or absolutely improper, and does not recognize the verbal abstinence which is enforced in this country. Even in England the rule is much less rigorous than with us, though by no means as lax as in France, where nothing is proscribed which is not absolutely criminal or repulsive. Of the extremes, ours is certainly the preferable, and I

would only remonstrate against drawing harsh and unjust inferences from what is often a mere difference of custom. We should recollect, too, that every thing which does not involve essential principle, is in a great measure arbitrary and conventional, and not be too prompt to subject the conduct of others to our own standard of habits and education. I am but pleading for charity in our judgments of others, for I repeat, both reason and feeling induce me to prefer the cautious reserve and watchful scrupulousness which prevail with us.

It has been observed, with equal truth and point, that in France nothing is *Salic* but the throne. In fact, women there perform duties, and are entrusted with functions, which in other countries are appropriated exclusively to the stronger sex. They not only wait upon customers in the shops, they preside at the cafés and the restaurants, they book passengers for the diligences, they are the box-keepers at the theatres, they write in the office of the notary, they are the prominent and active managers of numerous establishments, and finally their names appear as principals or partners in commercial firms. The participation of females in so many masculine employments, may be in some degree owing to the sanguinary wars of the republic and the empire, which diminished the natural proportion of active men in the resident population. But this is a cause of but partial and temporary influence. In shops and other establishments, female charms are resorted to systematically, and with great success, to attract custom. A pretty woman will make the fortune of a café or a fancy store. The pleasure of being waited upon by a fair damsel, is often dearly purchased by needless expenditures and exorbitant prices, which it would not be gallant to begrudge. There is no city where this system is carried to so great an extent as in Paris. Some of the greatest establishments owe their vogue chiefly to the attraction of the presiding beauty, who, arrayed in all the splendor of costume, sits enthroned beneath a gorgeous canopy.

But I must break off this gossiping paper abruptly, lest the attraction of the subject draw me insensibly into a tedious prolixity.

J. L. M.

Washington, D. C.

A MENTAL RETROSPECT.

I.

I once could see, but now am blind—
The world is dark to me;
But, oh! 'tis fresh within my mind,
As once it used to be.
I can recall the break of day—
The first faint streak of light—
The mists which rose and swept away,
Along the mountain height.
The last dim stars which 'gan to fade,
Before the approaching sun—
The flood of light, his advent made—
His glory, going down.
I knew not which did please me best,—
That flood of morning light,
Or that refulgent plunge to rest,
Within the arms of Night.

II.

I recollect the opening Spring,
The Violet's early bloom;
The Iris I was first to bring
To my dear mother's room;
The Hyacinth soon follow'd these,
With white or purple bells;
And shrubs among yet leafless trees
Peep'd out from sunny dells.
The Red Bud stood, with blushes deep,
Beside the Dogwood pale;
And made my heart exulting leap,
Returning warmth to hail.
Methinks I now can see the wheat,
Spread like a carpet green,
With peach and cherry blossoms sweet,
Embroid'ring all the scene.

III.

That wheat, in Summer, changed in hue—
Wav'd like a sea of gold—
And as the soft winds o'er it flew,
'Twas beautiful to behold;
Those blossoms had been early shed—
The type of man's own doom;
For thus as soon our early dead
Oft sink into the tomb?
But, oh! their place was quick supplied
By many a verdant leaf;
And for the loss of those who died,
There was no heart for grief;
For there was fruit, and there were leaves—
Fast flutt'ring ev'ry one—
The shady veils which Mercy weaves
To curtain out the sun.

IV.

Autumnal days! ah, they were soft—
Sometimes with smoky light;
And those were sad; but then they oft
Foreran the clear and bright.
And then the wood—the waving wood—
Look'd rich beyond belief;
With some trees dyed as red as blood,
And some with golden leaf;
Deep orange tints, and purple too,
Were mix'd with evergreen,
And ev'ry shade and ev'ry hue
Within the rainbow seen;
In color'd map, those trees were group'd,
All over hill and dale—
And such the groves, where fairies troop'd,
In some Arabian tale.

V.

But Winter came to blast that scene,
And lay it bleak and bare;
And nothing save the Evergreen
Was left of all so fair.
How was it, glorious Evergreen!
That thou wert smiling on,
When other trees around, were seen
So sad and woe-begone?
Yet, still there was in Winter's face
A charm unto my eye;
A might—a majesty and grace,
To lift the soul on high:

The storm and tempest sweeping past,
The torrents too of rain,
The flaky snows descending fast,
And burying all the plain.

VI.

And there were moonbeams cold and bright,
Out on the waste which froze;
What lovelier thing than starry night,
Upon the sparkling snows?
"The floor of Heaven was thick inlaid
With patines of bright gold;"*
A firmament beneath was made—
A mimic Heaven unroll'd.
Yes, Winter, lock'd in "thick-ribb'd ice,"
Thou too had charms for me;
Those skies were worth a countless price,
And I could welcome thee.
Life's Winter on me dreary lies,
And dark my path on earth,
But I may see those starry skies,
Through my Redeemer's worth.

* "Sit Jessica: look how the floor of Heaven
Is thick inlaid with patines† of bright gold.

[*Merchant of Venice.*

† Patines were small flat dishes used in the administration of the Eucharist.

LETTER FROM MRS. JANE MECOM,

TO HER BROTHER, BENJAMIN FRANKLIN.

[The various editions of Franklin's works contain numerous letters from him to his youngest and favorite sister, Jane, married to Mr. Mecom of Boston. The following from her to him, although a fragment, will, it is believed, be interesting. It is copied from the original and has been hitherto unpublished.]

Boston, Dec. 5, 1774.

DEAR BROTHER:

Since I wrote last, which was by Capt. Calahan, I received your's of September 28. Your affectionate concern for my satisfaction, excites my sincerest gratitude and warmest affections. I am pleased, beyond expression, to find you are not discouraged under all you and our dear country suffer. I myself am not much discouraged, but I feared I was only fool-hardy, for many of our people are alarmed at the news of more ships and more soldiers coming; but the only way, as you have observed, is to keep on in the way of duty, and put our trust in God.

The slander you mention, (for I also look on it as such,) was told me before I saw the papers; but it took no hold on me, for I immediately told them it was false. I knew you would scorn to accept any favors from them.

I hope God will* [prosper your] advice and endeavors for our good. Our ease requires all the strength and wisdom that can be collected. I hear the Scarborough came in yesterday; but if she did, it was very silently; not a gun fired; and we know it was not in regard to the day, for we had drumming and whistling

* There are a few words illegible here in the fold of the letter. The words supplied in brackets were probably those written.

all through the town. It is said too, they have brought news that the Home Ministry continue, and almost all the same Parliament, and that they are determined to carry things to the utmost extremity. I don't know how they could know this, for I suppose they were not all chosen when she sailed; though I think the letters some have received, of later date than your's to me, imply almost as much. May God defend and preserve us.

December 15.

I wrote the above in order to send by the first opportunity; since which cousin Williams has received one from you and from their son, whose sentiments and the spirit he writes with, are very pleasing to us all here. The anxiety we feel for each other, you for us and we for ourselves, and for what we know you suffer on our account, is not among the least of our afflictions. Since I saw one of your letters to the Speaker, mentioning your anxiety for us, I have blamed myself for writing you an account of a fray that happened in this neighborhood; but it is gone and I cannot recall it; but I have seen nothing of the like nature since; and I really think that part of General Gage's letter to Peyton Randolph, Esq. is a truth, (however some contest about some other parts of it) that never was more pains taken to keep an army in peace with the inhabitants than there is among these. There is a number of officers in this street, almost every other house between the Orange Tree and King's Lane. They are all very peaceable, but the neighbors do not associate with them. I really pity them sometimes *** touching book of music; having [time] hanging on their hands and no *** This has been our Thanksgiving Day. Our God has told us that all our suing for a reconciliation will prove abortive without a regeneration of morals among us; and I am in hopes we have that token, for *** several within my observation appearing to be of that number.

I have sincerely pitied poor Mrs. H—— for her loss of so amiable a husband as I have heard he was, in so dismal a manner. The father of her dear babe *** is much missed in their education, if the means [be not] supplied another way; but I know by what I have heard of her and seen of her writings, that she is seized of a zeal of philosophy, and, I hope, of christianity, which will enable her to bear the affliction and acquit herself.

Present my respects to Mrs. Stevenson and to Jonathan. Tell him I wrote to him in the vessel Mr. Hislop and Mr. Quincy went in, and so I did to my dear brother; but not being under cover, I fear they may not get to you.

TIME AND GRIEF.

'Tis true, that Time with slow remission steals
The pang from common griefs—yet there is woe,
Beyond that great magician's skill to heal,
Which stamps itself deep in the central heart,
And, like the fissure in the ocean rock,
Resists the waters of the Lethæan sea.

Louisville, Ky.

SONNET—THE RECALL.

BY PAER BENJAMIN.

Oh truant heart! come back to thine own home—
 Let not the roses lure thee, nor the blooms
 Of the young spring entice thee more to roam;
 Be thou not dazzled by those sparkling rooms
 Where Beauty plays the queen, and flashes gems
 From her dark eyes, and from her red lips pearls;
 Oh truant heart! frail are the roses' stems,
 They break in showers—and sudden tempest hurls
 The spring blooms to the earth, and Beauty pales—
 'Tis life's sweet star, dimmed by the moon of Time;
 Come to the fountain, heart, that never fails,
 Fountain of hallowed genius, thoughts sublime,
 That flows through dream-land, pure, and bright, and free—
 There is thy home, my heart: the fount is Poesy.

THE POET'S DESTINY.

BY A YOUNG LADY, A NATIVE OF VIRGINIA.

CHAPTER I.

A cloud swept o'er the lover's face,
 As he stood before me now;
 A scornful smile was on his lip,
 A shadow on his brow.

Two years of exile passed away, and Ernest Gordon was again in England. Time and change had wrought their usual work, and calmed the tumult of feelings which nothing could entirely subdue. Though his brow wore no longer its deep sadness, yet it was shaded still; and it may be, that the memory of some early sorrow urged him to flee from the gaieties of the metropolis, and seek the solitude of his childhood's home. There, he could be alone with his own thoughts. Society no longer charmed him; and steadfastly scrutinizing the frivolities of the world, he had learned to shun and pity those who loved them. Books were now his companions; and sometimes, in his bitterness of soul, he deemed them the only friends who never altered or betrayed.

It is a sad period in life, when such feelings crowd upon us; when the beauty seems taken from our future, and the light gone from our path-way. Gloom like this was on Ernest, as he wandered through the old familiar haunts of his boyish days—and he pondered on those days as the only happy period he had ever known; forgetting that many hopes brightened over him still, that no era of existence is without its blessings, and that none can be really unhappy while there is good remaining to be done on earth. How few, in such mournful meditations, perceive that the change is not in the scenes and objects around them, but in themselves; that the blight has fallen, *not* on their prospects, but on the withering flowers of their own hearts. The stars are always in Heaven, and the darkness which shuts them from us, is around ourselves.

It was early on a summer afternoon that Ernest was seated in the library, whose treasures had so often contributed to the consolation of his loneliest hours. The windows of the room were open, and the soft breeze sighed through the curtained casements; repose rested

like a mantle on all, and its influence fell on Ernest also. His eyes were fixed on the page before him, but his thoughts had roamed far away to the records of the past.

Throwing aside the learned volume, he took a pamphlet from the table and carelessly opened it. While he glanced at its contents, a change came over his countenance, as if the lava of years had been suddenly removed from the world of his memory. The lines he looked on were addressed to the writer's "only friend," and were these:

"I will not forget thee! the links of the past,
 They are clinging around me yet;
 And the thoughts which connected my spirit with thine
 Are such the heart cannot forget.

They are lingering near me in tenderness still,
 Unstained by the touch of decay,
 And are brighten'd by gloom, as stars shine at night
 Which lose all their lustre by day.

I will not forget thee! too many bright hopes
 Are gathered around thy dear name,
 For with accents of kindness thou greetedst me oft,
 When others spoke only to blame.

Thy memory comes like the breath of the south,
 With fragrance and loveliness fraught;
 For communion with thee, was hallow'd by love,
 And chasten'd by beauty of thought."

Ernest's conscience smote him for his forgetfulness, as he read the verses addressed to himself and signed with the name of Walter Vere. Since their parting, these friends had heard nothing of each other—for Walter, with that peculiar reserve which generally forms a feature of an imaginative character, had said nothing of his plans or destination; and Ernest, in the selfishness of his individual disappointments, after the lapse of a few months' absence, had rarely thought of his youthful companion. Perhaps he may be forgiven this neglect, by those who feel that the memory of childish friendship is often lost in the engrossment of a deeper passion. But now, when the variety and distraction of travel had passed away, and he was once more enjoying the quiet of home, Gordon's interest in his friend returned with redoubled ardor, and he dwelt with the tenderest affection on the proud and sensitive disposition of the gifted poet.

Entirely ignorant of Walter's residence, Ernest wrote to Sir Godfrey Kneller inquiring for it; for he had resolved to compensate by future kindness and attention, the past neglect and suspension of their intercourse. A few days brought the wished-for information, and Ernest despatched a note to his friend.

"Once more, dear Walter," he said, "my wanderings are ended, and again I am among the tranquil beauties of home. This place recalls the happy hours we have passed here, and in roaming through its familiar scenes, I can scarcely realize that years have fled since we enjoyed them together. Will you not come to me, Walter? The sight of long forgotten things will impart to you a new inspiration—and communion with your earliest friend, will blot out the memory of sorrows we both have known too well. Do not deny me, Walter; I have so much, so very much to tell you,

which I cannot write. Moreover, I long to learn your prospects and hopes; they were confided to me so openly once, that I cannot relinquish the pleasure of a renewal of your confidence. I am here alone, and the thought of having you for a companion, has given me a taste of joy I have not felt since we parted."

Ernest wrote truly. In solitude, his more youthful feelings had returned, and it was with an interest he had long ceased to cherish for the common events of life, that he looked for Walter's answer. It came at last, and Ernest read as follows:

"Thanks, a thousand thanks, dear Ernest, for your kind invitation; it would indeed bring back the past, to be with you again—but it may not be. The poor have but few of the pleasures of this world, and my destiny shuts me out even from these. I must remain here, and toil in solitude—but do not think me insensible of your goodness because I am forced to decline its offers; believe me, your affection is among my dearest consolations, and you can never know how precious I hold it, till, like me, you have only one or two to love you. You express an interest in my prospects; alas! Ernest, there is little in the future that promises well for me. My writings are sufficiently profitable to prevent our suffering, but I no longer work with the zeal of my past efforts. Now, exertion is painful, and I turn, almost with loathing from the very lines which are the sole support of my daily existence. Do not deem me ungrateful, Gordon, because I speak often of my sorrows: they have, alas! been more familiar to me than joy. I have but one real pleasure on earth, and that is the consciousness of giving comfort to my mother and sister. For them I live, and perhaps their affection is the dearer, because, with the exception of yours, I have proved it to be the only love which changeth not. Do you remember, Ernest, how often in our boyish anticipations, I used to picture a manhood bright with honor and glorious with renown? How confident I once was, in my powers; how soaring was the ambition which urged me to win celebrity! Those hopes have vanished. I find that in trusting to my own intellect, I leaned on a broken reed, and that in sighing for fame, I pined for that which can only be gained by parting with happiness. I am wiser, or at least humbler, than I then was; for nothing produces in us humility so soon, as the shadowing of our proudest and brightest hopes. But I will not weary you, my friend, by dwelling longer on my misfortunes; their recital can avail nothing. Will you not write to me, Ernest? Let me realize one of my early dreams, in proving the truth of your friendship. Through years of silence and separation, I have never doubted it, and it would be painful indeed to find it vain at last."

"Poor Walter!" murmured Ernest, as he finished these mournful lines: "he has indeed known many sorrows, but he has escaped the haughty scorn whose blight is now upon me!"

Ernest did not suspect that the disappointment, which had withered some of the better feelings of his heart, was even then clouding the sunshine of his friend, and stealing away the beauty of his life. He dreamed not that his sadness was as nothing, compared to the wild, unmitigated despair of a being like Walter. Ernest had many resources;—wealth gave him power; and change had brought him calmness. But the poet

was poor; his sufferings had been increased by silence and loneliness; there was no excitement to draw his thoughts from the hour which had sealed his misery in revealing the hopelessness of his early passion. He had worshipped too long at that forbidden shrine, to kneel before another. The incentive to exertion was gone with the faithless dream in which he had garnered up the hopes of his life. The poet was of too gentle, too loving a nature, to find support in the pride which had proved a solace to Gordon. He could not, like him, repay the scorn of the one, on the many; and while Ernest smiled in haughty bitterness, Walter wept in secret sorrow.

CHAPTER II.

His sorrows were in secret kept,
Their strength was never seen;
And those around him did not dream
How wretched he had been!

It was a sweet summer night, when the brother and sister gazed together on the quiet and religious beauty of the far off stars. The poet's brow was pale with deep and troubled thought, and in the uncertain light, his eyes emitted a strange brightness from their dark, passionate depths. His smile too, was sad, and beautiful as the moonlight. Lucy looked at him in silence, as, wrapt in the mournful reverie which was now a common mood with him, he gazed on the orbs wandering above them. Tears filled the sister's eyes as she marked the unconscious absorption, and witnessed the gloom which so often cast its shadows over Walter's spirit.

"I have not told you, Lucy, that I shall be obliged soon to go to London," said Walter, at last; speaking as if with an effort. "The publisher says my presence will be necessary in superintending my forthcoming work, and though I dread the very thought, I must go."

"I can scarcely regret the necessity, dear Walter," said his sister, "for I think the change of scene and exercise will improve both your health and spirits."

"I cannot bear the idea of mingling again in the crowd," he said; "the very air of London makes me gloomy, and I feel doubly desolate in a throng where so many are happy. I wish Ernest would go with me."

"Can you not ask him?" inquired Lucy calmly; but the mention of his name, whose sound to her was now an abiding sorrow, called up a sudden paleness on her cheek.

"I will write to him," continued Walter; "he has so many friends in London, it can but be a pleasure for him to go there. It is the wretched only who shun the multitude!"

"And why should you be so wretched, Walter?" asked Lucy, almost reproachfully. "You have blessings even yet—and is it no consolation to remember you are the stay and comfort of our dear mother?"

"Yes, Lucy, that consolation is the sole comfort of my life. As for my blessings—where are they? Is it a blessing to toil unrequited and in solitude? Is it a blessing to see you suffering from this harsh climate, without the power to find you a gentler one? If these are blessings, Lucy, I am blessed indeed!"

"You must not think of me, dearest," she answered.

"Believe me, the suffering of sickness can never give the pain I feel at your repining in bitterness."

"Not in bitterness, my sister, but in sorrow and hopelessness," said Walter. "But it is too cold for you here, dearest," he added, after a moment's pause. "Retire to rest, Lucy—and may your dreams be happy!"

"Will you not go too, Walter?"

"My dreams are not bright enough to tempt me," he answered, with his strange, sad smile. "I will watch with the stars a little longer,"—and Lucy left him.

Walter looked after her sorrowfully, and he thought her slight figure seemed wasted, even since he last observed it.

Lucy sat long at her window, wrapt in silent, cheerless meditation; and when at length she retired, she perceived through the dimness of the night, that her brother was still at his station.

The next morning Walter wrote to Ernest, asking him to accompany him to the metropolis.

"I dread the prospect," he said, "but my going is necessary, and I would not neglect any thing which may add to the comfort of those dependant on me. Now, more than ever, I am bound to make every exertion—for a new affliction is approaching, and death is written on the brow of one, nearest and dearest. It is not yet too late to save her, and if my next work prove popular and profitable, I shall seek her health in a foreign land. Poor Lucy! she is sensible of her danger, even while she attempts to conceal it; but her confession is not needed to reveal the decay I can trace so surely on the cheek and in the eye!"

Ernest readily consented to accompany his friend, but he little suspected their mutual dislike to London arose from the same cause. Walter's letter awoke new feelings in Ernest, and as he read of Lucy's danger, her sweet face came back to him, as from a dream. He remembered, and without vanity, the one short interview, which had betrayed to him her heart's secret, and he asked himself if he had done wisely in coldly passing by such love.

Ernest's first love was very like most men's—it was more a memory than a reality—for, it was not proof against neglect and new associations. His devotion to Lady Alice had been so scorned and repulsed, that it had given place to a feeling of dislike; and pride, more than affection, induced him to avoid the possibility of meeting her. With much true and deep feeling, he mingled a vein of worldliness, which perhaps did more than any thing else towards healing the wounds of his bosom.

"Can I not aid Walter in restoring his sister?" he thought. "I have wealth, and it is all he needs. She, perhaps, can love me, even now; and I would willingly show the world, that there are others as worthy of adoration as the Countess of Lysle!"

How different the emotion that prompted the proud, yet humble adoration of Walter! With a devotedness, which for years had been his blessing, he still treasured up one lovely face; and Alice knew not the heart she trampled on, when she so haughtily rejected the poet's love!

Scarce a week had passed, ere another was added to the circle of the poet's home. The next day the friends were to journey to the city—and now Ernest and Lucy were again together. A single glance at her altered

and placid face, told Gordon she was doomed; and he saw, that in anticipating her restoration, his friend was hoping against hope.

Walter was writing in his room, and Lucy wandered with Ernest in the soft moonlight. They spoke of her brother, his hopes, his fears, and the quiet days of their earlier intercourse. Gordon vaguely alluded to his own disappointments; but flying from the past, he lingered over the present. At length all was forgotten and lost but the holy enchantment of that joyous moment—and in the low tone of intense feeling, he uttered the sweetest words that ever fell on Lucy's ear.

"I am changed, Lucy," he continued, "from the enthusiastic being you and Walter once knew; and perhaps I have lost all claim to your forgiveness and generosity; but, trust me, you will find none, even among the happiest and most devoted of your suitors, who can hold you dearer in his heart of hearts, than I do! Speak to me, my beloved—tell me, Lucy! that you can love me, even yet!"

Lucy was silent, but Gordon watched her varying color, and he required no other answer. In that hour was centered the blessedness of all her life, and even Ernest thought not of her danger as he gazed on the dark lustre of her lambent eyes, which, like her faithful heart, reflected back his image. Alas! why is it, that love and death so often meet on earth?

"We shall return in a few days," said Walter, as they separated at night, "and Ernest will come back with me, unless the attractions of London prove too strong for him."

"That were scarcely possible now," said Gordon, with a glance at Lucy, which sent the eloquent flush to her very forehead, and made her visions of the night happier than they had ever been.

CHAPTER III.

That moment's passing blessedness,
Repaled a life of tears;
And broke the chain of silent grief,
Which bound her brightest years!

It was morning in the city, and the hum of human voices floated on the air. But the sounds broke gently through the rich curtains which adorned a small, yet splendidly ornamented boudoir, in one of the noblest mansions of the capital. Rare paintings and Italian statues graced the room, and on a low, luxurious couch, rested one, fairer even than the fairest vision of the artist's dreams.

The mood of the lady was an uncommon one; for tears were in her eyes, which had long been strangers to the Countess of Lysle! On the table beside her lay an open letter, and in her hand she held a miniature, on which she gazed with more than admiration. Its features were those of a young and handsome man, and the original must have been deeply beloved indeed, when the resemblance Alice deemed so precious. Again and again she pressed the effigy to her lips; and then resting her head on her arm, while the long ringlets swept unheeded over it, she wept wildly and bitterly. The letter caused her grief; and it was this:

"I do not upbraid you, Alice; the time is past when confidence in your tenderness gave me a right to re-

proach you for a coldness I believed assumed. Your conduct I have long thought strange, but now I have proved it heartless. You said you loved me, and I trusted in the confession—I view that also as a sheer act of coquetry. That I have felt for you something even more than love, it is needless to inform you. But your own haughty indifference has now converted into unalterable pity, for your weakness and instability, all the devotion I once laid so lavishly at your feet. You have forfeited the respect, without which love is valueless; and it would be hypocrisy in me to pretend still to worship an idol, whose divinity I deem forever lost. You are mistaken, sadly mistaken, Lady Alice! if, by the course you are pursuing, you expect to retain the admiration of honorable men;—beauty and wealth may command the flattery of the crowd, but they alone can never secure the sincere love of a proud and lofty spirit. That gift will never be offered on the altar of one who is as destitute of regard for the feelings of others, as she has proved herself treacherous to her own! If you would win the affections of a noble heart, you must exercise more of that consideration and sympathy, which only can obtain it. I wish you all happiness, Lady Alice! though our destinies are severed. If, in after years, I shall hear of you, changed and chastened, as I trust you may be, I shall still rejoice in the memory of our early friendship. Farewell, forever!”

“He is gone!” murmured Alice, wildly; “the only one I ever loved, has left me forever. What now to me is wealth, it cannot restore his constancy? What care I for rank without his love—and what is beauty to me when he prizes it not? All—all, are worthless, and I am desolate. The pangs I have inflicted on others, are visited on myself; and the despair I have heaped on so many, is now crushing me to the dust. My advantages are as nothing now; I would give them all, to bring back the pure and holy spirit of the love I have lost. Oh! he has torn from my heart its last, best hope, and blighted the promise once implanted there! Fortune, friends and life are dear; but they are nothing—less than nothing, when deprived of the only object of a soul-devoted feeling! Oh! that we could lose our being with our bliss! But it may not be: the load of life will still oppress us; and unless memory and reason should be lost in insensibility, we must bear our fate with woes unutterable!”

Thus in the agony of a proud heart's first sorrow, Alice gave way to the wildness of her grief.

With an inconsistency not unusual in selfish characters, Alice loved at last with a depth and intensity of feeling, known only, perhaps, to a haughty, scornful spirit. But habit with her had become a second nature, and she carelessly trifled with the heart she had won. Self was still the centre of her impulses, and the love gained by beauty, was lost by vanity.

“Do you intend calling on the Countess of Lysle?” asked Ernest, as Walter and himself were seated in their apartment at the hotel at London.

“I do not,” answered Walter, sadly. “The Countess has, doubtless, long since forgotten that I ever crossed her pathway. Shall you visit her, Ernest?”

“No,” said Gordon. “It has been many months since we met—and I cannot hope to be remembered, when the poet who praised her is forgotten.”

Walter did not reply, and his sudden abstraction

prevented his perceiving the scornful smile on Ernest's lip. Could Alice have read the hearts of her lovers, she would indeed have mourned the pride which had produced bitterness and scorn in the one, and sorrow and despair in the other.

Night approached, and Gordon stood with folded arms, listlessly gazing from the window on the street below, when a servant entered and presented a note. It contained these words written in pencil:

“I have this instant heard that you are in town and intend leaving to-morrow; will you quit London without seeing one of your oldest friends?”

No name was signed, for the writer had trusted to the memory of the addressed, and he knew but too well the fair characters of Alice's hand.

“The time is past for a lure like this to snare me,” muttered Gordon. “I will not give her the triumph she expects.”

And after a moment's pause, as the softer feelings of other years came back to him, he added, “Perhaps it were wiser that I should not look upon that face again!”

Approaching the table, Ernest wrote a few words, and enclosing his card, directed it to the Countess of Lysle; he then tore her note into pieces. Walter started in surprise from his reverie, as Ernest raised the window and scattered the fragments in the air, and then, with a flushed brow, resumed his idle employment. Had Walter known whose hand traced that paper, he would indeed have marvelled at his friend. Such a summons would have been enshrined in the innermost recesses of the poet's heart.

It was with recovered calmness, and in a spirit widely different from the morning's agitation, that Alice approached her mirror, after having written to Ernest.

“He will surely come,” said she; “for I am not one to be refused!”

And a smile of triumph, as she gazed on her image, passed over her almost faultless face. Her recent grief had subsided, as she looked with confidence to the renewed adoration of her recalled admirer.

The hours passed, and still he came not; and Alice began to fear her invitation had not been received, when an answer at length arrived.

“I regret that an engagement this evening with my friend, Mr. Vere, and my early departure to-morrow morning, will deprive me of the honor of waiting upon the Countess of Lysle.”

In a paroxysm of wounded pride and disappointed vanity, Alice threw the note from her, exclaiming:

“He has forsaken me also; and has scorned the kindness of her whose slightest courtesy once was not unwelcome. Walter, too, is here again, and has past me by, like all the rest—he too has forgotten me!”

The night was far advanced before Alice sought repose. Her dreams were strange and fearful, and the pale, passionate face of the rejected poet stole upon her slumbers, like a spirit from the mournful past.

* * * * *

The following day found Ernest and his friend again at Walter's dwelling. Lucy looked more wasted than when they parted; a few days had evidently increased her disease—but she was very beautiful, and a smile, long a stranger, played around her joyous lips.

Walter, as usual, was alone in his apartment—and her mother, after cautioning Lucy not to sit too long at the open window, left the lovers together.

"Walter will go with us to Italy," said Ernest, after arranging many plans for the future. "His health is suffering from the life he leads here—and the holy associations connected with that land of song will recall his early enthusiasm."

"His anxiety on my account oppresses him," said Lucy; "but I am fast recovering, and I am too happy to think of danger."

She smiled as she spoke; but Ernest gazed upon her, and all other objects were lost in the sacred contemplation. The moonlight shone full on her transparent face, and gave it that clear, unnatural fairness, which contrasted strongly with the burning circle on her cheeks. Ernest drew her nearer to him, as if he would not now, for an instant, be separated from one who was so soon to be taken from him forever. Lucy seemed to divine his motive, and she continued calmly—

"I have never thought death so terrible—it is not more so than any other final parting with those we love. In truth, there was a time when I looked upon it as a hope, and pined for it as a relief—but that was long ago; before you returned here, Ernest."

Ernest fixed his eyes on her in unutterable fondness, as the secret of her early and unrepaid love was unconsciously betrayed in the last sentence—but he did not reply, and Lucy continued:

"It is a fearful thing to believe, that when we leave the earth, we shall leave also the memories of those whose love we held so precious, and that we shall be forgotten by the friends we deemed so constant. I had that thought once, and it made me very sad; but latterly, since I have been with you, it has entirely passed away. You will remember me—will you not, Ernest?"

"Do not speak thus, dearest," said Gordon; "why talk of death, my beloved, when life promises so much of happiness?"

"Because, at this moment, when I am so happy, I fancy death is nearer than life!" answered Lucy, in a low, sad tone, that fell like a prophecy on Ernest's ear.

"It cannot be!" exclaimed Ernest passionately—and while he spoke, he forgot how utterly vain were the hopes he would cherish. "It cannot be, Lucy! You are so young, that the mild air of Italy will yet restore you, and we will return blest, and blessing all around us. We have both known sorrows—but that hour of ecstasy—the hour of your returning health—will repay them all!"

He paused for an answer—but Lucy was silent; and the hand he pressed was cold and still.

He passed his arm round her waist, and her cheek rested on his shoulder.

"Are you cold, Lucy?" he asked. "Answer me, beloved!"

There was no reply—and the form he held, rested more heavily against him. With trembling eagerness, he gently raised her on his arm. Her face was turned towards the moonlight,—its slight color had faded, and the features were calm and motionless as the chiselled statue!

"Speak to me, my own Lucy!" he said, as a

frightful thought came over him. "Say but one word to comfort me!"

There was no sound; but an alteration was visible on her countenance, and the lips slowly parted. These indications could not be mistaken. With a shudder, Ernest laid the gentle form on the couch where they had been sitting, and the lover knelt beside the dead!

* * * * *

Months passed, and the name of Ernest Gordon was heralded in the papers of the day, as a distinguished, popular leader in the House of Commons.

A melancholy change came over the spirit of Walter. The death of his sister, followed soon after by that of his mother, had severed the strong ties which bound him to earth, and he shrunk from the observation of man. To him the world was a chaos; and the evanescent allurements of time and sense had lost their frail hold upon his affections. He now sedulously shunned society, and retired to a lonely abode, where visitors never intruded, and where he lived in the strictest solitude. Although, at times, in his wanderings, he appeared among the people of the neighborhood, yet he never noticed or accosted any one. The day was systematically spent in stern devotion to his studies; and when the moon was bright, he sought relaxation in sweet communion with the solemn night. His singularities at length made him an object of apprehension to the simple-minded inhabitants of —; for they had heard him rave wildly of his early disappointments; and it was whispered that a lustre too bright for reason, occasionally lighted up his dark spiritual eyes. As they nightly passed his quiet habitation, they would vaguely hint at some mysterious cause for his seclusion, and point in terror to the pale lamp which shed its fitful glimmerings from the casements of the wretched solitary!

A year had rolled away, when a stranger crossed the threshold. It was the friend of his youth, who broke the solitude of his home. From that hour, he was missed from his accustomed haunts, and the light of the student's dwelling was extinguished forever!

A simple marble column, inscribed with the name of "Walter Vere," marks his resting place; and on it is carved a laurel wreath, the vain reward of the high aspirations of the gifted, yet disappointed Poet.

J. T. L.

VIRGIL'S TOMB.

BY PARK BENJAMIN.

On the steep hill of Pausillipo stands
The tomb of Virgil. Sacred is the ground;
Sacred the gale that scatters leaves around;
Sacred the laurel-wreaths, that pilgrim hands
From climes remote strow o'er the hallowed shrine
Of Mantua's bard, the glowing, the divine!
Precipitous and wild the mountain lifts
Its shattered summits mid the cloudy rifts—
And from deep fissures spring the ilex trees,
With flowering shrubs and ivy overgrown:
On a lone cliff, more broken than the rest,
The weary traveller, ascending, sees
A small, rude building, guarded by the crest

Of a huge rock, beset with scars, yet strown
 With silver mosses, like the thin grey hair
 Around the forehead of a warrior old :
 That aged rock the mountain seems to hold
 Upon its shoulders, with the pious care
 Of brave Æneas, as from Troy he bore
 Father Anchises to the sea-girl shore !
 There is the tomb of Virgil !—in those walls
 Robbed of its ashes stands the holy urn :
 Softened yet clear the morning's radiance falls—
 There incense-tapers should forever burn—
 Along the vaulted roof, the winding aisle :
 There, like a priestess, feeding the pure flame
 Upon the altar, Evening pours her smile ;
 And there, blue Midnight spreads her starry shield,
 (Such power, O Pallas, could thine ægis yield ?)
 To guard, undimmed, the splendor of his fame !

A MERCURIAL VISITOR; WITH VARIATIONS.

"The shadow came! a tall, thin, gray-haired figure,
 That looked as it had been a shade on earth;
 Now it waxed little, then again grew bigger,
 With now an air of gloom, and now of mirth;
 But as you gazed upon its features, they
 Changed every instant—to what none could say."

[Byron.]

There's many a pleasant thing in this world of our's,
 reader—at least, so my short experience declares, and,
 for one, I am not disposed to be cynical, and insist that
 it is otherwise. I confess that I can find nothing to
 envy in those, the burden of whose song, from morning
 till night, is

" 'Tis all a tale of falsehood—life is made of gloom ;"

those who, with a chilling shrug of the shoulders, solace
 themselves in their misery, by insisting that others are
 equally miserable, and, to prove their assertion, do their
 utmost to render them so. Beshrew, I say, all those
 impertinent blockheads, whose pleasure it is to sit like
 the owl, and send forth their hootings, to the discomfort
 of all whose optics, unlike their own, prefer light to
 darkness, and who have no longings after the *joy of be-
 ing miserable*. Let them croak about the

"—woes

"Ill bartered for the garishness of joy,"

if it suits their fancy, but at least let them not force
 their diet on those who relish it not.

Yet, reader, I am not so far gone in the ways of folly,
 as to insist that all things are *equally* pleasant. One
 may enjoy the chirping of the swallow, I trust, without
 being obliged to pronounce it equal to the varied notes
 of the mockingbird, as one may derive entertainment
 from a romance of the day, without reducing to its level
 those which have stood the criticism of years. "*De
 gustibus non disputandum*," we are told, and so, reader,
 do not quarrel with me, when I declare, that to me, one
 of the pleasantest things which this world affords, is a
 stormy, blustering night in March, like the one in which
 I now write. It is cold—yes, bitter cold. The wind is

whistling one of its most melancholy tunes without ;
 now, like the sweet notes of the Eolian harp, sinking
